# LET YOUR STUDENTS *See* HISTORY IN THE MAKING through CASTLE Films'

## "NEWS PARADE OF THE YEAR!" THE YEAR!

(1944)

8mm.

16mm.

### Living History... Filmed as it Happened!

In this one film, your students can see... with their own eyes... the world's most momentous events of an entire year. They'll watch crucial land, sea and air battles... filmed under fire 'round the world. They'll see the liberation of enslaved peoples. They'll be in the midst of headline events molding the future of civilization. History will come alive... with a thrilling, unforgettable impact. A great movie that will educate, inspire and entertain... students and teachers alike... now and for years to come. Make sure it's in your school film library!

#### THE YEAR'S GREATEST EVENTS ALL IN ONE FILM!

- ★ YANKS INVADE GERMANY
- ★ MacARTHUR RETURNS TO PHILIPPINES
- ★ ALLIES FREE FRANCE, BELGIUM AND HOLLAND
- ★ JAPS SMASHED IN MARIANAS
- ★ ROBOT BOMBS OVER ENGLAND
- ★ SOVIET'S BLAZING FRONT
- ★ U. S. PRESIDENTIAL ELECTION

### CASTLE FILMS' Educational Subjects

are of indispensable value to every school movie library!

## and a Spencer VA

Modern visual education methods call for *both* a blackboard and a Spencer VA Delineascope.

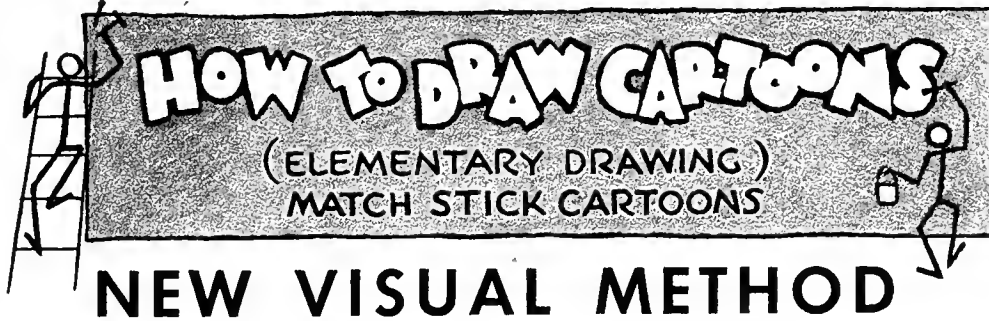

The VA Delineascope is a versatile instrument which can be used to project lantern slides as well as appropriate pictures and text from current magazines, newspapers and books.

It is an aid to teachers and pupils alike. Material projected through it has a dramatic force that arouses and holds the attention of the entire class. It pays for itself many times over by improving grades and reducing failures.

Write for our teachers' manual, "Opaque Projection." It presents new teaching techniques.

# What DID A SCHOOL SUPERINTENDENT FROM SOUTH CAROLINA Say TO A SUPERINTENDENT FROM NORTH CAROLINA?

Well—we don't know for sure . . . but their conversation might have run something like this:

"You mean to tell me, Suh, youah school has a new DEVRY 16mm. motion picture sound projectuh—and with DEVRY Corporation just winnin' its fo'th straight Army-Navy 'E' flag for excellence in buildin' equipment for the wah?"

"Yes, Suh!—and there was no special wiah-pullin' and no extra-special dispensation to get ouah DEVRY eitheh! . . . Just a mattah of placin' ouah o'dah with the DEVRY school supply dealer in ouah state . . . Then—befoah we really expected it—theah it was—delivered in its two matched carryin' cases—that look like a couple of pieces of fine luggage—all ready to go to work."

"Well, Suh, that's just what I'm going to do! You see, fo' my money, DEVRY sound-on-film projectuhs ah the best buy on the ma'ket . . . Fust off—they safely project both sound and silent films that are brilliant, rock-steady, free from weave and jump . . . And light is unifo'mly distributed to prevent strain on young folks' eyes."

"Correct, Suh—and don't forget that youah DEVRY sound-on-film projectuh gives you high-fidelity sound that is fluttah-free, wow-free and hum-free at any volume . . . We heah like the nat-ahness with which both speech and music is rep'oduced by a DEVRY."

"Yes, Suh—and don't fo'get that youah DEVRY projectuh is mountain-rugged in construction—assuring you of practically a life-time of trouble-free service . . ."

"And don't forget eitheh, that youah teachers find their DEVRY'S so simple to thread and operate they feel free to turn the projection job over to a student."

You, too, can enjoy the advantage of a DEVRY sound-on-film projector by mailing the coupon below to the authorized DEVRY school supply dealer nearest you. You will find him the dependable source of a complete line of DEVRY projected teaching aids.

**THE KEYSTONE TACHISTOSCOPE**

in the morning

↑ a single number, word, or phrase is flashed at exactly the same spot on the screen.

The slotted mask enables the operator to move a slide with twelve or more numbers, words, or phrases so that

Multiple Slide—Flash down the left column; then turn slide over and flash down the right side.

**The KEYSTONE OVERHEAD PROJECTOR and the KEYSTONE FLASHMETER**

**T**HE Overhead projector equipped with a short-focus lens gives a large, clear projection at a short distance.

The Overhead projector with open slide table enables the operator to see, at all times, the number or anything else the subject should see on the screen.

The open slide table of the Overhead projector provides a very flexible means of using acuity charts in slide form and unlimited types of training slides, such as color charts, Polaroid slides, etc., either with or without the

Flashmeter. An adapter for 2" slides will be provided.

The Flashmeter is equipped with an Ilex shutter specially designed for the purpose with iris diaphragm, and speeds from time exposure to one second and up to one one-hundredth of a second.

Forced air conditioning makes it possible to use a 500-watt or a 1000-watt lamp with consequent highly illuminated projection and all parts of the instrument cool.

Creators of MODERN Scientific Aids for BETTER VISUAL Teaching

Scene from "Paris Liberated, Yanks Recapture Guam," example of the current event films which Filmosound Library speedily releases.

**See and hear  
history in the making!**

**I**T is vital to the continued success of democracy that school children be well prepared for citizenship. A B&H Filmosound can help mightily . . . by presenting sound motion pictures which provide stimulating starting points for group discussions.

A steady supply of current event films is available at moderate rentals from our Filmosound Library. Also invaluable in training

for citizenship are our hundreds of historical, geographical, and other social science films; scores of feature films that mirror current problems; OWI morale films; and CIAA "good neighbor" productions.

A Filmosound will reproduce these films, and films on practically any other school subject, at their best. Always overwhelmingly preferred by schools, Filmosounds are even better than before, due to our war-accelerated research in optics, electronics, and mechanics.

**SCHOOLS ARE GETTING  
FILMOSOUNDS NOW**

Recent revision of regulations permits schools to extend AA2 priority ratings on orders for Filmosounds. We are filling school orders in the sequence of their receipt. To avoid unnecessary delay, anticipate your needs and order now.

Ready Now! for Your Use  
... 12 of the Latest

# Erpi Classroom Films

Ready for immediate delivery! ... 12 of the latest sound film subjects for classroom use in physics, geography, social studies, nature study, hygiene, meteorology, home economics, and others. Produced in collaboration with outstanding educators. You are invited to see these teaching films on the screen. See how these new Encyclopaedia Britannica Films can help you.

#### HOME ELECTRICAL APPLIANCES

Collaborator: Earl C. McCracken, Ph.D.  
*Teachers College, Columbia University*

Explains principles of operation and maintenance of home electrical appliances—House circuits—Alternating currents—Principles of controls—Fluorescent lighting—Refrigeration—Care of electric iron, vacuum cleaner.

Scope: For high school juniors and seniors.

#### PRINCIPLES OF HOME CANNING

Collaborator: Natalie K. Fitch, Ph.D.  
*Teachers College, Columbia University*

Demonstrates food canning steps governed by principles of bacteriology; sterilization; timing; hermetic sealing—Microphotography of food spoilage—Presents canning as tasteful task for thrifty home makers.

Scope: For junior and senior high school home economics classes.

#### HOUSING IN AMERICA

Collaborator: Harold Clark, Ph.D.  
*Teachers College, Columbia University*

Creates personal interest in housing problems—Contrasts dream home with inadequate house—Shows practical way for beautifying and equipping houses.

Scope: For elementary grades through high school.

#### THE WEST INDIES

Collaborators: L. S. Rowe, Ph.D. and  
W. Manger, Ph.D.  
*Pan American Union*

Authentic portrayal of geographical, political and social role of The West Indies—Sketches political history, types of people and economic activities.

Scope: For upper elementary grades through senior high school.

#### CENTRAL AMERICA

Collaborators: L. S. Rowe, Ph.D. and  
W. Manger, Ph.D.  
*Pan American Union*

Tells story of Central America's people: political history, geographical environment and economic activities—Shows interdependence of Central America with world.

Scope: For upper elementary grades through senior high school.

#### COLOMBIA AND VENEZUELA

Collaborators: L. S. Rowe, Ph.D. and  
W. Manger, Ph.D.  
*Pan American Union*

Recaptures experiences of discovery and exploration of region—Geography, topography and climate—Vocation—Trade.

Scope: For upper elementary grades through senior high school.

#### CARE OF PETS

Collaborator: Ernest P. Walker  
*National Zoological Park, Washington, D. C.*

Pictures boys and girls caring for pets—Reaction of canary in response to attention—A spaniel enchants with his wistful puppy eyes—A well mannered cat's response to kindness.

Scope: For primary and elementary grades.

#### WATER BIRDS

Collaborator: Arthur A. Allen, Ph.D.  
*Cornell University*

American water birds—Shows physical characteristics; habits; environment; adaptivity—Care of Egret, Mallard Duck, Canada Goose—Facts about Lesser Scaup Flamingo; Brown Pelican—Migration.

Scope: For intermediate grades through junior high school.

#### THE PRIMARY CELL

Collaborator: Dr. Morris Meister  
*High School of Science, New York, N. Y.*

Contains explanation of dry cell electron action—including ionization of electrolyte—Electron flow through circuit, action at electrodes—Polarization and depolarization.

Scope: Correlates with physics, chemistry, electricity, radio, general science, and industrial arts courses.

#### SERIES AND PARALLEL CIRCUITS

Collaborator: Dr. Morris Meister  
*High School of Science, New York, N. Y.*

Studies relationship between resistance, current and voltage in series of parallel circuits—Illustrates advantages and disadvantages of each circuit—Explains simple series; parallel combination—Types of problems.

Scope: For physics, electricity, radio, general science and industrial arts courses.

#### THE ATMOSPHERE AND ITS CIRCULATION

Collaborators: Michael Ference, Ph.D.  
and George Benton  
*The University of Chicago*

Explains structure and dynamics of atmosphere—Detailed presentation of structure; chemical composition; gaseous nature—Distribution and weight of air—Altitude, pressure and temperature variations.

Scope: For intermediate grades, junior and senior high school.

#### THE TEETH

Collaborator: John Oppie McCall, D.D.S.  
*The Murray & Leone Guggenheim Dental Clinic,  
New York, N. Y.*

Pictures development and care of teeth—Traces development of tooth bud in embryo to appearance of permanent teeth formation in late teens—How to keep teeth strong.

Scope: For junior and senior high school.

# A Proven Aid To Teaching

## ... 16 mm. Sound on Film

**T**HE WAR has driven home dramatically a truth which most educators have long known—16 mm. sound motion pictures are one of the most effective aids available to modern teaching. They offer the unusual combination of motion, sound and color. They create an illusion of reality on an unlimited scope. They make possible continuous and far-reaching field trips right in the classroom. They are one of the best methods for teaching social concepts—for transmitting skills, increasing retentiveness and speeding up the learning.

Ampro projectors are playing a leading role in bringing 16 mm. sound films to thousands of schools and universities. The rugged dependability and other important features that have made Ampro so popular with schools have also been recognized by all branches of the U. S. Army and Navy. As a result, now practically 100% of Ampro output goes to our armed forces.

An unusually interesting and informative story entitled "What Will Happen in the Movies the Day War is Over . . ." is being distributed in attractive booklet form by the Ampro Corporation. Write today for your FREE copy.

Victor  
presents  
"THE HEART OF  
*La Bohème*"

from PUCCHINI'S THRILLING OPERA

A UNIQUE presentation of the opera is offered in this Victor Recordrama by combining voices, music, pictures and text. "The Heart of La Bohème" is a condensation, with only the most melodious and stirring moments of the work on records. The other parts of the drama are supplied in descriptive notes that carry the listener from one musical peak to another without disturbing the continuity of the story. The inside cover of the album and six album-size pages contain authoritative information on Puccini and "La Bohème." Included are full Italian texts and English translations of all vocal parts of the Recordrama, synopsis of the action linking the arias and ensemble pieces, and

photographs and drawings of the composer, the cast, and of scenes from stage productions of "La Bohème."

Licia Albanese, leading soprano of the Metropolitan Opera Company, and Beniamino Gigli, world famous tenor, head the fine cast which includes Tatiana Menotti, Afro Poli, Duilio Baronti, and Aristide Baracchi. Members of the Orchestra of La Scala Opera, Milan, conducted by Umberto Berrettoni, assist the singers in this brilliant performance of "La Bohème." Especially recommended for classroom use.

**MUSICAL MASTERPIECE ALBUM  
M980 OR DM980**

Five 12-inch records . . . . . List Price \$5.75

### *Our Twenty-Fourth Year*

**W**ITH this issue THE EDUCATIONAL SCREEN moves by its twenty-third milestone and into its twenty-fourth year. We celebrate the occasion very simply, by printing Volume XXIV, Number 1 on the title page, and by adding a touch of color on the inside pages of this birthday issue—with a caution to our readers not to mistake this festive feature for habitual practice.

Behind us now lie twenty-three full years of honest intent, serious purpose and highly undulant prosperity. They have been years of variegated memories, some grim, some golden, but we cherish them all. Through boom or depression we have managed ten issues a year, save in the darkest year of them all, 1928, when our all time financial "low" compelled omission of three numbers of the year's ten—hence Whole Number 228 for this current issue (instead of a perfect 231). Every year has been copiously punctuated with commendation and criticism. We deserved both, we believe. We profited by both, we know. The one kept our head up, the other kept swelling down. Our errors of commission we consign to the limbo of the past, for nothing can be done about them save to avoid a repetition. Our errors of omission can and will be corrected gradually, carefully, and completely, in due course.

On this page, in the September, October and November issues, we were feeling quite retrospective. We glanced backward over the long and venerable history of visual education to its far off infancy, traced progress through adolescence to our present dawn of maturity, and suggested some desirable discards from past practice to hasten our final emergence into adulthood. We heartily endorsed the universal conviction that World War II will supply the final mighty impulse to bring the audio-visual field to maturity. The brilliant achievement in visual training by our armed forces may blast inertia and indifference out of the American school field from this time forth. When the men who planned, produced, and directed the military program, and who were recruited almost entirely from the American school field, come back, inspired by their wartime experience, the audio-visual field should drive forward with throttle wide.

We enter our twenty-fourth year, then, alone in the visual teaching field and with a definite glow of satisfaction and confidence: Satisfaction at having given our best to the visual field, exclusively to that field, for a long time—Confidence that the years ahead will see a greater EDUCATIONAL SCREEN keeping pace with the greater Audio-Visual Field that is inevitably coming. Nostalgic reminiscence plays a small role in progress. From here on we are concerned with prospect, not retrospect. We incline to hold the simple

thought that the past, with its hits and misses, is behind us. The task ahead of EDUCATIONAL SCREEN has been thought through, plans are drawn, and the blueprints are ready.

#### *What Readers May Expect of Their Magazine*

It is the single-minded purpose of THE EDUCATIONAL SCREEN to meet as perfectly as possible, and remain human, the total needs of the audio-visual field; to become its essential medium, rather than "official organ". We mean to embody in our pages the varied content required for today's activities, for tomorrow's advances, for permanent progress. We shall seek the best articles obtainable on all phases of visual teaching, in all subject areas, at all curricular levels, written by Teachers and Professors from Kindergarten to University, by Administrators, Supervisors, Directors, by Specialists within and without the school walls, writing whereof they know, hence authoritatively and—we always hope—readably. Steadily more attention will be given to the swift-moving developments, of educational import, in Radio and Television. The National Film Evaluation Project, originated by EDUCATIONAL SCREEN and necessarily suspended by the absenteeism of war, will be resumed, as soon as conditions permit, and expanded on a firmer basis and under broader auspices than before. Present Departments, their value proved by past reader reactions, will continue to cover school-made films, the role of motion pictures in international understanding, teaching techniques and classroom practice, the important results of scientific research, the appearance of new products and processes, nation-wide news of pertinent events and activities both academic and commercial, and, broadest of all, a survey and resumé of the literature of the visual field as it is written month by month in books and periodicals throughout the country. New Departments are on the agenda, to treat administrative problems, care and handling of projection equipment within the school, systematic course material for teacher-training, adult education, and other aspects of the field. These are some of the plans for making EDUCATIONAL SCREEN a "minimal essential" for American teachers and American schools.

#### *What the Magazine Expects from its Readers*

We look for a steady increase in reader reactions. We want to feel that there are thousands of critics awaiting each issue, to praise or pounce, and thereby keep us on the straight and narrow path of optimum service. We plan to promote, as of today and indefi-

nately ahead, a more intimate and voluminous correspondence with "the rank and file". We mean the front-line teachers, administrators, directors, supervisors, who are not only the heart and core, but the main body of the audio-visual field. It is they who bring the products of scholarship and manufacture to the ultimate consumer, the American child in school. Value to that child is the prime criterion of audio-visual teaching. It is the front-line workers who determine and know these values. The final verdict on all material, equipment and method must be handed down from the classroom.

This army of front-liners possesses an immense store of firsthand knowledge that too often lives and dies with its possessors. Too many thousands of them are non-vocal. Too many veterans are content to serve only their own school or school system when they could be serving countless other schools also. Too little of the literature of the field is written by these veterans out of their ripe experience, too much by the recruits out of their new enthusiasms. We would urge this silent army to unlimber its fountain pens and typewriters, send streaming into this office their doings, findings, thinkings, and let the EDUCATIONAL SCREEN pass them on to the rest of the educational world.

The letters may range from a few sentences to pages long. We want hints, opinions, suggestions, criticisms, proposals, arguments, questions, approbations, anathemas. We will give them a Correspondents' Corner, or Column, or Page, or more as the stream justifies. We want brief, concrete accounts of novel means and methods, devices and inventions, short-cuts and simplifications, that make for greater efficiency in teaching or administration. These will appear variously in our departments, news sections, correspondence columns, or as independent items standing on their own. We want full length articles on any and all aspects of the field. It may be your own article as the spirit moves, or you may tell us of a colleague you know to be doing an original piece of work and we will write him direct. An example: A visual instruction director recently wrote us, "I get around my territory constantly and see many novel things going on that deserve to be known about elsewhere." He named several, outlined them, proposed that we write and he contact at the same time. We did. Result: Two brief write-ups and two full articles from five teachers in his three-State area are on the way for future issues in 1945. That from a three-cent stamp!

We take pleasure in inserting here a small announcement apropos of the above invitation. *Hereafter, every contributor to any issue of EDUCATIONAL SCREEN, whether the contribution printed consists of paragraphs or pages, will receive a year's subscription to the magazine, or a year's extension of his present subscription, without charge. This is in addition to extra copies regularly given to authors of articles.*

### **Collaboration Will Do It**

Success for such a magazine and corresponding benefit for its field can come only from close-knit collaboration. Audio-Visual teaching is the youngest newcomer in the pedagogic realm and it still largely ignored in general educational literature. It is a field within a far greater field and the line of demarcation is, unfortunately, still too clearly visible. Until the line of demarcation disappears, until the visual idea permeates the whole scholarly world, the audio-visual field must produce its own literature. The magazine must supply the exact contents that the field desires and needs, or fail in its purpose. These contents must come from the field that knows what it wants, or fail in their purpose. The field, then, must furnish the material, the magazine must distribute it to the far corners of the country. Then the many can know what the few are doing; a new procedure developed in one school can be shared with all others; an experiment once done and recorded need not be set up and conducted over and over again; an investigation completed in one area can be available everywhere; surveys can be coordinated instead of overlapping constantly; in short, truth wherever discovered, need not be rediscovered endlessly. The appalling repetitiousness of our thinkings and doings can be reduced enormously if the AUDIO-VISUAL FIELD and THE EDUCATIONAL SCREEN will simply work together in a mutual enterprise.

### **And Now to Get Practical**

Obviously the plans outlined above will mean higher costs for the magazine with increase in number of pages. Paper quotas prohibit such increase for the present and the immediate future, but our readers may expect it at the earliest moment possible. Right now, however, the building of a better EDUCATIONAL SCREEN is under way. Publisher Donald P. Bean is doing things! Additional office space, enlarged staff, promotional campaigns on a scale never attempted before, are bringing most gratifying results. But this represents only a beginning of the costs we plan to incur to bring you the kind of EDUCATIONAL SCREEN you want. All depends on just one thing, SUBSCRIPTIONS. Subscription growth alone can bring advertising growth. The two combined can assure continuous expansion and improvement in your magazine.

Subscription is a mere matter of two small depreciated dollars per year—at present—but we will whisper a bit of information not yet ready for publication. For some years past the two dollar price has been entirely too low. For the kind of expanded magazine now building, it is impossible. On a certain date—not very remote, we admit—the subscription price must go to \$3.00 a year. But it is still \$2.00—for new subscription or renewal, and will remain so until formal announcement of the higher price is made. Does this suggest a logical line of action to you and your colleagues? Or is a word to the wise insufficient?

# Why I Use Films in the Teaching of Biology \*

*How one teacher gains maximum effectiveness in visual teaching by a carefully chosen film collection of his own.*

RAYMOND F. GORTON  
High School, Longview, Washington

**I**N the course of ten years I have built up a list of some twenty-odd films as part of my instructional materials for teaching the subject of Biology. These, through the years, have become indispensable. They have forced me to cover less material but, beside arousing greater interest in the work, they have left with the students a better comprehension of what was covered. I put understanding and interest, then, before coverage.

The basic consideration for the acceptance or rejection of a film is that it serve one of two purposes: (a) that it give the student a better visual understanding of something he already knows or will soon study about, or (b) that it add something new to his knowledge which he cannot get out of other classroom activities.

The first type of film, giving the student a mental picture of something he may have heard or read about, may be illustrated by *The Lost World*. We are not attempting here to get him to understand why these huge reptiles became dominant in that prehistoric period, why they later disappeared, nor to explain why there were no flowers yet upon the earth, but rather to enable him to have a visual-image memory of what the situation was really like at that remote time in the earth's history. Reading about it, hearing about it, is not enough because he has never seen or experienced anything like it. He can know a pomegranate, for example, by seeing, tasting, smelling, feeling it for himself, but not a tyrannosaurus. From *The Lost World* he gains an experience that he can refer back to in later reading and discussion. It is a "background" type of film to supplement something he already knows or will know about.

The second type of film, adding something new available from no other source, may be illustrated by the film *Reproduction Among Mammals*. It serves the second purpose stated above as requisite for inclusion in my list, namely, the presentation of new facts. For instance, the contact of several sperms with the egg or ovum; the loss of the flagella or tail; the penetration of the head and fusion with the nucleus of the egg; the change in the outside wall of the egg to prevent penetration by other sperms; these are topics discussed very slightly, if at all, in biology books for high school students. In fact, the mechanics of mammalian reproduction are so inadequately covered in biology texts at this level that films are not only the best means of obtaining these facts but they are practically the only means.

Another example of the second type film—the "teaching" film as distinguished from the "background" film—is *The Nervous System*, showing the nature of the nerve impulse. The actual flow of the impulse along the nerve, and its progressive change in elec-

trical state, is something hard to understand by any other means. It is evidently so difficult to explain in print that usually no explanation is attempted in most high school texts.

It is obvious that these two types of films are not mutually exclusive. The same film can, and probably in most cases does, serve both purposes, that of visualization and of providing new information. There is a tendency to overload the course with too many "background" films which are too general in nature, and one must be on his guard against this practice.

Into the selection of films presenting subject matter there enter all those factors that must be considered, whatever the medium of presentation, such as technical quality, authenticity, pertinence, understandability, and adaptability to the capacity of the class and to the work being done in the class. For example I rejected the film, *The Solar Family* because, after trying it on the class, it was evident that it contributed very little to their understanding of the planets. They seemed to grasp very little of the subject as presented therein.

My method of handling a given film with a class is determined by the type of the film as it appears to me after viewing and use with a class, not as it is described in the publicity matter of the producer or distributor. The "background" type of film ordinarily follows other class work on the subject, is usually shown only once, and the student is not held directly responsible for what he has seen. The "teaching" type of film, however, calls for as thorough a knowledge of the subject as possible, with other means of instruction also employed. The student knows that he is to be held responsible for learning specific facts

A battle between prehistoric monsters—from the silent teaching film, "A Lost World."  
(Encyclopedia Britannica Films, Inc.)

\*Talk given at the Southwestern Washington Conference on Audio-Visual Aids, Kelso, Washington, October 6-7.

Diagram taken from the Erpi classroom film on "Leaves."  
(Encyclopedia Britannica Films, Inc.)

from the film, is given ample opportunity to discover them, and finally is tested to prove what he has learned. I often show such a film a few frames, feet or yards at a time; students use both books and film in raising questions on the subject; and, after discussion, the film is run over again entire.

The process of selecting films is never completed. Films, like textbooks, change. New and better ones are constantly being made available. We incline to cling to the old and proven films, but when a new film is to be added an old one must be dropped from the list. Since the only real way to determine the worth of a new film is actually to use it with the class, we come into conflict at once with our time limitations. To solve this difficulty, I am careful not to fill all the time allotted to film-teaching during the year from the tested list. I save a portion of it for testing new films. After such testing, and retesting as long as needed, if I find that the new films meet the requirements better than films already in use, I drop the old and add the new to the established list.

Spikes for Transportation Attachment—from "Seed Dispersal"  
(Encyclopedia Britannica Films, Inc.)

To say it all over again briefly:

1. Films have become indispensable in the teaching of Biology because they add interest and understanding.
2. Biological films are of two general kinds: (a) background or visual image films, (b) basic teaching or factual films.
3. Certain films may serve both purposes. The danger lies in using too many background films.
4. The type of film determines the method of use.
5. Selection of films for permanent use should be determined by test in classroom.
6. A film should meet such criteria as interest, timeliness, authenticity, understandability, pertinence, technical quality, etc.
7. The time put on films lessens time available for other means of instruction, hence the films, by their effectiveness, must justify use.
8. The film must be either more valuable than other means of instruction available or better than a film already in use for the purpose.

Animation showing eruption while building up a cinder cone—from "Volcanoes in Action"  
(Encyclopedia Britannica Films, Inc.)

9. The greatest weakness in biology films is a tendency to be too much concerned with facts for the facts' sake rather than with presenting material to support the great fundamental biological principles.

Below is a list of some twenty-odd films which I use in my biology classes:

Leaves	Nervous System
Roots of Plants	How The Ear Functions
Fungus Plants	How We See
Digestion of Foods	Reproduction Among Mammals
Heart and Circulation	Flowers At Work
Mechanics of Breathing	Seed Dispersal
Urinary System	Trip to the Planets
Endocrine Glands	Volcanoes in Action
Lost World	Earth's Rocky Crust
Reactions In Plants and Animals	Arid Southwest
Realm of the Honeybee	Beach and Sea Animals
Rocky Mountain Mammals	Butterflies
Spiders	War on Insects
	Wearing Away of the Land

# The Film and International Understanding

## School Film and Fiesta

MRS. C. DELANEY, Principal  
Woodrow Wilson School, Elizabeth, N. J.

DR. JOHN E. DUGAN, Editor

Hadden Heights, New Jersey

LIKE almost every visitor to our neighbor republic, the writer returned from Mexico with a staggering collection of "Mexicana". There were the usual unbelievably bright serapes and the assortment of silver jewelry; pottery in various shapes and sizes; handblown glass; tooled leather; carved wood and onyx; ugly little heads of ancient gods; brilliantly painted trays; painstakingly embroidered handkerchiefs; handwoven cloths; and tiny glass figures. Baggage problems were further complicated by many articles chosen with the children at school in mind—costumes, toys, school books, games, coins, and dolls dressed in everyday and fiesta costume.

In answer to a request from a class in our school studying about life in Mexico, most of the collection was brought to school and displayed in our Visual Aids Room. Interest in the exhibit spread quickly through the school. Even the smallest children were fascinated by the gay costumes and unusual toys.

Through the exhibit and the reading which it encouraged, we soon had a very real interest in Mexico and its people. The children were eager to know more about the Mexican children and the games they played, the schools they attended, and the way they celebrated holidays; the Indians of Mexico; Mexican markets and fiestas; the homes and home life of the people. This

Reading for information on Mexico

interest could have been aroused, of course, in many other ways—through a well-chosen motion picture, for example.

### Interest Called for Visual Aids

Having aroused the interest of the children, we had a very real problem: how to build on that interest in developing an appreciation of and respect for a culture which differs so greatly from our own. International

---

**EDITOR'S NOTE:** Training in international understanding is not just a matter between nations. Among other things, it involves actual understanding brought about in concrete school situations.

This article describes the actual use of films and slides to introduce and carry through a large school project in international understanding. It also tells how films and slides were used to record this project and to bring about wider understanding in the community and in a broader educational field, as well as in this particular school itself.

Mrs. Delaney, the author, is a school principal with wide interests in international understanding. She has acted as educational consultant to the Filmstrip Division of the American Council on Education, and is consultant for the Inter-American Education Foundation (a division of the Coordinator's Office). She has done considerable writing in the field, and is the author of *Latin America: A Source-Book of Instructional Materials*.

---

friendship requires a respect based on an understanding wider and deeper than any of us possessed. How were we to help the children acquire the information about Mexico which is a prerequisite to real understanding? Without such information our children would almost inevitably have considered the Mexican people as "interesting, but pretty queer".

There were several sources of information open to us: the personal experiences of those of us who knew something about Mexico; reference books in our own school and in our very cooperative public library; colorful story books written in answer to the popular demand for stories about Mexico and other Latin American countries; current magazines featuring the newly-important lands to the south of us; lantern slides; filmstrips; and motion pictures. All of these sources were used extensively by the teachers and children in the course of our study.

### Films Used for Understanding

We found the motion picture one of the best sources of information during the preliminary stage when one of our objectives was the building of a common fund of knowledge and understanding. In the first place, each film could be readily adapted to the level of individual classes. Secondly, a well-chosen film presents in a very short time a more rounded picture of life in Mexico than children in elementary grades can get in a reasonable time through reading. It serves as a springboard for reading and for reference work, stimulating rather than displacing them. Finally, the "everyday" approach of many of the available films gives a much more typical picture of Mexican life than so many of the available books which, for interest-arousing reasons, stress the bizarre rather than the typical, and which neglect the customary routine for the more colorful fiesta.

### Stimulated Interest Evolved Fiesta

The exhibit and the motion pictures set into motion a series of classroom activities which spread very quickly into a school-wide project centered around the Mexican people. There was an unprecedented demand for books, stories and pictures about Mexico. Neither teachers nor children had had much experience with handicrafts; but the simple handicrafts of Mexico presented a challenge that could not be ignored. Teachers and children learned together how to fashion clay and papier mâché into toys and animals; to make and decorate colorful trays and bowls; to weave, and make baskets.

We heard the music dearest to the hearts of the Mexican people and learned a great deal about our

Pupils sewing aprons for fiesta costumes

neighbors from their songs and dances. When we began to make plans for our annual music program there was an insistent demand for a program of Mexican music. Some of the classes had learned Mexican dances—the beloved Jarabe Tapatío or Hat Dance, the lovely Sandunga, the amusing Dance of the Old Men, and the lively Chiapanecas—and it was decided to present these dances at the musical program.

Making masks and hats for Dance of The Old Men

When we included some of the Mexican singing games which the younger children had been playing with so much fervor, our program of Mexican music

Dance of The Old Men

had grown to considerable proportions. Somewhere the idea of a musical fiesta had been injected and we soon found the fiesta idea growing, carried along by its own momentum. The teachers and children were so enthusiastic over the handicrafts that it had been decided to exhibit them. The colorful costumes of the dancers were ready. A fiesta must have a puppet show, and we had one portraying the story of the China Poblana—the national fiesta costume of Mexican women. All that was really needed was a market place. We decided (with our fingers crossed against a shower) to construct booths in our big schoolyard in which the children could sell their handiwork—and our Fiesta was on its way!

### A Film Record of Our Own Fiesta

"Wouldn't it be wonderful to have a moving picture of all this?" asked one of the parents as we stood watching the gay Mexican fiesta scene in our schoolyard. Hundreds of children and adults moved about among the booths in which the handiwork of the children was on sale. Little girls in long full skirts and white blouses bargained for toy animals of papier mâché or colorfully painted trays. Other little girls with shawls over their heads and shoulders sold brilliant paper flowers like those so popular in Mexico. Boys in overalls or white pajama-like trousers crowded around the charcoal fires on which tortillas were cooking. Some wore big sombreros, and serapes which they had fashioned themselves. Except for the dancers, there was no attempt at "costuming". Big sister's cotton skirt, a square of cloth for a shawl, bright flowers and ribbons in her hair and a little imagination will transform almost any little girl into a Mexican child.

Mothers stopped to admire the bright China Poblana costumes which are so typical of Mexican fiestas, and the beautiful lace-trimmed skirts and headdresses of the Tehuanas who were to dance the Sandunga later. Boys in the tight-fitting "gold-braided" charro costume of the gentleman cowboy of Mexico held their big sombreros as they bargained for painted pig banks or drank the cold drinks on sale.

Mexican dances by school children, in costume, at musical fiesta.

### Importance of Color

Only a color moving picture could have preserved the fiesta spirit of the occasion. Even as we watched the gay scene, a member of our supervisory staff was making such a record for us . . . a record of the market-place with its buyers and sellers, of the gay costumes of the children, and of the traditional dances of Mexico which they performed. That film has been enjoyed over and over again since the day of the Fiesta. It has been used as a climax to a series of Kodachrome slides showing the classroom and group activities which led up to the Fiesta itself.

The slides were taken by Jo Salzmann, a teacher in our school system. They include pictures of the various types of activities in which our children engaged in preparing for the Fiesta—reference reading; discussions; arithmetic activities; utilization of the radio and phonograph; the "tonette" band playing Mexican music; children mixing tortillas, making costumes, working with puppets; handiwork activities, including weaving, painting, working with clay, fashioning animals and toys from paper mâché; the dances and singing games which formed part of the Fiesta program; and the life-size dolls and animals made by the kindergarten children.

### Film and Slides Coordinated Whole Project for Wider Understanding

The color film, Kodachrome slides and black-and-white enlargements which duplicated the slides have been a source of delight to teachers, children, and parents. They have not only helped to remind us all of the grand time we had at the Fiesta, but have proven valuable in many other ways. They have served in teachers' meetings and with groups of students in a nearby college to encourage other teachers to try similar activities with other groups of children. The film and slides have been of particular value in this field of teacher education because they picture what was actually done by ordinary children and teachers with no experience in handicrafts, without special knowledge of Mexico or its music and dances, without any special equipment or costly materials.

Shown over and over at the request of parents, we have found that this record of a school-wide activity has helped to give parents a better understanding of the value and scope of the activities carried on by their children. It has helped immeasurably to emphasize the fact that teaching today is no longer a matter of mere text-book study, and has in that way served as the best single means we have found for educating our parents in the modern philosophy of education in which we believe.

### *From The Editor's Mailbag*

**M**ANY subscribers have written appreciatively about the information on selected films for the primary level in the Curriculum Clinic of the December issue.

One subscriber asked us an easy question after reading the article, "Where can I find the names of the producers and the sources of supply of these primary films?"

"In that excellent Film Directory—1000 and One—twentieth edition," was our prompt reply.

Dr. Findlay read the December issue too, and he writes, "From the telegrams, letters, and personal telephone calls that I have had since you published Edgar Dale's article about the Los Angeles City School System and the editor's generous review of our publication, I have come to the conclusion that everyone in the world reads the EDUCATIONAL SCREEN. We appreciate your publishing these articles. It is most encouraging to those of us who are trying eagerly and earnestly to do a good job to feel that those in a position to know appreciate the efforts which we are expending."

# With The Masters

## *Developing Art Appreciation Through Visual Aids*

MRS. MARTHA GUILFORD  
Indianapolis Public Schools

**F**EW are the definitions of broad educational objectives that do not place the mastery of fundamental skills and the appreciation of the culture that civilization has given us, side by side. The latter goal, because it is essentially abstract, is far more difficult to realize than the former. We intend so sincerely that it shall be a part of every literature lesson, of every art unit, of every music lesson; but the multiplicity of facts to be taught and techniques to be mastered are so pressing that appreciations are often neglected.

This was exactly the situation that obtained in our school in the area of art appreciation for several years. Our principal, in her position of vantage, as supervisor of instruction throughout the grades, was "far enough from the mountain to see it." For the busy teacher completely engrossed with her lesson plans and bulging courses of study, such perspective is often impossible. The observation was made, and rightly so, that our children after eight years in our school, were leaving us, with practically no appreciation for the work of the masters in the field of art.

It was not difficult to determine the reason for this "lack." Children were not familiar with the masterpieces because little direct or consistent teaching had been done in this field. We all know that we seldom like that which we do not know well. No implication of blame for this condition was placed on any single factor. An excellent art institute is supported in our city. However, the problem of transportation to it from our district in the outskirts of the city, made regular visitations there impracticable. Teachers of art, pressed by the time factor and heavy enrollment in their classes, had found it impossible to devote enough time to this particular phase of art work to develop lasting impressions upon their children. It was obvious that if our children were to know, first, and to love, second, beautiful paintings they must experience direct teaching in this field.

This was a problem. And just where to place such an activity and how to carry it on most effectively were not easily solved factors of this problem. This is how we approached it; and now after several years of experience we are willing to present our findings and to affirm definitely that the end has justified the means we have employed.

After surveying carefully the possibilities of allocating the problem to any one of several areas of learning it seemed best to place it in the expression work of the English field. This plan was decided upon as a guarantee that all children should become familiar with a certain number of selected masterpieces during their eight years in our school.

A committee of teachers representing the different grade levels of our school set to work to determine just

which pictures would be of most interest and greatest value to the children in the development of art appreciation in each grade. A sincere effort was made to select those paintings representative of the contributions of different countries and periods, as well as a variety of types such as landscapes, pictures depicting historical events, pictures of religious significance, and those with interests appropriate to children. Two such paintings were decided upon to be studied during each term of each grade, two for the fall term, two for the spring term. During their eight years in our school each child would come in close contact with at least thirty-two masterpieces. This outline of pictures is conformed to rigorously by each teacher.

This plan for teaching these pictures was decided upon. Each child buys for a few pennies those pictures assigned to his grade. These are small colored prints; they are his to have in his hands while the picture is being discussed. But before him projected on the screen by means of a kodachrome slide is the same picture. This larger reproduction of his picture allows for the examination of details and seems to vitalize his experience very definitely. Material concerning the artist is introduced in the lower grades by the teacher; in the upper grades the pupils themselves who have done some research work on this subject supply background data that enriches the study. Oral discussion is encouraged; the most important facts about the masterpiece are emphasized and impressed upon the children's minds.

For the following period the children prepare written reports concerning their picture. In the primary grades where individual compositions are impossible, a simple group activity is engaged in and the product typed for them by the teacher if the children cannot write. Where it is at all possible the children are urged to make individual contributions. These are looked over carefully by the teacher to insure authenticity of facts and the highest standard of achievement possible for the grade level in English composition. These then are copied most carefully and mounted in their Art Books, loose leaf books with the composition on the right hand page and their own reproduction of the painting on the opposite page. These books are kept by their teachers from term to term, added to, two pages each semester, until at the end of the eighth year there are thirty-two pages. Then the pupils take them home, a concrete evidence of their consistent work in art appreciation.

However, as the work proceeds through the years and the number of pictures grows, reviews of the earlier pictures are carried on; because of their maturer viewpoints and increased ability to discern values, comparisons can be made, contrasts observed and appreciations deepened. Seeing these masterpieces again and again

on the screen renews their interest rather than dulls it. Under the guidance of different teachers new interpretations are provided. Arranging a program based upon these pictures for their parents is excellent motivation for oral English as the children discuss the paintings which appear on the screen for their parents' and their enjoyment.

The program that was suggested as a culminating activity for this eight year project, has real possibilities for developing initiative in the children and for providing them an actual experience in the preparation and presentation of a program for their parents and classmates. Recently such a program was given by our eighth grade children just before leaving for their ninth year in another school. Full responsibility for the entire activity was assumed by the children who, in committees, decided upon the fourteen pictures which they thought would be most interesting to their audience; wrote the reports which were to act as the bases for their explanations of the masterpieces as they were shown on the screen; printed their own programs; operated the projector; met their guests—in fact took full responsibility for the success of the project. The purpose for the program is given rather clearly in the introduction which one member gave before the showing of the pictures:

"Welcome today to a 'Visit with the Masters.' Here through the use of one of our modern educational tools, we are bringing you a wealth of culture in the field of art, from many lands and many centuries. The paintings which we shall show you, represent such a wide field of endeavor and such an inconceivable wealth that they could never, in reality, be assembled under the roof of any one museum. But we are bringing them together, here in our school auditorium, through the use of kodachrome slides and our projector. We hope that you will enjoy seeing them and will learn abundantly as a result of having been our guests today.

"As a part of our English work the past eight years, the boys and girls of this school have studied great paintings. We have also made a collection of thirty-two of these masterpieces with a report about each, in a notebook which will be ours to keep and to enjoy throughout the years. Names of great pictures have become familiar to us. Stories about their artists we have learned and enjoyed. Today we have invited you to be our guests so that we may be able to show you fourteen of the loveliest of these paintings and to tell you some of the things which have made us enjoy and appreciate them. May your pleasure in them be as great as ours has been in the preparation of this program."

An example or two of the reports that were given by the children in explanation of their pictures illustrate the sort of material that appealed to them, as they gathered their facts from several different sources in their library.\*

\*Oscar Winfred Neal, *World Famous Pictures* (Chicago: Lyons, 1933)

Katherine Morris Lester, *Great Pictures and Their Stories* (New York: Mentzer Bush and Company, 1930)

Flora L. Carpenter, *Stories Pictures Tell* (Chicago: Rand McNally and Company, 1918)

"The Blue Boy" was the basis for this report:

"'The Blue Boy' by Thomas Gainsborough, is one of the outstanding portraits of all times. This picture is remarkable for its beautiful colors.

The artist gives us a blue gray background; while the figure is clothed in a warm blue which blends so remarkably with the gray, the latter is cool, the former, warm. The boy was Jonathan Buttall whose father was very desirous of having a portrait of his son. In those days there were no cameras, so in order to realize this ambition,

Courtesy, Society for Visual Education  
The Blue Boy\*\*

he employed Thomas Gainsborough, one of England's greatest artists, to paint his son's portrait. It had been said that no picture could be painted successfully with blue as the predominating color. Therefore the artist set out to prove the fallacy of this story. The boy was dressed in a silk suit, a beautiful shade of blue, with a soft white blouse for contrast. The great wide brimmed hat which the boy holds in his right hand is an interesting spot in the picture. The face of the figure is illumined by a light which seems to come from above. A great amount of skill is exhibited in the manner in which the artist has handled his colors without our attention being attracted from the real purpose of the masterpiece, a beautiful portrait of a boy.

"The story of the artist is in itself an interesting one. He was what might be called a prodigy in art, developing his talent at a very early age. For a long time he did nothing but landscapes, then he discarded these entirely, and devoted himself exclusively to the painting of portraits. Of these, portraits of several English kings are notable. America is extremely proud to have this painting, 'The Blue Boy' by Thomas Gainsborough in a collection in an art museum in California. It is one we children may look forward to seeing, in the original, at some time in our lives."

When "The Child Handel" was thrown upon the screen, one boy presented this:

"This is a picture full of many details, and it tells a remarkable story from the life of one of our greatest musical geniuses, Handel. The masterpiece is so perfect that when one becomes familiar with the incident that it portrays, he is never able to forget the story it so clearly tells. It runs like this. The child Handel loved music so devotedly that, in his father's judgment he

\*\*Reproduced from Kodachrome slide distributed by Society for Visual Education, Chicago.

spent too much time at his harpsichord, an old styled piano. In an effort to discourage what the father considered a waste of time, he had the instrument moved to the garret of the family's home. But the boy was not daunted by this. Late at night, when the lad felt sure that his parents were asleep, young Handel would go up into the attic and play very softly, but very beautifully. One night his pleasure in his music became so great that he played a little more loudly than he realized. The result is just what we see in the picture before us. The family aroused by the notes coming

The Child Handel\*

from the attic, hurried up there; here we see the surprised child, the displeased father, the concerned mother, and the anxious members of the household. To picture this group so perfectly was an achievement of real artistry.

"The artist, Margaret Isabel Dicksee was an Englishwoman who lived among great painters and who had the benefit of the finest training that the latter half of last century provided. Please note the remarkable details, the costumes and the true portrayal of the facial expressions. The light from the father's lantern throws a glow over the child's face and leaves in our mind a lasting picture of this lad who was to become one of the world's greatest musicians. May this painting and its beautiful story be a part of our art appreciation throughout our lives!"

The gratification the children have experienced as they carry through the years their project in their art appreciation has been highly rewarding. The correlation between art and their English expression fulfills the broad educational objective which embraces the development of cultural appreciations and the mastery of skills. And through the use of visual aids as tools in this activity, have we realized a degree of success.

\*Reproduced from Miniature in Art Education series, distributed by Brown Robertson Co. Inc., New York.

The list of pictures used through the eight grades is as follows:

#### With the Masters

Grade I	<i>Fall</i>	"Can't You Talk"—Holmes "Feeding Her Birds"—Millet
	<i>Spring</i>	"Helping Hand"—Renouf "Distinguished Member of the Humane Society"—Landseer
Grade II	<i>Fall</i>	"Torn Hat"—Sully "Saved"—Landseer
	<i>Spring</i>	"Boy and Rabbit"—Raeburn "Song of the Lark"—Breton
Grade III	<i>Fall</i>	"Taos Indians Roasting Corn"—Couse "The Angelus"—Millet
	<i>Spring</i>	"Dignity and Impudence"—Landseer "The Gleaners"—Millet
Grade IV	<i>Fall</i>	"The Blue Boy"—Gainsborough "Children of the Sea"—Israels
	<i>Spring</i>	"Age of Innocence"—Raeburn "Avenue of Trees"—Hobbema
Grade V	<i>Fall</i>	"Sheep in Autumn"—Mauve "The Close of Day"—Adan
	<i>Spring</i>	"Sheep in Spring"—Mauve "The Horse Fair"—Bonheur
Grade VI	<i>Fall</i>	"Fighting Temeraire"—Turner "Sir Galahad"—Watts
	<i>Spring</i>	"Spring"—Corot "Mill Pond"—Inness
Grade VII	<i>Fall</i>	"Old Santa Fe Trail"—Younghunter "Washington Crossing the Delaware"—Leutz
	<i>Spring</i>	"The Child Handel"—Dicksee "Galahad, the Deliverer"—Abbey
Grade VIII	<i>Fall</i>	"Northeaster"—Homer "Mona Lisa"—Da Vinci
	<i>Spring</i>	"The Last Supper"—Da Vinci "Sunflower"—Van Gogh

#### Training Skills in New Fields

The great interest in the new series of six films—*How to Draw Cartoons*—reported by the producers, Walter O. Gutholn, Inc., has several explanations. The organization of the material by Gene Byrnes, creator of *Reg'lar Fellers*, is superb. The drawings and commentary by Fred G. Cooper are skillful and clear. Reports from showings to school groups in Toledo and Indianapolis indicate that teachers are eager for instructional materials for training skills in non-vocational subjects and that they will experiment widely with the films at several instructional levels, particularly, when the slidefilm materials to accompany them are available.

Aside from its value in art classes, any novice, young or old, will find this film course in cartooning fascinating and easy to follow. Not only is the "Match Stick" technique easy to grasp, but it is amusing and entertaining. For those who desire to explore the more serious side of drawing, it provides the basic fundamentals for sketching figures and animals.

## Reports from Users of

### "Eighteenth Century Life in Williamsburg, Virginia," and Their Educational Implications

DR. WALTER A. WITTICH, Editor  
and DR. MARGARET CUSSLER,  
Eastman Kodak Company

ONE of the first purposes of education is to acquaint children with their environment. Small children easily become interested and acquainted with things represented by their immediate environment. As children grow older, they become capable of reaching farther afield and grasping larger areas of what goes on about them, until at last their studies encompass the world. Today's environment is usually quite clearly understood, but when we take children into areas represented by past time, complications often occur.

Authentic, well-planned motion pictures make a tremendous contribution to reconstructing the past. When school children have an opportunity actually to see and hear how other children lived a century or more ago—how they spoke, how they dressed, how they traveled, how they worked, how their houses were constructed—they have a background of understanding which can be built up in no other way. Time relationships take on real meaning. Reading of historical material becomes more easily understood and retained because it is integrated with first hand experiencing. Gradually students can relate their own activities with those of the past.

Unfortunately, too few well-planned educational films exist in this area of historical interpretation. Such films as "Eighteenth Century Life in Williamsburg, Virginia" are therefore of special interest. The report that one hundred prints of the picture had been booked continuously during the past year led the Editor of The Curriculum Clinic to ask the producers to summarize the reports received from users with a view to finding out how schools have used the picture, and what light these reports throw on the criteria for identifying and selecting films for classroom use. The following interesting report was prepared by Dr. Margaret Cussler of the Eastman Kodak Company's Informational Film Division in response to our query:

"Mainly we are impressed with the variety and the wide geographical distribution of the responses from users of 'Eighteenth Century Life in Williamsburg'. In a city like Baltimore, for instance, we have reports from public schools, high schools, parochial schools, country day schools, and a college; and then postal cards were received from such diverse groups as the Reciprocity Club, The Enoch Pratt Library, Sportsman's Luncheon Club, the Museum of Art and the Engineers' Club. It is enlightening, also, to see how many towns and consolidated schools are using films these days—Schiller, Illinois; Scotch Plains, N. J.; St. Croix Falls, Missouri; Zeeland, Michigan—names which incidentally remind us that many nationalistic strains are interested in the common American Tradition. Cedar Falls, Iowa, wrote in, but so did Cedar

Hill, Tenn., and Cedarhurst, N. Y.—and Castine, Me., and Hannibal, Mo., and Hopewell, N. J.—towns once concerned with matters quite different from documentary or educational films. We were also interested in knowing how the film's users feel about certain specific questions:

"First, for what grade level and subject matter area was the film best suited? We still don't know the answers to these questions because one teacher said kindergarteners (for the pictorial sections), and another said graduate students, with the consensus agreeing on the upper elementary grades and early high school years. One principal said it is 'related to almost all subjects in the curriculum of the junior high school'. Another suggested its use for the 'new social studies program for grades four, five, and six in the elementary school.' Also, it was specifically mentioned for History, English, Art, Homemaking, Industrial Arts, and Social Studies.

"Second, did it fulfill its intent as an exploratory film—in subject, in treatment, and in the use of color? Milwaukee wrote: 'The overall treatment of the subject was one of the most outstanding portrayals of one type of community life that we have ever seen, and we have been viewing miles of "educational" films in the past 7 years.'

"Third, was the close-up method effective? Since most films dealing with a restoration stress buildings and exteriors, the director wanted to avoid a dead, museum atmosphere. What he did here was to try a close-up of Life in the Colonial Period—a close-up of a few colonists out of the total pre-revolutionary population of four millions, a close-up of one town, and finally of one day in the lives of a few typical colonists. The verdict was mixed.

Courtesy Eastman Kodak Co.

The cook goes about her work with authority and skill

"Fourth, *would the run-of-the-mill chronicle of daily existence be interesting to youngsters long accustomed to a diet of Westerns?* The day we chose to depict was a day of peace, with no hint of the Revolution against the authority of the royal Governor yet to come. It was a day in the life of an ordinary citizen, a cabinet maker; what was shown was the way the colonists cooked and breakfasted and worked and dealt with each other, those commonplaces of family life, shops, inns and jails which the history books so often scorn to record. One Fifth Grader in Green Bay, Wisconsin, had to say on this: 'I liked it very well. I liked best of all the blacksmith shop where they made the horseshoes; also the carpenter shop, and the lamp lighter going along lighting the lamp and blowing it out. I liked the whole thing. Thank you for a beautiful picture.'

"Fifth, *was the film authentic?* Certain omissions in history texts made the task of producing a documentary film difficult. The research department in Williamsburg had to comb diaries and records to check such details as: What kind of a razor was used in 1770, whether it was permissible to show earthenware utensils or whether they must be pewter or wood, and how many times a colonial fork had? We breathed more easily when the film passed review by 70 museums and a score of Teachers Colleges and State Boards of Education without turning up any anachronism more serious than an odd salt cellar.

"Of course, it was inevitable that we should get some reactions that we did not expect. After you've secured Conrad Nagel as commentator and a quartette from the Rochester Philharmonic to play appropriate 17th and 18th century selections, it's disconcerting to be told, 'We thank you for this unusual silent film.'

"Many commented on how the film portrayed progress in alleviating the drudgery of housework. One principal wrote: 'In one of my own classes the film set one boy to thinking about the nature of progress. This boy was somewhat surprised at the gracious life lived in Colonial Williamsburg, and it prompted him to think about the nature of progress in America since that time. I believe that the film served, among other things, to give the boy a historical perspective which he lacked in a degree before.'

"Finally, if 'Eighteenth Century Life in Williamsburg' were to be considered an effective teaching tool, we were concerned about what professors of education would think of it. Indicative of their interest were a number of suggestions for historical films. A professor in the Horace Mann-Lincoln School, Teachers College, Columbia, wrote us: 'The film was seen by five hundred elementary children who thoroughly enjoyed it. The teachers of these children think that it is a particularly accurate and beautiful production. The color and narration add much to its appreciation. I, personally, feel it is the best educational film I have ever used with children.'

"Naturally, it was pleasant to hear from a Professor of Education at the University of Cincinnati that 'Eighteenth Century in Williamsburg' is 'a great contribution to the educational material of our time.'"

These comments from users explain the film's great

Courtesy Eastman Kodak Co.

**The son of the cabinet maker discovers that woodworking skill is not casually attained**

popularity. Its authenticity, its beauty, and its usefulness are apparent. The Curriculum Clinic hopes, in later issues to analyze detailed reports from elementary and high school teachers who have used the separate reels of the picture in their classrooms. Reels one and two deal specifically with details of eighteenth century living—food, clothes, servants, and household routine. Reels three and four portray the economic and social life of colonial times—the apprentice system, 18th century cabinet making, transportation, and social life.

It may be helpful to re-state here some familiar criteria for identifying and selecting films for instructional purposes:

1. Teachers must recognize that the text or teaching film is produced to be used primarily as a learning tool in the classroom rather than as an entertainment film. It should be used to bring into the classroom information which can be used advantageously in making more understandable a subject area, in this case, history.
2. The text or teaching film should be used where it will make its greatest teaching contribution. To use it indiscriminately at all age levels and in diverse audience situations is to show it under circumstances where it will not be allowed to make its greatest contributions.
3. Like any other teaching material, the text or teaching film should be handled as a normal classroom procedure just as a text assignment or a laboratory experiment or any other classroom project.
4. The good teaching film must not be expected to compete with the "wild west thriller" or the "Mickey Mouse" comedies. Its purpose is not primarily to entertain but rather to teach in a completely vivid, understandable, and authentic manner. To use the text film under conditions which will subject it to competition with the entertainment film is a mistake.
5. The text or teaching film must be authentic in every detail. In so far as it is, it will supplement reputable textbooks, charts, models, globes, laboratory equipment, and other useful classroom teaching materials.

Next month's Curriculum Clinic will define the various types of films available for classrooms, and discuss their use.

## A Monthly Digest

ETTA SCHNEIDER RESS, Editor

### ADMINISTRATION

- **A Measure for Audio-Visual Programs in Schools**—Helen Hardt Seaton—American Council on Education. Series II no. 8 40p. October, 1944. 40c. The Council, Washington, D. C.

This study discusses some of the difficulties obstructing full use of visual materials and offers basic recommendations for the development of audio-visual programs in school systems and individual schools.

A number of visits were made to cities in the East and Southeast for the purpose of discovering what use teachers were making of motion pictures and what they considered the most fundamental problems obstructing wider and more effective use. A report of these visits forms one section of the bulletin. From these experiences, and with further assistance from ten leaders of audio-visual education the author has compiled a list of recommendations for the systematic development of audio-visual programs in schools, which comprises the second part of the book.

Present trends in six cities visited would suggest practices that, by and large, may be expected elsewhere. In all but one of the cities the program was administered by a central department; in one the visual work was carried on by individual schools with some guidance from a teacher committee on visual aids. The administrative titles and jurisdiction differed, but these differences appeared to have no direct effect on the effectiveness of the program. Other factors—the vital leadership of the person in charge, his underlying philosophy, administrative support, cooperation between departments, and the like—appear to operate to a much greater degree in affecting the extent and kind of use.

The best administrative organization would appear to be one that included all types of teaching aids as part of the instructional or curriculum division of the school system.

Problems that face teachers in the use of projected materials are the physical factors that are usually an administrative rather than a teacher responsibility; provision of adequate equipment, darkened rooms, ventilation during projection and operators.

Sound film projectors are either purchased by the central department and circulated, or are directly bought by the school. The director should encourage the latter method wherever possible, and should regard the circulating equipment as a compromise measure only.

Films owned by the department are usually unavailable when needed, either because there are not enough prints of a popular subject or because some areas are neglected in favor of others. Some libraries still distribute obsolete, outdated subjects. Where films are rented the efficient method appears to be to have the central office handle the requisitions and payment.

No better method of extending and improving the audio-visual aids service can be found than in proper utilization and publicity. Conferences, demonstration lessons, in-service courses are some ways of promoting better use. Among those teachers who are using films effectively, utilization practices seem to conform to the pattern: preparation, showing, follow-up. Written tests are not in general favor as follow-up. None of the teachers reported previewing films before using, nor did they ever have a second or third showing. But all teachers agreed that these practices would improve the use of films.

One interesting method was reported by a junior high school science teacher. The day before a film is shown he and a few students remain after school and screen it. The students make notes on what they consider the important points of the film in connection with the unit being studied. After discussion with the teacher they work out the film preparation for the following day and present it to the class.

The interviews with teachers and administrators revealed that a very small percentage of teachers are now using films in their teaching. In some cases regular classroom use did not appear to run much over 10%. Furthermore, utilization practices of many of these teachers leave much to be desired. It is therefore urged that schools begin to make plans, enlisting the aid of teachers as well as supervisors. Do now what can be done now, but be sure it is a part of a developmental plan which is geared to the future and not one that is limited by the present.

The section of Recommendations is directed to those systems where a system of administering the use of audio-visual aids already exists, as well as to those planning to start such a service. The functions of a department of audio-visual education are outlined under two broad but inclusive headings: planning functions and service or operating functions. An outline of personnel and services for departments in school systems of varying size is then given. The chapter on Recommendations should serve as a measure for evaluating existing programs, as well as a guide for supervisors who are now making plans for the future.

A potential usefulness of this book is in teacher-training courses, where the classroom teacher may examine audio-visual aids problems and his own relationship to them.

### FILM FORUMS

- **Library Film Forums**—Alice I. Bryan—Joint Committee on Film Forums, 525 West 120th St., N. Y. 27. 41p. mimeo. November, 1944.

This final report of the Library Film Forum Project should be useful to groups throughout the country as a concise and practical guide in arranging group discussion with motion pictures. Many articles have been written in the three years since this project was started, but this bulletin brings together the findings in a practical form.

The Film Forum Project was sponsored by a Joint Committee representing four educational organizations: The American Library Association, the American Association for Adult Education, the American Association for Applied Psychology and the American Film Center. The Project involved the promotion of group discussion with appropriate motion pictures in public libraries throughout the nation. There were three aims of the Joint Committee in undertaking the project: (1) to stimulate the use of documentary films by libraries (2) to study the effectiveness of the film forum technique as a medium for adult education and (3) to make whatever contribution it could to furthering the war effort.

The usual procedure at each film forum was to present, at a meeting in the public library, one or two carefully selected documentary films relating to a contemporary social or economic problem followed by group discussion under the guidance of a competent leader. Book displays and reading lists were used to promote follow-up reading.

This study was held from the Spring of 1941 to June, 1943. The conclusions given in the final report are based on some 270 film forums held in over 40 libraries in all parts of the nation. They indicate a definite interest in the possibilities of motion pictures for discussion and there is a decided growth of film forums since the close of the project.—The Committee's recommendations, a summary of principles underlying the use of films for adult education, and a number of practical materials in the appendix make up this valuable brochure. It includes so much that has already been abstracted and digested that further condensation in this review is impossible. The reader is therefore referred to the report in its original form.

### FILM PRODUCTION

- **Motion Pictures for Postwar Education**—Commission on Motion Pictures in Education, American Council on Education—The Council, 744 Jackson Place, Washington 6, D. C. October, 1944. 23 p. 20c.

The philosophy and objectives for the study of postwar educational needs for motion pictures to be undertaken by the Commission on Motion Pictures in Education is the purpose of this bulletin.

Because war films have been produced to teach soldiers, sailors, aviators and war workers it is assumed that there will be an increase in the production and use of educational films when peace comes. Films will have to be made to suit particular ends, and four types of films are mentioned; the demonstration film, the informational film, the incentive film and the provocative or discussion-type of film.

As for future film production, the Commission is of the opinion that the general procedure for careful planning, production and utilization of civilian educational agencies may very well follow the general pattern developed by the film production units of war agencies. In order to accomplish this: (1) the educational objectives of schools, colleges and other institutions in the post war period should be stated as specifically as possible; (2) we must study in detail their concrete problems and ascertain the extent to which films will aid in the solutions; (3) series of films for specific purposes must be planned; (4) they must be produced according to educational specifications; and (5) they must be followed up through programs of utilization.

The latter part of the pamphlet shows how teaching films may be related to the task of removing some of the barriers that stand in the way of democratic citizenship. Following are the barriers which appear to the Commission as hurdles to be overcome as soon as pertinent motion pictures are made: illiteracy and ignorance; indifference and irresponsibility; lack of understanding of the democratic process; ignorance of history; ignorance of science and technology; physical and mental infirmity; and social inflexibility.

As a prospectus of postwar needs of the American people, this book gives a very negative picture. It presents a kind of decadent society which will be rehabilitated by the magic of a few sound films. Would that the Commission had set itself along a much more positive and constructive course, such as the one envisioned by the National Resources Planning Board on the subject of Postwar Planning. Moreover, the finest collection of motion pictures cannot be produced or utilized in a vacuum. They must be part of the warp and woof of postwar society, and not a dose of medicine to be administered at regular intervals. In other words, these films should be made under the direct supervision of the competent agencies that are now being created for postwar living, with the help of motion picture specialists, such as those that comprise the Commission.

- **The Factor of Motivation in Learning as Applied to the Making of a Teaching Film**—John L. Hamilton, U. of Minn.—*Journal of Educational Psychology*, 35:423-31 October, 1944.

Better films can be made when more of the principles of learning are considered in the planning of films. One of these principles is that learning takes place only when there is proper motivation. Most films used in the classroom have little or no motivation, because the medium is considered to be sufficiently stimulating. The contention is that within each film the principles of learning should be included, thus requiring a stimulating beginning for motivation.

The following principles have been adapted to educational films and are concerned with motivation:

- 1) Emphasis on meanings and relationships contribute to motivation. There should be a pointed, concise opening sequence in which the best methods of the camera's own technique are used.
- 2) Interest, attitudes and purposes must be developed first. In a film as *The River* it is itself a kind of motivation for learnings outside the film.
- 3) Goals and standards to be met function successfully as incentives only when adapted to pupil ability. We cannot expect a single film to suit all age and grade levels. Too seldom does an educational film state at the outset what should be learned from it.
- 4) Definite objectives are necessary for clarity.
- 5) Use pupils' own interests for motivation.
- 6) There should be specific suggestions and directions for learning, as "This is important", or "This should be remembered."
- 7) Recognize the film's limitations and motivate the learner to seek knowledge through other means.

### UTILIZATION

- **Developing Social Concepts through Instructional Films**—V. C. Arnsperger and Mary Emile Windle—*School Management*, 14:3. September, 1944.

Anecdotal notes on desirable social concepts that were developed in connection with the showing of sound films in elementary classes, with special reference to Encyclopedia Britannica Films such as "The Southeastern States", "Western China" and others. The article clearly illustrates that much in the use of a film depends upon the context in which it is presented and on the ability of the teacher.

### FLAT PICTURES

- **Better Captions for Picture Study**—M. Melvina Svec, State Teachers College, Buffalo, N. Y.—*Journal of Geography* 43:266. October 1944.

This is a report of a study made of the captions that accompany pictures in textbooks and other illustrative materials. Among the faults noted are: the ready-made captions do not usually refer to concepts in the photo; they use phrases, not sentences; they contain a needless repetition of words.

The challenge is lacking to raise questions of relationships seen in the picture.

Suggested standards for judging captions are given, with the note that they are pertinent for judging any type of picture projected, still or motion pictures: 1. The caption should provoke examination of the picture. 2. It should present an idea in clear and correct form. 3. It should employ a variety of ways of expressing ideas. 4. It should use properly graded vocabulary and concepts.

Since a single picture may be used for a variety of purposes, it is sometimes preferable to have no caption, allowing the teacher to vary the presentation by composing special captions.

### PERIODICALS

- **Sight and Sound**—Quarterly publication of the British Film Institute, 4 Great Russell St., London W. C. 1 vol. 13, no. 50 July, 1944.

One noteworthy article in this issue of *Sight and Sound* is "Planned Production" by George H. Elvin, Secretary of the Association of Cine-Technicians. One of the wartime activities

Technical accuracy and authenticity are "musts" in Office of Education films. Each subject is planned and supervised throughout production by U.S.O.E. technical and visual education specialists. Technical consultants work with script writers. Each script is checked by a technical advisory committee of from 3 to 8 members. Competent, experienced workmen are the actors. Shooting is done in factories or vocational schools. The edited picture and proposed commentary are checked by U.S.O.E. specialists, technical consultants, and the advisory committee. Only then is an Office of Education film approved!

**HOW TO OBTAIN U. S. O. E. FILMS**

- 1 Order the films from your Visual Education Dealer (Federal funds may be available for the purchase of films. Check and find out.)
- 2 If your dealer does not have the films, write Castle Films, Inc.
- 3 Ask your dealer for *new* 1945 descriptive catalog listing all the U.S.O.E. films now available.
- 4 Send in your name to be put on our mailing list for monthly data on new films.

**25,000 U. S. O. E. FILMS PURCHASED**

Since November, 1941, when the first Office of Education training films were released, 25,000 prints have been sold to war plants, vocational schools, colleges and universities, and other civilian users.

## QUESTION BOX ON FILM PRODUCTION

Conducted by DAVID SCHNEIDER  
Evander Childs High School, New York City

HARDY R. FINCH, Editor

Head of the English Department  
Greenwich High School, Greenwich, Conn.

**QUESTION:** I just received a telephoto lens for my 16mm. motion picture camera. Comparing the F stops on this lens with my regular lens I was greatly puzzled to find that there is a marked difference in the size of the openings, even though the F stops read the same. Without going into too much mathematics or physics, can you please tell me whether the larger diaphragm openings on the telephoto call for adjustment in lighting or camera speed?

**ANSWER:** Heeding your proscription, this answer, like the dentist's proverbial caution before drilling, will hurt only a little, mathematically speaking.

You must remember, that the F number is a relative term. It represents the ratio of focal length of the lens divided by the working diameter of the diaphragm opening. For example, your regular 16mm. lens has a focal length of 25mm. or one inch. Thus, if this lens were opened to a diameter of  $\frac{1}{4}$  of an inch its F stop is equal to  $F\frac{1}{4}$  or  $F4$ .

Before taking up the telephoto lens, let's review two simple observations with light. A book held three feet from a reading lamp will be nearly three times as bright as one held five feet away. This is based on the optical principle that the intensity of illumination varies inversely as the square of the distance from the source of light. ( $3^2=9$ ;  $5^2=25$ .) You can prove all this with the aid of a good lightmeter, which has all the needed mathematics built into it.

In playing with a flash light in a darkened room, you must have observed that the circle of light thrown on a wall ten feet away will be greater (but not as bright) than the circle only a few feet away.

With these two points in mind, let us examine a telephoto lens, say of three inches focal length. This means that instead of having the film one inch (standard) from the lens, it is now three inches away. Therefore, if this telephoto had the same sized opening as your standard lens, the same amount of light would enter the lens, but only  $\frac{1}{9}$  of that light would reach the film. Using the formula for relative aperture, you will find that an opening of  $F4$  on this lens calls for a working diameter of  $\frac{1}{4}$  of an inch, permitting nine times as much light to enter. You can readily see then, that all the adjustments that you are concerned about, have been taken care of by the manufacturer.

One more word of advice. Do not be disturbed to find your pictures with the telephoto magnified. This is due to the positioning of the rear lens which acts as a magnifier of the image formed by the front element of your telephoto.

**QUESTION:** What can I do to prevent my films from being scratched up more than necessary?  
Can scratches be removed?

**ANSWER:** Dust and dirt are the greatest enemies of film. The first place to look for them are in the camera itself. Before each loading be sure to examine every nook and corner of your camera for any specks. A fine camel's hair brush is an important adjunct to any careful amateur's equipment. Also be sure to clean the film gate before each threading to remove any emulsion particles that may have been left from the previous reel.

The projector is the second "breeding" place for dust and dirt. The film gate of the projector is the greatest contributing cause of film scratches. Until such time when manufacturers invent a dust free gate, projectionists must

exercise eternal vigilance in keeping it free from grit and grime.

Film cleaning fluids, basically doubly distilled carbon tetrachloride, can be used to remove oil and finger marks. Be sure to soak the velvet cloth thoroughly before cleaning your film with it. Directions come with each bottle.

Since most amateurs use their originals both for editing and projecting, it may be advisable to send their films for a hardening up process. This makes it resistant for some time to dust, oil, or finger marks. It does not make it "scratch-proof." That is another problem for inventors.

For the answer to your second question I am indebted to Mr. J. Henry of the Comprehensive Service Corporation of New York. Scratches are easily removed if they appear on the shiny side of the film. Scratches on the emulsion side mean only one thing—that part of a picture has been removed. If minor details of the picture have been lost they can easily be concealed by the Recono Process. This consists of treating each side of the film first mechanically, by removing dust and oil, followed by the chemical liquefaction of the emulsion. In the latter process new emulsion fills the spaces left by the scratches. This results in a complete rejuvenation of old film, only in so far as emulsion is concerned.

Having witnessed a demonstration of such process I can testify to the accuracy of the latter statement.

**QUESTION:** We would like to include a few self-written or animated graphs in our forthcoming film. We are sure that it's more interesting to watch the curve grow than to see the finished products. Please give us a few simple directions how to proceed. Thank you.

**ANSWER:** Animations are best made with cameras that are provided with the single-frame release. However, a little practice in flicking the exposure button with the open, unloaded regular camera, will give you skill in releasing no more than one or two frames at a time.

Having mastered this technique, your next step is the production of the graph, itself. Printing or writing is easier on the eye when the reading matter appears white against a dark background. Therefore you proceed as follows:

Load your camera with positive or negative film. Place your camera on a tripod or other rigid support. Attach firmly your white cardboard or sheet against a wall, so that in your viewfinder the edges will not show. Having made all adjustments for emulsion speed of film, light reading, and distance, you may outline very faintly in white chalk the shape of the curve. Check with your viewfinder to see that the graph is properly centered in the field of view.

Using India ink, and beginning at the bottom of your outlined graph, place a small stroke at a time over the chalk line. Flick the exposure button only after you have removed your hand, otherwise your audience will catch you in the act.

It is best to remember that the smaller and more uniform the strokes the smoother the growth of the curve will appear. After the last stroke run at least three or four feet of extra film to give the audience an opportunity to study the complete curve.

If you have your own dark room you can develop this film in a special contrasty developer such as D II. Consult February 1944 issue of EDUCATIONAL SCREEN for details.

If you have reversal film in your camera you will have to use white ink against a black background. The film manufacturer will then do the processing for you.

A Series of

# SOCIAL STUDIES FILMS

... a series of films conceived and produced solely for school use, by an organization that thinks and writes for Social Studies classes. The YOUNG AMERICA films mark a notable step forward in teaching methods. For each film will capture the enthusiasm and interest of your pupils, stimulate their thinking, make them eager to learn and to reach out for knowledge.

There are few fast rules in teaching today. Progress brings new materials and new methods into the classroom. Film technique is a child of progress; it has been proved one of the most effective methods of teaching yet devised. It uses to the full both the eye and the ear. It is a tool made for your profession. And YOUNG AMERICA's films are tools for your hands.

## *Plastics -*

16 MM WITH SOUND

... a film that captures all the drama of a vital new industry. It is a living history of plastics, from the first-felt need through the latest war-spurred development and on to a view of future wonders. It reflects each forward stride of man's science. Geography has made plastics, and plastics will make new geography. *This film is admirably suited to both Social Studies and to Science classes. (15 minutes)*

## *Food -*

16 MM WITH SOUND

... tracing the history of food preservation, from ancient man in his dark cave to the frozen foods and K-rations of 1945. Here your class will see the progress of civilization as it parallels man's battle to grow and preserve food; how food motivates new trade and travel; how and why wars are caused and won by food. This film is especially recommended as a basic project in Social Studies. (16 minutes)

*For Each Film ...*  
**YOUNG AMERICA** sends, free of charge, a complete lesson outline, which arrives one week before showing date. It includes a film summary, discussion program, free materials available to teachers and work projects; all are graded for 6th through 12th grades.

*Films are for rental only. Rates are \$3 for first day, \$2 per additional day, 10% discount for bookings of two or more films. Lesson outline furnished free.*

32 E. 57 STREET, NEW YORK 22, N. Y.

# Teacher Committee Evaluation of New Films

L. C. LARSON, Editor

Ass't Prof., School of Education  
Consultant in Audio-Visual Aids  
Indiana University, Bloomington

Assisted by CAROLYN GUSS  
and ELIZABETH MEANS  
Extension Division  
Indiana University, Bloomington

## Training Table

(Educational Film Library Association, 45 Rockefeller Plaza, New York 20, New York.) 24 minutes, 16mm. sound—color. Sale price \$125 less 15% educational discount. Produced by Associated Screen Studios for the Royal Canadian Air Force. Apply to distributor for rental sources.

This film depicts the work being done by the R. C. A. F. to insure proper diet for all members of its force; thus indicates some of the fundamental principles of good diet.

Opening scenes show candidates at recruiting centers being selected on the basis of aptitude and mental examinations. Subsequent scenes show the selectees being assigned to training for specific jobs on the basis of further examinations.

The following sequence, beginning with pictures of various activities at the airport, is devoted to drawing an analogy between the body and an aircraft—carbohydrates and fats being comparable to fuel; proteins, to repair parts; vitamins to the spark in the ignition system.

Vitamins A, D, B<sub>1</sub>, B<sub>2</sub>, and C are treated somewhat in detail. For each vitamin are given its source, its benefits, and the results of its omission from the daily diet. Also shown are the basic food groups. The commentator states that Air Corps dietitians supervise the inclusion of these foods in the menus, their preparation, and analysis for purity.

Next are shown three meals—breakfast, lunch and dinner—which are woefully lacking in the important nutrients and which contain only one-tenth the necessary minerals and vitamins. Following shots show these same meals replaced by meals which are well-balanced and nutritious. In some instances substitutions were all that was necessary; in others supplementation was also required.

Views of R. C. A. F. laboratories evidence their constant research and contribution to the wise choice and best preparation of food. The film closes with a series of shots showing the routing of rations from the supply depot to the airman's mess hall; and, as three typical well-balanced R. C. A. F. meals are shown, the commentator explains that rations are selected, balanced, and prepared to assure health.

**Committee Appraisal:** The committee feels that "Training Table" is an outstanding film on general nutrition. Even though the film is addressed to the personnel of the R. C. A. F. nevertheless the information provided on food is of vital importance and interest to school and adult groups in the United States. Highly recommended for use in classes on intermediate, high school, and college levels and by adult groups interested in the importance of a sound diet to insure maximum physical efficiency.

This monthly page of reviews is conducted for the benefit of educational film producers and users alike. The comments and criticisms of both are cordially invited.

Producers wishing to have new films reviewed on this page should write L. C. Larson, Indiana University, Bloomington, Indiana, giving details as to length, content, date on which the film was issued, basis of availability, prices, producer and distributor. They will be informed of the first open date when the Teacher Committee will review the films. The only cost to producers for the service is the cost of transporting the prints to and from Bloomington. *This Cost Must Be Borne By The Producers.*

## Start In Life

(British Information Services, 30 Rockefeller Plaza, New York City) 22 minutes, 16mm. sound. Produced by British Ministry of Information, London, England. Apply to distributor for terms governing purchase or rental.

This is a British documentary film that shows how England is caring for expectant mothers and children from infancy through school days. It begins with Mrs. Anton, an expectant mother, visiting a welfare center where she receives a careful examination. The commentator states that Mrs. Anton calls each month and that because she appears to be perfectly normal is asked to have a home delivery. Next is shown a midwife caring for mother and child, directing the maid in her duties and starting the records that will be kept during the first five years of the child's life. Picturization of the work of the Welfare Society includes yearly examination, keeping of consistent health records, immunization against diphtheria, distribution of orange juice and cod liver oil and group teaching of mothers.

The next part of the picture deals with the work of the nursery school. Mrs. Anton is shown bringing her seven-month old baby to the nursery before she goes to her defense job. The activities include bathing, feeding, playing and medical examination—the essentials needed to insure proper development.

The picture then deals with children entering the junior school at the age of five. Activities for the day include mid-morning milk lunch, hot noon lunch, rest periods on cots, and an interesting physical education program fitted to the needs of the various ages.

Special schools are provided for the crippled and under-nourished children. The program is adapted to their restricted abilities. Outdoor classes are held whenever possible. Correctness of posture and a nutritive diet are emphasized.

The last scenes show how evacuees live in rural centers. Community activities include gardening, hockey, manual training, games, and free play. The commentator explains that after the war these centers will be used for summer vacations for under-privileged children.

**Committee Appraisal:** Good for showing the pre-natal and postnatal facilities made available by the British government to expectant mothers, mothers, and children. This film should be particularly useful for teachers' meetings, parent-teachers' groups, social workers, and university classes in education and sociology.

## You the People

(Teaching Film Custodians, 25 West 43rd Street, New York City 18) 21 minutes, 16mm. sound. Produced by Metro-Goldwyn-Mayer. Three-year lease \$60. Apply to distributor for rental sources.

This film, one of the "Crime Does Not Pay" series, deals with the operations of a corrupt city political machine. It begins by showing the narrator taking from the files a folder marked "election fraud" and stating that the film will treat this dangerous and inexcusable practice which is too prevalent in America. The scene shifts to a large hall where a crowd is assembled to hear Frank Carter, the candidate opposing the machine's present mayor. Carter does not proceed far in his address until members of the city's political machine surreptitiously sneak in and by tampering with the light switch, cause so much confusion that the crowd leaves in frenzied disorderliness.

*Holmes*

P R O J E C T O R  
C O M P A N Y

Manufacturers of 16mm and 35mm Sound-on-Film Projectors for over 25 years to Dealers and Users

1813 ORCHARD STREET CHICAGO 14

Subsequent scenes follow the activities of this band of unscrupulous politicians as they disrupt a radio broadcast of the clean government league, extort money from city employees and business men for the mayor's campaign fund, and plaster the town with the idea that no one's vote makes any difference and that the same machine is backing both candidates.

When Bill Wright, a Civil Service employee, questions the legality of employing fifty new clerks during the election campaign and refuses to put through the order, his superior fires him. Later Bill Wright, having prepared a report of his case, is beaten up while on his way to the broadcasting station where he is scheduled to go on the air with his story.

The last sequence of the film pictures the machine's last desperate attempts to swing the election for their candidate. Ballot boxes are stuffed, votes bought, honest citizens dissuaded from voting. The climax shows Bill Wright discovering the print shop's plate for the counterfeit ballots. As he and his friend are leaving, the racketeers arrive and open fire on them and manage to kill Bill's friend. In an attempt to cover up the discovery of counterfeit ballots as soon as election returns are reported and their candidate in by a safe margin, they go to burn the warehouse where the ballots are stored. Fortunately Bill Wright and police intercept their plans. As a result, the morning paper carries bold headlines indicting the mayor-elect and his entire machine.

**Committee Appraisal:** This dramatized case study treats the operation and effects of a corrupt political machine. It emphasizes that each citizen should exercise his right of franchise. The certain large city and the dishonest politicians are portrayed in such a manner as to be representative of any American city under the control of unscrupulous politicians. Good organization, direction, and photography enhance the value of the film. Recommended for use by social science classes on high school level, sociology classes in college, and general community groups. Especially timely during election campaigns.

**Reward Unlimited**

(Office of War Information, Bureau of Motion Pictures, Washington, D. C.) 11 minutes, 16mm. sound. Produced by Vanguard Films, Inc. for U. S. Public Health Service. Apply to distributor for rental sources or terms governing purchase.

This dramatization of the great need for Cadet Nurses follows Peggy from the time she decides to leave her position with a plate glass company through graduation from nurses' training.

The opening scene shows Paul, a young lieutenant in the infantry, on a picnic with Peggy. A conversation revolving around the topic of his amphibious training is culminated by an embrace and kiss, which evoke Paul's proposal. But since Paul realizes that he must care for his mother and wants to postpone marriage until the end of the war, Peggy decides to quit her present job and go into work more essential to the war effort.

The next scene shows Peggy "seeing her soldier off." On her way from the station she stumbles and falls. The lady who is following, is concerned about the injured knee but Peggy is concerned about the injured pair of nylon hose. Coincidentally the lady is a nurse who invites Peg into her home and administers first aid. In the course of the conversation she drops just enough information about the urgent need for nurses to clinch Peggy's decision to become a nurse.

Peggy is next shown at home attempting to convince an obdurate mother that her decision is a wise one. Apparently Dad is so preoccupied with the evening paper that his daughter's arguments do not penetrate his consciousness. An hour spent in extolling the advantages of signing up as a volunteer finds Peg's mother still adamant in her opinion that nursing is beneath her daughter's dignity, but finds Dad nonchalantly arising from his easy chair and, with a fond arm around his daughter, giving his parental consent and blessing. Mother, too, then agrees.

Scenes follow Peggy through her training and graduation.

**POST PICTURES ENTERTAINMENT**

POST PICTURES never fail to fascinate and entertain school audiences. Here are two leaders in 16 mm sound films:

**A CHUMP AT OXFORD**  
*Laurel & Hardy*

● Hilarious comedy about two street cleaners who enter sedate Oxford and have many ridiculous adventures there.

**TOPPER RETURNS**  
*Joan Blondell  
Roland Young  
Carole Landis*

● "Topper" again turns strange and thrilling happenings into rib-tickling gaiety.

# Your pictures look twice as good!

... when projected on the new Radiant Screens with the Hy-Flect Glass Beaded Surface.

Thousands of tiny glass optical beads firmly imbedded in the snow white plastic surface of the improved Radiant Screens make the startling difference. These beads reflect light instead of absorbing it. The results—black and white motion pictures, slides and slide films show up vividly and clearly with sufficient contrast. Colors take on new depth and brilliance. Student attention and interest is more effectively maintained. Visual aids become more efficient when used with these perfected Radiant Screens.

The Radiant Screen here illustrated is Model DS—a portable Metal Tripod Screen—sturdy but light, compact, easily set-up, and is quickly adjustable. Available in sizes from 30" x 40" to 52" x 72".

The Radiant line of screens—specially designed for schools and institutions—also includes a complete range of wall, wall and ceiling, and table screens from 22" x 30" to 20 feet by 20 feet and larger.

Send for FREE Bulletin →

### Radiant Portable Models Offer You:

In addition to the Hy-Flect Glass Beaded Screen Surface—you will find many innovations, special conveniences and unique advantages in Radiant Screens. These include:

- 1. Automatic Clutch.** A positive device that permits instant raising and lowering of screen housing without the necessity of manipulating screws and bolts. So simple and easy to operate a child can use it.
- 2. Quick Tripod Release.** Tripod legs may be opened or closed quickly. They

support the screen in any position for wide or narrow spread without set screws or plungers.

**3. Auto-Lock.** (Pat. applied for.) Just touch convenient button for raising or lowering center extension rod and screen instantly.

**4. Convertible from Square to Oblong—**for movies, sniffs or slides, Radiant square sized screens are convertible to oblong by merely raising screen to indicated position.

City \_\_\_\_\_

As a graduate nurse she enters little Jimmie's room to assure him that his bad dream is not a reality and that soon he will be well. As she prepares to leave, Jimmie shyly admits that he likes her the best of all the nurses because of the inside shine that shows through her eyes. With a smile she thanks the small patient and says, as she leaves, "That comes from being happy."

The film concludes with commentary to the effect that any girl who is between the ages of eighteen and thirty-five, a high school graduate, in good health, and interested in nurses' training should contact the nearest hospital or write Box 88, New York.

**Committee Appraisal:** A dramatic film which presents in an interesting and informative manner the nation's need for Cadet Nurses. The story adds to the film's appeal to young women and parents. Serves admirably the purpose for which it was produced. Recommended for use with senior high school and general community groups.

## The Literature in Visual Instruction

(Concluded from page 26)

that may be worth retaining in peace is the Ministry of Information and especially its film and publication activities.

With respect to films, the author states, it has provided a coordinating channel for all film production. Today films are planned and not left to a field of competing interests. The Film Division of the M. O. I. is responsible for all film requirements of government departments. It issues and approves the production of films for theatres. It controls the Crown Film Unit which has a film production record second to none. On the non-theatrical side, it has organized distribution by a Central Film Library for all civilian government departments and organizations. The library has 14,000 copies of 800 titles

nearly 500 of which have been produced since 1940. Mobile units give 1400 shows each week.

In peace-time the theatrical side of its activities can continue, especially to facilitate reconstruction. Government subsidy is necessary to ensure the full development of the documentary and educational films for the benefit of the community. A statement of policy representing the Association of Cine-Technicians on this matter is already in print. It is called "Documentary and Educational Films: a Memorandum on Planning for Production and Use in Post-war Britain", the Association, 2 Soho Sq., London W. 1.

### SOURCES

- **Recreation**—compiled by Lili Heimers, director, Teaching Aids Service, and edited by Margaret G. Cook (Librarian)—*New Jersey State Teachers College*, Upper Montclair, N. J., Part I (30 pp.) and Part II (66 pp.) mimeo. \$1.00 (stamps not accepted). Copyright 1944.

A tabulation of charts, exhibits, field trips, films, slides, filmstrips, maps, pictures, posters, publications, recordings and transcriptions dealing with "Recreation for All Ages." Chapter I gives general information as to sources of material on Administration and Leadership in Recreational Activities. Titles of other chapters are: II Camping, Hiking and Scouting; III Parties, Dramatics and Festivals; IV Hobbies.

An alphabetical index enables the user to find readily material on any particular subject, such as archery, bicycling, carving, dolls, first aid, folk festivals, handicrafts, holidays, Indian lore, music, photography, puppets, radio, rocks, and minerals, skating, songs, weaving, etc., etc.

## February Regional Institutes in Minnesota

During the eight-day period from February 10 through 17, the University of Minnesota Extension Division will hold a series of regional institutes in five cities of the State. The schedule is as follows: February 10—Owatonna; February 12—Duluth; February 14—Crookston; February 15—Alexandria; February 17—Marshall.

The purpose of these institutes is to bring about an exchange of valuable experiences in audio-visual education between persons engaged in this work throughout the State, to report new developments in the field, and to help many schools get started who wish to begin a program of audio-visual education after the war crisis has passed. It is felt that especially in this day of limited travel regional institutes will carry out these purposes much better than a central institute at the University. Regional institutes have not been held by the University Extension Division for some time and this year's program is an experiment to determine how effective they can be in reaching the educators of the State. The attendance will largely determine the possibility of holding more regional institutes in subsequent years on other subjects.

The program will include remarks by J. M. Nolte, Director of University Extension; W. A. Andrews, Director of graded elementary and secondary schools of the State Department of Education; and Professor G. Lester Anderson of the College of Education. One panel discussion will be held on the advantages, limitations, and utilization of all types of visual aids. Another panel discussion will be entirely devoted to problems related to starting a school program in audio-visual education. Panel members will include Paul Wendt, Director of Visual Education Service at the University; Harold Bauer, Superintendent of Schools at Winona; Ervin Nelsen, until recently Director of audio-visual aids, Virginia, Minnesota; M. I. Smith, Director of audio-visual aids at Hibbing, Minnesota; and G. W. Remington, Field Adviser, University Extension Division, whose duties include visual education work. This panel will be augmented in each of the above cities by local leaders in audio-visual education who can speak for their section of the State. Finally, there will be a demonstration of utilization of integrated visual aids in the classroom. It is planned to start the meetings at 10 o'clock in the morning and to continue until 4 or 5 o'clock in the afternoon.

## Indiana Radio Conference

The Indiana Chapter of the Association for Education by Radio met at Indiana University, Bloomington, on Saturday, December 9 to discuss the utilization of radio for education. Blanche Young, president of the Indiana Chapter and radio consultant for Indianapolis Public Schools, presided over the all-day program. Mr. L. C. Larson, Indiana University, led a panel discussion on "The School's Role in the Utili-

# Notes

zation of Audio Aids" at the morning session, following the showing of the BBC film *Lessons from the Air* and a panel discussion on "The School's Role in the Production of Radio Programs."

The afternoon meeting was devoted to a discussion of "Implications of Frequency Modulation for Education," and a showing of the General Electric and Army training films on FM.

## "Combat America" Released for War Bond Showings

The War Department has released exclusively through the Office of War Information, 16mm. technicolor prints of the film *Combat America*, which was made by Major Clark Gable on order of General H. H. Arnold, Commanding General, U. S. Army Air Forces. 300 prints of this 63-minute film have been made available to the Treasury Department's War Finance Division for War Bond promotion exclusively during the month of January. The film will be booked only for war bond rallies and showings where a War Bond is the price of admission. Bookings will be through the 16mm. chairmen of the state War Finance Committees in cooperation with 16mm. educational and commercial distributors. The special promotion campaign is directed by Merriman H. Holtz, Motion Picture Consultant of the War Finance Division in Washington, in cooperation with OWI's film division under Taylor Mills, Chief, and C. R. Reagan, Associate Chief.

*Combat America* was made as an orientation film for aerial gunners. It follows the Flying Fortress crews of the 351st Bombardment Group from the end of their training in this country, through operational training in England where they become part of the Eighth Air Force, to actual combat over Germany. In the film Major Gable serves as writer, director, actor, and narrator. He and two of his camera crew, Captain Andrew J. McIntyre and Master Sergeant Robert Boles, were awarded the Air Medal for obtaining unusual air combat footage.

All January bookings of the film will be made without charge; but beginning February 1, *Combat America* will be officially released for general showings at the regular service charge for OWI films.

## New York Educators Attend Television Program

The Visual Instruction section meeting on the December 8th program of the New York Society for the Experimental Study of Education was concerned exclusively with the topic "Television in Education."

A telecast in the Television Studios of Columbia Broadcasting System opened the evening's program, which was under the chairmanship of Mrs. Esther L. Berg. Talks were given by Gilbert Seldes, Program Director of C. B. S. Television Studios; Miss Rohama Lee, Chairman of E. F. L. A. Television Committee; Lieut. Lyle Stewart, Officer-in-charge U. S. Navy Training Aids Section, 3rd Naval District; Maurice L.

### Chicago Film Workshop Programs

The Chicago Film Workshop in Adult Education which was organized in November under the sponsorship of the Adult Education Council, gives adult educational counselors the opportunity to preview films and provides information on the kind of films there are on specific subjects, how they can be secured and used effectively.

The first meeting, in November, was purely experimental. Three films on various subjects were shown: *Portugal*, *Tyneside Story*, *Global Air Routes*. Questionnaires were distributed to determine how the Workshop could best serve the educational advisers present. An analysis of the data collected showed that the majority requested programs built around a specific subject.

In the light of that information, the second open meeting was built around the subject, "Understanding Latin America". Again three films were shown: *The Bridge*, *The Amazon Awakens*, (both films from the Coordinator of Inter-American Affairs) and *Brazil*, a March of Time film. No discussion was used at this meeting.

The third meeting, on the subject of Labor and Management Relationship, was presented in a slightly different way. The films selected were: *A Man and His Job*, *Partners in Production* (both from National Film Board of Canada) *Valley Town*, produced by the Sloan Foundation. Two points of view were presented in the discussion . . . one from the point of view of Labor, the other from Industrial Management. Evaluation blanks were filled out by those in attendance—one on the quality and content of the films, the other on the effectiveness of the techniques utilized by the discussion leaders.

The fourth program, given January 12, was on the subject of Juvenile Delinquency. The first film shown was *Youth in Crisis* (March of Time) which presents the problem of delinquency. In the second film, *The Case of Charlie Gordon* (National Film Board of Canada) a Canadian community organizes to avert delinquency by arranging for apprenticeship jobs for

735 MARKET STREET - SAN FRANCISCO

their young boys. The third film, *A Criminal Is Born*, (Teaching Film Custodian film) is a dramatic attempt to show parents how easily children can become delinquent when insufficient interest and attention has been given to their upbringing. Present at this meeting was a Resource Board of Specialists who discussed the films and demonstrated how these films can be used effectively. Lists of bibliography and related films were distributed.

Plans for future programs are under way and will cover the following subjects: postwar employment, postwar housing, rehabilitation, nutrition, minority groups and child guidance.

### Francis W. Noel to Assist in Educational Reconstruction of Europe

Mr. Noel, formerly Lt. Commander and Officer-in-charge of the Training Aids, Utilization and Evaluation Section, Bureau of Naval Personnel in Washington, has been released by the Navy to take over his new appointment as consultant on audio-visual education to cooperate with the Delegation to the Conference of Allied Ministers of Education in London. He will leave for London at an early date and will be associated with Dr. Grayson Kefauver, who was delegated about a year ago by the U. S. Department of State, to study the problems of rehabilitation in the occupied countries of Europe. Mr. Noel will be particularly concerned with the possibilities of the use of audio-visual aids in these devastated countries and will make available to them information on films as well as the experiences of our educational institutions in the use of audio-visual materials.

### Visual Meetings in Illinois

A series of five regional conferences on the utilization of audio-visual aids were conducted during the week of November 27-December 1 throughout Illinois, with the public schools in the following cities acting as hosts for their respective sections of the state: Bloomington, Rockford, Galesburg, Jacksonville, and Mount Vernon Township High School.

Speakers at the meetings included E. C. Waggoner, Director of Science and Visual Education, Elgin Public Schools; Alvin B. Roberts, Principal, Haw Creek Township High School, Gilson; S. E. Alkire, Superin-

tendent, Griggsville Public Schools; Neil F. Garvey, Visual Aids Service, University of Illinois; Walter M. Johnson, Director of Visual Aids, University High School, Urbana; H. E. Erickson, Radio Corporation of America, Chicago; Roger Zinn, The Jam Handy Organization, Detroit; Roger Albright, Teaching Film Custodians, New York.

### New Company Produces First 16mm Entertainment Film

A new enterprise, called Major 16mm Productions, Hollywood, has completed production of *Sundown Riders*, the first feature length entertainment picture made by and with professionals and offered for unrestricted exhibition, according to a recent announcement in *Motion Picture Herald*. The film was photographed in Kodachrome on standard amateur model 16mm camera equipment, by Alan Stensvold, and directed by Lambert Hillyer from a script by himself. Producers are Stensvold, William and H. V. George, Russell Wade and Jay Kirby. The latter two also have principal roles in the film. The sponsors state that the story, which resembles the Hopalong Cassidy Westerns, was prepared in collaboration with schools, churches and parent-teacher organizations.

The objective of this group, it is claimed, is to find out by positive test the extent and character of the 16mm market. The sponsors plan to produce three pictures as a trial. Mr. Stensvold, long experienced in the ad-film field, pointed out that there now is government approval for use of film and other materials in making straight entertainment films in 16mm, providing they mesh somehow with the war effort, inclusive of meshing by way of reducing juvenile delinquency. It is under this provision that Major 16mm Productions expects to be able to place in schools and churches an entertainment film for which admission can be charged successfully, the profits from the exhibition to finance the other filmic activities of churches or schools concerned.

### British Film Production

Thomas Baird, Director of the Film Division of the British Information Services, announces that J. R. Williams, Head of the Non-Theatrical Section of the Division, has returned to New York from a two-months' "refresher" visit to England, where he has been observing at first hand the effects of the war on film production in the Ministry of Information.

During the past year, loans on more than 150 pictures have been made by the Film Division to schools, churches, clubs and professional associations throughout the country.

Press reports from London on the opening of the new British Ministry of Information picture, *Western Approaches*, declare this to be "the greatest sea film ever made". It is the first feature documentary in Technicolor ever made by the British Government. Never before has anyone attempted to film the Atlantic in color. In production for nearly two years, it will be shown in the United States this month. The film relates the story of 24 men, survivors of a torpedoed merchantman, who spend 14 days in a lifeboat in the Atlantic, and is a fitting tribute to their courage.

# EDUCATION OR ENTERTAINMENT

# UNIVERSAL PICTURES COMPANY, INC.

Rockefeller Center New York, N. Y.

CIRCLE 7-7100

# Current Film News

■ **ENCYCLOPAEDIA BRITANNICA FILMS, INC.**, 20 North Wacker Drive, Chicago 6, have released the following new Erpi classroom films:

**Housing in America**—produced in collaboration with Harold Clark, Ph.D., Teachers College, Columbia University. In this reel, the "dream" of modern technology is contrasted with the inadequate houses in which most of us continue to live. The film creates an awareness of physical surroundings, their influence upon man and his ability to control them. Suggestions are given on how to make houses meet the standards for pleasant and healthful housing.

**Water Birds**—produced in collaboration with Arthur A. Allen, Ph.D., Cornell University. Authentic material on certain of our American birds is presented, depicting their physical characteristics, habits, environment, adaptivity and care of the young.

**Care of Pets**—produced in collaboration with Ernest P. Walker, National Zoological Park, Washington, D. C. This film dramatizes the proper care of various household pets—the canary, tropical fish, cat and dog. In delightful home scenes, pupils may see other children enjoying their little friends and providing for their needs.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, report the release in 16mm. sound of an important and timely film concerned with the rehabilitation of limbless war casualties, called:

**Back to Normal**—a 2-reel subject revealing the part played by modern science in the making and fitting of artificial limbs by means of which disabled persons are able to follow their old occupations or work at new trades which are taught them at Government Training Centres. Participating in the film are former patients of Roehampton, one of Britain's hospitals devoted to the treatment of limbless war casualties, as they are today, working, and enjoying their recreation and sports like other people.

A woman who lost a leg during the blitz tells about herself and is seen actively taking care of her home and family. Next comes a young couple dancing. The man lost both legs while serving in the Navy; the girl lost a leg in an air raid.

A postman seen hurrying along a country lane lost a leg in the last war and has been delivering letters for twenty years. A leather craftsman with two amputations below the knee, operates a heavy treadle machine all day. A child, who is seen at games with other children, lost a leg in the blitz when only eleven. Other cases are an electrician with a thigh amputation and a man who lost a leg who now drives a truck.

The film shows how disabled persons are taught to use these new limbs, and

how the joint on a modern artificial leg can be locked and set at various tensions, permitting its wearer to sit down and stand quite naturally.

It is a revealing film—detailed and explicit in the treatment of the subject; and lastly, it urges that, although the State accepts responsibility for these men and women, the final responsibility rests with the community to accept and to judge them, not by their disabilities, but by their abilities.

■ **CASTLE FILMS INC.** 30 Rockefeller Plaza, New York 20, announce that sixteen supervision training films produced by the U. S. Office of Education, may now be purchased from them, the contractual distributor of all USOE visual aids.

**Problems of Supervision**—title of this new series of 16mm. sound films—has been designed to aid in the training of foremen and other supervisors. Each picture takes up a problem of supervision, raises questions commonly faced by supervisors, and suggests practical ways of meeting the problem. The films do not give "final answers" but do suggest practical ways of meeting such problems and provoke thought and discussion.

Titles of the sixteen films are: "A New Supervisor Takes a Look at His Job," "Planning and Laying Out Work," "Maintaining Good Working Conditions," "Working with Other Supervisors," "Introducing the New Worker to His Job," "Instructing the Worker on the Job," "Placing the Right Man on the Job," "Supervising Workers on the Job," "Supervising Women Workers," "Maintaining Workers' Interest," "Every Minute Counts," "Improving the Job," "Main-

Taken from "Problems of Supervision"

taining Quality Standards," "Using Visual Aids in Teaching," "The Supervisor as a Leader" (2 parts).

There are no accompanying filmstrips in this series, but instructor's manuals may be obtained from the Division of Visual Aids, U. S. Office of Education, Washington 25, D. C.

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, have obtained the following short subjects for their Filmosound library:

**Living Flowers**—1 reel—a new nature-study sound film showing the life cycle of several types of butterflies.

**Masters of Sacred Music**—1 reel—presents some of the major contributions made to sacred music by Beethoven and Bruckner, and the scenes enriched by their lives. Selections include Beethoven's Fifth Symphony, Symphony Pastorale, Missa Solemnis, Symphony Eroica and Bruckner's Fourth Symphony.

■ **YOUNG AMERICA Magazine**, 32 E. 57th Street, New York 22, N. Y. through its new subsidiary unit, the Film Division, is engaged in the production of 16mm sound motion pictures for social studies classes. It is announced that the films are planned, written and produced solely for classroom use. The first two subjects in the series are now ready—

**Plastics**—the story of this important new industrial development.

**Food**—the history of its preservation. The films, about 15 minutes running time, and graded for 6th through 12th grades, are available for rental only, and are accompanied by a complete lesson outline, which is sent out one week before the showing date. This includes a film summary and discussion program.

■ **THE COORDINATOR OF INTER-AMERICAN AFFAIRS**, Motion Picture Division, 444 Madison Ave., New York 22, continues to furnish its depositories with prints of new films on South America. Among the most recent are four Julien Bryan productions, two from the U. S. Office of Strategic Services, and one Walt Disney travelog. They are, respectively:

**Atacama Desert**—showing life and industry, particularly mining, in the hot desert of northern Chile.

**High Plain**—story of the descendants of the Aymara tribe living on the Bolivia plain.

**La Paz**—a film journey through Bolivia's capital city.

**Lima Family**—a day in the lives of the members of an upper-class family.

**Belo Horizonte**—story of Brazil's "planned city with a plan," one of most modern cities in the world.

**Sao Paulo**—a study of progress in Brazil's second largest city.

**The Amazon Awakens**—a color film which tells the fascinating story of the Amazon River Basin, its history, industrial progress and possibilities for its future. Many of the sequences are done in true Disney animated form.

## "COURAGEOUS MR. PENN"

This new 16mm sound motion picture based on C. E. Vulliamy's biography of William Penn, is a stirring portrayal of the character and achievements of the great Founder.

William Penn and his times are brought to life with dramatic vividness as the film shows the fearless Quaker leader fighting for religious freedom and civil liberty in England during the reign of Charles II; the King's grant to him of land in America; Penn's first memorable crossing on the famous ship, "Welcome"; steps in organizing the new colony; his peaceful relations with the Indians; establishment of the

Commonwealth of Pennsylvania under Penn's governorship.

"COURAGEOUS MR. PENN" (9 reels) with Clifford Evans as Penn and Deborah Kerr as his loyal wife, highlights the life of a great man in American history. William Penn fought religious intolerance and devoted himself to the betterment of human society and to the establishment of those principles of Government which were later to become the foundation of our American democracy. The film is especially timely and valuable for that reason.

Scenes from "As You Like It"

■ THE U. S. COAST GUARD is distributing a dramatic two-reel motion picture, entitled:

**Serving the Merchant Marine**—summarizing the Coast Guard's many services to the nation's gigantic merchant fleet at sea and ashore. Filmed by Coast Guard combat photographers, the picture opens with scenes of a fleet of merchant ships laden with supplies, off the Normandy coast on D-Day and goes on to show how the Coast Guard protects these vessels. Spectacular high lights are scenes of cutters convoying ships, blasting enemy U-boats, and rescuing survivors of ill-fated freighters from the seas. How the Coast Guard establishes and maintains its 33,000 aids to navigation on U. S. rivers and lakes and off the seacoasts is another infor-

IN making AS YOU LIKE IT available in 16mm Commonwealth Pictures Corporation has made a notable contribution to motion pictures for school use. Shakespeare's gay, romantic comedy of make-believe in the Forest of Arden has been transferred to the screen with great skill and artistry. Direction, settings and acting are all of the finest. Two of the world's great artists appear in the leading roles—Elizabeth Bergner, who has played Rosalind hundreds of times on the stage, interprets the heroine with beguiling and delightful charm, and Laurence Olivier makes the romantic Orlando a modest and engaging hero. There was excellent choice, too in the selection of supporting players, all of whom render magnificently the poetry of Shakespeare's lines. Notable in this respect is Leon Quartermaine as Jacques, Henry Ainley as the banished Duke and Sophie Stewart as the devoted and loyal Celia also contribute splendid performances.

The literary quality and value of the film is such as should make it warmly welcome to the thousands of teachers of English in our schools and colleges. A study guide is available.

In addition to Commonwealth Pic-

orative portion of the film. The methods and contributions to the war effort of Port Security work, is also presented.

Prints of this film are being distributed through Coast Guard Public Relations Offices in each of the Naval Districts of the United States, Alaska, Honolulu and Puerto Rico.

**Normandy Invasion**—another Coast Guard 2-reel 16mm film—was released for use in conjunction with the Sixth War Loan Drive. It is an unforgettable record of the tremendous preparations and effort made by the invasion forces on D-Day. Gripping scenes of U. S. troops wading through a hail of machine gun fire from boats which have worked their way through mine fields and under water obstacles highlight the picture.

tures Corporation, 729 Seventh Avenue, New York 19, N. Y., the film is available for rental also through Ideal Pictures Corporation, 28 E. Eighth Street, Chicago and its several branch offices.

■ WALTER O. GUTLOHN, INC., 25 W. 45th St., New York 19, include three outstanding major productions among their recent theatrical releases, namely:

**The Falcon in Danger** (RKO) with Tom Conway and Jean Brooks. Thrills and mystery ensue when an airliner crashes and two passengers are kidnapped.

**Hit the Ice**—8 reels—in which Abbott and Costello are silewalk snapshot artists who become enmeshed accidentally in a bank robbery.

**The Lady Vanishes**—Alfred Hitchcock's famed thriller that takes place on a continental express train traveling through the Balkans.

### New Catalogs

Mr. H. A. Kapit, president of Walter O. Gutlohn, Inc., announces the release of a special catalog of their 16mm, motion pictures to be used as a teachers' guide in the selection of visual material for instructional purposes. This is the first catalog of its kind ever to be released by a commercial source. It marks a step forward in the facilities available to those interested in the selection of proper films for teaching purposes.

"This film catalog is comprised of three sections; the first contains films selected and evaluated by different curricular panels composed of education specialists in their particular fields under the supervision of the Advisory Committee on the Use of Motion Pictures in Education.

"The second section lists those films approved by one or more of the following: W. H. Wilson Educational Film Libraries, Association of School Film Libraries, Dr. Hollinger of Pittsburgh Schools and other representative groups and individual teachers, Teacher Committees of Indiana University.

"The third section contains recently released subjects together with other carefully selected films which have not as yet been previewed by any educational film evaluation committee, but which, in our opinion, will find a prominent place in the field of teaching."

The lists have been compiled by George J. Zehrung of the Gutlohn organization. Mr. Zehrung taught in New York City Schools, later becoming director of the Motion Picture Bureau of the YMCA.

Copies of this catalog may be obtained directly from Walter O. Gutlohn, Inc., 25 West 45th Street, New York 19, N. Y. or any of its branch offices.

United Nations Information Office, 610 Fifth Ave., New York 20, has compiled the second yearly issue of the United Nations Film Catalogue, listing 16mm.

(Concluded on page 43)

# "Why Didn't You Tell Me, In One-Syllable Words?"

wrote a teacher recently. She complained that our brief announcements and advertisements did not fully describe the value and usefulness of "1000 and One" to busy people. She also complained that they did not give her any idea about how easy it was to use it.

## So This Year's Edition Has A New

### FOREWORD

#### HOW TO USE 1000 AND ONE

**A** few minutes' careful study of the organization of this Directory will acquaint the user with the many kinds of information about the films which are described in its compact pages and reward him by aiding in the ease and speed with which this information is located.

The volume is arranged in five major divisions:

#### THE CLASSIFIED SUBJECT INDEX (pages 3-4)

should be consulted first in cases where the user is interested in finding reference to groups of films on a certain subject, but does not have specific film titles.

#### THE ALPHABETICAL INDEX TO FILMS (pages 111-134)

should be consulted first in cases where the user has the title of a specific film but wishes to locate further information about the size, length, producer, sources and content of the film. This Alphabetical Index refers to the pages where such data is available, and also indicates the films on which evaluations are available in EDUCATIONAL SCREEN Film Evaluation Service.

#### THE CLASSIFIED FILM LISTINGS (pages 11-110)

which constitute the main body of the book, contain the following information about each film:

**Title** of the film in bold type.

**Number of reels** in parenthesis after the title.

**Description** of the contents of the film.

**Information** about distributors.

Distributor of each film is shown by number or numbers, at right end of line, referring to Reference List of Producers and Distributors (pages 135-143)

Symbols before each distributor-number show form in which distributor supplies film: ● means 16mm sound; ⊕ means 16mm silent; ▲ means 35mm sound; △ means 35mm silent. Each symbol or symbols apply to the one or more distributor-numbers immediately following. Several symbols are often needed, as a Distributor may have a film in both sizes, and both sound and silent.

#### INDEX TO PRODUCERS AND DISTRIBUTORS (pages 135-143)

**Prices.** Inasmuch as "1000 and One" includes many distributors of a given film and as prices vary markedly with distributors, it is impossible to "price" each film in the body of the book. The price question is handled, therefore, at the end of each Distributor Note as well as the matter of negative ownership.

#### INDEX TO ADVERTISERS (on page 144)

The shortest index in the book, but one of the most significant. From these advertisers most of the films and equipment listed in the book may be secured. Without their cooperation in compiling information and their financial participation "1000 and One" could not be supplied for twice the cost of this edition.

**"1000 and One" Answers All Questions About Films**

CHICAGO 1**

## AMONG THE PRODUCERS

### Bertram Willoughby's Silver Anniversary

An outstanding figure in the field of non-theatrical film distribution is genial, smiling Bertram Willoughby, president of Ideal Pictures Corporation, Chicago, who this month celebrates his 25th year of continuous activity in this field.

Bert was born in Canada. His father and his paternal grandfather were both preachers, and Bert himself was educated for the ministry. After attending Union Christian College in Merom, Indiana, and McMaster University in Toronto, he entered Chicago Theological Seminary in 1909, delivered the Baccalaureate address to his Class at the 1912 Commencement,

Bert Willoughby

and began his first pastorate at the First Congregationalist Church in Wadena, Minnesota.

It was while serving as pastor of the First Congregationalist Church of Osage, Iowa, some six or seven years later, that Bert became interested in the use of motion pictures. His church had a seating capacity of 1200, but Sunday evening attendance was frequently all too slim. Always original in his ideas and thinking, Bert hit upon a correction for this situation by instituting what he called "The People's Pleasant Sunday Evening Service". He presented one or more Lyceum attractions—instrumental or vocal music—and preached a ten or fifteen-minute sermonette. Soon attendance taxed the capacity of the church. When he encountered difficulty in obtaining continuous Lyceum attractions, his thoughts turned to the motion picture as a means of maintaining attendance. A motion picture projector was purchased, and each Sunday night a motion picture of a religious or ethical nature was shown, around which Pastor Willoughby built a sermonette.

When the Monarch Film Company opened a production unit in Osage, Bert gave thought to the desirability of producing short subjects especially for

church use. The result was the completion of four such films within the next few months. They were called "Screen Sermonettes." The idea was to run them solely in his own church, where they proved highly successful—but before long requests for the films came from churches all over the country, and to handle these Bert established a rental library exclusively for church patronage. Sometime later, New Era Films of Chicago, then one of the very few film rental libraries of the country, arranged to handle the distribution of the Bertram Willoughby Screen Sermonettes, and as the result of this "deal", Bert came to Chicago as vice-president of the Company, and head of its Religious Film Department. When, late in 1920, a disastrous fire practically destroyed the concern, Bert organized his own distribution company called Pilgrim Photoplay Exchange, to specialize in religious films and stereopticon slides. Soon schools, clubs, state institutions, etc. were added to the church outlet for film rentals and slide sales, and business increased. In 1928 the company was incorporated under the new name of Ideal Pictures Corporation. It prospered under the increasing demand for service.

Then in 1928-29 came a period of important new developments in motion picture history which were greatly to affect the non-theatrical field. Heretofore all films were 35mm silent. Now sound films appeared in the theatres, and non-theatrical customers, too, began to want sound subjects—despite the fact that few, if any, portable 35mm, sound projectors were then available. It was also during this period that the 16mm. silent film was developed. It was a somewhat chaotic situation for the non-theatrical film distributor, but Ideal continued its circulation of 35mm. silent films, augmenting this library with 16mm. silent subjects.

In the 30's came an even more startling development—sound was put on 16mm. film and 16mm. sound projectors appeared on the market. Bert began to investigate every source of 16mm. sound films. In January 1935, Ideal Pictures Corporation launched into the rental of 16mm. sound films and the sales and rental of 16mm. sound projectors. Since that time the policy of Ideal has been to place in its library every good 16mm. sound subject which can be obtained. The result is well-known in the industry, and is revealed in the firm's Silver Anniversary Catalog recently issued, which shows the great extent and scope of subject matter now carried. Chicago headquarters of Ideal Pictures Corporation has quadrupled in size and there are now 11 branch offices.

Bert was active in organizing the Allied Non-Theatrical Film Association, was its first president and is now its honorary president. Affectionately called by many "The Dean of the Non-Theat-

rical Motion Picture Industry", Bert prides himself on the fact that "his competitors are his best friends", and he is never happier than when he can sit down with one of the younger men in the business to discuss trends and developments. When asked whether he intends to retire, his answer is a positive NO. Today, after 25 years in business, he is still in complete charge of purchasing and promotion for his entire organization, visits each branch office several times a year, and personally gets out his annual catalog. He is proud of those men and women who have helped build up his organization. Among these are Philip Malickson, Ed Stevens, Howard Smith, Elmer Willoughby, M. M. Rath, S. J. Sperberg, M. E. Harvey, G. Doran, H. A. Spanuth, his branch managers and newer men who have joined the organization more recently.

### John H. Skinner, Jr. On SVE Staff

The Society for Visual Education, Inc., Chicago, announces the appointment of John H. Skinner, Jr., to the post of Editor-in-Chief, in which position he will coordinate the editorial activities involved in the production of educational slide-films and sets of 2"x2" slides, and the manuals used with them.

Mr. Skinner has served for six years with the Agricultural Adjustment Administration and the Agricultural Extension Service as an editor and information specialist. During this period, which started early in 1934, he organized and directed a state-wide visual education program for the Delaware Agricultural

John H. Skinner, Jr.

Extension Service, which was widely used by both school-age and adult groups, and produced material to be used in the program.

Beginning in 1940, Mr. Skinner conducted an extensive survey of visual education work in the various state Agricultural Extension organizations and, at the same time, was a free-lance producer of both 16mm. motion pictures and 2"x2"

slides of an educational-promotional nature.

Entering the armed forces in 1942, he served for eighteen months with the Coast Artillery (Antiaircraft) in the Eastern Defense Command. Most of his service was in the S-3 section (Plans and Training) where he became well acquainted with Army training programs and methods, and in which position he directed for a time all such activities of his battalion. Upon being placed on Inactive Status early in 1944, Mr. Skinner became Visual Aids Coordinator at one of the Army training centers in the Eighth Service Command. He comes to SVE directly from that position.

Mr. Skinner was born and raised at Lafayette, Indiana, and educated at the University of North Carolina and Purdue University.

### Slide Films on Welding and Cutting

A complete and well integrated slide film training program on oxy-acetylene welding and cutting operations is now available to teachers in vocational schools. The Linde Air Products Company, a Unit of Union Carbide and Carbon Corporation, realizing the need for supplying both teacher and student with adequate instructional materials, has recently completed a series of how-to-do-it slide films together with supplementary literature covering the basic welding and cutting techniques that must be mastered. The lessons are arranged in series form and are presented as follows: a "Cutting" series consisting of eight lessons, a "Welding" series in ten lessons, a "Safety" series consisting of one lesson on the care and handling of equipment and a second on fire precautions.

Each lesson consists of a slide film, three instructor's supplements, and 25 student's lesson booklets. The student's booklets contain a written record of the step-by-step procedure shown in the film with additional supplementary information amplifying that contained in the films and a set of review questions so that each student may test his own progress.

The material may be secured at any office of The Linde Air Products Company at a nominal price. Linde representatives will aid in the selection of slide films and the planning and organization of individual training programs.

### Educational Groups Hear C. R. Crakes

Widespread demand for speakers experienced in using visual teaching aids in the classroom has prompted DeVry Corporation, Chicago, to continue its program of furnishing such speakers for the balance of the school year.

This special service was inaugurated late in the summer of 1944 under the direction of Charles R. Crakes, DeVry's educational consultant. Starting at the University of Texas Visual Education

Forum last August, Mr. Crakes has appeared before similar forums in a number of western and southern states. His most recent activities have been in Alabama, where he took part in visual aids conferences in Mobile, Montgomery, Birmingham and Tuscaloosa. Recently in Fargo, N. D., Mr. Crakes spoke before 1,800 state educators, while later he addressed 350 city superintendents and high school principals of South Dakota schools who were meeting at the state convention in Mitchell.

Mr. Crakes' tour will continue right up to the close of the school year in June. Arrangements can be made by addressing Mr. Crakes at DeVry Corporation, 1111 Armitage Ave., Chicago 14. There is neither cost nor obligation involved.

### Current Film News

(Concluded from page 40)

and 35mm. motion picture films on the United Nations with sources from which they can be secured. It presents films on Australia, Belgium, Canada, China, Czechoslovakia, Denmark, France, Great Britain, Greece, India, Latin America, Luxembourg, Netherlands, New Zealand, Norway, Philippines, Poland, Union of South Africa, United States, and U. S. S. R.

As stated in the Foreword the films listed in this catalogue may be of service in two ways. First, they will help to give a clearer picture of each of the United Nations, its countryside and cities, its people and their way of life, and its war effort; as a result, the tasks of the peace will be made easier. Second they stress problems which the nations will have to face collectively and individually at the war's end, and the importance of United Nations cooperation now and above all in the future.

The films will be loaned, in most instances, free of charge, upon application to the film officers listed in the catalogue, which is distributed free on request to the United Nations Information Office.

◆ ◆

The Princeton Film Center, Princeton New Jersey has just issued its 1945 Film catalog, listing a wide variety of educational and special-purpose films. Attractively bound and carefully arranged to permit quick, easy selection of titles, the films listed in the catalog cover virtually every type of subject, including teaching aids, cultural and technical releases and entertainment films.

In the Educational section, films designed especially for classroom use are available for teaching aids in history, geography, chemistry, physics and social studies, as well as health, safety and other general topics. Specially chosen sponsored subjects, selected for their educational value, are included in the catalog. Each subject is fully described on a separate, colored illustrated page, and arranged so these descriptive pages can be used for classroom discussion of the subject.

In the entertainment field Princeton's catalog includes many full-length features, as well as travel, sports, comedies and folk-lore "shorts". Copies of the catalog may be obtained without charge from The Princeton Film Center.

### Government Accepts Optical Training Films

Over a year in the making, a series of six visual aid units on optical craftsmanship produced for the United States Office of Education by the Bell & Howell Company, has just been formally accepted in Washington. Each unit comprises a sound film, a silent filmstrip and a 16-page illustrated instruction manual.

The series was produced in collaboration with the U. S. Navy, which has under way a similar group of eight films dealing with the grinding and polishing of flat surfaces. The Bell & Howell series is confined to spherical surfaces, and was produced at the company's new Lincolnwood optical plant. William F. Kruse, head of the Bell & Howell Films Division, wrote and directed the entire series.

The formal preview was held in the screening room of the Office of War Information, with Navy, State, Agriculture and other government departments represented. British, Russian and Chinese government representatives have expressed interest in getting prints for their own optical industries.

These films form part of the nearly 500 war training films produced by the USOE under the direction of Floyd Brooker. They are used daily in a large scale craftsmanship training program at the Bell & Howell plant. This series, like all the USOE and Army-Navy production films, can be rented and purchased through the Bell & Howell Film-sound Library, with rental charges credited against purchase price of films bought within 30 days of original rental use.

### BEG YOUR PARDON!

THIS is the current model of the Bell & Howell Film-sound. Over a caption identifying it as a current model we inadvertently carried on page 432 of our December issue an illustration of a much earlier Film-sound projector.

# Plan Now to Use RCA Teaching Aids

WITH RCA ELECTRON TUBES

**Victor Records and RCA Victrolas** bring authentic audio instruction into the classroom. Thousands of records are available to help teach music, speech, languages, drama, history and literature. The RCA Victrola combines quality performance and ease of operation.

**16 MM Projectors** bring sound movies into the school to familiarize the student with the appearance and sound of persons and places, to illustrate how things work. The RCA Projector for schools is simple to use. It includes many important advances in projector design.

THE FOUNTAIN-HEAD

OF MODERN TUBE DEVELOPMENT

IS RCA

**FM Transmitters and Receivers** by RCA provide the finest in FM equipment for every broadcast need—for better reception and for FM demonstration in the school.

**School Sound Systems** by RCA provide instantaneous links between all administrative and teaching departments for broadcasting instructions, entertainment, signals and announcements.

**Other RCA Teaching Aids** RCA Test and Laboratory Equipment provides a way in which students can understand more quickly and thoroughly the fundamentals of electronics as they are applied in radio, television and other fields.

**FREE BOOKLET:** giving detailed information on this important teaching tool, "School Sound Systems in Elementary, Junior and Senior High Schools."

—And why *shouldn't* the builders of the *first portable* motion picture projector build the simplest—the easiest to operate—the *finest* mechanism that science and skill might evolve?

Your DEVRY is unique among 16mm. projectors, in that it was *designed and built for sixteen millimeter sound-on-film* projection.

It is *not* a silent projector—with "something added." It is a sound-on-film projector that projects both sound and silent films *safely*. Its sound system—equipped with jacks for microphone or turntable hook-up—provides a separate public address system, for use indoors or out.

DEVRY is unique among 16mm. motion picture *sound* projectors in that it is built to *professional standards* by an organization that **BUILDS** 35mm. theater projectors.

Streamlined in design—DEVRY's light-metal construction affords minimum weight with maximum strength and long-life performance.

# Remember These Facts

## *... When You Consider Your Post-War Projector for 16 mm. Silent Films*

After the war—the vast libraries of 16 mm. silent film will continue to play an important role in visual education. These silent motion pictures, with the option of accompanying lectures or discussions by the teacher, still possess unique advantages that assure their continued use. That means new 16 mm. silent projectors will be needed when peace-time production is resumed.

In selecting your post-war 16 mm. silent projectors, you should bear these important facts in mind:

Prior to the war, Ampro 16 mm. projectors were recognized as approved equipment in thousands of school systems, universities and government agencies all over the world. They offered new standards of dependability, brilliance of illumination and ease of operation plus—  
*portability . . . simplified easy threading . . . triple claw movement that protects film . . . automatic safety shutter . . . still picture button . . . fast and direct threading rewind . . . centralized controls . . . pilot light . . . standard lamps obtainable everywhere . . . framcr . . . centralized lubrication . . . and many other features.*

The rugged dependability and other important features that have made Ampro so popular with schools have also been recognized by all branches of the U. S. Army and Navy. As a result, now practically 100% of Ampro output goes to our armed forces and no 16mm. silent projectors will be available until after the war.

An unusually interesting and informative story entitled "What Will Happen in the Movies the Day War is Over . . ." is being distributed in attractive booklet form by the Ampro Corporation. Write today for your FREE copy.

# AMPRO

# KEYSTONE *Overhead Projector*

## "Now we use lantern Slides in the Classroom"

So writes a teacher who has recently been provided with a Keystone Overhead Projector. Like many other teachers she is enthusiastic over these advantages:

The lantern and the teacher are together at front of the room **before the class.**

The slide is right side up on the projector's open slide table, clearly visible to the teacher in all details.

She can point out items of reference on the slide, with the corresponding shadow

of the pointer appearing on the screen. Likewise writing or drawing on etched glass will reproduce on the screen.

The projector is ideal for tachistoscopic work when combined with the Flashmeter.

It is air-cooled and provided with heat-absorbing glass so that lamps of 500-watt, 750-watt or 1000-watt may be used.

It is easily adapted to the projection of 2"x2" slides.

# Beseler PROJECTORS-

## Model OA2

Of all the BESELER projectors designed for both opaque and transparent projection, the OA2 is one of the most popular models. Some of its outstanding features are:

- More screen illumination in opaque and transparent projection.
- Self-contained elevating legs.
- Accessible doors for easy servicing.
- Modern in design.
- Readily convertible from opaque paper to standard lantern slide projector.
- Special film attachment accommodates single and double-width film and 2 x 2" Kodachrome slides.
- Totally enclosed air cooler.
- Two carrying handles.

*Model OA2 is available for immediate delivery*

*have been pioneers in*  
**VISUAL EDUCATION**  
**FOR MORE THAN 75 YEARS**

Since 1869, the name of BESELER has stood for projectors of unexcelled performance. Ever since the days of the "magic lantern" with its three-wick kerosene lamp, BESELER projectors have blazed the trail of progressive visual education. Thousands of BESELER projectors have been used to instruct our armed forces in both World Wars.

Modern visual education in our public schools today has made exhaustive and taxing demands on projectors. In order to meet these demands, BESELER offers an unusually wide range of projectors and equipment, so varied as to meet any school requirements.

When your school or school system requires projectors, BESELER will be happy to make suggestions and submit bids without obligation.

LET OUR ENGINEERING DEPARTMENT SOLVE YOUR INDIVIDUAL PROJECTOR PROBLEMS

*The Filmosound Library film Indian Life Today includes this scene in a sequence showing how American Indians bake their bread.*

## World Tours for Geography Pupils... RIGHT IN THE CLASSROOM!

Yes, without leaving their classrooms, your geography students can visit almost any country in the world . . . get vivid, *correct* concepts of physical aspects, of natural resources, and of people and their ways of life . . . gain keen desires to learn more.

How? By means of films selected from hundreds of geographical subjects offered by the Bell & Howell Filmosound Library.

For teaching other subjects, too, Filmosound Library offers a wealth of helpful films at moderate rental or purchase prices.

And remember, a Filmosound Projector will reproduce any 16mm. sound-on-film subject at its best. Our war-accelerated research in Opti-onics is resulting in Filmosounds even better than before. Better in picture quality and in sound quality; better in cooler, more quiet operation and in simplified controls.

---

### *The Final Battles*

THE war is not yet won. Its outcome has been decided—our enemies cannot win—but the final battles are still to be fought. The end of the war will probably be as costly as the beginning, in money, in effort, and in lives.

These sober thoughts should temper any false optimism inspired by the day-to-day headline reports of new Allied gains. At the end of the current fiscal year—June 1945—the war will have cost the United States alone approximately four hundred billion dollars. These enormous expenditures and appropriations will not be terminated by the end of hostilities. When that happy day arrives there will be conquered nations that must be policed, millions of troops overseas which must be maintained and returned, a hungry and desolate world which must be fed and rebuilt. Nor will these be all of the unusual problems growing out of this war. Germany, ostensibly vanquished in the last war, continued to fan the ugly embers of aggression into the present serious threat against the rest of the world. Will the last battle of the present war be won until the fires of ignorance, intolerance, and oppression have been completely extinguished?

This is as good a time as any to face the Treasury Department estimates that even if the war ends in the summer of 1945, it will still be necessary to raise approximately forty billion dollars in 1945 for further war financing. Plans for a Seventh War Loan are already under way. A group of approximately fifty people was invited to Washington by the Treasury Department the last week in January to plan the part that 16mm. films and visual education should play in this new war financing operation. Theodore R. Gamble, the Treasury Department official who had personally directed the stupendous task of raising so many billions of dollars for the war effort, applauded the significant contribution that 16mm. films made to the successful completion of the Sixth War Loan. 86,913 showings of the special 16mm. army and navy films made for the Sixth War Loan to audiences totalling twenty-five and a half million people exceeded even the most optimistic estimates, and the Treasury Department attributes to these showings a share of the credit for the oversubscription of the Sixth War Loan, particularly the significant increase in "E" bond sales. Since most of the surplus funds in the Seventh and successive War Loan Drives are concentrated in the group of purchasers most easily reached by movies—industrial workers in war industries and other organized groups

—it becomes apparent why increased emphasis will be given to 16mm. plans.

Once again those interested in visual education are faced with a real challenge and a real opportunity. The public is now fully aware of the role of visual aids in the enormous task of training the army and navy for combat. It is also vaguely aware of the role which combat photography—such as that in the Coast Guard story on Pages 65 to 68 of this issue—assumes in the successful prosecution of the war. The Seventh War Loan Drive affords another opportunity to make an additional contribution to the successful financing of the war effort. The organization, films, schedule, and specific assignments will be announced later. The importance of the task is emphasized here in order that all may be ready when the call comes. Every projector, every operator, every hall, every volunteer worker will be needed when that time comes.

Fulfilling our responsibility in the Seventh War Loan will be the best means of meriting our share of the serious responsibility in the period that will follow the cessation of hostilities. Is there any reason why the democratic heritage which is so worth fighting for is not also worth living for? Is there any reason why there should not be the same unity of national effort in winning the peace as there has been in winning the war? As visual educators we believe that the answer to both questions is, "No", and that visual aids will play an increasingly important role in public re-education along these lines, in this country and abroad.

While this is not the time nor the place to outline the specific contributions which visual aids will make to the inevitable problems that will follow in the wake of the war, this issue of EDUCATIONAL SCREEN does present sidelights on a number of different aspects of these postwar problems. Attention is called particularly to the following:

"Motion Pictures for Adult Education", page 56

"A B C's for G I Joe", page 58

"The Film and International Understanding", page 63

These articles represent several approaches which visual education is making and can make toward the successful outcome of the battles against intolerance, illiteracy, and ignorance. In fact, from our present point of view these struggles will really be the final great battles of the war.

D. P. B.

# Motion Pictures and Adult Education

*A vigorous discussion of why and how the future of adult education should be greater than its past.*

JAMES S. KINDER, Director, PCW Film Service  
Pennsylvania College for Women, Pittsburgh, Pennsylvania

**E**DUCATION is a process of continuous growth and development, and, for adults, we imply the use of non-formal or popularized methods which may be applied to the vast unorganized group of people, who, usually at least, have had limited opportunities for formal study.

The methods and the content employed in providing for the stimulation and growth of this adult group are those associated with the public library, museum, art gallery, platform, forum, roundtable, radio, and motion picture. The setting for this instruction centers in the school, church, lodge, union, recreation center, community house, or club. Schedules are usually irregular. They are arranged so that they do not interfere with the hours customarily devoted to one's vocation. Compulsions are almost entirely lacking. The will to learn must generate the activation.

How different is the setting for formal education! Society has decreed a matrix of explicit time-place-content-method-compulsion. Furthermore, it seems that society has fashioned a pattern whereby those in formal education and those in adult education must not intermingle nor know the ways of the other.

By and large, our schools seem to be great castles built by society at the edge of town away from the pathways of the adult. These castles are surrounded by high walls and a wide moat. Each morning at nine o'clock from Monday to Friday, from September to June, the gates of the walls are opened, the drawbridge lowered, and the children enter the castles. They stay all day studying great truths which appear to have little or no relation to what is going on outside the ivory towers of the lovely castles. At four o'clock in the afternoon the gates open again, the bridge is lowered, and the children and teachers file out and return to their homes. The castles are closed up tightly until next morning. Saturday, Sunday, and every night find the castles with their classrooms, laboratories, workshops, gymnasiums, swimming pools, and multitudinous equipment locked up solidly. Only on rare occasions, one in particular called "Commencement Evening," do the adults ever set foot in the castles.

In the formal educational program, motion pictures have proved their worth. This point is not open to argument, yet there are many teachers and administrators who simply can't grasp the tremendous educational potential the motion picture has placed in their hands. It must be admitted that in many schools motion pictures are still being misused. Often they serve only as a hors d'oeuvre. All too few use them as true entrees or main courses, and to some they are only garnishes or tasty sauces, or perhaps they are the

sweets of dessert served in the auditorium. There are still schools which limit their motion picture consumption to a reward for the rooms with good conduct records.

By far the larger percentage, in fact nearly all, of the educational experiments involving motion pictures have been made with children. Experiments with adult learning outside the walls of the college or university can be counted on the fingers of the two hands. The need for some worthwhile comprehensive experimentation involving after-school learning is urgent.

Knowledge at hand indicates that the motion picture is an illustrated prospectus of new horizons for those adults whose minds and imaginations have been limited and circumscribed in their development. Favorite topics for continuous learning are travel, literature, history, economics, politics, and social problems. Every one of these topics is a fruitful field for visual presentation, and this method eliminates in large measure the labor and time involved in library study for people who have little time for study, people who are only occasional readers, and who read too slowly and poorly to do more than haphazard reading. George Bernard Shaw hit the nail pretty well on the head when he said, "The number of people who can read is small, the number who can read to any purpose much smaller, and the number of those who are too tired after a hard day's work to read—enormous. But all except the blind and deaf can see and hear." The continuous education of these people is pretty much limited to the radio, motion picture, pictorial magazine, fiction, and an occasional lecture. The possibilities of the film and the radio are tremendous.

Today, everyone is interested in the post-war life. Here is a topic as real as life itself. Adult groups, organized and unorganized, everywhere, are literally crying for information. Good material is scarce and piecemeal, yet splendid motion picture material is available, and more will be produced. This material needs to be synchronized with other educational media into a stimulating mosaic. The need is for implementation and leadership.

Several years ago the Motion Picture Producers and Distributors of America opened up some of their theatrical short subjects for educational exhibition. Panels of educators viewed these short subjects and selected those most useful for educational purposes. The chairmen of the general committee charged with the responsibility of selecting these educational pictures was Dr. Mark A. May. In December, 1937, Dr. May listed these criteria for the evaluation committee to use in judging the "expected educational effects" of

a film. The criteria are listed as five questions:

1.—What noteworthy facts, ideas or conceptions would one expect pupils to get from this film?

2.—What interests and appreciations would one expect this film to develop?

3.—What attitudes and sensitivities would one expect this film to develop?

4.—What skills would one expect this film effectively to promote?

5.—What further educational activity on the part of pupils would one expect this film to stimulate?

In making adult applications we would probably want to re-phrase, modify, and extend these criteria. The writer suggests that adult education films should function in various areas as follows:

1.—Provide facts, data, and skills about one's vocation. Such films as those produced by the U. S. Office of Education and the U. S. Department of Agriculture are good examples of films suitable for adults.

2.—Provide interests and appreciations. All sorts of films—documentary, theatrical, and educational, can, and actually do, serve in this area.

3.—Help adults interpret their own world to themselves. This is a big area and includes health, politics, economics, industry, labor, etc.

4.—Remove the barricades of provinciality of the mind, affecting ideas of geography, race, sex, vocation, social mores, politics, tolerance, and the dignity of useful work. In this area there are numerous fine examples, notably those films now being produced by the National Canadian Film Board, the British Ministry of Information, and especially those of the Office of the Coordinator of Inter-American Affairs. Julian Bryan in an address in Pittsburgh on Pan-American Day, 1944, made the statement that you can't like, at least with enthusiasm, someone you have never known. How can Americans—children or adults—wax enthusiastic about the people of Ecuador, Peru, or Guatemala, if they have never known or even seen one of them? The film more than any other instructional medium scores a bull's eye on this criterion.

5.—Sensitize adults to the insidiousness of propaganda. Again the film is one of the best vehicles for the isolation and study of propaganda. It may serve both as method and content.

6.—Summarize accumulated knowledge and research. So much is known today, but its dissemination is slow. Brief items appear in the press concerning inventions, discoveries, surveys, and studies, but it is years before the public learns anything more about them. Every adult is interested in these things and wants to know more about them, yet he is limited to a few verbalizations over the radio or in his newspaper. Knowledge is growing fast about sulfa drugs, penicillin, plastic surgery, plastics, trade unions, vitamins, etc. Five or six years ago the Brookings Institute spent thousands of dollars on a study of labor and industry. The best scholars in all the United States assisted. The results were printed in a half dozen big thick tomes. Who reads them? Why couldn't the studies be summarized through motion pictures and made available for serious adult study? They could be made palatable, yet tell

the story of the findings and conclusions of this mass of scientific research.

The above six areas are not necessarily definitive, rather they are illustrative of the needs of Mr. Average Man. The solid artifacts of learning can be presented in all these areas, and in terms which can be understood. Even now you can think of particular films which are splendid examples of each area. Do you blame the visual educationalist for condemning the use of motion pictures for club meetings as a tasty morsel to get out a crowd, when highly informative film material might be channeled into the very heart of the program?

Someone has said that recreational motion pictures are so banal that the movie-goer must check his intelligence at the door. Although this is still true of many pictures, there are others which carry an intellectual and cultural challenge. Hollywood is now making pictures of such current best-selling novels as *Valley of Decision*, *A Tree Grows in Brooklyn*, *The Song of Bernadette*, *Burma Surgeon*, *A Bell for Adano*, and *The Robe*. The content of these novels is challenging and the motion pictures will be equally so. They will be seen by more people than the thousands who read the books. The attitude of a great many people is pretty well summarized by the cartoon of two girls—one asks, "Have you read this book, *Hamlet*?" The other replies, "No, if its any good, it will soon be in the movies. I'll wait." At the N. E. A. Convention in 1931, ex-Governor Carl Milliken stated, "For every man or woman who reads a good book a week, a hundred go to the motion picture theater. For everyone who goes to a concert or an opera, ten thousand go to the movies. For everyone who has access to good paintings and good sculpture, probably 100,000 go to the movies." More recently Mortimer J. Adler stated the case in this way. "The arts, enriching the imagination and providing vicarious experience which can be directly appreciated, are almost indispensable in social education, both for children in schools and for the adult population. Of the arts, those of fiction serve best because of what they represent; their proper object of imitation is all of human life. Of the arts of fiction, the movies are at once the most popular and the most vivid representation of contemporary society. Their vividness makes them exceptionally useful as an educational instrument."

Adult education, as far as numbers enrolled are concerned, fluctuates widely from year to year. According to figures released recently by three major cities, the number of adults enrolled in evening classes offered by the public schools shows a considerable dropping off. Reasons for this decrease are legion. No figures exist to show how many motion pictures were used in these adult courses. Probably not many. From 1941 to 1944, the Federal Government sponsored the Engineering, Science, Management, War Training courses all over the country. Hundreds of thousands of adults, chiefly men and women who were gainfully employed, enrolled in these courses. Some centers made exten-

(Concluded on page 62)

# ABC's for GI Joe

PVT. ROBERT E. WAGGONER

Waco Army Air Field, Waco, Texas

IT was not difficult for Kelly to explain why he could neither read nor write. "When I was seven years old," said Kelly, "Pa said I had to start school. The first morning I milked the cows and did the chores and got ready to go. Then I found it was too late. School had started for the morning. After that Pa just forgot about me going and so did I."

The beginnings of lifelong illiteracy are often as elementary as that. But illiteracy as a national problem is not so simple. For years we have congratulated ourselves on our American educational system. We are justly proud of our modern high school and its conveniences, dramatic facilities, spacious gymnasiums, cafeterias and the like. Yet we've overlooked one weakness. We have lost sight of the many potential students our schools never reach. Kelly, of the Louisiana strawberry farm, was one boy the school never saw, and there are many like him. In fact the World Almanac of 1944 estimates that in 1930 there were eight and a half million people over ten years old who were illiterate. For a country considered to be an educational leader, that is a startling record. Eight and a half million illiterate men and women are a formidable indictment of our vaunted school system.

This problem, moreover, aggravates itself. The number of illiterate people may multiply unchecked, because so few of the literate majority are aware that the problem exists. Most American parents, who were well educated themselves and whose children receive the benefits of our modern system, are complacently unaware that thousands of their fellow-countrymen, of all ages, have never seen the inside of any "little red school house". On the other hand, the parents whose children are unschooled are generally indifferent toward the problem for, in most cases, they themselves received too little formal education to know its worth. Certainly the American people as a whole would not, for a moment, encourage or condone illiteracy. Have we not dotted our country with schools, to make education free and accessible to all, even to dwellers in the remote nooks and corners of the land? The schools are there but there are eight and a half million people who stay away! The great challenge of illiteracy, therefore, is to acquaint America with the existence of the problem. We must convince America of the need of educating this unnoticed minority.

Almost inadvertently we have already started that program along two lines. The first awareness of the problem arose with the National Selective Service Act that provided a mass physical and mental classification of millions of American men. Draft board members were amazed to find that there were men in their own communities who could not complete their

*A close-up of the Army's cure for illiteracy and its implications for adult education after the war.*

first questionnaires because they could neither read the questions nor write their names. These boards at least were made cognizant of the fact that this condition existed in their own town, among their own people.

A second and more vital consciousness of the problem arose within the Army itself. Draft boards throughout the country were required to furnish a certain number of men to be inducted into the Army. Quotas often were hard to fill. Consequently, there was a natural tendency to draft those men, who, although they could neither read nor write, were physically qualified. One of the first jobs for all inductees is to take the Army General Classification Test, designed to estimate a man's intelligence. It's not difficult to explain, therefore, the Army officials' surprise at the number of men at all reception centers who could not even start this Classification Test because they could not comprehend the written instructions nor even write their name on the front page of the test booklet.

The Army, thus made sharply aware of the illiteracy problem in the country and knowing that in general such men were useless to them, though many met the most rigid physical standards, still recognized that there are some Army jobs that require only the most elementary educational qualification. With such jobs in mind, the Army high officials decided that instead of sending these men back home, they would give them the fundamentals of an education. They believed that with a few concentrated weeks of "G. I. Schooling", these men would be trained and made capable of handling simple Army jobs. In so doing, they fired the first shot in the educational war against illiteracy.

After selecting Army personnel with adequate educational and teaching experience, they established schools at basic training centers called Special Training Units. Since my work was in the S. T. U. at Shepard Field, Wichita, Texas, all comments here will be related to that unit, although there were several of them in operation.

The fundamental objective of these Army schools was not the maximum of education which could be given these men. The training was concentrated into nine or twelve weeks, was aimed at a fourth grade level, and, naturally enough, the curriculum was colored by the Army's purpose. The men learned many words applicable solely to Army life: barracks, "dogtags", Army serial number, pay roll, etc. But the paramount result of the program was this: these men, many of them over thirty years old, began to feel a certain pride in the fact that they themselves were learning. Men who for thirty-five years had been completely indifferent toward any and all forms of education now beamed like children when they could write their first letter home. I vividly recall one of my students

who tolerantly listened to my first day's explanation of the worth of education. Then, when I had concluded, he declared, "My old man never went to school. I never did. My kid won't either. It hain't worth it." Several weeks later this man worked for three nights writing his first letter to his Mississippi home. When he showed it to me, I was pleased to find it was written to his fourteen year old son, warning him that he had better start school immediately, or the consequences would follow in the wood-shed. In the post war battle against illiteracy, these men, taught for a few weeks by the Army, will be missionaries of education. They've learned the worth of learning, the difficult way.

Solving the problem of illiteracy in the United States should become a priority position on our list of post war jobs. A growing number of people are now aware of the condition that exists. The federal government has recognized the situation, that thousands of illiterate men are themselves experiencing a new longing for education. If this is so, then the important question the readers of EDUCATIONAL SCREEN will ask is this: What part will visual aids play in answering the challenge to our modern school system?

One of the most important educational developments during the last twenty years has been the use of visual aids in teaching. The educational motion picture has been developed almost completely within that time; the use of slides, maps, charts, and still-pictures has been long since organized and correlated with the curriculum for its greater effectiveness in schools. Yet, the contribution that visual aids may make in teaching illiterate people can prove as important as any service it has rendered in the past.

The potency of visual material for this purpose arises from the peculiar problem that these illiterate men present. It is no easy job to convince a man who has raised children and supported a family for fifteen years that he should learn his alphabet. Obviously, the same technique that is successful with six year old children will not apply to a man that farms 160 acres. Yet the same material must be given to both students. It is here that the inherent, attention-holding qualities of visual material can be invaluable. These minds, undisciplined, untrained for 30 or 35 years, need something graphic, something particularly arresting, on which to focus their attention. I know of no substitute for the proper visual material.

By far the greatest problem in teaching these men is the problem of motivation. Obviously, the men have never been convinced of the need of education or they would have secured it for themselves. It is just as obvious that these men must be made to realize that need before any learning can be accomplished. The most difficult job of S. T. U. teaching was the task of motivating the original interest in learning. It was a most laborious job, yet most fundamental.

The task of achieving the motivation rests upon the individual teacher. The success of every class is directly proportionate to the ability of the teacher to interest the men in learning. I have worked with a number of men who were competent instructors when the class was cooperative, but who had trouble in convincing the men at the start that education was neces-

sary. Such classes could have been successful but they were usually failures, because the students had no desire to learn.

#### A Special Educational Film Is Needed

Educational motion picture leaders of the country might well consider that initial obstacle. Certainly an expertly produced film, vividly portraying the advantages and necessities of such an education, would not be difficult to make. Such a motion picture could help infinitely in motivating these men to begin trying to learn. An illiterate man can be taught these fundamentals, providing he has a compelling desire to learn. A competent motion picture possesses the inherent power to accomplish that end as no other medium can. In the field of illiterate education, such a film would immediately prove its worth. It would supply the essential initial impulse toward bettering life for thousands of men.

The ordinary technique used in teaching primary students five or six years old entails no association factors. Generally speaking, children learn the alphabet, learn simple sentences and words quite unquestioningly. The job is not so simple with thirty or forty-year-old men. The instructors of the Special Training Unit at Sheppard Field found that one excellent method of teaching primary material to mature men was to relate the things they were actually learning to the things they wanted to learn. No man who has supported a family for twenty years is eager to learn that E follows D. He wants to read the newspaper, to write letters home. For that reason, a large part of the curriculum was devoted to the study of current events, and to the simple vocabulary of daily life. During the class hour the men learned where the United States was on the map, saw the position of Stalingrad and Moscow, discovered the significance of towns and countries that previously had been hazy, jumbled words they heard over their radios. Within two weeks, these men could spell Russia and China because they had seen them on our map. One of my students learned to spell Pantelleria before I did.

Obviously, visual aids were essential in this exercise. Current events move too rapidly for effective motion pictures to be developed. There are no substitutes for slides, maps, charts and graphic pictures. The Army prints a weekly news summary including a large map demonstrating the changes of the past week, called the Army News Map. We made great use of that weekly map. I understand other Special Training Units mimeographed the weekly maps they used for demonstrations. The origin of these helps makes little difference. The important fact is that learning through association of mental images is greatly facilitated by the planned use of appropriate visual material.

There is one more phenomenon to be mentioned that I am not certain I can explain. Perhaps it is because all Americans, regardless of educational achievements, manage to acquire a deep love of their country. Whatever the explanation, this fact was consistently noticed. The men were greatly interested in history. I have seen men listen in almost child-like

(Concluded on page 62)

# A Museum Inaugurates a "Visual Aids Institute"

ON January 5th and 6th, 1945, the Department of Education of the American Museum of Natural History held a Visual Aids Institute. For many years this museum has been a pioneer in the field of visual instruction, both through the exhibits in the museum halls and by means of exhibits, films and slides lent to the schools for classroom use. It was felt that the time had arrived to pioneer in still another direction, and so the Visual Aids Institute was planned.

The purpose of the Institute was to provide an opportunity for teachers of both elementary and secondary levels to examine available materials for present and post-war utilization, and to discuss with those who have used them possibilities for further enrichment of curricula.

At so many meetings devoted to visual instruction the motion picture has been practically the only type of visual aid presented. At the Museum Institute the program was planned and arranged expressly to bring out the place and value of all types of visual aids and their interrelationships in teaching situations. With this aim always in mind the Institute was divided into three broad sections: (1) A demonstration-exhibit of available visual materials; (2) Showings of new films; (3) Panel programs featuring noted speakers in the various fields of visual instruction.

The first feature, the demonstration-exhibit, was open to teachers for two hours on Friday and seven hours on Saturday. In the large exhibit hall at the museum, representative exhibits were displayed by forty-nine exhibitors. These included materials from the museums of the New York metropolitan area including Newark and Trenton, New Jersey, and from the commercial agencies of the same area. It was the first time that exhibits from all of these sources had been brought together in one place for teachers to examine and study.

The second section, showing of new films, afforded preview of four new teaching films, *Care of Pets* (Erpi-Encyclopaedia Britannica), *India* (March of Time Forum edition), *Charm and Costume* (Harmon Foundation) and *Balkans, Powder-Keg* (World in Action). That Friday evening the Museum was most fortunate in being able to present a preview of the new Walt Disney feature film *The Three Caballeros*. This of course was of special interest and attracted a large audience of teachers, supervisors, principals and workers in the visual field. *The Three Caballeros* combines live-action characters and animated cartoon characters, and everyone attending was intensely interested in seeing this new technique and the astounding color effects achieved by Disney.

The third section, on Saturday, comprised two panel programs, an informal buffet luncheon at 1 p. m., and a general session. At the panel programs, speakers gave short presentations on the fruitage of their ex-

DR. IRENE F. CYPHER, Supervisor of Guest Services,  
DR. GRACE F. RAMSEY, Curator of School Relations,  
The American Museum of Natural History

periences in using the various forms of visual aids. In one panel the discussions were devoted to the use of visual aids in the science subjects, in the other to the same materials for the cultural subjects. In each panel the visual materials discussed were the same, namely, motion pictures, slides, flat pictures, dioramas, realia and exhibits. Student reactions to the use of visual aids constituted an additional feature of special interest.

The informal buffet luncheon period gave everyone an opportunity of meeting and talking together about old times and mutual problems of the present. The speakers at the afternoon session presented topics which were of general interest to all, such as the newest methods for photographing heat and air, presented by Norman F. Barnes.

One of the most appreciated outcomes of this Institute was the bringing together of educators who are working in all subject fields at both elementary and secondary levels. It was the consensus of opinion that visual aids to be most effective must be used at the appropriate times in a classroom project; that they must be carefully selected, with a wise integration of all forms, if the subject under consideration is to become a part of the pupils' experience in life. No one visual aid, used alone, will accomplish this purpose, but a combination of several forms will be most likely to achieve the desired ends.

The interest evinced in this institute by those in attendance and the many requests received for a repetition would seem to indicate the value of holding an annual institute of this type. The Museum will announce definite plans in a later issue of this magazine.

## DIGEST OF PANEL PROGRAMS

### Motion Pictures

Miss Rita Hochheimer stressed the fact that in the last analysis the selection of classroom films must be done by the classroom teacher. It is the classroom teacher who knows what will best meet the problems arising in the presentation of teaching units. A good film, properly used, will not only result in the acquisition of knowledge, but also in a change of attitude. The hope is that some day we will have films that will really help promote international understanding and brotherhood. . . . Dr. Grant W. Leman brought out the importance of the motion picture in teaching techniques and ways of doing things, such as playing a musical instrument. He emphasized the value of using other media, such as kodachrome slides, with the motion picture, in order that detailed study might be made of subjects such as art appreciation. . . . Mr. David Schneider showed three short schoolmade films,

*They All Go to Evander, Chick Embryology and Behavior of Birds and Insects.* He pointed out that interest in visual instruction is greatest and appreciation of the problems keenest among those who attempt to make their own films. . . . Dr. Paul Brandwein showed several films of microscopic forms which he has made. These included action of white corpuscles and fertilization of chromosomes. His method is to show about twenty-five to fifty feet of silent film, without titles, over and over until the pupils can describe the action shown on the screen. In this way the films become accessory microscopes and he is more certain of what pupils are seeing than when they actually use the microscope.

### Lantern Slides

Dr. Ward C. Bowen stated that one of the best ways to utilize slides was to make them a part of the group discussion or class talk, and not the occasion for a monologue by the teacher. He particularly stressed the importance of flexibility of presentation, and the importance of arranging slides to fit the needs of the moment. More slides can and should be used to develop understanding and appreciation. . . . Mr. Thane Bierwert emphasized the value of using slides which showed a true likeness of the subject under discussion. Subjects should be well grouped and carefully photographed, for visual memories can be accurate only when children can see things as they really are. . . . Mr. Solomon Y. Stillman demonstrated his methods of using slides in the classroom so that the pupil would do 90% of the work and the teacher 10%. These included slides for tests and for homework; slides projected upon the blackboard where changes in graphs could easily be drawn and comparisons made; and slides made by his pupils of drawings of machine parts. . . . Mr. Rutherford B. Platt, whose beautiful kodachromes of plants and other forms in nature appear frequently in "Life" magazine, compared the clarity of a printed description of a plant by Britton and Brown with that attained when each statement is illustrated by a kodachrome slide showing an enlargement of the part mentioned, e. g., a close-up of flower stalks growing in the axils of the leaves. Mr. Platt also showed kodachromes of art forms in nature and designs for costume jewelry from close-ups of flowers and buds.

### Dioramas

Dr. Irene F. Cypher stressed the value of a true diorama in creating an illusion of reality. This miniature group is particularly valuable when used as the core around which to build a lesson. The question of scale in using these miniature groups is not a barrier to their effectiveness. Pupils can and should be encouraged to make dioramas for classroom use. . . . Mr. Sam K. Smith stated that the diorama is valuable as a visual aid because it combines sculpture, painting and craftwork, all of which are visual arts. He too stressed the value of the diorama in creating an illusion of reality. . . . Dr. James L. Clark described the principle of the new illusion exhibit, the mirror-scope, in which two mirrors placed at the proper

angle, and a horizon line properly adjusted in a cardboard diorama, give the illusion of reality.

### Flat Pictures

Miss Louise Condit spoke of the value of flat pictures in presenting a full story. Original objects may be too large or too small and fragile to handle. Pictorial material enables you to show unlimited details and phases of the subject you are teaching. . . . Mr. Ralph Graetor, formerly of the staff of "Life," showed several series of accurate drawings which are made when "Life" magazine shows scientific studies, e. g., the life of a tree or an appendectomy. He showed how such drawings are preferable to photographs because they emphasize the important factors and minimize or eliminate others for the sake of clarity.

### Realia and Exhibits

Miss Hanna T. Rose described the work of the Brooklyn Museum in planning its exhibits exactly to meet the needs of teachers. Museums are no longer the ivory towers they used to be, but try to prepare material that will help enrich classroom work by providing actual specimens and objects which could not otherwise be obtained by teachers. . . . Mrs. Kathryn Greywacz described the value of well labeled, carefully prepared and integrated exhibits combining charts, models and artifacts. The New Jersey State Museum plans to work out many new groups for teacher use in the near future. . . . Miss Genevieve Secord stated that children are interested in the real objects, and it is important that such material be made available for classroom use. Art is a description of life, and the art teacher can therefore be of assistance in helping pupils to make objects needed for the various other subjects. . . . Miss Katharine Beneker described the steps in establishing small school museums. She emphasized the importance of pupil participation in this work to be secured by having pupils serve as museum directors, curators and custodians, the latter to be responsible for cleaning of the exhibits and keeping them in proper places after use by classes. . . . Mr. Robert Snedigar spoke on the care of classroom pets. He demonstrated this with his pet raccoon, Rusty, showing the intelligence and keen sense of smell of this animal. . . . Dr. Alfred Beck showed that realia for science classes may often consist of "junk"; a coca cola bottle, a broken vacuum flask, a piece of glass from the mirrors of the largest telescope ever made, a plunger, etc. But each of these objects can be used in simple demonstrations by the clever teacher to stimulate interest on the part of pupils. . . . Miss Ellen Eddy Shaw demonstrated how to make a cactus garden for the classroom.

### Student Reaction to the Use of Visual Aids

Miss Mary S. M. Gibson told of the enthusiastic reaction of visitors to special exhibitions arranged from time to time. She was followed by three students from Weequahic High School, Newark, New Jersey, who gave their reactions to visual aids in the classroom. They felt that more preparation and research should be done in the making of films used on the high school level to bring out specific subject matter. Slides made

by students, they felt, were of value because the students gained a knowledge of the subject while making the slides. They were quite desirous of having more students participate in making dioramas because of the knowledge to be gained while doing research for the groups and for the skill in crafts that would be acquired. Whatever type of visual aid was used they felt that it was of paramount importance that it depict reality.

Students from the Bronx High School of Science and Forest Hills High School, New York, also gave their reactions to visual aids. The student from Forest Hills High School gave the findings from a questionnaire that had been prepared and circulated among three hundred of his fellow students. Their opinion was that most of the sound films shown are only silent films with spoken text. They felt that if the picture were a silent one and their own teacher became the narrator the film would be more valuable to them. They also stated that the films were usually too long, with too little opportunity allowed for questions and answers. Both students stated that teachers were accustomed to give too much material at a time because the machine might not be available when needed, and too much time was lost in preparing the classroom for projection.

#### Participants in the Program

##### Cultural Subjects Panel Speakers

- Dr. Paul A. Kennedy, Assistant Superintendent, New York City Schools  
 Miss Rita Hochheimer, Assistant Director, Bureau of Visual Aids, New York City Board of Education  
 Dr. Grant W. Leman, Supervising Principal, Oradell, New Jersey  
 Dr. Ward C. Bowen, Chief, Bureau of Radio and Visual Aids, Department of Education, University of the State of New York  
 Mr. Thane Bierwert, Acting Chief, Division of Photography, The American Museum of Natural History  
 Miss Louise Condit, In Charge of Junior Museum, The Metropolitan Museum of Art  
 Dr. Irene F. Cypher, Supervisor of Guest Services, The American Museum of Natural History  
 Mr. Sam K. Smith, Vice-President, Diorama Corporation of America  
 Miss Hanna T. Rose, Educational Staff, The Brooklyn Museum  
 Mrs. Kathryn B. Greywacz, Curator, New Jersey State Museum, Trenton, N. J.  
 Miss Ruth Hessler, In charge of Lending Collections, Newark Museum, Newark, N. J.  
 Miss Genevieve Secord, Director of Art, Maplewood School System, Maplewood, N. J.  
 Miss Mary S. M. Gibson, Curator, Peter Cooper Museum, New York  
 Dr. Daniel C. Knowlton, Chairman of Social Studies, Cazenovia Junior College, N. Y. and Professor Emeritus of Social Studies, New York University  
 Dr. E. Winifred Crawford, Supervisor of Visual Instruction, Board of Education, Montclair, New Jersey  
 Dr. F. Dean McClusky, Headmaster of Scarborough School, Scarborough-on-Hudson, N. Y.  
 Mr. John J. Jenkins, Director of Audio Visual Instruction, Bronxville Public Schools, Bronxville, N. Y.  
 Student Participants from Weequahic High School, Newark, N. J.

##### Science Subjects Panel Speakers

- Dr. Frank M. Wheat, Chairman Biology, George Washington High School, New York City  
 Mr. David Schneider, Dept. of Biology, Evander Childs High School, New York City  
 Dr. Paul Brandwein, Head of Biology, Forest Hills High School, N. Y.  
 Mr. Solomon Y. Stillman, Dept. of Biology, School of Industrial Art, New York City  
 Mr. Rutherford Platt, Rutherford Platt, Inc.  
 Mr. Ralph Graeter, Art Editor, World Book and Encyclopedia (formerly of Life Magazine)  
 Dr. James L. Clark, Director of Preparation and Installation, The American Museum of Natural History  
 Mr. Alfred D. Beck, Chairman Junior High School Standing Committee in Science, New York City Schools  
 Miss Katharine Bencker, Supervisor of Temporary Exhibits, The American Museum of Natural History  
 Mr. Robert Snedigar, Instructor, Department of Education, The American Museum of Natural History  
 Miss Ellen Eddy Shaw, Curator of Elementary Education, The Brooklyn Botanic Garden  
 Dr. Morris Meister, Principal, The Bronx High School of Science

Dr. Mervic E. Oakes, Department of Sciences, Queens College, Flushing, N. Y.

Mr. Thomas J. Dowling, Department of Science, Albert J. Leonard High School, New Rochelle, New York  
 Student participants from: The Bronx High School of Science, New York City, and Forest Hills High School, New York City

##### General Session Speakers

Mr. Norman F. Barnes, Member of Staff of General Electric Engineering Laboratory, Schenectady, New York

Lieutenant Irwin J. Reif, U. S. Army Signal Corps, Film Division  
 Miss Evelyn Lambart, Technician, National Film Board of Canada, Inter-American Club, James Monroe High School, New York, N. Y.

##### Sponsors

Dr. John H. Bosshart, Commissioner of Education, State of N. J.  
 Dr. Alexander M. Dushku, Executive Director, Jewish Education Committee of N. Y. C.

Mr. Wayne M. Faunce, Vice Director, The American Museum of Natural History

Mrs. Margaret Gillette, President, Guild of Independent Schools of New York

Dr. Alonzo G. Grace, Commissioner of Education, State of Conn.  
 Mr. Albert E. Parr, Director, American Museum of Natural History

Dr. Charles Russell, Chairman, Department of Education, The American Museum of Natural History

Dr. George D. Stoddard, Commissioner of Education, State of N. Y.  
 Dr. John E. Wade, Superintendent of Schools, New York City

Reverend Edward J. Waterson, Superintendent of Schools, Catholic School Board, Archdiocese of New York

fascination to simple stories of the Puritans, or America's earlier wars. When the men were finally able to write and were given a theme assignment, they almost invariably chose to write stories of the United States' early history. What better opportunity could visual education leaders ask than the chance to teach through history an appreciation of our country and its ideals? When this war is won and our freedom is again secured, we must inaugurate an educational program that will teach the underlying meaning of history and the values of liberty. Illiterate men can and will learn these ideals through visual aids.

The problem of illiteracy is especially vital to America, because we live in a democracy that is based on the right and ability of all men to participate in their government. If our country is to continue to grow and develop and expand, to realize its ultimate best, then all must be capable of accepting the responsibilities that democracy places upon them. The first weapon used by a demagogue is often an ignorant minority. The best weapon against demagogues and their oppression is an intelligent, informed people that possesses the power to elect competent leaders. Our form of government gives us that power; we must make all our citizens capable of wielding it.

I had worked with Alvin for three months. He was a very slow learner, but he worked so hard it was impossible to lose patience with him. The day before he was to take his final test, he came to me. There was a new air of confidence about him. Bashfully, yet with a look of determined pride, he handed me a smudged paper—the first letter he had ever written. It was addressed to his wife. The English was bad and the spelling faulty, but it contained a sincere tribute. "See I can rite now. Wen I come home, I make you good man."

Visual education leaders have in trust a great tool. The intelligent and farsighted application of this educational weapon can bring them that same satisfaction—the thrill of making for a woman and a country, "a good man".

# The Film and International Understanding

## The Audio-Visual Program of the East and West Association

DR. JOHN E. DUGAN, Editor  
Hadden Heights, New Jersey

KATHRYN LINDEN, Director of  
Audio-Visual Program, East and West Association

FROM the beginning East and West has sup-  
planted its lecture courses with a strong visual  
program. With us films and other visual media are  
not a teaching project; neither do we wish to enter-  
tain. It is our aim rather to present information by  
visual means as a serious approach to adult under-  
standing, and as an integral phase of a well synchro-  
nized program.

There has been too much discussion of social and  
economic problems as though people were just figure-  
heads. People are intensely human. Circumstances  
of geography and climate have created different cul-  
tures, different ways of life; it is important for us  
to understand these, and at the same time to recog-  
nize the basic humanity common to all mankind. If  
we are to arrive at an intelligent public opinion, we  
must know the peoples with whom we have to deal.  
Our greatest barriers to such knowledge have been  
time and distance. Surely no more direct means of  
bridging these barriers can be found than in a good  
documentary film—unless it be seeing and meeting  
the peoples themselves. East and West tries both these  
approaches.

It may be of interest here to indicate the purpose  
and scope of the East and West Association. East  
and West was first announced on a Lincoln's Birth-  
day three years ago, by its president Pearl Buck.  
Founded to create better understanding among peoples,  
East and West has established popular lecture courses  
in New York, Boston, Philadelphia, Detroit and Chi-

---

**EDITOR'S NOTE:** This article tells how films and other  
audio-visual materials are built into a large national pro-  
gram for international understanding. This program does  
not permit any one medium of expression to predominate  
exclusively.

This is an important consideration for those who are  
interested in the use of the film in this field. Programs do  
not have to be "all-film or nothing." Frequently the most  
important task for the film enthusiast is to determine  
where his film will fit in best and perform the greatest  
service. Experiences related in this article may be helpful  
in this connection.

---

cago with an average attendance ranging from 800 to  
over 1000; in-service credit is granted by local boards  
of education. The Booking Service of East and West  
sends out national speakers and artists on individual  
appearances at colleges, clubs and civic organizations  
throughout the country. Chapters afford an opportu-  
nity to smaller communities to set up their own East  
and West programs, based on patterns made avail-  
able through the headquarters in New York and with  
as much assistance in planning programs as may be  
desired. Publications as well as photographic and ob-  
ject collections are available on the various peoples of  
the Far East, Russia and the Pacific.

An inherent principle in program planning has been  
the impartial and full presentation of every topic.  
American and European experts as well as nationals  
from other countries state the problem or plead the

cause. In forums such as the Peoples Congress held this fall at New York's Town Hall, nationals of neighboring or other interested peoples are likewise represented on the panels—Americans, British, Dutch, Chinese when discussing Japan, Indians when discussing China. Films have been found through

India Official Photo

Young factory worker, India

questionnaires to be a favorite background or preliminary for such discussions. Whenever possible, artists of various countries participate—singers and musicians who appear in costume and whose very presence serves as a visual impact of the culture they represent. Exhibitions of the arts and crafts of the various peoples are presented, photographic stills of types and significant national scenes are displayed, workshops in pictures and publications are conducted.

Methods of presentation vary in accordance with physical conditions as well as with materials available. At Town Hall, where there are no facilities for object exhibitions, our audio-visual program comprises films, the appearance of national artists (in addition to the national speakers invited by the Lecture Department), Lobby displays include photo-enlargements and book tables for the literature of related organizations.

At the Dalton School, where a specialized course of fifteen lectures on China was held last spring, we found a lobby with five built-in wall cases. With the consent of the School and with the collaboration of leading museums and private contributors, East and West was able to arrange a series of five object exhibitions planned to visualize the subjects presented by the lecturers of the series: Daily Life in China, Arts of China, Musical Instruments, The Theater, Chinese Industrial Cooperative work. The exhibitions were left in place three weeks at a time; films or musicales were given on alternate dates. The School as well as East and West incorporated the exhibitions in their program; several classes devoted projects to the study of China, and we were asked to schedule our final exhibition on the date of school graduation. At another series at Carnegie Music Hall, where no facilities whatever were available, we had recourse to projection rental services for films, and turned the stage itself periodically into a workshop, inviting the audience to come up and browse among tables of books, maps and pictures in the half hour preceding the regular lecture period. Similar visual programs are presented

also in connection with the East and West courses given in other cities, notably in Detroit where members of museum staffs themselves arranged exhibitions for the East West series at Rackham Hall.

Films have been our most important visual medium, and as already stated, questionnaires have established them as a favorite introduction—despite difficulties in projection. Time and again we have found lecturers building up their statements on films just shown, or referring to film sequences by way of proof. We should like to pay tribute here to some of the splendid documentary films which are available, films that carry our audiences into the very atmosphere of the countries whose problems we seek to portray. Films bear witness to the spoken word, and beyond this, show many things the lecturer can merely suggest, or overlooks.

The very importance of films in the international field, however, lays a tremendous responsibility upon the producer. In a program such as ours, where the topics are limited to certain nations, it is particularly difficult to find documentary films that are not just travelogues, propaganda or an explorer's phantasy. Splendid work has been done by commercial and press producers. We hope urgently that with time amateurs will yield to professionals, and that expeditions, which are so important and so professionally organized in other fields, will take with them both anthropological and film experts to make their picture records. Too often excellent materials are lost through poor editing or poor technique. Adult audiences demand good standards of workmanship.

On the other hand, films can be adapted and misstatements answered by the lecturer. Propaganda, for example, is apt to defeat itself. We showed an excellent film on Japan recently; made under wartime pressure and for wartime purposes, the propaganda was at times excessive to the point of becoming unconvincing, but the picture in the meantime revealed the actual life and development on these islands of our enemies. A film on India showed a water fountain with a sign on one side reading "For Hindus" and on the other, "For Moslems"—a visual misstatement to suggest the much rumored schism in India. An American ambulance driver just returned from India pointed out on the platform that he had seen a group of Hindu and Moslem soldiers making fun of that very sign; that the narrator had failed to mention that the sign, put up at a railway station, was European made.

Entirely different from the lecture program use of films, of course, is the presentation of documentaries *per se*, such as at the Museum of Modern Art, the Philadelphia Museum and the Metropolitan Museum. It happens that I had the opportunity of arranging the film program at the Metropolitan for one season. It became an exciting project. Most documentary shorts, however excellent, are by their very nature confined to one phase of a subject; by linking a number of shorts in a theme sequence we could offer a rounded presentation. Again, unlimited by subject scope, we could alternate programs of shorts with features, documentaries with historic films, art programs with nature studies, sociological, national or war film sequences.

# The Curriculum Clinic

## Films? - - What Kind Of Films?

WALTER A. WITTICH, Editor  
Bureau of Visual Instruction  
The University of Wisconsin

AT a recent meeting given to consideration of classroom programs of visual instruction, a panel of consulting experts reached complete disagreement over the answer to the question, "How shall we use films in our classrooms?" One proposed a single-showing technique; another insisted that two or three showings were often not enough; and a third rose to the defense of teachers with the generalization that no one needs worry too much about it, that good teachers will figure it out for themselves—and, of course, some will. Such situations merely emphasize again the necessity of classifying films by use and purpose. For the sake of completeness it may be well to describe, define, and classify films that are available for them in the classrooms. Thereafter we can discuss specific problems relative to their use.

The whole problem of selection of films for use in the classroom today is very closely akin to the problem of selecting the type of book for use in the schools of seventy-five years ago. Then, as today, the materials were available in quantities. Philosophies were put forth from every quarter and were expressed through materials which resulted in confused purpose as well as benefit, insofar as their classroom use was concerned. Just as at the turn of the century instructional books had been evolved which dealt ethically and in a planned way with every known subject of interest to youth of that time, so today the textfilm is gradually proving itself as an effective classroom tool and distinguishing itself from the welter and confusion of "anything on celluloid" which is being produced in virtually unknown quantities currently.

The thousands of alleged classroom films available at this moment to school administrators fall naturally into the familiar four basic categories: the *entertainment film*, the *advertising film*, the *documentary film*, and the *textfilm*. So that we may refer clearly to them later, let's describe them.

The *entertainment film* aims at emotional rather than intellectual appeal, and may or may not contribute to broad cultural backgrounds. Since it is not concerned with age of audience, subject-matter or academic criteria, any contribution that the entertainment film makes to the classroom is usually incidental or supplemental.

The *advertising film* is made for the primary purpose of promoting sales of the services or goods of the advertiser who is the sponsor or producer of the film.

The *documentary film* is one which deals with a social situation. It attempts, in a realistic, undisguised and authentic manner, to interpret the events, the cultures, or the problems of the day for the purpose of assisting man to understand his place in society and

to stimulate constructive thinking and planning for the future.

The *textfilm* is one which is made to become an integral part of a socially desirable course of study by furnishing desirable experiences which otherwise would be inaccessible to the students.

We may now consider the place of each of these four in classroom practice. Most teachers agree that the pure entertainment film holds little of value to the classroom. There are, of course, entertainment films which do make a course-of-study contribution. Many able teachers and administrators who have witnessed such films as *The Adventures of Tom Sawyer*, *The Adventures of Mark Twain*, *The Life of Louis Pasteur*, and *Little Men*, agree that these films are of such quality that they make a contribution to the study of language, literature, or our country's cultural backgrounds. It is obvious, however, that the usual entertainment films do not reach such standards. When using even the best entertainment film, seeing it once would probably suffice in creating the experiences we want to use in connection with any subject area.

Whether or not we wish to set up the schools as ready-made advertising audiences is questionable. Some advertising films in recent years, however, do supply information in subject areas not yet covered by the makers of textfilms. Frequently there comes along a film produced by an advertiser which disregards almost entirely the opportunity of selling a product in favor of the presentation of information which has a high degree of utilizability in a course of study. When this is the case, let's use it. Too many advertising films are made with one objective in mind—selling. To use the selling film in the classroom is to open our public schools as a ready-made consumer audience. This certainly is not an objective of education in a democracy.

The documentary film is just coming into its own insofar as cognizance of its contribution to the classroom is concerned. Many documentary films become excellent teaching materials in the fields of economics, civics, problems of democracy, and the general social studies. To derive full values from these films, it is often necessary to study them intensively as we do any traditional work-type lesson. This must be done if we wish students to be fully aware of the vividly presented social experiencing which can result from viewing such splendid documentaries as *The Bridge*, *Peoples of the Potlatch*, *Portage*, *Life in Eighteenth Century Williamsburg*, *Virginia*, and others, the same as for textfilms. Many documentary films are definite additions to classroom learning experiences. Let's not treat them as a strange new device. Rather let us use them just as we use other tried and tested classroom learning sources.

The textfilm, which is of great value because of its ability to present even theoretical subjects with vividness, clarity and understandability through visual imagery, has won its place in every one of the nineteen subject areas pursued in our public schools. We must recognize, however, the great necessity for careful planning, use, and evaluatory techniques when using this most effective medium in modern classroom instruction. Research has definitely confirmed the desirability of using the textfilm intensively rather than extensively. Classroom teachers are increasingly accepting responsibility for applying to film use the same established techniques of motivation, advance vocabulary study, evaluation through discussion or objective measurement, and review (follow-up showings and reshowings) that they have for years applied to other learning sources.

Briefly we have attempted to lend some orderly classification to the welter of films which are being produced at the present time. Henceforth, when discussing the use of films in the classroom, let us ask some questions: What kind of film are we discussing? At what level are we using films? What purposes are we attempting to achieve? I am sure that, if we do this, we can eliminate many of the generalities, many of the misunderstandings, which befog many of the well attended meetings devoted to current practices and trends in visual instruction today.

## Motion Pictures and Adult Education

*(Concluded from page 57)*

tive use of motion pictures in these courses. Whether or not the schools can "teach the G. I. way," why, at the very least, cannot the adult educators copy some of the G. I. vitality? The army, navy, air force, and industry have accelerated their programs by providing quick, hard-hitting, intensive study. Movies, radio, and recordings are high priority tools in this learning. To a large extent the 3 R's of old are being supplemented by three modern R's—Reels, Radio and Recordings.

There are now more than 6,000 Better Film Councils in the United States. Some of these do excellent work, but most of them waste their untrained and undirected efforts in mere moralizing about "good, clean pictures." An educational job done by educators is needed, and probably it should fall into the lap of the Adult Education Association, or other similar agency.

Finally, it should be emphasized that pictures of all kinds, industrial, educational, documentary, and theatrical furnish pertinent adult study materials. Furthermore, we may expect producers to rise up here and there, who will be willing to "go the extra mile" and make a film now and then for particular adult education purposes. A plethora of material already exists. To convert the casual impressions gained from this inchoate mass of movies into functioning, disciplined use along the lines of the six areas outlined earlier is no mean task.

## The Film and International Understanding

*(Concluded from page 64)*

One factor we have been greatly impressed with. A good film can be nearly spoiled by poor projection. At certain locations there may be physical difficulties which it is possible to mitigate, but which cannot be completely mastered. In any case it is essential to know the terms of film projection, how to change the focus or to control pitch and volume; and it is essential to watch these factors on each new film. There are some difficulties in projection we found we could overcome. Stronger bulbs, special lenses increase clarity. In places where there is no projection booth, heavy drapes cut the noise of the machine. In places where only the wall or a poor quality screen is available, it may be advisable to make use of the portable screens rented by projection services.

In line with the national program of East and West, the Audio-Visual Department as such also has developed its own independent program of gallery exhibitions and circulating shows. A series of twenty-two photographic and object collections have been prepared during the fall, and are enjoying a wide circulation. China, India, Australia, Hawaii, the Indies, the Philippines, the Soviet and Africa are among the subjects. Recordings of important speeches made during the lecture series on India and China are available on 16 inch records. They have been successfully used in school and club forums, and for broadcasting from local radio stations. Lists of documentary films found of special value are likewise available.

Other departments of East and West have very definite audio-visual interests. The publications of East and West include a series of picture portfolios on family life in other lands, East and West has gone into the comics: "In Comic Cavalcade", "Johnny Everyman" and "The Twain Shall Meet" bring to the children of America a colorful adventure in good will. A radio program, "Music East and West," is being presented by the Booking Service, with its roster of national artists. The first in the series, a Philippine program, was launched over WNYC from the platform of Town Hall, Pearl Buck and Brigadier General Romulo giving their personal messages. Recordings of the radio series will be distributed by the OWI.

There is a compelling force in the audio-visual approach, a tremendous challenge both to those who produce the materials and those who use them. People are hungry for knowledge of the world about them. The success of the army-navy program attests the value of films alone in accelerating the acquisition of such knowledge. Photographic exhibitions prove facts and provide self-evident testimony of a way of life or the humanity of a people. Crafts reveal skills, intelligence, taste, custom. Films carry us into the very haunts of "foreigners" and make us feel as though we were their neighbors. Only by mutual understanding and respect can we hope to build the peace of the future—and to us, at least, it seems that audio-visual materials meet a basic need in providing a means for such understanding.

# 16MM SOUND FILMS of MERIT

*Recommended by the Motion Picture Committee of the Department of Secondary Education of the National Education Association and accompanied by discussion guides.*

## ADVENTURES OF TOM SAWYER

Produced by David O. Selznick, Mark Twain's greatly loved story of boy life in the mid-eighties has been brought to the screen with all the color and rich flavour of the great book. It is excellent as entertainment, and also valuable educationally for its depiction of the American scene in a by-gone period.

## APRIL ROMANCE

A biographical feature, based on the life of the great composer, Franz Schubert. The charming love story, fine acting, music, costumes and settings of gay 19th Century Vienna make for delightful entertainment, as well as genuine educational values in the study of Musical History and for Music Appreciation courses.

## KING OF THE SIERRAS

A fascinating story of wild horses. The great round-up of 2,000 mustangs by the U. S. Government in Arizona affords a factual background for an appealing drama of the rivalry of two stallions, and provides good character values in drawing a parallel between human and horse difficulties and the good consequences of right living to both.

## KILLERS OF THE SEA

An authentic, thrilling natural drama of man's skill and courage in the hazardous undertaking of ridding the Gulf of Mexico of killer fish which prey upon game fish. Captain Wallace Casewell battles successfully such monsters of the deep as the bottle-nose whale, hammerhead shark, sawfish and octopus. Many laughs, too, amid the thrills.

# The Literature in Visual Instruction

## A Monthly Digest

ETTA SCHNEIDER RESS, Editor

### THEORY

- **Tools for Learning: Images**—Ward C. Bowen, Chief, Bureau of Radio and Visual Aids, N. Y. State Dept. of Education—*New York State Education*, 32:137 November, 1944.

The child's world is an extremely concrete world. He has not yet learned to deal in abstractions nor to use any but the most elementary symbols. As his education progresses, the child needs images for two immediate purposes: for reference in identifying and classifying new objects which he encounters, and for translating or interpreting the spoken or written word. He may derive those images from real objects, or he may derive them from other images presented to him, such as illustrations in textbooks and magazines, screen images from slides or motion pictures, posters and other materials.

Whatever these source materials, the teacher must apply certain basic principles in selecting them: 1) Start with very simple images; 2) Assist the child to obtain authentic images; 3) Begin with the 'homely' and near-at-hand, only slowly moving toward the 'foreign' and the far-away.

The first and best source from which the pupil may derive correct images is his own environment. To illustrate the point, a study of soil conservation would be effective if it dealt with conditions in or near the school grounds and included first-hand observations from experiments, leading to books and pictures where the concrete ideas have been extended and applied to other areas.

Actual objects are always preferable to a picture, if available. Pictures are only substitutes for the real object or experience. They should be selected and used with full realization of their limitations, and constant effort should be made to assist the pupils to a correct 'reading' and interpretation of the pictures.

### ADMINISTRATION

- **Post-war Plans: San Diego County**—J. D. Knight, Director, Audio-Visual Education—*Film News* Vol. 5, No. 9, November, 1944.

This Audio-Visual Education Department was begun in 1935 and has since acquired teaching aids costing in excess of \$160,000. The department is housed in a large, 2-story building which includes conference rooms, a 200-person capacity projection room, a dining room and kitchen. The building is used to integrate all county school activities. There is a truck delivery system to the 110 schools, which makes deliveries every two weeks in a county that is larger than the state of Delaware.

With the cooperation of a far-sighted county superintendent, the San Diego Department has some definite postwar plans for improving its services. They include the use of new textbooks that are coupled with audio-visual aids; an educational program on the unit of experience idea; FM broadcasting; television; a comprehensive teacher-training program, as well as a new building.

### MUSEUM MATERIALS

- **The Mountain Goes to Mahomet**—Bernice Elliott, Children's Museum, Jamaica Plain, Mass.—*Nation's Schools* 34: 51. December, 1944.

The Children's Museum has prepared some 200 separate exhibits in natural history, social science and charts that are circulated throughout Massachusetts and other states. All material can be handled without risk of damage. The cases, except for bird cases, are made of heavy cardboard.

Public libraries have changing displays of these museum materials for the general public.

The Museum has a card catalog system for loaning out the materials and for keeping records on use, and teachers are encouraged to make proper use of the teaching aids.

### THE LIBRARY AND FILMS

- **Newark Experiments with Films**—Bernard Schein, Newark, N. J.—*Wilson Library Bulletin*, 19:276 December, 1944.

In an attempt to attract the community to the library and furnish information of a significant type, the Springfield branch library planned a series of four monthly programs. The first three were of the film forum type and the fourth was a straight film program.

A brief introduction was given and after the program the book displays were featured. The library noted a fairly good attendance and a good book circulation following the program. Many new people were attracted to the meetings and there was a gain in membership.

One of the outcomes of the film series was the request from a neighborhood group to present programs at the library on the problems growing out of parent-child relationships. Thus the way was paved through the film programs for other adult activities in the library.

In and of themselves motion pictures can be of considerable educative value, apart from their functions to stimulate discussion and reading. They help to disseminate facts and ideas to persons who might not otherwise receive them, especially the non-reading public.

### UTILIZATION

- **Films Valuable in Training Program**—Lyne S. Metcalfe—*Modern Machine Shop Magazine*, 17:178 January, 1945.

The article describes the methods employed by the Scintilla Magneto Division of Bendix for training mechanics. The pattern established in this course is adaptable to any form of machine shop training, and the Division has arranged to make this teaching material available to any aircraft plant, school or manufacturer. The program is based on a series of 17 discussion-type slide films produced by Jam Handy.

New students are grouped in classes of approximately 20. First they are given an understanding of basic electricity principles and theory, because the magneto is a special form of alternating current generator, and the slidefilm has been especially valuable in teaching the theory. Then comes instruction in magneto operation, the differences in various types of magnetos and proper maintenance. Next the class is shown what is inside the magneto. This is done with the aid of slidefilms as preparation for actual use of the instrument at the workbench. After the students have had a chance to use the magneto and the various tools, procedures are shown in another series of films. There is a test to determine what errors or misunderstandings may still exist.

### RADIO

- **The Radio University in Peace and War**—Eric Underwood—*American Scholar*. Winter, 1944-5 p. 86.

The story of WRUL in Boston is told by an English visitor who is astounded that the United States has the first radio station devoted exclusively to educational programs and supported exclusively by voluntary contributions.

The station was begun to provide culture and education over short-wave to a worldwide audience. Its service has been somewhat redirected in wartime especially through the information and inspiration sent to the people inside occupied countries. In 24 languages, members of Harvard University's staff in modern languages send broadcasts daily. The station is now the official outlet for the U. S. government. Some time is still given to regular WRUL features,

## To Man the Convoys

Merchant ships—of critical importance in the logistics of war—must be competently manned to supply the far-flung war fronts of the United Nations with adequate tonnages of food, guns, tanks, planes and fuel. More than 1200 major ships and 50,000 men of the U. S. Merchant Marine are carrying on a task which has contributed mightily to the successes we are now achieving.

Each week, each month, sees more ships sliding down the ways. More

men—thousands of them—must be recruited and trained . . . *quickly*.

The visual methods pioneered in the schools and colleges of the country are playing an important part in expediting this training.

such as "Beyond Victory" in collaboration with the Carnegie Endowment for International Peace.

- **Make Youth Discussion Conscious!**—*Junior Town Meeting League*, Columbus, Ohio, 24 pages, free—is a new handbook for school forums and class discussions which gives detailed suggestions for adapting radio forum techniques—based on four nationally-broadcast programs—to discussions by youth.

Discussion is one of the most effective tools of a working democracy. The art of talking things over is an important outcome of a high school education. This pamphlet is a noteworthy contribution to this objective. It is worthy of careful study by every high school faculty.

Social studies teachers will find in the handbook a new approach to discussion—with added appeal to students—in the adaptation of popular radio formats to the classroom and the assembly meeting, with the chief emphasis for the latter on the Junior Town Meeting. The booklet outlines preliminary steps in class, group and assembly discussions, discusses good leadership, training of speakers, how to ask questions, and includes two helpful evaluation charts, one a check list for speakers, the other intended to measure reflective thinking in discussion.

Allen Y. King, directing supervisor of social studies in the Cleveland schools, and I. Keith Tyler, director of radio education at the Ohio State University, editors of the booklet, are president and member of the board of trustees, respectively, of the Junior Town Meeting League formed last year as an international organization "to foster discussion of current affairs among youth." In addition to the handbook, it provides for its members a weekly publication, *Civic Training*, which outlines the topic of the week. Details on the League's service to schools and non-school youth groups are found in the handbook. (Reviewed by Edgar Dale)

#### PERIODICALS

- **Lend Lease**—*Building America*, vol. 10 no. 1

A thorough-going discussion of lend lease as an economic practice that will affect the economic outlook of the young people now at school. Through carefully integrated pictures and text, lend lease is explained and documented; how we have helped Britain, the forces in Africa and the Middle East, the Soviet Union, Australia and the smaller nations; how lend lease has helped our soldiers abroad when it operates in reverse. The pamphlet ends on the query: "Will it be all for one and one for all in peacetime, too?"

- **Congress**—*Building America*, vol. 10 no. 2

Beginning with a two-page cover photo of President Roosevelt addressing a joint session of Congress, this issue of *Building America* brings into sharp focus the story of Congress as it operates today and indicates some of the ways in which changes could be made. Good charts and candid camera shots of individual congressmen in action illustrate the story. The facts on how a bill becomes a law are made clear by a clever cartoon-chart. Another chart shows how pressure groups operate in getting new legislation passed. The brochure should be widely used and when

properly introduced in high school or adult classes, it will do much to promote interest in the work of one's own congressional representatives.

- **Audio-Visual Aids to Learning**—*Educational Leadership*. Vol. 2. November, 1944 issue. Dept. of Supervision and Curriculum Development, N.E.A., 1201 16th St., N.W., Washington, D. C. 50c single copy.

This special issue contains a fine collection of articles by specialists in the field. Readers are referred to the magazine for further information regarding each of the articles.

"Film Behind the Fight", by Major Dennis R. Williams describes army techniques and experiences in using motion pictures. "A Community Tunes in on Education" by H. B. McCarty, director of the Radio Education Division of the University of Wisconsin, relates how community education is being attempted through local broadcasts. "Audio Visual Education in Action", by Dorothy Blackwell of the St. Louis, Missouri Department of Audio-Visual Aids to Instruction describes the excellent administrative organization of that department. "Training Aids Step Up Navy Instruction", by Lt. Comdr. Francis W. Noel, is another application of wartime use of films. "Let's Learn How", by Lt. Amo de Bernardis, is concerned with the organization of an audio-visual program inside a school. Other articles are: "We Make Them Ourselves", by Ella Callista Clark; "School on the Air", by John W. Gunstream, Texas School of the Air; "Are You Both Practical and Visionary?" by Lt. Orville Goldner.

- **Sight and Sound**—British Film Institute, 4 Great Russell Street, London W.C. 1. vol. 13 October, 1944.

The article, "AC 2 at the Teachies" by B. E. Gillett on page 61 tells an interesting story of wartime use of motion pictures. An isolated group of R.A.F. men, early in the war, found themselves with little diversion. The author started with a silent motion picture projector and whatever films could be secured free. These were advertising films, government films and those from nearby school libraries. The program would start with a short, informal chat on the subject of each picture and the projectionist usually acted as commentator. Sometimes the film proved to be on a subject familiar to someone in the audience, and that person would be called upon to supplement it. During the change of reels someone would usually ask questions and soon a discussion was under way.

Recently a change of personnel took place at this RAF post, and now most of the people there are members of the WAAF. The film programs have been continued, and improved with the aid of a sound projector. Now there are modern, feature-length subjects with a few educationals to round out the program. From these entertainment films an interest in film appreciation has arisen. Talks are given on good motion picture technique, photography, cutting, editing and the like and the current film programs illustrate these aspects of appreciation. The meetings have been well attended, the voluntary.

On pages 66-67 will be found a British version of the desirable features for educational sound projectors.

# Recognition of Trees --- In Hand-Made Lantern Slides

By ANN GALE

Roosevelt High School, Chicago

**F**AVORABLE conditions for learning save reteaching. A very large object, and the direction of everyone's attention to it by light is achieved with slides. The following six slides are designed to acquaint students in the intermediate grades with six of our most common and useful trees.

1.) The White Oak grows from 50 to 70 feet high. It is found in the eastern half of our country and in southwestern Quebec and Ontario. The wood is used for shipbuilding and other construction, while the bark is used for tanning.

2.) The Sugar Maple also grows in the eastern half of our country. The wood is used for cabinet work, interior finish and floors. The sap is used in the manufacture of maple sugar.

3.) The Colorado Blue Spruce has a distinctive blue foliage. It grows in the Rocky Mountain region of Colorado north to Wyoming. This evergreen is used frequently in landscaping.

4.) The American Elm is found in the eastern half of the United States, and north to Newfoundland. The wood is used for shipbuilding and other construction.

5.) The Black Willow, often a shrub, may grow 20 to 90 feet high. It grows along streams in the eastern half of our country and in Arizona and California.

6.) The Yellow Pine grows in the south from Virginia to Texas. It furnishes the hulk of our resin and turpentine, and the bark is also used for building purposes.

The simplest type of hand-made slide is made by drawing or tracing on finely finished etched glass with ordinary medium lead pencil. Color, by special crayons or inks, enhances the slides greatly. Fine effects are obtained by blending with crayons. About one-third inch margin should be left all around the slide. The slide is readily cleaned with soap or washing powder to receive a new picture.

# Teacher Committee Evaluation of New Films

L. C. LARSON, Editor

Consultant in Audio-Visual Aids  
Indiana University, Bloomington

Assisted by CAROLYN GUSS  
and ELIZABETH MEANS  
Extension Division  
Indiana University, Bloomington

## Care of Pets

(Encyclopedia Britannica Films, Inc., 1841 Broadway, New York City) 11 minutes 16 mm. sound. Sale price \$50 less educational discount. Study guide available.

This is a four-sequence film depicting the proper care of the common pets—a canary, cat, puppy and two types of fish.

The picture first shows Louise caring for her canary, Tony. She changes the paper covering the bottom of the cage, replenishes the seed supply, and fills the water cup during which time Tony is taking a bath. The commentator states that once in two weeks is often enough for a bird to bathe. Following the grooming done with his beak, Tony breaks into song as he is hung in a sunny window in the living room.

Next is shown Jack caring for his two types of fish, the tropical barbs and fantail goldfish. He gives a very small amount of food to the former, and then removes the excess to prevent pollution of water. A snail helps in keeping the water clean, and submerged growing plants provide the oxygen. An electric water heater is regulated to keep the water at the proper temperature of 75°. When Jack finds his goldfish gasping, he realizes that they need oxygen. He carefully removes most of the deoxygenated water with a syphon, adds fresh, and then aquatic plants so that he will have a balanced aquarium.

Helen demonstrates how to take proper care of a cat. She feeds Tippy chopped toast and raw liver, giving her fresh water, provides her with a scratching block and a catnip mouse. Since Helen knows that a cat's method of keeping clean often causes balls of fur to collect in the stomach, she combs and brushes her pet to prevent this from happening. Lastly she prepares the proper bed and places it in a warm room and out of drafts.

The last sequence shows Perry training and caring for his three-months old puppy. Rex is given warm milk over dog food in a bowl selected because that shape will keep his big floppy ears out of the food. In true puppy fashion he begins to chew the rug. Perry reprimands him in a firm tone and then substitutes a bone. The film closes with Rex being inoculated against distemper.

**Committee Appraisal:** Primary teachers dealing with a unit on pets should find this film useful in developing an interest in pets and in demonstrating to children the correct techniques and procedures in caring for certain pets. The committee felt that the film would form an excellent basis for spontaneous discussion on pets, but raised the question as to whether it would have been better for primary grades to have had a film on each pet rather than introduce four pets in an eleven-minute film.

## Synthetic Rubber

(Bureau of Mines, Washington, D. C.) 22 minutes 16mm. sound. Produced by the Bureau of Mines in cooperation with the United States Rubber Company. Apply to distributor for a list of depositories and terms governing purchase.

This two-reel film gives a brief overview of the history and production of natural rubber, a more detailed study of synthetic rubber, and a comparison of the latter with the natural product.

The film opens with a chemist working in his laboratory who, as narrator, emphasizes the immensity of the task of developing synthetic rubber while scenes show many scientists who have made contributions. Following scenes show long rows of rubber trees, the tapping by a half-naked native, the collecting of the latex, and glimpses of the manufacturing process.

When the war cut off the supply of America's natural rubber from tropical rubber trees, civilian and war needs showed the inadequacy of the supply of rubber from other plants and the need for a synthetic product.

A brief history of both natural and synthetic rubber in terms of leading inventors and scientists is depicted. Shown are Charles Goodyear and his accidental vulcanization of rubber, Michael Faraday who ferreted out chemical composition of rubber, Rowland who first distilled rubber, and Sir Wm. Tilden who produced the first synthetic rubber.

The next sequence deals with rubber processes following World War I. The source of raw materials is pictured—oil fields for butane, formerly a wasted by-product, and waving fields of grain for the alcohol. Formulas for the basic materials are pictured. Animated drawings show the formation of giant carbon chains which make synthetic rubber. Pictures of the immense tanks, measuring, mixing of the constituents—butadiene, styrene, soapsuds, and a catalytic agent and water—the straining out of the rubber, its shredding and washing, and formation into large bales are accompanied by supplementing remarks, which include the quantity needed yearly by our country, the chief uses of synthetic rubber, and some of the advantages of it over the natural rubber.

The advantages of the combination of natural and synthetic rubber are demonstrated in tests on puncture-proof gasoline tanks. Here the natural rubber which lines the metal tank is inner-lined by synthetic rubber which is oil resistant. A bullet hole is sealed by the natural rubber which expands when it comes into contact with gasoline.

**Committee Appraisal:** Should be useful in developing an appreciation for the contributions of individual scientists which resulted in the gradual perfection of a process and in developing an understanding of the processes involved in the manufacture of synthetic rubber and its chief uses. Recommended for use by groups studying general science and chemistry classes on secondary and college level and by adult audiences interested in industrial processes.

## Using Audio-Visual Aids in Training

(Castle Films Inc., 30 Rockefeller Plaza, New York City 20) 14 minutes, 16mm. sound. Sale price \$21.49. Produced by U. S. Office of Education. Apply to distributor for rental sources.

This film demonstrates and explains how audio-visual aids can effectively be used in a training program for industrial employees. The scenes shift back and forth between the training supervisor's actually using audio-visual aids in a carefully planned teaching situation involving a group of trainees learning to use the micrometer and his conference with a potential user of films.

After the commentator has explained that the need for better and speedier training has increased the use of visual aids, the training supervisor is shown with his class. He asks various members to measure a given object with the steel rule, the inadequacy of which is demonstrated by the different answers.

Murphy then explains that the micrometer is the measuring device needed to give accurate measurements in this instance. His class is entirely unacquainted with the manipulation of the micrometer, so he permits them to experiment with it. During this part of the class period he tells the class that they will see a film demonstrating the use of the micrometer and he prepares them for it. After seeing the film, the class has many questions. Murphy tells them that the most of their questions are answered in the filmstrip which accompanies the film. The class is then shown giving micrometer

### PAUL L. HOEFLER, F.R.G.S. Motion Picture Producer

Paul L. Hoefler, who is in charge of all productions . . . has been interested in the possibilities of educational and industrial films for many years. He has produced all types of films covering a wide variety of subjects.

### Produced World-Famous Feature Film: "Africa Speaks"

This epic-saga of the Black Continent proved so popular and such a comprehensive revelation of this little known area that it was produced and released in sixteen languages. It was the first sound film showing wild life in its natural habitat. It is still considered the top ranking picture of its type.

### Author and Lecturer

He has lectured at many universities and colleges, and has appeared on the lecture platform before other large audiences throughout the United States. He is the author of the book "Africa Speaks" and has written numerous articles for magazines, such as "Asia", also "New York Times" and for newspaper syndicates in the United States, Europe and South-Africa.

Mr. Hoefler is a Fellow of the Royal Geographical Society of London, a member of the Circumnavigators' Club of New York and an active member of the Explorers' Club of New York.

### Pioneer in Commercial Pictures

He made some of the first 16mm Kodachrome and sound films. Many of his scenes supplied the first reproductions ever made from original Kodachrome.

He was commissioned by the "Kenya and Uganda Railways and Harbors" to produce a color film for use in promoting tourist travel to East Africa. This picture was shown throughout Europe with great success.

### Contributing to "Victory"

Since the war, he has produced films dealing with army activities . . . two of which were produced in North and East Africa with the cooperation of the U. S. Army Air Forces. Another has just been completed telling the story of the wonderful work being accomplished in the Army Hospitals throughout the United States in the rehabilitation and reconditioning of returned wounded veterans.

## The 50<sup>th</sup> Anniversary

of the origin of motion pictures brings to mind the fact that for over half of this time the resources and ingenuity of the Holmes organization have been applied toward developing progressively better projectors for film and sound reproduction. To this end our future development is dedicated—that we may provide school organizations and individuals with projectors in keeping with technical advances and operating improvements perfected in our research laboratory.

## NEW 1945 I.C.S. FILM CATALOG READY!

With emphasis on entertainment, the Institutional Cinema Service has just released a new listing of their feature pictures only. This catalog not only recapitulates all of the popular features listed in the "I.C.S. 1944-45 Victory Catalog" but also includes about sixty additional pictures among which are the famous Hal Roach special productions as follows:

*Broadway Limited, A Chump At Oxford, Captain Caution, Captain Fury, The Housekeeper's Daughter, One Million B. C., Of Mice And Men, Road Show, Saps At Sea, Topper Returns, Turnabout, There Goes My Heart, Topper Takes A Trip, Zenobia.*

Hundreds of schools and institutions are using our entertainment programs regularly, taking advantage of our special rates on a series of bookings. If you are interested in better films for auditorium enrichment write for our new catalog, addressing Dept. E.Z.

**INSTITUTIONAL CINEMA SERVICE, INC.**

*Films for EDUCATION and RECREATION*

1560 BROADWAY

NEW YORK 19, N. Y.

reading called for on various frames of the filmstrip, after which they actually use the micrometer for measuring thicknesses and for testing their accuracy.

At the conclusion of each step in the instructional activities, Murphy is shown in conference with Richard who is to be in charge of one phase of the plan's training program. During these conferences, Murphy points out that the instructor must prepare the class, that the instructor must preview the materials before using them, he must determine his objectives, there must be follow-up activities, and that there is no one set way but that the instructor must work out a procedure for each situation.

As Murphy concludes the conference, he provides Richard with a list of the films in the library, also some of the manuals and invites him to use the conference room for previewing purposes.

**Committee Appraisal:** This is a film primarily designed to demonstrate to instructors of industrial training desirable practices in the use of audio-visual aids. Since the practices suggested in this film would apply in other teaching areas, it would also be a good film to show to teachers in all subject matter areas on the secondary, college, and adult levels.

### For Years to Come

(U. S. Department of Agriculture, Washington, D. C.) 22 minutes, 16 mm, sound, color. Sale price \$89.20 from Castle Films. Apply to producer for rental sources.

This is the story of the activities on Spring Run Farm from harvest to harvest during that year in which the owner decided to change from straight row farming to contour farming.

The film beginning with autumnal scenes of the farm early introduces Father, Mother, the four boys, and the twin girls, all of whom have responsibilities and share in the work of the farm. The large brick house, nearly a century old, is shown. Chris and his sons are shown harvesting crops from their straight-row fields.

During the winter Chris thought much of adopting contour farming methods. He is shown talking it over with friends and neighbors in town, and then one night calling on the Supervisor of York Soil Conservation to whom Chris announces his decision to change to contour farming. The office agrees to provide a soil conservation map for his land and a technician to help him.

Following scenes show that all winter, as Chris chopped out trees, he was planning for the spring. Such scenes as little pigs playing in the sun, peach trees laden with blossoms, and the entire family cutting seed potatoes herald the arrival of spring. The soil conservation technician, Chris, and his son, are shown plotting the fields according to the map. The process of marking with a homemade level and stakes is demonstrated.

Scenes of the garden flourishing, fruits ripening, and crops maturing mark the advent of summer. The final shots depict the harvesting of crops from rows following the contour of the ground as the narrator explains that both the corn and potato yield was greater than the preceding year despite the drought. The film concludes with a picture of Father and Mother happily surveying the fields with the realization that the land is being conserved for generations to come.

**Committee Appraisal:** While teachers of agriculture previewing the film felt that it failed to provide adequate information on contour farming, teachers in other areas were unanimously of the opinion that "For Years to Come" was an outstanding film for emphasizing the need for soil conservation. In addition to the emphasis on soil conservation, they felt that the film could be used from the upper elementary to the college level and with general adult groups to depict farm life under optimal conditions and the cooperative relationship among members of a farm family. Also the committee felt that the cameramen should be complimented for the beautiful color and pleasing composition apparent throughout the film.

# Screens Especially Designed For School Needs

To Meet the Requirements of Every Type of Visual Aid Program

The new line of modern Radiant Screens, incorporating many new and special features, includes Wall Screens, Wall and Ceiling Screens, Table Screens as well as the Portable Metal Tripod Screen ranging in size from 20" x 30" to 20 feet x 20 feet and larger. These screens are sturdy, long-lived—easy to operate and they are available with the improved Radiant "Hy-Flect" Glass Beaded Surface that permits the projection of visual aids with greatly increased brilliance, clarity and contrast. Today—thousands of schools, universities, institutions, and government agencies use and endorse Radiant Screens.

### Radiant Portable Models Offer You:

In addition to the "Hy-Flect" Glass Beaded Screen Surface—you will find many special conveniences and unique advantages in Radiant Tripod Screens. These include:

- 1. Automatic Clutch.** A positive device that permits instant raising and lowering of screen housing without the necessity of manipulating screws and bolts. So simple and easy to operate a child can use it.
- 2. Quick Tripod Release.** Tripod legs may be opened and closed quickly. They

support the screen in *any* position for wide or narrow spread without set screws or plungers.

**3. Auto-Lock.** (Pat. applied for.) Just touch convenient button for raising or lowering center extension rod and screen instantly.

**4. Convertible from Square to Oblong—** for movies, stills or slides, Radiant square sized screens are convertible to oblong by merely raising screen to indicated position.

## WORLD WITHOUT BORDERS

(Produced and distributed by Universal Pictures Company, Inc., Rockefeller Center, New York, N. Y.)

**T**HIS two-reel featurette is a swift and stimulating overview, in motion and sound, of the history of human flight, from its absolute beginnings with Hero of Alexandria's hot air bag to the streamlined air monsters and speedsters of today. It pictures the early achievements of Montgolfier and his successors down to Santos-Dumont, in lighter-than-air aeronautics. The balloon so captivated the popular imagination that it furnished globular motifs for countless plates, porcelains and tapestries that are now museum pieces. Napoleon made elaborate plans for invading England by balloons. Then came parachutes. Soon came Langley, Lilienthal, and the Wrights, Farman, Bleriot, Curtis, and many more, presenting perhaps the swiftest cavalcade in the history of man's invention.

One interesting and little known sequence, no less pathetic than authentic, concerns the ingenuity and tireless struggle of the strange Gilmore brothers in California in the 1890's. They designed and built an airplane, huge for its time, on lines definitely anticipating later models in practically all the fundamental features. With the machine nearly completed, the brothers thought it wise to protect their work by application for patent papers several years before the Wrights came on the scene. Washington rejected the application because it was "absurd to think that anything heavier than air could fly", blandly ignoring birds! It was the end of the road for the Gilmores, their resources gone and no more obtainable without the patent. The "first airplane" never left its birth barn, and still stands there today, in tatters.

Then the supreme role of the planes in winning this war—parachute troopers jumping, rocket fighting, bomb bays opening, "bombs away", and dizzying glimpses of the doomed target

below, many shots of planes landing on carriers, not always successfully.

The two reels are dotted with fascinating drawings, photographs, old prints, down to our day of perfect photography. It is a kaleidoscope of planes, of their making and their makers, planes of all models, on the ground and in the air, of steadily increasing beauty and efficiency. And finally, animated world maps, where arrow lines move from one point to another, with the incredible "flying time" between them when peace comes again—leaving us still but on the threshold of greater wonders to come.

### AASA Cancels Meetings

The American Association of School Administrators cancelled its four regional conferences in compliance with the request of War Mobilization Director, James F. Byrnes, that gatherings be restricted to 50 persons to afford travel and hotel facilities for service personnel. The conferences were planned for Birmingham, Alabama, February 12-14; Chicago, February 19-21; Denver, February 27-March 1, and New York City, March 5-7.

In cancelling the four meetings, N. L. Engelhardt, president of the AASA, and associate superintendent of schools, New York City, said, "Our regional conferences had been reduced in size in accordance with previous plans to restrict large gatherings, and our curtailed program was devoted in large measure to the education of returning veterans and other projects connected with the conduct of the war and its aftermath. However, we recognize the extreme emergency of the present request of the war agencies, and will fulfill to the best of our ability the objectives of these conferences through other media."

In 1942, at San Francisco, the AASA registered 12,174 delegates. A year later the Association cancelled its national meeting at the request of the Office of Defense Transportation, and last year five regional conferences were substituted for the national meeting.

### CIAA Spanish Language Films

The Office of the Coordinator of Inter-American Affairs, Motion Picture Division, has deposited Spanish language versions of several of their films with thirteen film libraries located at strategic points, where it is felt they will receive the most use. Films deposited with all of these libraries are: *Busy Little Bears*, *Housing in Chile*, *High over the Border*, *Airacobra*, *Advanced Baseball Technique*, *Willie and the Mouse*, *Of Pups and Puzzles*. Ten other subjects are available from some of the depositories. The films should have two major uses: (1) for Spanish-speaking persons mostly in the Southwest, and (2) for Spanish classes in high school and college.

Depositories for the Spanish sound-track films are:

Department of Latin American Cultures, University of Arizona, Tucson; Extension Division, Department of Visual Instruction, University of California, Berkeley; Rocky Mountain Council on Inter-American Affairs, University of Denver, Denver, Colo.; Division of Audio-Visual Instruction, University of Florida, Gainesville; McHenry Educational Films, 64 East Jackson Boulevard, Chicago 4, Ill.; Extension Service, Bureau of Visual Education, University of Michigan, Ann Arbor; Kansas City Sound Service Company, 926 McGee Street, Kansas City, Mo.; Department of Public Instruction, Visual Education Division, State of Montana, Helena; School of Inter-American Affairs, University of New Mexico, Albuquerque; Pan American Council of Buffalo and Western New York, 610 Delaware Avenue, Buffalo 2, N. Y.; Oregon State System of Higher Education, General Extension Division, Department of Visual Instruction, Corvallis; Extension Division, Audio-Visual Aids Bureau, University of South Carolina, Columbia; Division of Radio and Visual Education, State Department of Education, Austin, Tex.

# Notes

## Boston University Radio Courses

Realizing the growing importance of radio broadcasting in business and in the social life of the community, Boston University, Boston, Massachusetts, is offering professional courses to prepare men and women for careers in radio. That training must serve not only the business man but the professional studios of broadcasting stations. The proper technical facilities and the most practical teaching are essential.

To meet these qualifications Boston University has planned a program which has the active cooperation of local stations. All instructors of radio courses are full-time staff members of Boston broadcasting stations. To make the training program as efficient as possible, the University is organizing an Advisory Council which will include prominent executives from every station in Boston.

The following courses are given this semester: Principles of Broadcasting, Radio Today, Radio Announcing, Radio Speech, Radio News Reporting, Radio Script Writing, Radio Production, Radio Workshop, Radio in Education. Others will be given as the need arises on Radio Arts, Accounting for Radio, Radio Salesmanship, and Television.

Boston University has its own radio studios with the most modern professional equipment.

## Spring Courses in Visual Aids

The College of Education of the University of Minnesota offers a regular spring quarter course, "Visual Aids in Teaching." This class will meet two hours every Saturday morning of the quarter, March 20 to June 16. The course will be given by Mr. Paul Wendt, director of Visual Education, and will cover the equipment, materials and utilization of all types of visual aids.

Mr. Floyd E. Brooker, director of the Division of Visual Aids for War Training of the U. S. Office of Education, will conduct two courses on the motion picture at the American University in Washington through Pictures: Techniques and Problems of Use," and another on "Production Problems."

## New Navy Combat Films Available

*Target Japan* and *Pacific Firepower*, two new Navy films, have been made available for showing to war workers in plants and to labor unions by the Navy's Industrial Incentive Division.

*Target Japan*, a 12-minute action-filled motion picture, vividly portrays developments in the Pacific from the dark days of Pearl Harbor up through the step-by-step cracking of Japan's outer fortress. The film dramatically emphasizes the role of the new tactical development in Naval warfare—the task force built around the aircraft carrier—and highlights such new battle features as the rocket projectile and jet propulsion take-offs for planes. It shows amphibious operations against the well defended island of Sai-

pan, the "softening-up" job by big naval guns and airborne power, as well as Coast Guard and Marine participation, which ended in capture of the island. The picture was produced by the Navy in cooperation with the March of Time and is available in both 16mm. and 35mm. size.

*Pacific Firepower* (11 minutes, available only in 16mm.)—features the part played by aircraft in the conquest of the Marianas, portrays the engineering feat involved in the construction of the Saipan airstrip which brought Tokyo within easy bombing range, and describes the Navy's famous carrier-based Hell-divers. Woven into the film are scenes from Japanese activities on the enemy's home front, indicating the fanatical determination with which they are executing the war as American victories bring our forces ever closer to Tokyo.

War plants and labor groups desiring to exhibit the new battle films may obtain them through their nearest depository of Navy incentive film. The name of their nearest Navy Department film distributor can be obtained by writing: Chief of the Industrial Incentive Division, 2118 Massachusetts Avenue, N. W., Washington 25, D. C. A nominal rental charge is made for the film.

**Raw Film Stock Allocations Cut**

To meet increased military demands for X-ray, aero and 16mm film, the War Production Board has announced that consumption of 35mm film for entertainment purposes by the motion picture industry in the first quarter of 1945 will have to be cut. The indicated figure is somewhere in the vicinity of 300,000,000 linear feet, which is approximately 25,000,000 feet less than the last quarter of 1944. Civilian consumption of X-ray film will be cut to 75 per cent of average quarterly usage. Other civilian use of 16mm film has already been cut to a minimum, from 65,000,000 feet per quarter in peacetime to 1,000,000 linear feet.

Not only the industry, but domestic Government agencies, as well as several neutral countries whose allocations are passed upon by the State Department, will have to take reduced allotments. Although there has been a slight increase in the raw stock allocated to overseas film division of the OWI, actually its first quarter quota of 15,000,000 feet represents a cut, as from this the OWI will have to supply footage for Ministry of Information war films and other United Nations films shown in the U. S. In addition, this allocation will have to cover the OWI's Far Eastern program of psychological warfare films.

Requirements of the Army and Navy for 16mm. film in the first quarter total 142,000,000 linear feet, which is 8,500,000 feet in excess of the industry's present production capacity, 170,000,000 linear feet of 35mm. and 24,000,000 square feet of aero film.

Eastern Office: 2828 Decatur Ave., Bronx, N. Y.—FORDHAM 7-9300

In order to meet military and essential civilian needs, the film producing industry has already increased its output by about 45 per cent as compared with 1941.

It is expected that the raw stock shortage will be eased by April.

### Recordings and Transcriptions

The Bureau of Audio-Visual Aids, Indiana University, has announced the classification and analysis of 120 fifteen-minute radio transcriptions recently deposited with the Bureau by the Institute of Democratic Education. These programs are grade-placed for the most part at junior and senior high school levels with some suitable for college students and adult groups. They are available for one-week periods at the service charge of 25c for the first two programs and 10c for each additional double-faced record. All these transcriptions require playback equipment operating at 33 $\frac{1}{3}$  r.p.m.

The newly-acquired material comprises seven out of the nine series of "Lest We Forget" broadcasts and deals mainly with American history and government. A utilization chart, suggesting groupings of the programs, has been prepared by the Bureau to assist users in the selection and utilization of the material. According to the Bureau, research in the utilization of transcriptions indicates that their contribution lies in the development of attitudes, but continued experimentation points to their usefulness also as sources of information.

**P**ICTURES "made-to-order" for your needs are an actual, real life dramatization—an intimate experience which your audience undergoes. Films tell the *whole story* . . . whether it's a sales presentation, instructions, educational, or a goodwill builder of your plant or product.

Filmcraft is proficient in the making of special films that tell a retentive story, easily and quickly. Let us know your problem . . . our experienced staff offers time-proven advice, with no obligation on your part.

The Treasury Department has prepared a series of transcriptions to aid in the sale of war bonds. These are dramatic presentations with top-ranking stars, averaging 15 minutes each, entitled "Military Objective", "Children, Tomorrow Is Yours," "The Murder of Lidice," and "Miss Liberty Goes to Town." They may be loaned from the U. S. Office of Education, Washington.

A pamphlet on "Setting Up a Recordings Library," by Alice Manchester, describing the way in which The Ohio State University Teaching Aids Laboratory has catalogued recordings which can be used as teaching aids, may be obtained free of charge from FREC, United States Office of Education, Washington, D. C.

### Ten Best Films of the Year

Critics and reviewers for press and radio participating in the 23rd annual "Ten Best Pictures" poll, conducted by *Film Daily*, voted the Paramount picture, *Going My Way*, starring Bing Crosby, the best feature picture of 1944. Of the total 479 votes taken, it received 428, a 103-vote lead over 20th Century-Fox's production of *The Song of Bernadette*. In third place was *Since You Went Away* (UA-Selznick). Next were five Metro-Goldwyn-Mayer pictures; *Madam Curie*, *Dragon Seed*, *The White Cliffs of Dover*, *Gaslight*, and *A Guy Named Joe*. Completing the list were, in order: *The Story of Dr. Wassell* (Paramount) and *Lifeboat* (20th Century-Fox).

# Current Film News

■ **CASTLE FILMS, INC.**, 30 Rockefeller Plaza, New York 20, announce a new sound motion picture in color which discloses, for the first time, one of the Army's many secret weapons, called—

**The Weasel**—visualizing its evolution as a variety of tests are shown. Officials of the Army call on one of the largest automotive plants to design a vehicle capable of negotiating deep snow in the far North and then casually demand that it also be just as efficient as a carrier of troops and equipment in South Pacific jungles. It is christened "The Weasel" when final alterations in its design also permit it to plunge into a river, swim across and climb ashore through mud, deep sand, or any other terrain.

Audiences report that the film stimulates discussion on the more basic engineering problems that had to be overcome in its development as well as on this new vehicle's potentialities in postwar transportation. Castle has available a new four-page illustrated folder describing "The Weasel" which is offered free to all who wish to consider showing the picture, and is also supplying a complete catalog of free motion pictures to all who write for it to their offices at 30 Rockefeller Plaza, New York City; Field Building, Chicago, Illinois; and Russ Building, San Francisco, California.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, are now distributing 16mm prints of the Ministry of Information short subject on Hitler's secret weapon:

**V-1**—showing the robot bomb attacks on England during June and July of last year. This photographic report includes a number of spectacular shots of robot bombs destroyed in mid-air by anti-aircraft fire and by fighter planes. An amazing impression is given of the accuracy of ack-ack shooting against these fast moving targets, while in the case of those shot down by fighter planes, the dangerous short range attack is emphasized by the rocking camera as the buzz-bomb explodes close by. Nevertheless, in spite of increasing accuracy in all types of defensive weapons, by September 30, 1944, over 26,000 people were killed or injured and more than a million houses destroyed or damaged.

"V-1" has been called a "nine-minute capsule of buzz-bomb terror . . . which will educate and arouse its audiences to a vivid realization that robot bombs are not a peculiarly British problem but one which faces a whole world at war".

The narration is written and spoken by the Canadian author, Fletcher Markle.

■ **UNITED STATES DEPARTMENT**, Motion Picture Service, Washington, D. C., has released the following subject in one reel, 16mm prints of which may be purchased from Castle Films without authorization from this Department:

**Wetlands**—showing where our 120 million acres of wetlands are located. The film points out that seventy-eight millions of these acres will serve us best if left in their natural state for the production of timber and preservation of wildlife. Thirty-one million acres are shown to be suited to farming if properly drained. A section of the reel illustrates briefly the principal types of water control and methods of land drainage.

■ **DAIRY COUNCIL OF ST. LOUIS**, 4030 Chouteau Ave., St. Louis, Mo., has been engaged in the production of educational films on nutrition. The films will be loaned without cost to health and educational organizations in the area served by the Council. Prints are available for purchase. The completed subjects are:

**Home of the Free**—1 reel kodachrome sound—designed to teach the importance of good family nutrition in our wartime effort. The story is illustrated by scenes taken at a public nursery school, at Scott Field, and in the home.

**Making Ends Meet**—1 reel kodachrome sound—aims to teach adequate nutrition in accordance with the recommendations of the National Nutrition Program.

**Milk As You Like It**—another kodachrome reel presenting highlights in the processing and manufacture of dairy products.

**Two Little Rats and How They Grew**—movie record of a rat feeding demonstration conducted as a nutrition education experience. The project was developed by fifth grade boys and girls.

■ **BELL & HOWELL CO.**, 1801 Larchmont Ave., Chicago, have added several new Universal features in 16mm to their rental library, including:

**Corvette K-225**—10 reels—starring Randolph Scott and Ella Raines. When a corvette is sunk in enemy action, the crew get a new ship and have some

exciting encounters with Nazi subs and planes on its maiden convoy.

**Fired Wife**—a 7-reel comedy with business and romantic complications. Diana Barrymore, Louise Albritton and Robert Paige head the cast.

**Frontier Bad Men**—an 8-reel super-western with a cast that lifts the tale of cattle-town conflict above its type. Featured are Diana Barrymore, Leo Carrillo, Andy Devine, and Robert Paige.

■ **COMMONWEALTH PICTURES CORPORATION**, 729 Seventh Avenue, New York 19, reports their exclusive 16mm release of the United Artists feature:

**King of the Turf**—9 reels—with Adolphe Menjou, Dolores Costello, and the new juvenile actor, Roger Daniel. The story has a stirring, human interest theme of father-and-son comradeship and loyalty, told against the exciting, colorful background of horse-racing, and teeming with action and suspense in its combination of drama, comedy and pathos. It is available for rental also from Ideal Pictures Corporation, 28 E. Eighth Street and its several branch offices.

## Lincoln Film Popular

It is reported by Nu-Art Films, Inc., 145 West 45th Street, New York 19, N. Y., that the feature film, *Abraham Lincoln*, starring Walter Huston, has topped all records of circulation, both in number of prints and bookings. This ten-reel feature is widely recognized as the crowning achievement of the noted producer-director, D. W. Griffith, and is considered one of the most complete and historically accurate films ever made. Huston's portrayal of Lincoln has been acclaimed an outstanding achievement in characterization. A study guide for the picture, prepared by Frederick Houk Law, Ph.D., chairman of the Department of English, Stuyvesant High School, New York City, is used extensively. Although twenty 16mm prints are available from Nu-Art Films alone, they are rarely idle.

■ **U. S. Government War Information Films—1945 Edition**—a complete listing of all 16mm films released by the Bureau of Motion Pictures, Office of War Information, Washington 25, D. C. It is available on request.

This booklet includes descriptions of the contents of the 94 films distributed by OWI and the addresses of the 281 distributors in the 48 states from whom these films may be obtained. All of the subjects are 16mm sound. These films show why the entire world is at war today, where the fighting is taking place, and our part in this war.

Most local 16mm film libraries are distributors of government war films and will be glad to furnish complete information on these subjects.

### Department of Visual Instruction

THERE are reports of unusual membership activity in the Department of Visual Instruction of the NEA these days. Teachers interested in visual aids who are not already members of DVI should communicate with their respective zone officers.

#### Zone Officers

- Zone I** (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont)  
*President:* Mr. Joseph L. Senechal, Director, Department of Audio-Visual Education, Windham High School, Willimantic, Connecticut.  
*Secretary:* Miss Dorothy A. Allard, 8 Wells Road, Reading, Massachusetts.
- Zone II** (Delaware, Maryland, New Jersey, New York, Pennsylvania, Virginia)  
*President:* Dr. James S. Kinder, Pennsylvania College for Women, Pittsburgh, Pennsylvania.  
*Secretary:* Miss Mary Louise Molyneaux, Board of Education Building, Pittsburgh, Pennsylvania.
- Zone III** (Indiana, Kentucky, Michigan, Ohio, West Virginia)  
*President:* Mr. H. B. Allen, West Virginia University, Morgantown, West Virginia.  
*Secretary:* Mr. William G. Hart, William Ford School, Dearborn, Michigan.
- Zone IV** (Illinois, Iowa, Missouri, Wisconsin)  
*President:* Mr. Alvin B. Roberts, Haw Creek Township High School, Gilson, Illinois.  
*Secretary:* Mr. H. L. Kooser, Iowa State College, Ames, Iowa.
- Zone V** (Minnesota, North Dakota, South Dakota)  
*Secretary:* Mr. O. S. Anderson, Horace Mann School, Fargo, North Dakota.
- Zone VI** (Idaho, Montana, Oregon, Washington)  
*President:* Mr. Glenn Jones, State College of Washington, Pullman, Washington.  
*Secretary:* Miss K. S. Klise, Yakima High School, Yakima, Washington.
- Zone VII** (Arizona, California, Nevada, New Mexico)  
*President:* Mr. Boyd B. Rakestraw, Extension Division, University of California, Berkeley, California.  
*Secretary:* Mr. George M. Jamieson, Jr., 405 Hilgard Ave., Los Angeles 24, California.
- Zone VIII** (Colorado, Kansas, Nebraska, Utah, Wyoming)  
*President:* Dr. J. R. MacNeel, University of Wyoming, Laramie, Wyoming.  
*Secretary:* Mr. C. C. Lemmon, Granite School District, Salt Lake City, Utah.
- Zone IX** (Arkansas, Louisiana, Oklahoma, Texas)  
*President:* Dr. B. F. Holland, University of Texas, Austin, Texas.  
*Secretary:* Mr. D. W. McCavick, Bureau of Visual Instruction, University of Texas, Austin, Texas.
- Zone X** (Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina, Tennessee)  
*President:* Dr. W. H. Ward, Extension Division, University of South Carolina, Columbia, South Carolina.  
*Secretary:* Mrs. H. L. Harris, University System of Georgia, 223 Walton St., N.W., Atlanta, Georgia.

# AMONG THE PRODUCERS

## Changes in Britannica Films Personnel

E. H. Powell, president of the Encyclopaedia Britannica, has been elected president of Encyclopaedia Britannica Films, Inc., and Dr. Miller McClintock, formerly president of the Mutual Broadcasting System and industrial consultant, and Dr. V. C. Arnsperger, have been elected to the board of directors of the company, it was announced recently by William B. Benton, chairman of the board. Dr. Arnsperger is vice-president of the film company. Dr. McClintock also has been retained as special consultant to the film company. Three other new officers of the company have been elected. They are S. R. Fuller, treasurer; J. A. Brill, assistant secretary; and C. F. Hansen, who was elected to the newly created office of controller. W. G. Tams, formerly assistant secretary, was made secretary of the company.

Jack C. Coffey has joined the sales executive staff of Encyclopaedia Britannica Films Inc. in Chicago. President Powell has announced. As Director of School Relations, Mr. Coffey will be responsible for the company's promotional activities which include advertising, sales promotion, sales training and public relations. His experience in

J. C. Coffey

the production and use of visual aids in business organizations as well as schools covers a period of fifteen years, nine of which were with the Jam Handy Organization of Detroit, where he was on the executive staff and board of directors, and headed up the educational films sales department from its inception.

Robert H. Redfield, formerly Vice President and Eastern Division Sales Manager of A. J. Nystrom & Co., and recently of the Redfield Visual Agency, has also become affiliated with Encyclopaedia Britannica Films as Field Manager. His duties will consist of field

sales supervision, market analysis, curriculum correlation and educational counseling. His eighteen years of experience in the school selling field qualify him for this work. He is first assistant to Mr. H. R. Lissack, general sales manager, and will work out of the home office in Chicago.

Robert H. Redfield

Harold L. Hall has been appointed office manager of the sales department. Mr. Hall until recently was serving in the Ordnance Department of the Army Service Forces and retains his commission on an inactive basis. Prior to his enlistment in the Army, he was for six years manager of the factory order department, Zenith Radio Corporation, Chicago.

## Gutlohn Purchased by ITTC

Indication of the rapid development and expansion of International Theatrical and Television Corporation as a major factor in the 16mm field, was evidenced last month by the joint announcement of George Hirliman, President, Harry J. Rothman, Executive Vice-President and Joseph Auerbach of the Board of Directors, that the company had purchased the Walter O. Gutlohn Corporation.

Continuance of the Gutlohn Corporation as a definite entity was additionally insured by Mr. Hirliman when he further stated that plans to expand the currently operating branches from seventeen to thirty in the United States, were already under way; arrangements were completed whereby Harry A. Kapit would continue in his executive capacity as heretofore and will develop a new television department for said company; and the entire Gutlohn organizational personnel in New York and its branches retained. Augmenting this personnel will be Hirliman's former associates, including Alfred Crown as Vice-president, David

E. Weshner, Director of Public Relations, Ann Exelberth, Betty Carol, and Carol Weill as Director of Publicity.

The Gutlohn Corporation, organized in 1933 by the late Walter O. Gutlohn and Harry A. Kapit, developed in thirteen years of existence into a national factor in the 16mm field. Its acquisition by ITTC gives the parent company not only one of the largest 16mm educational film production organizations, but it also acquires a most extensive film library including over three thousand subjects.

In addition to the acquisition of the Gutlohn Corporation, ITTC which also controls Circle Film Labs, Inc. its printing outlet, and the Film Of The Month Club, has also acquired Certified Film Distributors, which will function as the sales organization, concentrating on outright sale of prints to sub-agencies, including department stores, photographic dealers, general industry and governmental agencies.

Emphasis on the corporation's plan, for the development of a strong visual education program was also in evidence with the appointment by Mr. Kapit of Victor Roudin and George Zehrung, Former Head of the Motion Picture Bureau of the Y.M.C.A. to head the Educational Division of the Corporation.

Headquarters of ITTC are being maintained at the Gutlohn offices, 25 West 45th Street, New York City.

## Hoefler Productions Expand

Announcement comes from Paul Hoefler Productions that the success of their policy in seeking the cooperation of leading audio-visual educators in the production of motion pictures serving the growing needs of the field, has increased their production schedule to the point where removal from Los Angeles to larger quarters was necessary. The new address at 9538 Brighton Way, Beverly Hills, California, has a second advantage—that of bringing them into closer contact with their laboratories and studios. Louis C. Simmel, Sales Manager of the firm, has just returned from an extended trip throughout the East and reports great interest in their recent release, *African Fauna*, a film depicting wild animals of the African veldt, forest and rivers. Paul Hoefler, production chief, has under way a number of new films, which have been scheduled as a result of demand by the Audio-Visual leadership of the country.

In line with their progressive program to keep the educational world advised of their progress in new productions, and of their policy of cooperating with educational leaders concerned with improving and extending audio-visual teaching practice, the organization has engaged the services of a long-established advertising agency, H. Charles Sieck, Inc., of Los Angeles, which will handle all advertising and promotion.

## New Slidefilms on Air Transportation

"Air Transportation . . . Jobs and You," second in a series of slidefilms presented by United Air Lines, explains the various jobs in the field of air transportation, and is designed primarily for use in junior and senior high schools and junior colleges. It will answer any of the questions asked today concerning the employment possibilities in the new and rapidly developing field of air transportation. The slidefilm and its new type of fully illustrated teacher's manual present an accurate picture of the wide diversification of jobs in commercial aviation, and indicate clearly the requirements for employment and the numerous advantages to those who have qualified as employes. The film and manual provide excellent assistance to those who are confronted with the problem of presenting the complete story of aviation as an industry.

The manual which accompanies the slidefilm is unique in presenting frame by frame exactly the illustrations used in the slidefilm. This enables the instructor to prepare for presentation without actually projecting the various pictures in the slidefilm.

A third slidefilm in the United Air Lines series, called "Seeing the Airport," has been developed to supplement its predecessors, "Behind the Scenes of a Coast to Coast Flight" and "Air Transportation—Jobs and You." In this strip a personalized tour of the Chicago Municipal Airport is conducted and pupils are given the "feel" of a flight from Chicago to Cleveland. The slidefilm is accompanied by a fully illustrated manual and is designed for use in grades two to five. It may be used to develop interest for classroom study or for review purposes.

These slidefilms have been produced by the Department of School and College Service of United Air Lines and are distributed by the Society for Visual Education. All are available without charge to any school or training organization which has appropriate projection equipment, or to any others who can make good use of this material.

## New S.V.E. Picturol Catalog

A new Picturol Catalog, which lists many new slidefilms, has been announced by the Society for Visual Education. The catalog includes among other slidefilms, an entirely new series of Picturoles on the National Parks of the United States. Another new slidefilm of timely interest is "Romance of the Alaskan Highway," a picture story of the building of the Alcan Highway to supply the troops in Alaska and the Aleutians. In contrast are two new slidefilms on the life and scenic attractions in the Virgin Islands.

Other educational slidefilm additions include "Elementary Meteorology" (three slidefilms); "Origin and Basic Definitions of Algebra" (two slide-

films); "Mathematical Instruments" (4 slidefilms presenting different types of instruments and their use); "Theory of Flight" (4 slidefilms).

Copies of the S.V.E. Picturol Catalog are furnished free upon request to the Society for Visual Education, Inc., 100 East Ohio Street, Chicago 11.

## Bell & Howell Announces 25-Cycle 16mm Sound Projector

Designed especially for 25-cycle operation, the Filmosound Model 156-VB is identical in other respects with the Model 156-V, and is listed at \$453.67, according to word from the Bell & Howell Co., 7100 McCormick Rd., Chicago.

Filmosound 156-VB

While as yet the entire output of this model is allocated to military and high-priority civilian use, the 25-cycle feature is expected to fill a real demand in rural localities after the war.

## RCA Manual on School Sound Systems

The important place which school sound systems hold in the field of audio-visual education is comprehensively described in a 28-page manual just published by the Educational Department of the RCA Victor Division, Radio Corporation of America. The new publication, titled "School Sound Systems" reveals how sound systems are being utilized in elementary, junior, and senior high schools, as presented in articles by experienced educators in these fields.

The use of sound systems in elementary school units in Chicago suburban areas is cogently presented by Emmet Morris, Principal of the Irving School, of Maywood, Illinois, in a paper which stresses the saving of administrative and student time through the use of two-way communication facilities provided by the sound system. Other points covered include the educational value of effective radio listening in classrooms, and the entertainment appeal of school broadcasting.

Twenty-four practical ways in which the sound system has been used in the Haldane Central High School, Cold Spring, N. Y., during the past five years are described by William J. Hagerty, Supervising Principal.

A list of Audio-Visual Aids which RCA Victor will make available to the educational field in the postwar period is included in the new booklet. These cover sound products, broadcast equipment including FM, AM, and television transmitters, FM and AM radio receivers, phonographs, television receivers, laboratory equipment such as the RCA Electron Microscope, and electron tubes. Also included are Victor records, which are now available, for use in music, speech and drama, social studies, and foreign languages.

Upon resumption of civilian production, RCA, pioneer in the development of sound systems for schools, will again make these systems available for schools ranging in size from 10 to 150 rooms, the booklet points out. Research conducted during the war, it is stated, will result in new advances in sound systems to produce even greater faithfulness of tone in the auditorium and classroom.

The new booklet can be secured by writing to the Educational Department, RCA Victor Division, Radio Corporation of America, Camden, N. J.

Max N. Heidenreich

Max N. Heidenreich has been appointed Sales Manager for RCA 16mm equipment in fifteen Southern States and will make his headquarters at RCA Victor's Atlanta office.

## New Ampro Booklet

Republication in booklet form of Stanley Young's noteworthy article "What will happen in the movies the day War is over . . ." is announced by the Ampro Corporation of Chicago. This survey of the postwar possibilities of 16mm sound motion pictures first appeared in a recent issue of *Cosmopolitan Magazine*. It revealed many new facts about the increasingly important role of 16mm films in a wartime America and aroused widespread interest. Free copies of this booklet are available on request from the Ampro Corporation, 2851 North Western Avenue, Chicago 18.

Instructor's Manuals

**\$489.87 — 10% Discount to Schools**

TODAY every vocational school needs its own library of visual aids—to help teachers, to increase interest, to speed up learning. With a school film library, teachers can have films when they need them—no ordering, no waiting, no substitutions.

The U.S. Office of Education recommends a basic library of 20 visual units (motion pictures, film-strips, and instructor's manuals). Start with these films. Add others later.

If this basic film library does not fit your curricular needs, write us for additional suggestions.

Visual and vocational specialists of the Office of Education will choose a library to fit your curriculum—in vocational agriculture, home economics, industrial arts, machine shop, woodworking, and other subjects.

With 500 training films to choose from, there is a visual aids library for your school.

# KEYSTONE *Overhead Projector*

## "Now we use lantern Slides in the Classroom"

So writes a teacher who has recently been provided with a Keystone Overhead Projector. Like many other teachers she is enthusiastic over these advantages:

The lantern and the teacher are together at front of the room **before the class.**

The slide is right side up on the projector's open slide table, clearly visible to the teacher in all details.

She can point out items of reference on the slide, with the corresponding shadow

of the pointer appearing on the screen. Likewise writing or drawing on etched glass will reproduce on the screen.

The projector is ideal for tachistoscopic work when combined with the Flashmeter.

It is air-cooled and provided with heat-absorbing glass so that lamps of 500-watt, 750-watt or 1000-watt may be used.

It is easily adapted to the projection of 2"x2" slides.

 A scene from *Rembrandt*, special school edition of a United Artists feature, starring Charles Laughton and recreating the life of the great painter.

## HOW Motion Pictures Can Help You Teach ART

In teaching art, it's often hard to make clear the relationships between masterpiece, artist, and the times that influenced both.

A B&H Filmsound can help bridge this gap by presenting art films from Filmsound Library . . . dramatic features like "Rembrandt," which recreate bygone days; films produced by Harvard University and similar authorities showing great contemporary painters, sculptors, potters, etchers, and other artists at work; films picturing the techniques of native artists in many lands.

For teaching virtually any

other subject, too, Filmsound Library offers a wealth of school-tested sound and silent films.

A Filmsound will reproduce these films at their best. Long widely preferred by schools, Filmsounds are even better than before. They now embody combat-tested results of our war-accelerated research in optics, electronics, and mechanics.

PRECISION-MADE BY

*Bell & Howell*

DeVRY Triple-Purpose Slide-film Projector (Left) for (1) 2" x 2" paper and glass slides; (2) for single-frame slide-film; (3) for double-frame slidefilm—with motor driven forced-air cooling.

DeVRY High-Impedance Microphones (Right)—either dynamic or crystal—deliver high-quality reproduction. Fit any standard stand.

DeVRY Phono-Record Turntables—two-speed operation—33 1/3 and 78 RPM—take records up to 16". True-tracking crystal pickup arm. For 60 cycle A.C. operation only.

# These Projected Teaching Aids

DeVRY Model 16-1966 is a 3-purpose projector for sound or silent films; true-to-life color, without extra equipment. Separate amplifier & speaker provides indoor or outdoor P.A. facilities.

DeVRY stereopticon with lamp capacity up to 1000-watts for 3 1/2" x 4" slides.

DeVRY slide projector with 300-watt lamp for 2" x 2" paper or glass slides.

# Now Available from DeVRY

DeVRY motion picture screens are sized from 30' x 40' to 20' x 20'—portable, ceiling, wall, wall & ceiling models. Immediately available.

The DeVRY SCHOOL SUPPLY DEALER in your state is in position to supply you with a complete line of audio-visual equipment—from the famed DeVRY 16mm sound-on-film projector to accessories. Make him your headquarters for projected teaching aids. Mail coupon below for our NEW catalog of visual teaching equipment you can buy now. Remember: When you "buy DeVRY", you buy assurance of a name that for 32 years has been an outstanding one in the field of Visual Education.

SHOOT your own school movies with a DeVRY 16 mm motion picture camera—proud brother of 35mm DeVRY'S that shot Academy-Award-winning "DESERT VICTORY."

# 25 Years of Film Service to Schools!

For a quarter of a century we have served the school field with the best in motion pictures. Our 16mm rental library is the largest in the country and contains the latest and finest Major Studio productions made available in 16mm sound. Those listed below are but a few of the many features increasingly used for curriculum enrichment in the study of Literature, History, Biography, Human Geography, etc.

### AS YOU LIKE IT

Two of the screen's foremost artists—Elizabeth Bergner and Laurence Olivier—play the leading roles in this notably fine production of Shakespeare's comedy.

### ADVENTURES OF TOM SAWYER

Thoroughly delightful screen version of Mark Twain's immortal and unforgettable story. With Tom Kelly, May Robson and Walter Brennan.

### BECKY SHARP

"Vanity Fair", Thackeray's famous classic about a thoroughly selfish woman, brought to the screen in Technicolor. Miriam Hopkins in the title role.

### EDGE OF THE WORLD

A stirring, human document on the struggle for existence by a strong, hardy people, living on a desolate island off the northern-most tip of Scotland.

### EXPLORERS OF THE WORLD

A thrilling travel and adventure film in Asia, Africa, South Seas, the Antarctic and Amazon region.

### LIFE OF ROBERT BURNS

The poetic genius and life of the great Scottish bard depicted in a telling and entertaining manner. Andrew Cruikshanks as Burns.

### LITTLE LORD FAUNTLEROY

Frances Hodgson Burnett's warmly human child story masterfully produced. Freddie Bartholomew in title role.

### THE MELODY MASTER

An appealing film based on the life of the great Austrian composer, Franz Schubert, with many of his best known and loved compositions played and sung. With Alan Curtis and Ilona Massey.

### PRISONER OF ZENDA

Anthony Hope's romantic tale of a by-gone century, beautifully produced, excellently acted by Ronald Colman, Madeline Carroll, and fine supporting cast.

Scene from "TOM SAWYER"

From "PRISONER OF ZENDA"

Rosalind and Orlando in "AS YOU LIKE IT"

**NOW** *is the Time*

**To Consider the Problem of Sound Motion Pictures as Visual Aids**

It is important that you consider carefully the role that sound motion pictures will play in your program of teaching. Although proper projection equipment may not be available to you until our war efforts are completed, now is the time to lay the groundwork for a successful program of visual instruction by analyzing the requirements of your local situation and carefully planning the program you desire. Success is dependent upon this careful planning. Prepare now so that you might make the most comprehensive use of this proven aid to teaching.

**Efficient Equipment is Vital**

A film program is no better than the equipment which makes it possible. Quiet, dependable operation, clear tone quality, brilliant illumination, simplicity of operation, compactness and portability—plus ruggedness that assures long service—all these are essential to the successful use of educational films. These are qualities that have won for Ampro 16 mm. Projectors outstanding recognition in thousands of school systems, colleges and universities. These are the qualities that have won for Ampro Units wide acceptance in all branches of the U.S. armed services. Today practically 100% of the Ampro output is demanded by the U.S. Government.

An unusually interesting and informative story entitled "What Will Happen in the Movies the Day War is Over..." is being distributed in attractive booklet form by the Ampro Corporation. Write today for your FREE copy.

*Spencer GK Delineascope used by Air Force Technical Training Corps, University of Chicago.*

## Seeing and Learning *Quickly*

In the first 28 months of its existence the Army Air Force Technical Training Command turned out more than 500,000 ground and combat crew technicians. An amazing total contrasted with the record of the preceding 20 years during which the Army Air Corps had graduated only 14,803 such technicians.

One factor which is helping to instruct such unprecedented numbers in so short a period is the use of visual methods.

Spencer Delineascopes are in daily service in this vital work.

# You can even thread it in the dark!

THE SIMPLIFIED FILM PATH IS SO EASY TO FOLLOW

Rapid, accurate threading is possible with the RCA film path. Note the four easy steps.

**RCA 16MM Projectors** are simple for teachers and students to operate...threaded in a moment, the film is ready to screen.

**You get longer film life:** The large, slow-speed sprockets are gentle on your film; the free-swinging gate makes it easy to adjust film in the aperture; an embossed threading-line provides a guide for exact length of upper and lower loops; the recessed sprockets and rollers prevent picture or sound-track area from touching metal; the sweeping curve of the film path has no sharp bends to kink your film.

**Other features:** The new RCA 16MM projector will include other important advances in projector design, such as even-tension take-up; coated lenses; completely removable gate; amplifier with inverse feedback for true sound; rewind without changing reels; standard tubes and lamps; sound stabilizer to keep sound on pitch; aero-dynamic cooling to prevent hot-spots; lower film-loop adjustable while in operation; theatrical framing.

**Availability:** Because of military demands, these new RCA projectors are not available now for civilian use. But investigate the new RCA projector before you plan postwar purchases for your school. Write: Educational Department 43-20F. Radio Corporation of America, Camden, New Jersey.

**PLACE FILM:**

- under **1.** large upper sprocket
- in **2.** aperture behind free-swinging gate
- around **3.** the sound drum
- and under **4.** the large lower sprocket

## Editorial

# Education Unlimited

“OF making many books there is no end” applies equally to the making of definitions and redefinitions in endless sequence. The range of variation is limited only by the vocabulary reach of the definition-maker. But the value of a new version depends on the contribution made to the clarification of thought, not on mere change of verbiage. A “new” definition that merely verbalizes details already inherent and fully formulated in the original concept is worthless, save as linguistic exercise for its maker and his reader. For example, when a “party” is defined as “a social gathering we attend to have a good time,” it suffices to recall a clear, complete and very personal concept already established in all normal minds. When a scholar comes forth with “a party is a social function where participants are exposed to social, intellectual and aesthetic experiences which yield more or less pleasurable satisfactions to each participant, but in varying degree according to his susceptibility to and capacity for such experiences,” he achieves nothing but cumbersome and futile circumlocution for “having a good time.” Even the great Dr. Johnson, master elaborator of the obvious, contributed far more to the gaiety of nations than to clarity of thought by such ponderous pronouncements as “a network is anything reticulated or decussated at equal intervals and having interstices between the intersections.” On the other hand, when a previous definition is illuminated by change, enriched by expansion or intensified by compression, it spells progress. John Stuart Mill could do it.

Few words have suffered more, at the hands of the definers, than “education”, and its sufferings are not over. It has been broadened to include animals and insects, and even to the point where it is scientifically correct to speak of “the education of bacteria” with no brain involved. It has been narrowed to a mere synonym for “school.” Dictionaries confirm this by calling education a “general term for learning, especially as gained in an institution of learning.” Popular convention is still more rigid: “His education ended with the Sixth Grade.” Parents want their children to “get their education first,” as if a diploma assured full mental resources for the balance of their lives. This narrow connotation is often defended by the argument that there must be “directive influence” for the process to constitute true education. There is no question that proper direction greatly enhances educational results. But it matters little whether the “directive” guidance and stimulus come from intelligent parents in the home, from teachers in classrooms, from captains of industry, from fellow humans in daily life, or from the individual’s own studies and explorations in literature and the living world around him. Otherwise we are forced into the manifest absurdity of ranking countless great men of history—Homer and Thales, Lincoln and Edison—as uneducated. We like the middle-ground position of John Stuart Mill who included in education

“everything that helps to shape a human being.” This able definition limits education to man and excludes microbes, but expands the scholastic period to the lifetime span.

Education, then, is the continuous process whereby the functioning of the human mind is indefinitely improved, and this is but the total result of reaction by the human brain to sensory experience. It is a lifelong process. A small part of it takes place in school. For during school years scarcely 25% of the student’s waking hours are spent in classroom, or about 6% of his average lifetime. But education goes on whether school keeps or not. The day’s education begins when the eyes open in the morning and the mind begins functioning; it ends when the eyes close at night and the mind stops functioning. The lifetime’s education begins in the cradle and ends with the grave. It comprises three periods, obviously—pre-school, in-school, post-school—of increasing length and proportionate importance. The pre-school period, from the *tabula rasa* of infancy to the alert little mentality that enters Kindergarten, already marks great progress. The in-school period should mean vastly greater progress, in acquisition of basic knowledge, in thinking power, in social attitudes, in directional aims, and above all, as soundest possible preparation for the long post-school period, richest of all, adulthood. Adult education is but a new term for a very old phenomenon. Most of our education occurs after school years. Compare the cerebral equipment of the young alumnus with his mentality and power at the peak of his business or professional career a generation later. Emphatically, however, the more expert and effective the schooling, the greater the educational progress in the post-school years.

And the audio-visual role in this Education Unlimited? It too, is unlimited. Since all learning derives from sensory experience which is predominantly audio-visual, our so-called audio-visual education is the fundamental basis of all educational progress. Strangely enough, up to the present century, the audio-visual senses have served education best in the pre-school and post-school periods. Schoolrooms were used to shut out the world, eclipse the vision, and bury young minds in books and words. Only with the twentieth century have schools begun to correct this disparity and enrich their procedures through a wider use of the senses. The schools are now busily on their way to greater things. Adult education should join the procession. Systematic development of adult education on a wide scale has hardly more than begun, yet the most perfect of all tools for its purpose is ready now—the sound motion picture. It is the ideal medium for mature minds. It opens unlimited possibilities for post-school learning progress. There is a further interesting implication. Ultimately, the sound motion picture may even come to realize its greatest possibilities in the field of adult education.

N. L. G.

# We Put Movies to Work

*How one High School handles its wide visual program through committees from its all-girl student body.*

SYLVIA M. MOYANO  
Flower Technical High School, Chicago

THE sound motion picture machine is a teaching tool which links the now with the future. Its use as an aid to more effective teaching is spreading to more classrooms constantly. It is being applied in new fields and gaining fresh advocates each year. Service units, Army, Navy, WAC and the rest are finding a valuable short cut to accelerated large-group instruction in the moving picture. Industrial firms, public health corps, and civic organizations are recognizing its power as a help in safety, sanitation and community campaigns. The movie is no longer just an entertainment feature or a toy, and in the near future we shall see the sound film taking an ever more prominent place in the classroom. The movie has come to school to stay.

We, at Flower Technical High School, an all girls unit in Chicago, are particularly fortunate in our visual equipment and we have worked out a very interesting program. We have two sound projectors and three silent, five stereopticons, and one slide roll projector. One classroom is fitted with proper opaque shades and made available throughout the day for picture showing. The visual apparatus is housed in this room and can be set in use in a few minutes. The Screenlites, a club of some forty trained girls, is in charge of these machines and of executing the details of our schedule. Five of these girls are fully qualified sound machine operators. Many more can show films on the silent projectors and a large corps is just in the apprentice stage. While learning, the girls look after such details as turning off lights, closing shades and ushering. Many of the club members carry a large responsibility

---

Flower Technical High School is the only school of its type in Chicago. Operated by the Board of Education it is a technical school exclusive for girls and is fully accredited by the North Central Association of Colleges. It offers a full four years academic curriculum with special emphasis on the home making art. In addition to this there is a trade dressmaking course with a definite vocational objective. A course on child care trains the girls in both the theory and the practice of handling young children. There are suites of rooms used in connection with the home arts training which give the students rich experience in gracious living.

Visitors from many parts of the world have agreed that the school ranks very high in its scholastic standards and is one of the unique institutions in the Chicago Public School system.

S. M. M.

Instruction in threading sound projector

in the way of clerical work, ordering films and keeping records.

Every day for at least four periods, sometimes more, we invite separate classes to the movie room to see one or several films. This arrangement is used most by the science and social studies teachers, but often by the home economics and occasionally by the foreign language and English departments. At least once a week all the classes in a given departmental group are called together in the assembly hall for the showing of films which fit best with its particular curriculum.

Recently, a twenty minute film dramatizing the Monroe Doctrine was shown in this way to all the history and civics classes. The scenes were so stirring and so real that the students will remember the basis on which our relations with Latin America have been laid long after other historical details are forgotten. Not long ago we ran a one thousand foot reel on the Carlsbad Caverns for the music students. No connection with music, you think? This particular film, in color, had such an exquisite musical background as to be a spiritual inspiration. "Rock of Ages," "Largo," "Brahms Lullaby," played softly on the organ as an obligato to the portrayal of these mysterious depths of the earth. Is this not an impressive musical experience?

Science and biology teachers find films invaluable in teaching such subjects as photosynthesis. The sound reel *Leaves* is one of twenty which are held on deposit at the school from September until June and can be shown again and again to the same group. Preparatory discussion, experiment, study, showing of the picture, further discussion, questioning, reshowing and testing, this is making movies work for us. We have Visual Education Guide Sheets and individual tests for follow up work on many of these topics in science, home

economics, and social studies. This procedure makes it impossible for Mary to tell mother when asked what she did in school today, "We didn't learn anything; we just had movies."

Once each month at the school assemblies the Screenlites have charge, and a film is shown which aids in guiding thought and effort in solving our war time problems, or in shaping civic attitudes, or in helping to further our good neighbor policy with the Spanish American countries. In the past we have used, *America Can Give It*, *Opportunity in the Navy*, *Anchors Aweigh*, *Winning Your Wings* and *Mexico Builds a Democracy* for this purpose. We are planning an extensive program of Spanish American pictures in the near future.

Student demonstrates film rewinding

As a stimulus to the Community Fund and Waste Paper Drive, the Screenlites donated a full feature length entertainment to those who met a certain quota. *Rose of the Rio Grande* and two shorts furnished thrills which amply repaid the girls for their donations of waste paper and funds.

Silent pictures and slides are used just as frequently and to as excellent advantage as are sound. Screenlite girls take this equipment right into the classroom in which it is wanted and show these films without immediate supervision from the visual education coordinator. The number of teachers taking advantage of this service, and the number of different departments included is increasing every week.

Problems facing a visual education coordinator are very numerous. Lack of time is the greatest handicap, for this special showing of pictures to classes and departments other than his own must be done outside of his class time. This can be done only after he has a large group of trained operators and the showing

can take place in a room convenient to his classroom. Ideally, and I believe that this will soon come, the visual education instructor should be a full time administrator in order to be able to cooperate to the fullest extent with each department throughout the day.

The training of a careful, accurate, dependable group of workers is the first step in the building of a visual education program. This takes time; one year, two years or more, depending on the number and type of students available. We have two groups, a senior corps, which knows the routine and a junior squad which is learning. Much time is spent in the movie room where these girls from the lower classes meet the older ones for instruction. Thus we hope to replace graduates by fresh material each term. Incentives in the form of a felt arm emblem for two semesters service and a bronze pin on graduation, keep interest active and stimulate many enlistments.

Damage to film and equipment is costly. This is the cloud that darkens the sky of the movie operator. Machines must be kept oiled and cleaned and threading must be checked and rechecked even with the most experienced workers. One of the manufacturers of sound projectors offers cards of special recognition for those who master the entire procedure of handling their type of machine. These cards, together with the arm bands and pins are given to accomplished Screenlites in an award assembly each semester. In this way, we are able to get many girls so well trained that our damage is kept down to a minimum.

We, and all the schools in the country, will continue to improve and enlarge our scope of operation until visual education will be a recognized teaching technique and as much a part of the classroom equipment as are text books, chalk and pen.

Setting up the projection equipment

# The Use of Audio-Visual Aids in an International Relations Class

*A stimulating presentation of the notable values of audio-visual materials in the study of international relations.*

**N**O course in the entire high school curriculum offers such opportunities for the vital use of audio-visual aids to enrich content and clarify subject matter as the course in International Relations. No other subject affords such possibilities for stressing our global world, for developing international understanding and goodwill, for promoting racial and religious tolerance and for laying the foundations of a just and lasting peace.

The international relations classroom should be a veritable laboratory, fully equipped with radio, maps, charts, current magazines, daily newspapers, and bulletin board exhibits. If not equipped for screen projection, it should have easy access to a room complete with the best of modern projection equipment.

Students should be trained to listen intelligently to radio programs, to discriminate between fact and opinion. They should be given sufficient assistance so that they will become acquainted with the best commentators and will develop a desire to hear the most dependable and reliable news broadcasts.

The *American Observer* for October 2, 1944 contains a short article by Quincy Howe on "Listening to Radio News." The author, radio news analyst of the Columbia Broadcasting System, presents seven main suggestions to enable listeners to get more from the news that comes over the networks. He emphasizes the need for planning one's radio listening so as to avoid duplication of information. He advises a minimum of an early morning broadcast and an evening broadcast. He points out the value of following a chosen analyst for a period of time, and urges one to have confidence in the reporter who gives credit for his

FRANCES NORENE AHL  
Glendale High School, California

sources of news, and to distrust the one who boasts of inside information. He shows the importance of listening to one commentator who broadcasts from Washington, D. C., one from overseas and one who is a military expert. He explains the significance of following the war on a globe as well as on maps. And, finally, he urges his readers to supplement their radio listening with newspaper and magazine articles and good books.

Some few years ago I was privileged to attend an international institute where the outstanding address was given by a newspaper editor. He laid down as the minimum reading requirements for the really good American citizen a daily newspaper, a weekly magazine, a monthly magazine, and at least one good book a month. It is not difficult to get students in an international relations class to surpass these requirements for so much of their information is drawn from newspapers and magazines. Then, too, as each main division of the work is introduced, it is wise to bring into the classroom for a day or a week—as the need may develop—the best books on the subject. More of our teaching time might well be given to acquainting our students with good books.

The student who reads widely becomes a more intelligent radio listener. And, likewise, the student who is well trained in radio listening becomes a more interested and valuable reader. He develops ability to read and to listen analytically, and to interpret news

From "Global Air Routes" (National Film Board of Canada)

(Courtesy Netherlands Information Bureau)

critically and with sound judgment. He acquires skill in detecting propaganda.

Today, as never before, students must be trained to read maps. Today's teaching must stress geography. It must stress our global world. Only through such teaching will our students come to appreciate Russia's position in the present hour, to understand why the Soviet Union's interest points to the Mediterranean rather than to the Western front. Through a careful study of maps the student comes to realize why Russia, in the demand for her frontiers as they existed at the time of the German invasion on June 22, 1941, is moved primarily by intelligent self-interest.

Again, only through a thorough knowledge of maps will the student fully comprehend the statements made by press and radio alike, on the third anniversary of Pearl Harbor, that we are only half way to final victory in the war with Japan. Maps and globes are most effective in revealing the vast distances across the Pacific, the transportation problems incident to landing an army in Formosa, China or the Nipponese homeland—problems that will make the invasion of Normandy seem like a dwarf by contrast. Maps make the present crisis in China far more real than page after page of printed word.

Two motion pictures especially valuable for stressing global geography are the *Airplane Changes Our World Map* (11 min. sd. Erpi, 1942) and *Global Air Routes* (14 min. sd. National Film Board of Canada, 1944.) Charts, such as those contained in the *Headline Books* of the Foreign Policy Association and the various publications of the Coordinator of Inter-American Affairs, are indispensable means of vitalizing problems of population, resources, world markets and trade. Pictures of all types—slides, filmstrips, still pictures and motion pictures—not only increase efficiency

of teaching but effect economy of time if intelligently used.

It is a mistake today to think that all still pictures should give way to motion pictures. Likewise, it is a mistake to think that all silent films should give way to sound films. Each has its own particular and unique place. Almost every lesson needs both still and motion pictures for the most desirable results. The next decade will see the production of many excellent filmstrips especially designed for use in the social studies. Today a slidefilm projector is a "must" in any adequately equipped projection room.

The opaque projector affords a most satisfactory means of using still pictures for it permits the use of post cards, photographs, pictures and maps culled from newspapers and magazines, pages in a book and various small objects. Students are tremendously interested in foreign lands. An article brought directly from Russia or India, Australia or China never fails to fascinate them. Copies of the *Moscow Daily News*—the only newspaper published in English in the entire Soviet Union—are flashed on the screen together with well chosen maps and pictures of Russia. Simultaneously an exhibit of Russian souvenirs—an authentic icon from the palace of Alexander III, an altar cloth from a Greek orthodox church, pieces of lacquer, some highly prized linens, several typical Russian publications and a copy of the Soviet constitution—is arranged. As a result, the students are eager to read such books as William Henry Chamberlin's, *Iron Age* or his *Russia's Enigma* or *The Kremlin and the People* and the *U. S. S. R.* by Walter Duranty.

One of the biggest advantages in the use of still pictures is derived from the fact that the teacher herself determines the exact order of the materials to be utilized. She can design them so as to incorporate

direct teaching principles into the visual lesson. She can include the latest word, map or chart from the morning paper. Again, any single portion of the lesson may be repeated as the need of the individual class develops. Any particular picture may be held on the screen as long as necessary to explain some situation or clinch a specific point.

Often the most effective results can be achieved through a combination of still and motion pictures. For example, when for budgetary and other reasons I was able to secure but one motion picture on India—*Made in India* (12 min. sd. A survey of India's factories and handicrafts and their contributions to the war effort)—I decided to supplement it with maps showing the political and geographical subdivisions of the country, charts presenting the resources and population, and still pictures illustrating the problems of religion, illiteracy, poverty, etc. as well as suggesting some of the historical background, the superb beauty of architectural achievement and the fascinating aspects of the land.

Sometimes the best solution of a geographical problem is to project a map on the screen and focus the attention of the entire class upon it. Such was the case after the showing of the film, *The Dutch Tradition* (27 min. sd.) Class time did not permit a second showing. A number of students did not understand from one showing of the film the vast extent of the

Dutch Empire before the present conflict. But with a map held on the screen for several moments, point by point their problems were clarified.

Every student of the class is given constant opportunity to contribute to the visual aids used. Several of the homes represented belong to the Book-of-the-Month Club and loan their latest volumes. Others have magazines not available in the classroom library. Sometimes it is only a single picture or map that is supplied, but it fits the need better than any on file at the moment. Students, on the whole, are excellent critics. They demand the latest and best in audio-visual aids as in everything else. Nowhere is there a finer opportunity to meet their demands than in an International Relations class.

### New Spring Quarter Courses at The University of Chicago

A course for teachers, Education 390, entitled "Audio-Visual Instruction: Techniques and Materials," will be given at the Center for the Study of Audio-Visual Instructional Materials in the Graduate Education Building on the University of Chicago campus during the Spring Quarter. The course will meet on Saturdays, from 10:00 to 12:30, from March 31st through June 16th.

The course will be conducted by Professor Stephen M. Corey of the Department of Education, The University of Chicago, and Mr. Joseph Dickman of the Chicago Public Schools. They will give consideration to all sorts of audio-visual instructional materials but with chief emphasis upon production, distribution and utilization of motion pictures. As most of the group will be interested in utilization, major attention will be given to that aspect of the subject.

Another Spring course, "Practical Theology 345, entitled "Practicum, Audio-Visual Education" is available. The course will cover the educational use of audio-visual aids in church programs; survey existing materials in use in church and school; formulate policies and standards of evaluation; construct guides for creating new materials and services. Prereq: Consent of instructors. Monday 4-5, 7-8:30 PM; Snyder, Eastman.

A further feature of these courses should be stressed. Members will have the benefit of, and full access to, the elaborate resources of the Center as described below:

#### The Center for the Study of Audio-Visual Instructional Materials

The increasing, nation-wide interest in audio-visual teaching will require the services of large groups of teachers, administrators, librarians and others who are thoroughly familiar with the production, distribution and effective utilization of these newer media. The purpose of The University of Chicago Center, then, is to provide such persons with assistance.

# Visual Education Demonstrations for Omaha Teachers

RUTH A. HAMILTON  
Druid Hill School, Omaha, Neb.

**B**EFORE the rumblings of the Iowa-Nebraska Institute on Visual Aids to Teaching, held at the University of Omaha in October, had died away, Omaha had another significant visual education experience. The Omaha School Board brought Dr. W. A. Wittich, Director of the Bureau of Visual Education at the University of Wisconsin, back to Omaha the second week of January for a series of demonstrations. This gesture on the part of the school board will be remembered for its unique service to the schools of Omaha.

Every teacher in the city system was given the opportunity to observe at least one demonstration. Because of the scarcity of available substitute teachers, children were dismissed for the session their teacher was to attend. Present, too, were parochial school staffs; representatives from the National Dairy Council, which is making such valuable contributions to the visual education program in our schools; some of the faculty of the University of Omaha; P. T. A. members, interested in helping their schools secure equipment; the director of the Visual Education Bureau of the University of Nebraska, who is building a fine library of films; and commercial dealers.

Demonstrations for elementary school personnel were held each morning, for high school each afternoon. Monday and Tuesday mornings, first, second and third grade teachers attended, seeing a demonstration lesson using the film, *The Policeman* with third grade children. Wednesday and Thursday, Dr. Wittich used the film, *The Honey Bee* with fifth graders for teachers of fourth, fifth and sixth grades. Friday morning he demonstrated for the seventh and eighth grade teachers how effective the film can be to teach social understandings by using the film, *Portage*, with a group of eighth graders. In addition to the films used in the demonstration lessons, the teachers were shown parts of others appropriate to use in the areas of Natural Science, Social Science, History and Music. The afternoon demonstrations, which were held in a different high school each afternoon, invaded the fields of Physiology, Physics and Political Science, in addition to those used for the elementary classes.

Dr. Wittich made a significant contribution to the visual education movement in Omaha by his talk at the Principals' Club dinner on Thursday evening, when presidents of the local Parent-Teacher Associations were guests. Practicing what he preaches, he showed parts of two teaching films and, speaking, emphasized that (1) Films will never replace the teacher, but will rather increase her opportunity to guide students into more vivid learning experiences; (2) Films should never supplant, but supplement other teaching; (3) Films should not be used unless

they make a definite contribution to the subject being studied.

One of the best evidences that the film is a fascinating tool was shown by the groans of disappointment when only a part of a film was shown. Everyone—parents, children, teachers—all wanted to see the rest of it. Many parents remarked that they could see now, how the children could learn much more in less time. The children, in general, wanted to see the films again to catch any details they missed on the first showing; teachers were stimulated to use films as teaching devices, as soon as equipment is available. One teacher remarked, "I will do a lot of it, to make up for lost time". Another said, "All the children in the class will gain a fuller and richer experience than could possibly be gained through one excursion".

The results of the week's experiences have been most gratifying to those who are desirous of the development of an effective visual education program in Omaha. Parent-Teacher Associations have become interested to the extent that some of them have underwritten the purchase of projectors for their individual schools; teachers have enlisted the aid of available visual education services; the administration arranged a meeting of the committee with Dr. Wittich, and this group is planning to make recommendations soon for the establishment of a central film library; and the Visual Education Bureau of the University of Nebraska has offered its whole-hearted cooperation to the schools of Omaha to aid them in setting up their program.

These meetings, so generously arranged by the Omaha School Board on the recommendation of our superintendent, Dr. Corning, will perhaps never be adequately evaluated. The contribution as an in-service training of teachers was immeasurable. Interest was stimulated. A coming-together of teachers for a common purpose creates interest and a receptive frame of mind. Every teacher was given an opportunity to watch classroom demonstrations of film utilization techniques. In many cases this awakened an interest where none was present before and, in others, present interest was increased. The demonstration method for training purposes is liked by teachers because it is definite, realistic, practical with the situation analogous to that of the classroom. It is reassuring to some, who observe, "I can do that", or, "I have done it that way". Much was learned about visual aids, *per se*—what they really are, what values they have, what areas and what age levels they serve—and not to be disregarded the pitfalls to avoid. It was made evident that the type of teaching done with films, could not be done without them. One teacher remarked that the demonstrations made her realize that teachers

(Concluded on page 107)

# The Curriculum Clinic

## Enter: "The American Nations"

WALTER A. WITTICH, Editor  
Bureau of Visual Instruction  
The University of Wisconsin

**Editor's Note:** Since Pan American Week is just around the corner, administrators and teachers who are searching for materials will find the film list in this article of great assistance.

IT has taken a world conflict to make teachers and administrators conscious of many areas of the world that previously have not received much attention in their classrooms. Traditionally, in the study of geography, history, and economics, teachers have turned their major attention to the European nations and the countries allied to them through the sovereignty or economy. This has, of course, been quite reasonable because most of the national groups have sprung from these backgrounds.

Consider, however, the events of the last five years. Many of this country's traditional sources of raw materials have fallen into enemy hands or have been made inaccessible through water-route blockades. Many of our foreign markets have disappeared; others have been created because of shifting alliances, treaties, and changing balances of power. As a result, new sources of raw materials have been brought into prominence that heretofore, while known to exist, were thought to be unprofitable. Countries, previously thought of as being only lesser contributors to our national economy, have suddenly become indispensable to us. Recent changes in transportation have opened up travel and transport routes over areas formerly seldom discussed. Substitute products have made their appearance; new ideas of dress and fashion have been introduced; tastes in music and literature have been altered. The many cultural shifts have brought into prominence people and places seldom spoken of in this country before World War II.

During the last five years, the western world—Alaska, Canada, the United States, Mexico, the Central Ameri-

cas, the islands of the Caribbean, and the republics of South America—has been literally pushed into prominence in world affairs. The responsibility is easily seen. School children, today, in order that they be well educated, must be given the opportunity of knowing about the peoples, the resources, and the cultures of these western nations, and the part that they will have in affecting future living in the United States. It is reasonable to suggest, then, that geography and history courses, problems of democracy classes, and the study of music appreciation, arts, and crafts must consider materials which describe the Western Hemisphere.

Any teacher or administrator who has sought usable sources of classroom information about the newly prominent geographic areas will be glad to know about the teaching and quasi-teaching films that have been produced for the purpose of interpreting our neighbors to the north and to the south of us. Today, one great post-war educational responsibility is already recognized: our youth and adults must know more about the peoples beyond the borders of the United States. They must recognize our international and intercultural responsibilities. This objective can be more nearly accomplished through using in our classrooms those materials which will help us to understand our neighbors, their cultural contributions, their social problems, and their interrelations and attitude toward us.

The bibliography of sound and silent films which follows has been selected to include subjects useful to teachers and pupils of geography, current history, problems of democracy, and allied subjects.

*Note:* The bibliography is arranged geographically from south to north in the following order—South America, Central America, Mexico, Caribbean Islands, United States, Canada, and Alaska. Abbreviations are (so) for sound, (si) for silent, (24m) for running time. Initials show distributors, whose addresses appear at end of list.

**Visual Education Demonstrations**

(Concluded from page 105)

should be better prepared, no matter what they were teaching. Observers had the opportunity of witnessing Dr. Wittich handling children who were uncoached and most natural in their responses. His still showed no variance, no matter what group he was teaching—parents, teachers or children. They saw that effective teaching is simple teaching, and classroom teachers were stimulated to attack their own problems with renewed vigor. Dr. Wittich's evident understanding of the problems of children caused at least one teacher to try harder to understand the problems of her group. His sincere attitude toward the children, even the little ones made us all feel anew that our profession of teaching is not only a noble one, but perhaps, the most important of all. In short, this demonstration week in Omaha is a compelling bit of evidence as to what could be done, by similar programs in all city school systems of the country, toward ultimate solution of a great problem—the in-service training of teachers in the use of visual materials.

# The Film and International Understanding

## Films for International Understanding Come of Age Too

DR. JOHN E. DUGAN, Editor  
Hadden Heights, New Jersey

**E**DUCATIONAL SCREEN has been emphasizing the coming of age of the visual education field under the impetus of various impulses which are the result of the war situation. This is decidedly true of the whole field of visual education.

Nowhere, however, has this development toward maturity been more rapid and remarkable than it has been in the field of films for international understanding. As a matter of fact, it could be said that before the war this field scarcely existed, and that practically its entire development has taken place during the war

years. This development has been as comprehensive as it has been rapid, touching all phases of the film—conception, technique, distribution, and utilization.

### Pre-War Travelogues

In the pre-war years we had films about other countries, but most of them were travelogues. They seldom had any lesson to teach or any specific aim beyond entertainment. If there was a specific aim, it usually was to interest tourists in travel in the country pictured. Travelogues of those days generally were more concerned with providing entertainment by showing that which was novel, picturesque, or amusing, than they were with any effort to bring about better international understanding.

As war crept upon the world and we became increasingly interested in other peoples, these films were the chief films for "international understanding". Their inadequacy to meet the particular problem at hand first became evident when we set about using films to develop the good neighbor policy. Some of these travelogues achieved their entertainment value by presenting Latin-Americans as amusingly peculiar creatures rather than as human beings like ourselves who could be "good neighbors".

In order that this material might not be wasted, and as a first step in the right direction, material from some of these films was edited and issued in a form more closely related to the problem at hand. Somewhat similar procedures were followed with material from various sources which could be used in films to tell Latin America about ourselves.

This is the train that takes Donald Duck, Joe Carioca and Panchito to Bahia in Walt Disney's "The Three Caballeros."

(Left to right) The Mexican translation of our Western cowgirl outfit is the Charro costume; The Three Caballeros dance the Samba-Jongo with a Brazilian senorita; Tehuana girl wearing the traditional Mexican fiesta costume.

Then the Coordinator's Office began to build its own fine series of good neighbor films. These films were made with specific objectives in mind. They were made with good professional technique. Their distribution was simplified, publicized, and expanded. Because of these things, these films were much more widely and intelligently utilized.

But the Coordinator's Office did not rest on its camera in complacent satisfaction. As film followed film, conception and technique improved. The value of common elements of humanity and experience were appreciated and used. The importance of color in picturing the brilliance of Latin-America was realized and the use of color increased. Today these films have become standard material with educators. They have been potent factors in binding two continents together. They were integral parts of the world's first hemispheric film program for international understanding.

Moving our consideration to a wider stage, Great Britain and the United Nations with their film programs—purely as a war measure—have demonstrated some valuable lessons about films as instruments for international understanding. They have shown how a comprehensive film program for international understanding can be organized on a world-wide basis. They have shown how different nations can successfully cooperate in such a program, even though it involves problems of distribution and utilization as well as of organization and production.

The film for international understanding has come a very long way in a very short time. Within the span of a very few years it has moved from the casually used travelogue to films expressly made for international understanding—films which already have been organized into programs of hemispheric and world-wide scope. Certainly a type of film which can advance so far in such little time has definite elements of virility and maturity.

What are some of the main factors which have contributed to the rapid development of this type of film? Here are some:

- 1.—A felt need for films in the field.
- 2.—Planning definite films to meet definite needs.
- 3.—Governmental financing of production and/or distribution.
- 4.—Insistence upon technical excellence and advancement.
- 5.—Recognition of the importance of portraying the common elements of humanity and human experience as the most forceful elements for bringing about mutual understanding.
- 6.—National and international cooperation of educators and educational and governmental agencies.

It is only natural to expect that these factors will be just as important in any post-war program for international understanding through the use of films.

One aspect of technique in the film for international understanding deserves particular attention. It is the animated motion picture.

A recent article in this department told how Philip

Scenes in "The Three Caballeros" illustrating "Las Posadas," a Mexican Christmas ceremony.

A replica of the Holy Family is carried through the streets of a typical Mexican village.

But the travelers can find no shelter—or "posada." Like the travelers of that memorable Christmas Eve, they are turned away from many houses before finding welcome.

"Las Posadas" is climaxed by the Breaking of the Pinata, a clay gourd filled with gifts and good things to eat. The child selected to smash the Pinata is blindfolded and then as the presents tumble out the merrymaking begins.

From "The Flying Donkey" sequence in  
"The Three Caballeros"

Regan was using it effectively in his films to get abstract ideas across to Canadian audiences. The contribution of Walt Disney's films to the Good Neighbor Policy, as well as to our war training effort, is too widely known to need further description here. But we may profitably give some consideration to his technique and its potential possibilities for the future in this field.

The animated film seems to have no limits. Nothing is too large or too small, too real or too fantastic for it to portray. It can select important elements from a complex situation and portray them with the utmost simplicity. It can do the same with conflict or with abstract ideas. It can take the observer anywhere, defying all laws of gravity, etc. Difference in language is but a minor barrier to it, as Disney has so ably demonstrated. It speaks a common pictorial language which all can understand.

A technique with such potentialities can be of great service. It can promote international understanding in the theatre and in the classroom (for both groups must be reached for true understanding). It can use the same film or different films for each group, depending upon circumstances.

What should be the difference between the animated educational film and the animated theatrical film? What about humor? Some educators feel that there should be no laughter in an educational film; others insist that humor promotes attention and learning. The matter of degree is doubtless important. In the field of international understanding many will say that laughing with people of another country promotes understanding; but we must avoid the danger of laughing at them.

In a recent article\* Disney himself says: "I make a very clear distinction between films for entertainment and films for education. They are related in that dramatic elements should be made to serve the purposes of education, for we must interest and stimulate the

learner. . . . But the distinction between entertainment and teaching films should be as carefully observed as that between novels and text-books."

Disney's latest feature picture, *Three Caballeros*, which is concerned to a great extent with Inter-American understanding, shows a further development in his technique. In this picture "real" photography is combined and synchronized with animation in a way that is difficult to describe. It should be seen to be appreciated. Animated characters seem to take part in the action of the "real" photography. Language, customs, scenery, etc. are commented upon by the animated characters as they conduct the audience on a Latin-American tour. Their comments point up the "real" photography in an amazing way.

Completely aside from any consideration of this particular picture itself, this combination of animation and photography in this particular way is of great interest to us. It offers a new technique and new potentialities in addition to those we have already discussed for photography and animation separately. What will it accomplish for international understanding that neither photography nor animation can accomplish alone? At the moment it is difficult to predict. But we do know that the film for international understanding has the virility and the maturity to make adequate use of any new or improved technique which can prove its worth.

### University of Chicago Spring Courses

(Concluded from page 104)

Specific functions of the Center are: (1) To provide facilities and guidance for research investigations of audio-visual media; (2) to enable teachers, supervisors, and administrators to make critical study and sound evaluation of audio-visual instructional materials for school use; (3) to provide school systems and individuals with consultative service regarding these materials; and (4) to demonstrate, in collaboration with the Department of Education and the University of Chicago Laboratory School, the use of audio-visual materials in teacher training and in elementary- and secondary-school situations.

Special facilities of the Center are: (1) Staff members of the Department of Education in the fields of elementary, secondary, and higher education; the curriculum, evaluation, etc. (2) Laboratory School and staff for demonstration, research, and consultative purposes; (3) a non-rental library of 600 instructional motion pictures, both silent and sound; (4) library of books, monographs, and reports of research investigations dealing with audio-visual media; (5) complete library of publications describing sources of audio-visual instructional materials; (6) modern projection, recording, and play-back equipment; (7) small projection theater; (8) model storage and other equipment; (9) immediate accessibility to large lending libraries in Chicago. (For further information write to Professor Stephen M. Corey, 5835 Kimbark Avenue, Chicago 37, Illinois.)

# Television in Education

*A Summary of the December 15th Conference held in the Television Studios of the Columbia Broadcasting System in New York City*

ESTHER L. BERG, Assistant Principal  
Junior High School 99, New York City

THIS was the first television program ever planned directly for an educational group. About one hundred and fifty educators were present, the limited capacity of the studios preventing some two hundred more from attending. The audience was practically unanimous in expressing encouragement of this type of program and of broadcasts aimed at meeting education's needs. Discussion ranged the field and touched on the possibilities for education, but no definite policies were formulated in view of television's present experimental state and the many new things that the end of the war will reveal that are not now revealable. It was admitted by all, however, that the peculiar and particular quality of television, i.e. immediacy, has great value and great potentialities. As to its actual use—whether it will be tied into present curricular activities or they will be altered to form a pattern around television—it was considered too early in the day to do more than suggest that there is a large field to be explored.

The outstanding feature of the evening, following the customary news telecast, was a televised play entitled "Nations and People", based on a Margaret Meade "School of the Air Show", expertly prepared and directed for this particular occasion by Gilbert Seldes, Director of Television Programs for the Columbia Broadcasting System. Mr. Seldes said it was the type of program he had long wanted to do and he had been awaiting merely the incentive of such a meeting with an educational audience. He talked briefly on the difficulties of program making—of time spent on casting and directing rehearsals—of the technical difficulties—of the break-downs, the difficulties of production, etc., having definitely in mind always the possibilities of television in education. Mr. Seldes discussed some of the special techniques and devices he employed in producing a visual image required to put over the desired effects and tell the dramatic story, and closed with an invitation to educators to tell the industry what they need.

"Nations and People" was a four-scene telecast showing a family breakfast by Chinese, Chinese-American, German, and American families successively. The same cast performed throughout, and change of costume between scenes was made on the screen in full view of the audience as an integral part of the whole performance. The group found it intensely interesting and numerous references and comments were made in the discussions following.

The major burden of the discussion for the evening was carried by a five-member panel—Seldes, Lee, Stewart, Du Mars, Hochheimer—with many participants from the audience. Miss Lee gave the over-all picture of television as it is and may be, and urged

educators to get into the picture somehow and soon. She could touch but briefly many points covered at length in her articles in *E. F. L. A. Film News* for December and January.

*Lieutenant Stewart* offered "Suggestions Concerning the Use of Television in Audio-Visual Training". Television will make it possible for students to be "literally" present at outstanding events such as presidential inaugurations, the opening of Congress, the opening of important conferences between dignitaries of the nations, and the like. Of course this is possible at present in newsreels. However, the psychological reaction of "literally" being present at the exact time that these activities take place is much stronger than seeing it after it has taken place.

Television may play a powerful role in the inspirational side of education. If properly used, it may motivate students to further study and effort. For example, typing contests may be televised showing the champions in their respective fields. Symphony orchestras showing famous visiting conductors may be televised. Fashion shows, visits to the laboratories of outstanding scientists, depicting informal talks and demonstrations. In all of these cases, it will be noticed that subjects requiring repeated showings are not included.

The pupils of two countries—England and America, for example—could be made to feel they were directly participating in a television broadcast by having two classes, one in each country, carry on an interchange of ideas. The possibilities for international good feeling and relationship made possible by such televised classes are unlimited. In a large way, success of television for training will depend upon recognition of its potentialities, advantages and limitations for training purposes.

*Mr. Du Mars* discussed the "New Medium for Public Information". All of us have been asked an unfair question lately—whether we'd like to hang on a star "or would you rather be a fish?" Naturally we'd all like to hang on the star which is television, but unfortunately we're swimming around in a sea of questions and problems. When will television "arrive" as a mass medium? Are the present standards good enough to satisfy the audience and thereby to assure the financial future of the industry? What is the smallest population that can support a television station? How much time can a station devote to education and other public service? At what time of day? How can the expenses of public service programs be met? These represent just a few waves in the sea of questions. Recently I have submerged myself in that sea. I have talked with, or heard talks by, just about all the people responsible for today's television pro-

grams. I have been reading much at the same time. Just about the only point on which there is general agreement is that "somehow" television *will* reach the people of the country and that it will serve them well.

In the diffusion of information we of the U. S. Department of Agriculture have used, to a greater or less extent, probably all media. Radio has been especially useful in giving general information and in stimulating mental appetites for more detailed knowledge. Modern motion pictures do a much more complete job than radio but lack the ability to enter the home (I'm speaking in general, of course). Now comes television, with the impact of the motion picture and the almost miraculous door-opening power of radio. I think the people who are paying the bill for our public information and who will pay the money for television receivers and who will buy the goods that will "somehow" make television succeed, will want and have a right to the best information we can give them, in the most acceptable form. Let me give a few examples of the kind of information I mean. First some purely practical topics: How to cook and carve the Christmas bird, turkey, duck, goose, chicken, or what have you—How to control the Japanese beetle that wrecks your victory garden—How to can snap beans. For farmers: How to produce milk at less cost—How to lay out terraces—How to improve range lands—What can be done to improve a laying flock—etc. *ad infinitum*.

*Dr. Baldwin* declared that the schools would go as fast as the industry permits: that the New York

schools were vastly interested in the educational implications of the new medium. *Mrs. Powell* said that the Museum is anxious to eliminate its walls, and is interested in television as a means of making the great masterpieces of art available to the schools.

Some cautionary notes were sounded. *Mr. Seaman* asked, "Will a telecast program be recorded?" If so, it can be used as part of the curriculum; if not, it is only a form of entertainment, even though it has educational values. *Dr. Tyler* told about the difficulties radio is still having in the schools as material for curricular integration. He urged more direction from school administrators. Their weight and prestige is needed to assure proper utilization in the classrooms. There must be a demand for proper programs. Television should start from the ground floor along these lines. And he added this question: "Wouldn't a recorded telecast be a sound film? If so, what would be the value of the telecast?"

*Miss Hochheimer* summarized the discussion by panel and audience as follows:

"The interesting demonstration of an educational telecast which we have seen this evening not only presents educators with a new medium, and exemplifies the possibilities of making our teaching vivid through the eventual utilization of this new medium, but also emphasizes again the basic ethical and spiritual values of education. The scene of the family breakfast table makes it clear that differences of skin color, hair color, even customs, do not basically affect personality. We

# The Literature in Visual Instruction

## A Monthly Digest

ETTA SCHNEIDER RESS, Editor

### TRENDS

- **An Educator's Overview of the Audio-Visual Programs of the Armed Forces**—Paul Wendt, Univ. of Minnesota—*Visual Review*, 1944:27.

The extent of use of audio-visual aids by the Army and Navy is incredibly great. Hundreds of men are being trained in production and use of training aids. Besides, there are the commercial companies that have been working at top speed to produce training aids. There are also hundreds of officers in charge of administering these aids. Thousands of projectors have been sent to hundreds of stations throughout the world, where there are over 10,000 training film showings daily.

Beyond this sheer quantity of use, there is the quality. Ingenuity and imagination have been given every encouragement. More has been accomplished by the film production units of the armed forces in the last few years in the line of better planning of teaching films than had been accomplished since the introduction of sound. These producers, technical experts, visual educators work closely together and the films that have resulted are outstanding teaching films. And each year sees greater progress in technique.

The armed services reveal what can be done with training aids with unlimited funds, where only the goal of saving our country is important. Many of the techniques will stay after the war's end: the use of integrated films and filmstrips on the same subject; the great emphasis on proper technique; the use of color in posters, as well as the clever use of humor. The armed services have taken the audio-visual ball right out of our arms and carried it a long way down the field.

- **Disney Techniques in Educational Films**—Frances Norene Ahl, Glendale High School, Cal.—*Social Studies*, 35: 344 December, 1944.

A summary of the production activities of the Disney studios since the outbreak of war. A recent title mentioned is "Amazon Awakens", produced for the Coordinator of Inter-American Affairs which combines animation and live action. It will shortly be released for use in elementary and secondary social studies classes.

The films produced for health education in Latin American countries are a major phase of the Disney program, but these films are not available in the U. S. Three films of this type produced in black and white, are "What is Disease?" "The Human Body," and "The Transmission of Disease."

### INTERRACIAL UNDERSTANDING

- **A Story of the Good Neighbor Policy in Action**—*Visual Review*, 1944:31.

Last summer the CIAA added a new project to its program: a series of 35 filmstrips on various aspects of life in the U. S. distributed among Latin American schools. These filmstrips were completed with the aid of the American Council on Education. They present such information as the relation of people to the land, American schools, health, essential occupations and life in town, farm and city.

Directing this project was Milton R. Tinsley, with Mary Rita Daley as picture editor and Constance Bridges Jones as script editor. The thirty-five filmstrips were prepared in nine months with a staff of six persons. Each filmstrip is about 50 frames in length. A narration accompanies each strip.

The filmstrips are circulated with an S.V.E. battery projector in 100 units. Thus far, they are available only in Latin America.

- **We Learn about South America**—Oscar E. Sams, Jr., Coordinator of Inter-American Affairs Office—*Nation's Schools*, 35:50 January, 1945.

A summary of the motion picture activities of the CIAA. There are now 70 subjects being distributed through the 150 educational film libraries and many more commercial companies. The other aspect of the CIAA's activities is the distribution throughout South America of films that describe the United States. There are OWI films with Spanish and Portuguese commentaries and special productions made for the CIAA. Some 400 subjects are in circulation.

- **A Seed Takes Root**—David Schneider, Inter-American Demonstration Center, U. S. Office of Education; Evander Childs High School, N. Y.—*Nation's Schools*, 35:52 January, 1945.

The film titles of the CIAA have been classified to fit the school curriculum. School subjects to be served by these films include English, economics, civics, health and so on. Some principles of use include: 1) preview films; 2) prepare the class and select the proper film to fit the lesson in its proper place; 3) no film should be shown as an end in itself.

### ARMED FORCES' TRAINING AIDS

- **Filmstrip Program of the Army Air Forces**—Major Godfrey M. Elliott, Training Aids Division, Office of Assistant Chief of the Air Staff, Headquarters, AAF—*Visual Review* 1944:10.

The Army Air Forces, with 700 different filmstrip titles available, are demonstrating the value of the filmstrip as a teaching aid and not as a substitute for a motion picture. The typical Army filmstrip is silent, consisting of 50 to 75 frames which have been assembled on a particular subject and fitted together in logical teaching sequence, with each frame bearing suitable explanatory text and captions.

The greatest number of Army Air Forces filmstrips are used to teach technical subjects. Here they can give detailed study and extended discussion of the material at hand.

Production of AAF filmstrips is largely done by army personnel, although a few have been commercially prepared. There are five AAF Film Strip Preparation Units scattered throughout the country, with central coordinating headquarters in the Training Aids Division, Office of Assistant Chief of Air Staff, Headquarters AAF. Each unit is staffed with skilled filmstrip producers, including writers, photographers, artists, retouchers and photo lab technicians, to take care of every phase of production, from writing script to preparing 35mm. projection prints.

To produce a filmstrip, the following procedure is followed. Request for a special filmstrip is made through the Training Aids Division. A check is then made of all available subjects to be sure there is no duplication. Then the subject is examined to determine whether it might be produced more effectively in some other form: i.e., motion picture, poster, booklet, etc. If the subject is approved for a filmstrip, it is assigned to one of the AAF filmstrip preparation units or to a commercial concern.

The production time for a filmstrip is much shorter than that for a motion picture. A training film normally requires six to nine months to produce; the filmstrip would need two to three months. This factor alone has often influenced the decision to produce a filmstrip rather than a film, as equipment to be illustrated often undergoes frequent change.

The steps in production are described, and throughout it is evident that great care is given to technical quality and accuracy of content. Copies of the finished strip are then made

**The VERSATOL Is One of Many Styles in the DA-LITE Line**

available to all AAF activities, as well as to the Army and Navy.

Proper utilization in the training program is an important consideration. For this reason, the AAF has published a 20-page booklet, "How to Use Film Strips" for instructors.

● **Training Films in the Coast Guard**—Comdr. Patrick Murphy, Chief, Training Aids Section—*Visual Review*, 1944:21.

The Coast Guard has successfully used the package method, whereby a motion picture or series of films and related filmstrips are distributed as a single unit. Production has been done by expert commercial organizations. An innovation of this service has been the use of a woman motion picture projectionist, a Spar, and plans are under way to train others for similar work.

● **Training Aids in the Marine Corps**—Capt. Walter S. Bell, Training Aids Officer, Headquarters, U.S.M.C., Washington, D. C.—*Visual Review*, 1944:23.

Great assistance has been given the training program of the Marine Corps in lessons of strategy with the use of films and filmstrips. Landing operations, amphibious operations are some of the vital problems to be taught. Actual scenes of landings, as Tarawa, are used to teach recruits how the Marine Corps functions.

There are training aids libraries available to all marine corps units everywhere. They distribute the Marine Corps materials, as well as other pertinent motion pictures and filmstrips.

● **Training Aids in the Air Service Command**—Major Lewis V. Peterson—*Visual Review*, 1944:25.

This part of the Air Force must supply every plane with gasoline, oil, tires, bombs and parts. To do this, there had to be found a method of teaching thousands of unskilled people how to make quick repairs and adjustments, and hundreds of instructors.

Teaching aids are produced in collaboration with the manufacturers of the various airplane parts. Training films, filmstrips, charts and models are thus made. AAF personnel and

commercial producers are used to make the technical films needed. Distribution is organized through 11 area Air Service Command film libraries, under the direction of a commissioned officer, some of which are WACS with schoolteaching experience.

**UTILIZATION**

● **Community Utilization of the School's Audio-Visual Materials**—Carolyn Guss, Indiana University—*Library Occurrent* (Indiana State Library quarterly) 14:321 October-December, 1944.

The School librarian, working in cooperation with the public library, may extend the use of school materials and equipment to benefit the community.

Motion pictures, charts, exhibits, realia and similar school materials may be used effectively by women's clubs and others. The librarian, in offering the use of school materials, must use tact and wisdom. She will need the help of persons working with extra-school groups, who act as coordinators. Meetings with these persons will help them to learn what is available, how they can be used, and how the various types of equipment may be operated. A projectionists' club for evening showings may conceivably be started. There should be some kind of share-the-cost plan so that both school and community will benefit from each other's investment.

## Motion Picture Commission Sponsors Contest

**S**TUDENTS interested in making movies will want to enter the Motion Picture Idea Contest which is being sponsored by the Commission on Motion Pictures of the American Council on Education.

"What pressing and persistent problems in American life today are most in need of analysis, definition and clarification through the vital and dynamic medium of the educational motion picture?"

The Commission is seeking answers to this question through this unusual Contest. High school students are being asked to submit their ideas for educational motion pictures in the form of brief synopses. Contestants may submit synopses dealing with any problem which seems to them to be of paramount importance. Problems dealing with civil liberties, race relations, intolerance, immigration control, relations between employers and employees, isolationism, world peace, malnutrition, crime control, unemployment, housing, taxes, planned economy, pressure groups and propaganda are typical of the many phases of American life which might lend themselves to the medium of the motion picture.

In each synopsis the student should state which one of the problems now facing Americans is most in need of picturization. The student should then justify his choice and tell how he thinks this problem could be treated in a film. A contestant may submit any number of synopses. Each synopsis, however, should contain a separate idea and should be about 300 words in length.

The writer of the synopsis deemed best in the opinion

of the judges will receive \$150 in war bonds. For the second best synopsis \$100 in war bonds and for the third best synopsis \$50 in war bonds will be awarded. Special awards of \$25 in war bonds will be given for each of the next ten outstanding synopses. The Board of Judges will consist of the members of the Audio-Visual Aids Committee of the National Council for the Social Studies. The contest closes at midnight, May 1, 1945.

Entries in the contest should be mailed to: Commission on Motion Pictures, American Council on Education, Yale Station, New Haven, Connecticut. All material submitted becomes the property of the American Council on Education. Synopses deemed suitable will be used as the basis for motion picture scripts to be submitted to producers, with the possibility that they may be made into educational motion pictures.

The Commission on Motion Pictures of the American Council on Education is engaged in a five-year study of the problems growing out of the war and postwar periods and in determining what educational motion pictures are needed to help meet these problems. Various committees are at work on some of these problems. However, the Commission is of the opinion that high school students can and should contribute substantially in developing a series of motion pictures in the field of the social studies which will help to solve some of the complex problems of democracy. Both the Commission and its collaborator in this contest, the National Council for the Social Studies, hope that the contest will help to bring the thoughts of youth to focus on the aspects of American life most in need of emphasis and clear thinking, and will make available the ideas of youth to those in charge of the production of educational films.

## QUESTION BOX ON FILM PRODUCTION

**QUESTION:** I am making a film of our school's gardens. I am planning to include close-ups of many of our beautiful flowers in full color. In order to add interest to the scenes I would like to show actual opening of flower buds as well as occasional closing or shedding of petals. Would you please be kind enough to enlighten me on what procedures to follow?

**ANSWER:** Judging by your question, I assume that you have access to a motion picture camera that can take single frame exposures.

To portray an average scene requires about ten seconds of screening. At silent speed, 16 frames per second, this amounts to 160 frames, which means in time-lapse photography, 160 exposures.

In order to film the complete unfolding of the petals of a flower, it's important to know how long it takes each kind of flower to go through this process (called anthesis by botanists.) It is also essential to know the exact time of day or night the flower bud begins to open. All this information you can obtain by direct observation of your own specimens or by consulting the literature on that subject at your botanical garden library.

Unless you have an electric time-lapse device, it is best to let flowers like the rhododendron or azalea, beautiful as they are, alone. These flowers take four days to open. I'm also certain you wouldn't care to undertake filming the Lady's Slipper Orchid which takes about three weeks.

The easiest way is to begin with flowers that take the least amount of time—the honeysuckle anthesis lasts about two minutes. To obtain an even flowing motion of this process you must expose one frame every  $\frac{3}{4}$  of a second. After having practiced on the honeysuckle you may wish to try the tulip which begins to open about 9 in the morning. Since the unfolding of its petals may take about an hour the interval between exposures should last between 15 and 20 seconds. Other flowers whose periods of anthesis last about an hour are: the Daylily which opens between 6-7 A. M., the wild rose between 4-5 A. M., Portulaca 8-9 A. M., the California Poppy 9-A. M.

In taking these time-lapse pictures be sure that the camera is resting on a firm support. Make certain that the flowers are in the center of your frame. Choose a day that is free from wind or shifting clouds.

There are several ways to make the flowers change their schedule to conform with your wishes. For example, the water lily opens at daybreak, when the light is very poor for photography. To postpone their opening to a more favorable time, pick these flowers before they have had a chance to show their petals, and keep them in the dark. These flowers will open whenever brought to the light.

To speed up the opening of poppies place their buds in some water in which an aspirin has been dissolved. This will also cause the flower to die sooner—an effective way of showing withering and fading of flowers.

Daylilies have a series of flower buds at successive stages of maturity. Pick a stalk with one or two flowers open. Remove these flowers—they will die anyway, before the day is done. Place the rest of the stalk in the frigidaire away from the freezing unit, until ready for shooting. On the day that you are ready for the time-lapse pictures, remove the stems from the frigidaire, and support them firmly in a flower pot containing moist sand or earth. In making the individual exposures take care not to include the flower pot in your pictures. This bit of cinematography may be carried on indoors with artificial light.

Tulips, crocuses, daisies and daylilies begin to close their corollas sometime toward the end of the day. By transplanting these flowers to pots or boxes, they can be taken to any sunny part of the garden or indoors to be photographed.

Some flowers, like the wild geranium, turn their blossoms upside down in time to avoid wetting by rain. The Scarlet Pimpernel, known as the Poor Man's Weather Glass closes its petals with the rise of humidity. It may pay to experiment with these flowers by subjecting them to a very fine water spray to observe and photograph their responses.

As for shedding of petals, the best procedure is to wait until the flowers themselves begin to feel loose. Set the camera on a tripod and focus on an area wide enough to include some of the space through which the petals will fall. Have someone gently tap one of the stems or branches from which the flowers are expected to fall. If you find the petals falling too fast, you may have to increase your shooting speed to about 32 or 48 frames per second. This will bring about a more graceful movement when this scene is projected at normal speed. Remember, however, to increase your diaphragm opening one or two stops, when shooting at faster speeds.

## The Amazon Awakens

(Coordinator of Inter-American Affairs, 444 Madison Avenue, New York City 22) 35 minutes, 16mm, sound, color. Produced by Walt Disney Studios. Apply to distributor for list of depositories and terms governing purchase.

"The Amazon Awakens" pictures the history, richness of natural resources, and industrial development to date of the Amazon River Basin with its five great centers of production and culture, and predicts its awakening in the future.

The film shows the many-spired tower of Eldorado, a castle in the air, to which the commentator contrasts the Amazon Basin. Animated diagrams trace the source of the futile search for Eldorado in South America, the quest which revealed head waters of the Amazon to the Spanish in 1541. An outline map of the United States superimposed on the pictorial map of the Amazon Basin shows the greater size of the River Basin. A relief map shows the watershed that produces the great river that flows 3,800 miles to the Atlantic. There is pictured the natural beauty of the water course, with its great falls, its jungle gaiety with rare and beautiful flowers, its birds with bright plumage, and various kinds of wild life. The human beings sparsely settled in the upper reaches of this river are shown with their homes on the River and along its banks. They are seen in boats and near thatched huts.

The next sequence pictures Iquitos, the first of five developments in the Basin. The modern down-town section of the city is shown with its college, city park, and floating steel docks. The native products pictured are Barbasco trees yielding rothenone from the roots, cinchona bark for making quinine, a native nut used to make fine buttons, and congealed latex for chewing gum. A power launch carrying the Public Health Service along the river stops wherever a white flag is displayed on the bank. There are shown mahogany logs used as rafts to move native products to market, where they in turn are marketed, sawed, cured, and exported. Reforestation of the jungle to mahogany is also shown.

Manaus, "Pearl of the River," located on the Negro River, is the second city shown. Its plaza in Mosaic tile is flanked by a customs house, cathedral, opera house, and athletic club. A modern trolley-car line skirts one side. There are also other modern civic enterprises such as a hospital, public parks, and an airfield. At Manaus is a camp for workers as a part of the National rubber plan. The method of tapping trees and congealing the rubber latex is shown. Pictures of the harbor show the products being handled by modern methods.

Boa Vista, an experimental agricultural station operated by

This monthly page of reviews is conducted for the benefit of educational film producers and users alike. The comments and criticisms of both are cordially invited.

Producers wishing to have new films reviewed on this page should write L. C. Larson, Indiana University, Bloomington, Indiana, giving details as to length, content, date on which the film was issued, basis of availability, prices, producer and distributor. They will be informed of the first open date when the Teacher Committee will review the films. The only cost to producers for the service is the cost of transporting the prints to and from Bloomington. *This Cost Must Be Borne By The Producers.*

the government is next seen while the commentator outlines the plans for its future development.

Fordlandia, a modern community set up by Henry Ford to experiment on two million acres with custom built rubber trees, is next pictured. Root stock selection, grafting, and regrafting methods to obtain heavy yield and disease resistance are shown. Scientific care for the 5,000 workers is evidenced by pictures of the schools, hospital, community games, luncheon, and golf course.

The last of the city sequences is the town of Belem, outlet for the Amazon Basin. Scenes in the harbor show anchorage afforded boats of various types and sizes. Picturesque natives play on native instruments. An experimental agricultural station is shown. Children are pictured as they are instructed in rubber culture and processing the latex. The paddle method is demonstrated as more effective than the ball method.

The summary is given by words of the commentator while the film shows a great caterpillar tractor turning the soil, the products of the farmland and the woodland and the river pass in review, and the new air age is indicated by map and flying planes. The same aircastle, Eldorado, flicks onto the screen to be overtraced by the waterways of the Amazon Basin.

**Committee Appraisal:** This film is an important addition to C.I.A.A.'s growing library of worthwhile films on Latin American nations. It presents an interesting study of the use of both animation and live photography. The committee felt that Disney took full advantage of the potentialities of both techniques in depicting the past, present and future history of the Amazon River Basin and that the transition from live photography to animation and vice versa is so skillfully handled that the audience is hardly aware of it. An outstanding film for use in social studies classes and general assembly programs on the elementary and high school level and as an interesting cultural film for general adult groups. The committee also felt that the narrator's occasional "cute" remarks were in discordant contrast to the otherwise highly intelligent treatment of the subject.

## African Fauna

(Simmel-Meservey, Suite 316, 9538 Brighton Way, Beverly Hills, California) 12 minutes, 16mm, sound, color. Sale price \$75 less 10% educational discount. Produced by Paul Hoefler Productions. Apply to distributor for rental sources.

"African Fauna" depicts the larger mammals that live in the veldts, forests, and rivers of this immense continent. The waterbuck, zebra, impalla, lion, cheetah, giraffe, crocodile, hippopotamus, and elephant are included in this color film.

The picture begins with listing the animals included, shows a map of the whole continent, and points out the locale of the first group which includes shots of "white pants" of the waterbuck, the bizarre zebra, the long jumps of the impalla, and the picturesque giraffe in his natural habitat. During this sequence the commentator supplies information which provides a better understanding of each animal.

A close-up study of a pair of feeding cheetahs, fastest moving animal on earth over short distances, is followed by several scenes of lions living on the grassy plains. The commentator states that the lion and other members of the cat family are protected by various countries of Africa because they are needed to keep the balance between herbivorous and carnivorous animals.

The film shifts to the upper waters of the Nile where crocodiles and hippopotami, are seen living in harmony. The commentator points out that both animals deliberately attack human beings. Also included are scenes of the long narrow gorge and the mighty falls of the Nile.

The last sequence depicts the heart of the Belgian Congo where the wild elephant is seen feeding on tall grass-like plants. Close-ups of these animals emphasize the huge ears, heavy ivory tusks, menacing trunks, and immense size.

**Committee Appraisal:** The committee felt that this was one of the best of a limited number of films which portray wild animals in their natural habitat and recommend it for use from intermediate grades through the adult level and in either the classroom or school assemblies and film programs for adults. It seemed to the committee that the film was assembled from motion picture footage obtained on an African expedition. There is a need for films of this type which are planned to provide a more adequate pictorial account of the distinguishing characteristics of wild animals.

### West Wind

(National Film Board of Canada, 84 E. Randolph Street, Chicago, Illinois) 18 minutes, 16mm sound, color. Produced by National Film Board of Canada, Ottawa, Canada. Apply to distributor for rental sources.

The film, "West Wind," with the secondary title, "Story of Tom Thomson," taking its name from one of Thomson's canvases of the Canadian North country, is a biography of his brief life, a tribute to his worth in interpreting the beauty of Canada, and an album of his paintings.

The opening scenes show his red brick farm home, the little school, the woodland trails, and the view from the hill as boats on Lake Huron set out for Toronto. The boy Thomson is seen fishing, hunting, and gazing into the far distances from the hill overlooking his farmland home with its woods and water. One of his early attempts at painting shows on beaverboard with cheap paint a dark, resourceful boy fishing from a bank.

The next sequence shows Thomson in Toronto in a commercial art studio developing his dexterous brush work. He and his friends take the trails to the country to sketch on Saturday afternoons and Sundays. On one of his hunting trips a friend tells him of the beauty of the North Woods with its bold rocks, dark waters, and flaming color.

The trip of the next summer shows Thomson and a friend on a 300-mile canoe trip through Algonquin Park to the upper reaches of the waters that feed Hudson Bay. From this trip he returned with his first mounted canvas, a study in birch trees. A map shows the terrain over which he worked from Canoe Lake to Cedar Lake with its wild life and logging industry.

Next he is shown by mid-March of the following year in the North again. Here his works follow the seasons of the year and his first great canvas, *Spring Ice*, reflects the ice and chilled water. When the rivers began to melt he worked with lumberjacks and painted *The Drive*, a picture of the log jam at the sluice gate.

With the coming of fall Thomson caught the flaming beauty of the autumnal woods in his *October* with its cobalt, deep orange, and blue grey. Against the cold autumn sun a jackpine in its lonely beauty furnished the subject for the painting of the symbol of Canada's North, and *Chill November* was painted as he watched a wedge of ducks fly south. Seven months later Thomson was drowned when his canoe sank into the depths of a lake.

A. Y. Jackson, a fellow artist, with whom Thomson worked for a short time, reviews Thomson's career and pays a tribute to him as the man who, by his love of color and skillful hand, gave to Canadian art in his four years more than any other artist had in a long lifetime. Two other colleagues, Lawren Harris and Arthur Lismer, recall the young artist and comment on his contribution.

The film closes with a review of his great works compared to photographic studies of similar scenes and the

### PMDA Plan for Industry Co-ordination

President O. W. Ray of the Photographic Manufacturers & Distributors Association, has appointed a new committee for the purpose of serving in an advisory capacity to the Executive Committee to explore ways and means of inaugurating an expanded program of activities for the photographic industry. This committee included: Chairman, Oliver H. Young, General Electric Co.; James Forrestal, Anasco; Robert D. Howse, Argus, Inc.; S. G. Rose, Victor Animatograph Corp.; J. Harold Booth, Bell & Howell Co.; Howard A. Schumacher, The Folmer Graflex Corp.; Jack J. Kuscher, DeJur Anasco Corp.

The committee has submitted to the Executive Committee of PMDA a proposal of industry-wide co-ordination of the efforts of all trade associations and groups having an interest in the advancement of photography.

About 15 separate trade associations are now active in the photographic industry. There is no connecting link between these groups. Consequently, as an example, recommendations to government agencies and others may often be contradictory. Action on other matters of industry-wide interest involves duplication of effort.

A coordinating committee to be known as the Photographic Industry Co-ordination Committee, made up of members from each of the present associations, has therefore been recommended.

The secretary of PMDA extended an invitation to all other industry groups to have a representative attend the first meeting of this committee, held March 15 in Chicago.

### ANFA Supports Intra-Trade Meet

In an open letter to trade associations in the retail photographic and non-theatrical film industry, the Allied Non-Theatrical Film Association (ANFA) endorsed the PMDA proposal for a joint conference, to arrange closer collaboration between the various trade groups.

### No Film Quotas for 16mm Industry

The recently-formed 16mm. Industry Advisory Committee held its initial meeting with WPB officials in Washington February 13 to discuss the 16mm. raw stock situation. Upon the recommendation of this group, it was decided that no restrictions beyond the limitations created by short supplies will be imposed upon the 16mm. industry this quarter. Lincoln V. Burrows, Film Chief of the WPB, left it to the committee whether or not there should be 16mm. allocation, which to date has never been established for 16mm. producers and distributors because of the difficulties of administration. The industry was given an estimated footage to take care of its needs, the stock being distributed through regular business channels without ratings. For the past year, however, nearly

# Notes

all of the producers have been making films for Government agencies and have received footage for this purpose from the individual agencies.

The Board reported that military demands for 16mm. stock are tapering off and it appears that, even though production of 16mm. film has been temporarily reduced, the worst of the shortage is over, and that more film will be available for civilian use in the second quarter of this year.

Members of the 16mm. Industry Advisory Committee who attended the meeting were: Emerson Yorke, Emerson Yorke Studios; William K. Hedwig, Nu Art Films, Inc.; Eric H. Haight, Films, Inc.; Samuel Goldstein, Commonwealth Pictures; V. C. Arnspiger, Encyclopaedia Britannica Films, Inc.; H. J. Spiess, Castle Films; Harry A. Post, Post Pictures; George A. Hirliman, Walter O. Gutlohn, Inc.; J. Milton Salzburg, Pictorial Films; Henry Glickman, Mecca Film Laboratories; William J. Ganz; Leslie Winik, Official Films; Russel C. Roshon; George P. Ulcigan, Soundies Distributing Corporation; Sol Jeffe, Moviellab Laboratories.

## OWI Overseas Film Program

Between four and five thousand 16mm. projectors are now available in France as a result of occupation by the Nazis, who had used this medium for propaganda purposes and left the equipment behind them. These machines will be used in schools, universities and commercial circuits in rural areas where the exhibitor usually gives one showing a week. It is estimated that 10,000 communities in France have weekly 16mm. shows. Belgium has also obtained a number of similar projectors from the Germans.

In response to the demand for American films in these countries, the overseas film division of the OWI is supplying them with 39 subjects, consisting of 109 reels in French, and 27 subjects, consisting of 74 reels in Flemish. Designed primarily to furnish information, these films cover the American scene—our war effort, education, news of the Pacific war theater—and include a news review aimed at bringing liberated countries up to date on the war.

Similar activity is carried on by the OWI in Greece and Holland. Films to teach the democratic way of life to audiences in Italy are distributed through the OWI by the War Department's Psychological Warfare Bureau.

Forty films for the psychological warfare campaign in the Pacific war zones, have been promised to the OWI by the eight film companies which supplied films for the liberated areas of North Africa and Europe, according to Louis Lober, assistant to Robert Riskin, director of the OWI overseas film division. All 40 will be subtitled in appropriate languages. The division is proceeding with further production plans for documentaries for Germany and other European countries.

### Film Forums for New York High School Students

Junior High School Film Forums conducted at the American Museum of Natural History in New York every Tuesday afternoon by students of social studies will have prominent civic leaders, educators and authors as guest speakers for the new spring programs.

The series was originated last year to interest young people in the New York City social science classes in discussion of democratic practices, current social problems, growth of the United States and the functioning citizen. After viewing short films, or portions of motion pictures pertaining to the topics, the forums are open to student discussion.

Dr. Benjamin Fine, education editor of the *New York Times*, was guest speaker at the forum, "Freedom of the Press," on Tuesday, March 6, at 3:15 p. m. Films discussed at this meeting were: "The Story That Couldn't Be Printed," history of John Peter Zenger, pre-Revolutionary War printer whose courage led to the freedom of the press doctrine in the Bill of Rights, and "Out of the Darkness," story of a Belgium underground newspaper, which was published in defiance of the Germans in World War I.

Speakers on forthcoming Junior High School Film Forums will include Special Agent Thomas M. Mahon of the F. B. I.; Louis Nizer, author of "What to do with Germany"; Rabbi Isaac Landman; Judge Anna M. Kross; Francis A. Turner, and Judge Justine Wise Polier.

### Visual Education Conferences

The production needs and uses of films in education will be the subject of a two-day conference of teachers, and producers and distributors of educational films at New York University on March 23 and 24, Dr. Alice V. Keliher, chairman of the Conference Committee, has announced.

Sponsored by the New York University Film Library, the Conference will be conducted as a workshop with informal round table discussions of utilization of films in teaching, distribution problems and production needs. New films in eight special fields will be shown to small groups and will be followed by a discussion on techniques of presentation.

One session of the conference will be presented in cooperation with the New York Chapter of the Special Libraries Association and will be centered about the general topic of the film in the future of education.

▲      ▲

A Northwest Washington Conference on Audio-Visual Aids is scheduled for March 23 and 24 at the Central School Building in Tacoma, under the sponsorship of the Tacoma Public Schools and the State College of Washington.

▲      ▲

A two-day program of addresses, panels and demonstrations of visual aids, for teachers and administrators of Northern Idaho, was held February 23 and 24 at the Lewiston State Normal School.

Four Audio-Visual Teaching Conferences for school administrators, teachers and parents throughout Iowa, under the direction of the Bureau of Visual Instruction of the State University of Iowa, are highlights of the March educational calendar of that state. Places and dates of the meetings are: the Senior High Schools of Ottumwa, March 19; Creston, March 20; Council Bluffs, March 31; Des Moines, March 22.

▲ ▲  
Mr. Clarence W. Pierce, president of the Board of Education of Los Angeles, and Dr. Vierling Kersey, superintendent of schools, have issued invitations to the Second Annual Audio-Visual Education Conference, March 23, at the Audio-Visual Education Building, 1205 West Pico Blvd., Los Angeles.

### Television in Education

(Continued from page 113)

have often said 'we are brothers under the skin,' but this vivid demonstration that we are brothers under the wigs and clothes is a more potent preachment than any teacher's voice, and will undoubtedly remain in the memory of ail of us for a much greater length of time than would the mere statement of principles involved.

"With this new medium we teachers are again challenged: Will we have the wisdom to work with the technicians and television experts to the end that we may have not only an occasional program of this excellence, but a whole integrated series which will truly illumine all phases of school work? On the other hand, will the television experts welcome our assistance, or will they feel that our viewpoint is too narrow and pedantic to be of help to them? This, I believe, is the basic problem which must be solved, if the schools throughout the country are to avail themselves of this new opportunity to help children interpret life in our present day complex civilization through this latest scientific advance. If the material available to schools is sufficient, if the quality of programs is of a high order and readily makes its appeal to teachers and pupils, the present situation with regard to lack of equipment will undoubtedly be met immediately after the war. But the deeper problem persists. And upon our intelligent grasp of the necessity for meeting its challenge depends the contribution which television will make to education."

A partial list of Program speakers and audience participants is given below:

- Mr. Gilbert Seldes, Program Director, C. B. S. Television Studios.
- Miss Rohama Lee, Chairman, E. F. L. A. Television Committee.
- Lieutenant Lyle Stewart, Officer-in-Charge, U. S. Navy Training Aid-Section, Third Naval District.
- Mr. Maurice L. Du Mars, Radio Service, U. S. Department of Agriculture.
- Miss Rita Hochheimer, Assistant Director, Visual Instruction, New York City Schools.
- Dr. Claire Baldwin, Administrative Assistant, Junior High School Division, New York City Schools.
- Mr. Arthur Hughson, President, New York Society for Experimental Study of Education.
- Mr. Chester A. Lindstrom, Chief, Motion Pictures, U. S. Department of Agriculture.
- Dr. F. Dean McClusky, Director, Scarborough Schools, Scarborough-on-Hudson, N. Y.
- Mrs. Lydia Powel, Television Consultant, Metropolitan Museum of Art.
- Mr. Robert Seaman, Television Consultant, New York City Board of Education.
- Professor I. Keith Tyler, Radio Education, Ohio State University.
- Miss Pauline Williamson, Visual Aid Consultant, Metropolitan Life Insurance Company.

Included in the audience were many Principals of New York City schools, many special teachers representing special projects such as Hunter College Elementary Schools, and many representatives from publications and commercial firms interested in the field.

# BRITISH INFORMATION SERVICES

An Agency of the British Government

# Current Film News

■ **ENCYCLOPAEDIA BRITANNICA FILMS, INC.**, 20 North Wacker Drive, Chicago, have released a new Erpi classroom film dealing with:

**The Atmosphere and Its Circulation** (Ocean of Air—Part I), produced in collaboration with Michael Ference and George Benton of The University of Chicago. Animated drawings are used throughout to explain the structure and the dynamics of the atmosphere. The first part of the film gives a detailed presentation of the structure; the chemical composition; the gaseous nature; the distribution of air, the weight of air, altitude and pressure and temperature variations throughout the atmosphere. The second sequence shows the circulation of the atmosphere as it would appear on an idealized globe without mountains or oceans. The circulation is explained in terms of the pressure bands surrounding the earth. The actual circulation or wind movements as affected by the earth's rotation is described in detail.

■ **BRITISH INFORMATION SERVICES**, Film Division, 30 Rockefeller Plaza, New York 20, have made available in 16mm sound another subject in their "Act and Fact" series—Number 4—which is called:

**Gateway to Germany**—the full story of the attack on the supply port of Antwerp. The film shows the British Eleventh Armored Division taking docks and railroads, bombers over Eindhoven, Nijmegen and Arnhem, parachute troops capturing bridges across the Lower Rhine, Lancasters blasting dykes of the German-held Island of Walcheren, British Commandos and the Canadian First Army in Flushing.

British Information Services report that their ten most popular 16mm films are "Desert Victory," "D Day," "Cherbourg," "Pilot Is Safe," "Road to Paris," "Target for Tonight," "Psychiatry in Action," "World of Plenty," "Before the Raid" and "Britain's Paratroops." Two subjects on this list, they point out, were made for and shown almost exclusively to specialized groups. "Psychiatry in Action" was hooked over 2,000 times, largely by audiences interested in the rehabilitation of returned soldiers, while "World of Plenty," dealing with post-war food problems, is of interest to agriculturists and nutrition experts. "D Day," "Cherbourg" and "Road to Paris" are three of a series called *Act and Fact* which uses combat footage to record the war on the Western front.

These films are loaned from British Information Services headquarters at 30 Rockefeller Plaza, New York 20, N. Y., and from their offices throughout the country, on a service charge basis. The standard service charge is 50 cents for the first reel and 25 cents for each additional reel.

■ **PICTORIAL FILMS, INC.**, RKO Building, New York 20, N. Y. announce the release in 16mm of three George Pal Puppetoon subjects. The entertainment appeal of these unique animated puppets, coordinated in sound and action, received significant recognition, when the creator, George Pal, was given the 1944 award in the box office poll among exhibitors for the best short subject of the year. The three releases are:

**Sleeping Beauty**—the well-known fairy tale told with a modern swing twist.

**Cavalcade of Music**—a potpourri of music and dancing with the puppets taking all the parts.

**The Big Broadcast**—featuring songs and dances from waltz to jive, including musical selections from some of the United Nations.

The Puppetoons are available from Pictorial Films direct or from their distributing film libraries throughout the country.

■ **VISUAL TRAINING CORPORATION**, 815 Bates St., Detroit 26, Michigan, has produced two new 16mm sound films for the Sinclair Refining Company, as follows:

**Planning for Tomorrow**—25 minutes—telling the story of two gas station partners who have more or less let things slip during the war, due to shortage of help and supplies. A Sinclair representative encourages them to spruce up the station, put in a new system, take on a line of tires, and other accessories, with the result that patronage is won back.

**Farm Work Simplification**—25 minutes—showing some practical short-cuts in farming. A capable young farm agent convinces a somewhat dubious farmer that a review of his work, development and application of new work methods can save time, labor supplies and worry in his everyday routine. The Agricultural School of Rutgers University cooperated in the production. Actual farm scenes were photographed in Indiana, Kentucky and Missouri.

These films may be secured free of rental charge direct from Visual Training Corporation.

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, have completed eight more films in the Optical Craftsmanship series which dovetail into the earlier six produced by them for the U. S. Office of Education. The new titles include:

**Spherical Surfaces**: "Rough Grinding with Curvature Generator."

**Flat Surfaces**: "Rough Grinding (Flat)": "Rough Grinding with Vertical Surface Grinder;" "Fine Grinding and Polishing (Flat)."

**General**: "Introduction to Optics;" "Beveling, Grooving and Rounding;" "Inspection Methods;" "Production Methods."

■ **MANSE FILM LIBRARY**, 2514 Clifton Ave., Cincinnati 19, Ohio, reports their release in 16mm sound, of the RKO feature:

**Way Back Home**—9 reels. Included in the cast are Phillips Lord as "Seth Parker", Bette Davis and Frank Albertson. The appealing story is one of rural life in Maine, and is built around a kindly old rural philosopher whose life is devoted to making the lives of others happier. Old-fashioned country life is realistically and entertainingly depicted, and among the highlights of the film are a barn dance, a taffy pull and community singing. The feature is available for lease to film libraries, as well as for rental direct from Manse to school and church film users.

■ **KNOWLEDGE BUILDERS CLASSROOM FILMS**, 625 Madison Avenue, New York 22, N. Y. are releasing a series of Geometry teaching films in 16mm sound, under the title of "Practical Geometry." As the company feels that the number of films needed to thoroughly cover the subject of Geometry is practically unlimited, no set number of separate films to be included in the series has been decided upon. The first subject in the series, now available, is:

**Lines and Angles**—designed to aid the student in his understanding of the mathematical applications of basic Geometry. Beginning with the erection of a perpendicular, the film illustrates the relationship of the perpendicular with the ordinary plumb-bob, level and square. Shows how angles are created by interesting lines and how angles are measured in terms of degrees by means of a Protractor.

Three other subjects in the series are in production and will be released in the very near future. They are:

**Angles**—a film which will help the student understand all the various types of angles and their relationship to each other, after he has become familiar with the construction of angles and has learned how to measure them.

**Congruent Figures**—illustrating the geometric principles of "equal sides and equal angles," and clarifying methods for finding and proving that angles and

(Concluded on Page 127)

## Evaluation of New Films

(Concluded from page 119)

picture of J. E. H. MacDonald, designer of Thomson's memorial cairn in a camp for artists in Algonquin Park.

**Committee Appraisal:** "West Wind," in addition to presenting Thomson's major canvasses and important sketches, provides through the presentation of the history of his life and the spirit of the Canadian north woods a better understanding and appreciation of the artist's work. Recommended for use by secondary, college, and adult groups interested either in art or in a sensitive interpretation of Canada's north woods and for school assemblies and general adult programs.

### India

(March of Time, 369 Lexington Avenue, New York City 17) 18 minutes, 16mm. sound. Obtainable on a rental basis only. Apply to producers for terms governing rental.

This film presenting the various conflicts in India—religious, political, and economic—raises questions as to the geopolitical and socio-economic future of this immense subject nation.

It opens with views of marching British soldiers, outstanding buildings and monuments, beautiful boulevards, street scenes with their teeming peoples. The commentator explains that while there are some 90 million Moslems, yet seventy-five percent of the 450 million population is Hindu in faith and that these two principal religions are extremely antagonistic. Moslems are shown literally in tens of thousands facing their temple and kneeling in unison to worship. Hindus are pictured in many different ways—begging, bathing in their sacred Ganges, buying food in the markets, carrying on elaborate ceremonial rituals, disposing of a corpse on a funeral pyre—all of which are absolutely determined by their religion. Shots of the Hindu "untouchable" pariahs as street sweepers and buildings labeled "High Class Hindus Only" depict another religious basis of bitter discord.

The second sequence treats another source of conflict, the division of India into some 500 feudatory states. Elaborate processions of a few rulers of these states were pictured while the narrator told of their size, their wealth, their poverty, their loyalty, and their aspirations to become independent. The turning pages of a book revealed the terms of the 1942 British proposal for independence. Resulting general mass meetings were shown. Also shown were their leaders Gandhi, Nehru, and Jinnah while the commentator explained that distrust of each other and Great Britain led to the rejection of the proposed independence.

The third sequence deals with India. Although wealthy in raw materials, 75 percent of the population eke out a mere subsistence by the most primitive farming methods. Picturization of primitive farming scenes, of street fighting to suppress anti-British uprising, of women in British created schools, of several phases of economic progress in the province of Mysore, and immense dams for gigantic hydroelectric and irrigation projects gives a sweeping panorama of many problems and some progress.

The film closes with shots of immense groups of people in place after place while the narrator states that improvement in living conditions and resulting decrease of mortality rates only increase the problem, for the country already has more people than agriculture and industry can sustain. Even so the world hopes that native leaders "steeped in the age-old wisdom of their land may still bring India to a position of dignity, prosperity and peace."

**Committee Appraisal:** This is one of the series of ten Forum Edition March of Time films. It presents in a provocative and challenging fashion the more important problems facing India today. The committee felt that the pictorial treatment of the subject was particularly effective. Highly recommended for use by social studies classes on high school and college level, and adult forums.

## POST PICTURES

Announces

A List of Additional Releases in 16mm Sound

### NATURE

A series of 6 educational subjects.

A series of magnificently photographed strange living things—on the land—in the waters—and in the air. Some gigantic in size, others so small that they are invisible to the human eye, but they are shown in bold relief and startling detail as seen by the microscopic camera lens.

### HYMNALOGUES

"The Songbook of the Screen"

In Natural COLOR or Black and White.

20 subjects

World renowned hymns and famous songs splendidly sung by the celebrated Hamilton Quartet, with the words, super-imposed on appropriate scenic backgrounds, to permit audience joining in the singing. The backgrounds were photographed in gorgeous natural color. Excellent 3-minute subjects to embellish any program.

### YOUNG EAGLES

The Boy Scout Adventure SERIAL in 12 chapters. Officially endorsed by the Boy Scouts of America. A picture everyone wants to see.

Available At Your Film Library

Write for our New Catalogue—just off the press—which lists the titles of the subjects listed here and many other fine features and shorts.

## SVE Slidefilms Teach Penmanship

*Write Soon* is the unusual title of a new and attractively designed series of four slidefilms recently added to the library of the Society for Visual Education.

Written and prepared for the Visual Education section of the Los Angeles City Schools with the assistance of a committee of principals and teachers, this series was inspired by the need for written records, standards for good penmanship, small letters, numerals and capital letters.

Attention is focused on the problem at hand: to give opportunity for each child in the classroom to see and discuss the problem at the same time; to give a dramatic presentation; to set good standards for position, handwriting etc., and to show the necessary factors to become a good penman.

The purpose for each procedure and bit of technique is stated, to give the pupil an understanding as to the *Why* and *How*. This series probably will be of the greatest service to the 4th, 5th and 6th grade teachers and pupils.

Full information concerning *Write Soon* may be obtained from the Society for Visual Education, Inc., 100 East Ohio Street, Chicago 11, Illinois.

## Manual for the Keystone Tachistoscope

This manual is the result of the first effort to provide helpful information for users of tachistoscopic equipment; it is offered not at all as a means of meeting the situation adequately. It might be considered the first step in the development of such a manual.

It will be noted that the Keystone Visual Company released the first Tachistoscope in educational circles in 1938. During that school year a controlled experiment was conducted in the Harding School at Erie, Pennsylvania, the outcome of which showed very favorable results from daily tachistoscopic flashing of vocabulary. This experiment was conducted with a third-grade class.

The Keystone Tachistoscope is a combination of the Keystone Lantern and the Keystone Flashmeter, which is attached to the end of the objective lens of the lantern. The Flashmeter is a diaphragm type of shutter enabling the instructor to flash material on the screen at exposure times, varying from one full second to 1/100 of a second.

During the past year a new Overhead Projector was developed. This instrument makes practical the use of lantern slides containing a number of words, numbers, phrases, or sentences by screening off most of the projection table, leaving only a slot for the exposure of a single word or number at a

time. This flexible arrangement has stimulated greatly the interest in and the use of the Tachistoscope in classroom instruction and in vision training in the eye specialist's office.

This new manual covers, in a general way, the technical use of the equipment and the wide range of possibilities in instruction.

## I.T.&T. Appoints Educational Film Production Head

Harry J. Rothman, Executive Vice-President of International Theatrical and Television Corporation, announces the appointment of Miss Zella G. Young to head its educational film production department. Miss Young has had experience as director, scenarist, and film editor in both the 16mm and 35mm motion picture fields. Her most recent affiliations have been with Universal and RKO-Pathé Pictures. Known for directorial and production work in educational and documentary films, Miss Young is planning an extensive production schedule for I.T.&T. under the supervision of Victor Roudin, Director of Visual Education for that company, and George Zehring, head of the Educational Division of Walter O. Gutlohn, Inc., a subsidiary of I.T.&T.

Three separate series of educational films to include approximately 18 subjects have been scheduled for immediate production. These will be in the fields of English, Mathematics and Music.

## DeVry Sells Laboratory Equipment

William C. DeVry, president of DeVry Corporation, has announced the sale of that company's laboratory equipment to Filmack, producers of theater trailers. Mr. DeVry declared that the organization will expand the distribution of educational and commercial films through the department headed by Gordon Hale, and will devote all of its time in the future to the manufacture of equipment.

## New Slidefilm on Soldering

School shop instructors will welcome the availability of a new discussional slidefilm on *Soldering*, produced by the Jam Handy Organization, 2900 E. Grand Boulevard, Detroit 11, Michigan. It has already been used successfully in the Armed Services and in war industries, especially in the metalsmiths field. The slidefilm consists of 92 pictures organized in twelve sequences, or units, covering the following: definition of solder; uses; soldering methods, fluxes; types; application; heat sources; the bit; steps in soldering; preparing the bit; soldering cables, terminals, tops, splices; soldering sheet metal; safety precautions.

This film slide acquaints the beginner

Frames from stillfilm on soldering

with the tools, materials and purposes of soldering, and thus prepares him for the proficient application of it in actual shop work.

## Bell & Howell Course in Optical Technique

Unusual interest marked the recent opening of Bell & Howell's School of Optical Manufacturing, which is meeting in the company's modern optical shop at Lincolnwood, Illinois. Offered only to 25 employees at a time so as to insure thorough understanding between students and instructors, the course is based on an effective program of actual shop periods and seminars. Upon completion of it each pupil will have made his own Galilean telescope from beginning to end, working to the close tolerances characteristic of high-grade optical manufacture. Thus Bell & Howell employees who may necessarily have had to confine their previous shop activity to the operations or processes for which they were best qualified now are obtaining a sound working knowledge of every step in lens-making.

The course, believed to be one of the first and most complete of its kind given during the war emergency (when production comes first), consists of 16 weeks with meetings being held twice a week. A more general training program, in which every optical worker is given an understanding of manufacturing theory, has been in operation for some two years and has been instrumental in enabling Bell & Howell to make increasingly large quotas of military optics despite the loss of manpower to the armed forces.

### Fairchild Annual Award

The American Society of Photogrammetry, meeting at Washington, has presented its annual "Sherman M. Fairchild Award" for outstanding work in aerial photography to Philip G. McCurdy, senior photogrammetric engineer and chief of the photogrammetric section of the U. S. Navy hydrographic offices, Washington.

Mr. McCurdy was given the 1945 award by the society for outstanding work in development of new photogrammetric methods which have "contributed much to the war effort," and for his editing of a monumental new textbook, "Manual of Photogrammetry," (Pitman, New York, \$8.50). He is also editor of the quarterly journal, "Photogrammetric Engineering."

Donor of the award, a silver plaque, is Sherman Fairchild, chairman of the board, Fairchild Camera & Instrument Corporation, New York, a pioneer in aerial camera invention and development.

### Milton A. Romney Joins RCA's Cleveland Staff

The appointment of Milton A. Romney as Sales Manager for RCA 16mm equipment in the Cleveland area was announced by Harold Winters, Cleveland Regional Manager for the RCA Victor Division. Mr. Romney has been associated with RCA for the past two years as Sales Representative in the Chicago regional office. For more than 20 years he has had close contact with the industrial field and film producers in the middle west.

Mr. Romney will make his headquarters at RCA Victor's Cleveland office, his territory including Ohio, Michigan, West Virginia, Kentucky, and Western Pennsylvania.

Milton A. Romney

### Navy Commendation Given To Visual Training Corp.

A special commendation for good work has just been extended to Visual Training Corporation, Detroit training and promotion service specialists, by the Navy Department through Rear Admiral D. C. Ramsey of the Bureau of Aeronautics.

This commendation was based in particular, said Genaro A. Florez, head of Visual Training, on the company's work in connection with the Packard Marine Engine training program for the operation and maintenance of the 4M-2500 Navy marine engine, used in motor torpedo boats. Admiral Ramsey wrote Mr. Florenz: "The film strips and manuals prepared by the men and women of Visual Training Corporation are proving most effective in the Motor Torpedo Boat Squadron centers where they are in use. The quality and applicability of these visual aids merits a 'Well done!'"

Admiral Ramsey added that the Navy Department was confident that this performance would be repeated in Visual Training's current work on training aids for the Bureau of Aeronautics. The Detroit corporation specializes in a complete visual media program, including motion pictures, slidefilms, glass slides, animated models, lecture charts, and picturized texts and illustrated manuals.

### Current Film News

(Concluded from page 124)

sides are equal. By the employment of animated drawings, equal lines, equal angles and congruent geometric figures are effectively compared.

**Locus**—in which a difficult topic for many Geometry students is clearly visualized and explained by this combination of photography, animated drawings and the spoken word.

■ **THE MARCH OF TIME**, 369 Lexington Avenue, New York 17, is issuing two special releases in their Forum Edition series this spring, namely:

**Americans All**—16 minutes—a study of the vital problem with which many U. S. communities are concerned today: how to prevent racial and religious intolerance. The film is an honest presentation of intolerance as a menace to American liberty. Discrimination is graphically shown but the emphasis is on the practical, constructive effort to prevent such discrimination as exemplified by the now famous Tolerance Plan of the Springfield, Massachusetts, Public Schools.

**The French Campaign**—19 minutes—tracing the United Nations' strategy of liberation which culminated in the freeing of France from the Nazi yoke. It is a coherent pictorial record of one of the greatest and most thrilling military exploits of World War II.

Discussion Outlines accompany the films which are available for 3-day bookings at \$5.00 each.

■ **CASTLE FILMS, INC.**, 30 Rockefeller Plaza, New York 20, contractual distributor for all U. S. Office of Education visual units, have obtained several new subjects in the Machine Shop, Sheet Metal Work, Woodworking and Welding series. Among the films on Sheet Metal Work are the following:

**Blanking Sheet Metal on the Squaring Shear**—illustrating how to lay out tapered blanks on an aluminum sheet; how to set and adjust front and back gages and side stops; how to use hold-downs and treadle; how to check blanks and further adjust machine; and how to trim blanks. Animated drawings explain operations of the shear.

**Blanking Sheet Metal with Hand Snips**—how to care for and adjust the snips; how to select them and cut along a straight line; how to cut an outside circle, a notch, and an inside line; and how to remove burrs left by cutting.

**Finish Forming by Hand**—showing the tools and methods used for holding small aluminum bulkheads during forming.

One of the new films on Welding is:

**Oxyacetylene Welding Light Metal**—demonstrating how to assemble a gas welding outfit; how to adjust gas pressures and the flame; and how to make a butt weld and a T weld in light tubing.

■ **OFFICE OF WAR INFORMATION**, Bureau of Motion Pictures, Washington, D. C., is allocating four War Department Industrial Incentive subjects to OWI 16mm distributors. They are:

**Battle of Midway**—11 minutes—a special adaptation of the Navy film to illustrate the part labor played in this victory.

**Combat Report**—13 minutes—a tribute to combat crews and to the civilians who had a hand in producing the bomber.

**Firepower**—11 minutes—described as the striking power of any fighting force. Ordnance officers are shown at drafting boards and proving grounds designing and building the weapons that will win the war.

**War on Wheels**—21 minutes—directed principally at the men and women of the automotive industries to show them combat performances of the vehicles they have built.

■ **BUSINESS FILMS**, 1124 Ninth St., N. W., Washington, D. C., has added the National Rifle Association to its distribution accounts. 16mm films produced for that association which are available at nominal fees from this source, include:

**How to Shoot the Rifle** (3 reels, sound)

**Fundamentals of Rifle Marksmanship** (4 reels silent, 3 or 6 reels sound)

**Pistol Bull's Eyes** (3 reels silent, 2 reels sound)

**Shooting Holidays** (2 reels silent and color)

## It presents new teaching techniques

This illustrated 36-page manual was published by Spencer in the interests of better instruction through visual teaching. It contains a wealth of specific suggestions for the use of the opaque projector and includes some teaching techniques printed here for the first time.

The majority of summer schools conducting courses in visual education utilize this booklet as a text.

More than 20,000 teachers interested in this subject have requested copies for their personal use.

Write Dept. R12 today for your copy.

## Fish Hatch at Your Convenience...with Filmosound

### Schools Are Ordering Filmosounds Now

Recent revision of regulations permits schools to place orders for Filmosounds. We will fill school orders in the sequence of their receipt as equipment becomes available. To avoid unnecessary delay, anticipate your needs and order now.

Yes... or butterflies emerge from cocoons. Or ant eggs incubate. Or dozens of other interesting, educational events in Nature Study come to real, thrilling life through the medium of a B&H Filmosound Projector.

No longer do field trips for your classes wait for good days and right seasons. Filmosound brings them into the classroom. Zoology, ichthyology, geology, biology, and other classes in the sciences and arts become more vivid, more inspiring with motion pictures. History becomes more alive.

Geography becomes like a visit.

There are many fine films on almost every conceivable subject in the Filmosound Library. Your school can rent or buy them at very moderate prices.

A Filmosound Projector will reproduce any 16mm. sound-on-film subject at its best. War-accelerated research has made Filmosounds better than ever before.

For additional information send the coupon. Bell & Howell Company, Chicago; New York; Hollywood; Washington, D. C.; London. *Established 1907.*

*easy as threading a needle*

that's how easy it is  
to thread the new

## DEVRY

### 16mm. SOUND-ON-FILM PROJECTOR

Conveniently-accessible, free-moving controls make it easy for anyone to thread the new DEVRY 16mm. sound-on-film precision projector. A 12-year-old student (following the simple, clear direction chart) can easily and speedily thread, frame and focus a DEVRY. Specifically designed and built for sound film projection, your new DEVRY projects *both* sound and silent films. It projects *both* black and white or *natural* color without extra equipment. DEVRY motion picture projection is kind to the eyes... Its sound is "Nature-Real." Those who own them say, "Your best buy is a DEVRY." Separate 25 watt amplifier and sturdy 12" speaker make it possible quickly to transform your DEVRY into a lecture-study device for use with microphone or turntable... or a public address system for assemblies, athletic events, etc., indoors or out.

Self-contained in two easily carried, matched cases, DEVRY combines the best features of portable equipment with the stamina and stability of theater projectors. DEVRY portable units are built by those same master craftsmen who build DEVRY professional equipment for Hollywood and the world's finest theaters.

# Continuous Field Trips Right in the Classroom

with 16 mm. motion pictures

New living, moving worlds of sound, motion and color are brought to our very classrooms through 16 mm. sound films! Vivid and exact impressions are etched deeply into the minds of our students through *both* the ear and eye. Social horizons are widened without leaving the classroom. The scope of this unique type of "field trip" is limitless. History, government, industry, human relationships . . . are presented authentically and dramatically! Educators recognize that 16 mm. motion pictures are essential to the development of tomorrow's CITIZEN OF THE WORLD.

to you until our war efforts are completed—now is the time to lay the groundwork for your visual education program. In this connection, an unusually interesting and informative story entitled "What Will Happen in the Movies the Day War is Over . . ." is being distributed in attractive booklet form by the Ampro Corporation. Write today for your FREE copy.

**PROJECTORS**

- Salient Points**
- Remarkably inexpensive.
  - Projection stage is conveniently located where you can see what you are doing with the material.
  - Best results from 6 - 15 feet from screen.
  - Will project material 5" x 5" or smaller.
  - Simple to operate—a child can handle it.
  - Extremely light and portable — weighs only 11 lbs.
  - Unusually long lamp life.
  - Good screen performance.
  - Objects projected in their correct left and right relations.
  - 300-watt medium prefocus lamp.
  - Projects all colors faithfully.
  - No undue heating of the projected material.

Every classroom in your school can now enjoy the luxury of the new BESELER Model OA opaque projector. This latest product of 75 years of BESELER engineering skill, has been used extensively in training service men for the various branches of the army and navy. Its high efficiency and amazing light performance, its striking simplicity and incredibly low price, make it ideal for classroom use.

It will project pages from books or magazines, post cards, snap shots and everything else that is opaque, with fidelity of detail and color. There are no glass slides to make—no pasting, no tacking, no adjustments of any kind . . . just place the material in the carrier and the projector will do the rest. This new model will project perfect images up to six feet by six feet and is particularly useful for lecture work.

Nothing like it has ever been designed before at this incredibly low price!

## Editorial

# *The End Is But the Beginning*

THE prospect of the termination of further bloodshed is cheering the entire world on Easter Sunday as this editorial is written. The rapid march of the Allied armies through the Ruhr during the last days of March and the brilliant accomplishments of the Army and of the Navy in the Pacific during the same period encourage the hope that the end of the active fighting phase of the war may be close at hand. That answer to the world's prayer can not come too soon.

Our armed forces will not relax their strenuous efforts to accomplish that victory in the shortest possible time. They know too well that every day saved means several thousand American lives saved as well as a correspondingly greater number of lives of our Allies. This gruesome reality should be sufficient to prevent civilians from any relaxation of their efforts in producing munitions, furnishing supplies, or contributing moral and financial support to the men on the active fighting front.

The enthusiastic over-subscription of the Red Cross Drive is a good omen for the continued unified support of the war. Acceptance of continued food rationing and the collection of clothing for rehabilitated populations are further tests of continued loyalty to the war effort. Subscriptions to the Seventh War Loan, May 14 to June 30, and public understanding and support of efforts to "win the peace" at the San Francisco Conference will present severer tests. Unified support of the period of occupation, conversion, and rehabilitation will be the supreme test of American and world unity.

The cessation of fighting will thus see the beginning of equally serious problems. But the fact that the problems that we face in the dark days ahead are of a constructive nature—rather than destructive—should be sufficient to encourage us to constantly greater efforts and to a more complete resolution to unity. The response to the State Department's request for the help of groups in local communities in spreading an understanding of the meaning and of the problems of the San Francisco Conference augurs well for this continued unity of the national effort. Despite the occasional views of pessimism and futility, nearly every community in the country has rallied its constructive organizations and agencies in an effort to spread the understanding of the critical character of the problems to be discussed at San Francisco, and subsequent prac-

tical measures that will lead to some form of organization for world peace.

Our immediate interest in all of these problems is the role which visual aids should play in their successful conduct. Here we may be really optimistic, for just as visual aids have played an important role in training the military establishment, so we find them playing an increasingly important role in the non-military aspects growing out of the war and of the peace. Reference has already been made in a previous editorial to the importance of movies in adult education. *Watchtower Over Tomorrow*, produced by the Commission on War Activities of the Motion Picture Industry for the State Department, now currently appearing in all theatres of the country, is a striking example of the use of theatrical movies for this purpose. The list of 16mm movies prepared by Chicago's "Build for Peace" movement referred to on page 145 of this issue provides an additional illustration of the continuing role of visual aids toward public understanding and unity.

Look again at the record of non-theatrical movies in the War Loan Drives. In the Fifth War Loan there were twenty-five thousand showings to ten million people. In the Sixth there were eighty-seven thousand showings to twenty-three and a half million people. Announcement of the special offerings being prepared for the Seventh War Loan will be found on page 156 of this issue. It seems unnecessary to do more than to remind school people that these films offer one more fruitful opportunity for public service toward the success of the Seventh War Loan Drive, as well as one more opportunity for astute public relations in your community. Projectors, operators, and public meeting halls should be freely volunteered to your State War Loan organization.

The remarkable unity which this country has developed during the prosecution of the war reflects the activities of all forms of modern mass communication—the radio, the movies, and the press. In emphasizing once again the importance of maintaining the same national unity in the period following the war, EDUCATIONAL SCREEN calls special attention to the illuminating first-hand observations of the part which non-theatrical films have played in Great Britain, which immediately follow this editorial. How much we in America could do in the solution of our peacetime problems if we adequately harnessed this same power!

D. P. B.

# Non-Theatrical Films at Work in England

*A close-up of domestic film distribution by The British Ministry of Information.*

J. R. WILLIAMS\*  
British Information Services, New York

I REVISITED Britain recently, after an absence dating from June 1942, and in a tour of the country I took pains to find out what was happening in the world of non-theatrical films. I was most struck by the way in which they have become part of the life of the people. It is much more surprising to be able

A showing for the *Fire Watchers* of St. Paul's Cathedral.

to say this about Britain than about America because, though Britain may fairly claim to be one of the leaders in the creation of documentary films, she was at the start of the war (and in one sense still is) very far behind the U.S.A. in 16mm film distribution. The reason is simple: the number of projectors, even in proportion to population, is much less.

A more acute need, however, can bring forward a swifter remedy, and the stimulus of war needs brought on a period of almost bewilderingly rapid progress in Britain. The Ministry of Information adopted an encouraging attitude toward films from the start, and by the fall of 1940 there was in existence an elaborate non-theatrical scheme manned by a great corps of enthusiasts. Since there were not enough projectors to make library distribution of prints effective, the plan had to be more drastic. A fleet of mobile units

was set up so as to cover the whole country. Fortunately, Britain's population is, by American standards, very compact, and it was comparatively easy to reach most communities from the control points of the Ministry's twelve regional offices.

The English countryside has its problems, however, and I shall never forget the excitement of the fall and winter of 1940 (I was a Regional Film Officer then) with cars breaking down in the middle of snowstorms, a projectionist here and there sleeping in his unit in a snowdrift, or an audience turning up at a village show on sledges.

Meanwhile, right at the outset, the Battle of Britain was on, and when one saw the confidential reports listing railroads blocked, bridges blown and culverts dammed up, one wondered if the promised films would ever be more than a dream. Then one morning a little pile of cartons would appear on the doorstep of the office, and *Into the Blue*, *Behind the Guns* and *Dangerous Comment* would go into circulation. There was something miraculous about these films appearing out the midst of the battle, and they gave us a strange kind of excitement.

It was exciting too, to find how the audience ate up the films. Within six months a solid scheme had been worked out for serving the whole country, and inside a year every city, town, village and hamlet was being taken care of in some way.

It soon became clear that the best markets were at the two extremes, city and hamlet. On the one hand

The M.O.I. mobile unit finds a road blocked on its way to a show at Tomintoul, Scottish Highland village.

\*Mr. Williams was Regional Film Officer in England from the inception of the Government's non-theatrical schemes in 1940 till June 1942 when he came to the U. S. A. He has been Head of Non-Theatrical Section of Film Division, British Information Services in New York City since January 1943.

Below: The Men of Tomintoul follow the film intently.  
 Right: The Highland audience is very curious about the projection apparatus.

the factories clamoured for films, and lunchtime shows rapidly became the most important single block of bookings. On the other hand, the rural villages welcomed with great enthusiasm this completely new addition to their social life. Almost the entire population would turn out for the show, whatever the weather, and some of the older, stay-at-home folks actually had their first experience of sound films on these village-hall occasions. Film Officers became accustomed to receiving letters from remote rural villages saying that this new miracle of the sound-projector which came right into your own community hall promised to transform the social life and culture of the countryside.

In the cities there were many audiences outside factories which welcomed the films. The rule was simple: any organization which could provide a hall and an audience of 100 or upwards could have a show. The Ministry would provide all the rest: projectionists, projector, films, screen and even electric current if necessary (supplied from a gasoline generator).

Clubs and community groups of all kinds took advantage of this service. Amongst the first, in my part of the country, were the Working Men's Clubs, which are a characteristic feature of the life of industrial Britain, and the Women's Institutes, which organize the spare-time life of both women and men in the rural villages. I remember having a block of bookings for the Sheffield Working Men's Clubs when the great blitz fell on the city. We were preparing to write these off as a week's straight cancellations when there came in a prompt report-card from a club which had mustered an audience of 400 men the night after the blitz. The film the audience had liked best was *Men of the Lightship*; reason—"the courage of the men." Then

there was a projectionist in East Yorkshire who used to report regularly: "Show O.K., air raid in progress."

Gatherings of Air Raid Wardens and Fire Guards were great occasions for films, especially when we were able to give them technical films on their own job, such as *Fire Guard*. I shall never forget a gathering of Fire Guards (civilian fire watchers) in one of the big industrial cities. The Air Raid Wardens (full-time, paid men) had organized the show, and attendance was restricted to the street leaders of the city. There was a maximum attendance, and 2,500 enthusiasts packed the City Hall right to the top shelf. The meeting opened with community singing. We used 35mm and gave them a 90-minute show beginning with the Carl Sandburg film *Bomber*, going on to *Fire Guard*, and ending with defiant films about British resistance to Hitler. The show was followed by thirty 16mm shows to the rank and file of the firewatchers throughout the city, each of which drew capacity audiences in local community halls. There was not much doubt about the morale of that city.

On my recent return to the scenes of these old enthusiasms, it was easy to see that the excitement of the early days was ended. But something even better had emerged. Films have proved their community value, and a steady, sober practice of using them has developed throughout Britain. In 1943-4, 150 mobile units gave 67,000 shows to an audience of 11½ millions, using at each of these shows anywhere from two to six pictures. In addition, the Central Film Library (which is part of the Ministry of Information's organization) made 130,000 shipments of films to borrowers having their own projectors, and there were 1,700 full-dress 35mm shows given outside normal hours (mostly on Sundays) in theatres.

The films used include both those of general community value and specialized films intended for specific groups. I saw a typical general show when I was in

Manchester. Right in the center of the city the public library—untouched by the blitz—puts its auditorium at the disposal of the Ministry once a week. Here I found an earnest audience, seventy-five per cent men and obviously busy people, not just loiterers with a lunch-time to kill. They sat attentively through two films (including one which told the story of how the War Office made a new anti-tank gun especially to keep a "date" with a new German tank on the Mareth Line) and then hurried away soberly to their work.

At Salford I saw an evening showing for a group of 150 Air Raid Wardens who have been keeping up their morale with the aid of films for four years. They do not have much to do in the way of air-raid work now, but they do not think this is any reason for a loss of morale—or of films. What struck me about a lunch-time show which I saw in a Leeds factory was how much this kind of thing seemed to be a part of the normal life of the place. I asked representatives of both management and labor whether they thought the practice should continue after the war. They had no doubt of it.

I paid a visit to Stratford-on-Avon, not to see Shakespeare's birthplace but to attend a showing of films to a Youth Organization of the kind the Ministry of Education has set up as a means of combating the tendency to juvenile delinquency. The young Stratfordians were a turbulent crowd—very much like a crowd of young American jive-enthusiasts—but the films held them, and they were not slow to express their appreciation of pictures of the rigors of Atlantic trawling or sheep farming in the mountains of Scotland. These boys and girls certainly did not realize they were being "educated." To them it was fun.

Alongside the generalized film-shows the M.O.I. has, from 1941, promoted the more specialized uses of films, and this type of use has grown rapidly of late. The Ministry produces or arranges for production of films for farmers, films for doctors, for housewives, for builders, for furnacemen and so on. When I was in the Midlands, for example, I saw one of the County Agricultural Executive Committees, which have been so active in implementing the Ministry of Agriculture's policy, previewing a batch of new agricultural films with a view of using them amongst the farmers. Two days later I was able to see a group of Welsh police-women taking in the brand-new film on juvenile delinquency *Children of the City*. It is particularly satisfying to see a film hit the nail on the head like this.

In all this ferment and development, the schools are not yet playing the part which they undoubtedly will play soon after the war. Here the British 16mm scene differs very markedly from the American one, in which the school is so prominent. The reason is again the simple one—shortage of projectors. The British schools have not yet been properly awakened to the possibilities of films and at present there are not the projectors for them to buy, even if they had the money to buy them. During the war the M.O.I. mobile units have helped considerably, but it has been ruled consistently that the Ministry's first business is with adults, and the schools have been offered no more than the spare time of the units. It is confidently expected that

all this will change rapidly after the war, and that the newly-created Ministry of Education will take up the slack in visual education.

Before returning to New York, I did witness one very interesting and unusual M.O.I. show at a school of "junior high" type in a mining town. A new film on road-safety for children was the centerpiece of the occasion; but the showing of this had been synchronized with a campaign undertaken by the county police. A policeman, specially trained for his job, introduced the film with a little homily of his own. He was quite a teacher himself, in his own way. He made friends with the children, taking care to identify himself with their interests, and convinced them that laws and regulations were intended for their good. After this the film was a great success.

Everything I saw in Britain gave me confidence that the future for non-theatrical films is secure. What part the government will play in post-war plans has not yet been announced, but there is a growing conviction that the ground which has been won shall not be lost; a belief that the various Ministries should use films as part of the means by which they both discharge their duties and give their masters, the people, an account of their stewardship. Alongside this there can be no doubt that the private, commercial development of 16mm films will go ahead at a great pace.

Finally, everyone in the documentary movement in England hopes and believes that the film is going to play a great part in the international relations of the future. By no other means can nations explain so vividly their ways of life, or contribute from their experience to the common pool of civilization.

A film display which I attended in the auditorium of the Cadbury plant in Bourneville was a particularly good omen of this. It was an all American program of films borrowed from the O.W.I. in London. The feature of the evening was the T. V. A. film, and a young lieutenant from Tennessee had come along to give a note of authenticity to the occasion. An audience of over a thousand, mostly young people, received the whole program very intently. I spent more time looking at the audience than at the screen, for it seemed to me a symbolic occasion. This, I thought, was one of the audiences of the future, learning about the ways of another people and another country, not from pedagogues nor from entertainers, but from those who have realized in a new way Macaulay's ambition to make history as fascinating as fiction.

---

### Visual Meeting in Waukegan Next Month

A Lake County Audio-Visual Conference is to be held the afternoon and evening of May 4 in the Senior Assembly of the Waukegan, Illinois, Township Secondary Schools. Dr. Stephen M. Corey of the University of Chicago will preside as chairman of the program, which has been arranged by Orlin D. Trapp, Director of Industrial and Visual Education. Speakers include W. A. Wittich, Lt. James W. Brown, USNR, William F. Kruse, W. Roger Zinn, Harry E. Erickson, and Carl F. Mahnke.

# The Inseparability of Geography and Visual Aids

*A brief but stimulating presentation of the intimate relation between Geography and visual materials.*

LEWIS D. CANNELL, Instructor in Geography  
State College of Washington, Pullman

**M**ANY people will tell you today that geography is due for a big revival. They point to the travel experiences of our troops, to the profusion of war maps in the press, to the land-office business in atlases and globes as evidence of undeniable interest. Let us hope they are right. So far, however, geography has been incredibly neglected in our schools and colleges. In the State of Washington, for example, in the first school year after Pearl Harbor just 31 high schools out of 166 taught the subject. In the two years since then 16 schools have added it, and 19 have dropped it. Some condone this curricular inertia by saying geography is "kid stuff" (but the grades are slighting it too!) Some say it is being given as parts of other courses; some that the curriculum is already chock-a-block with other requirements. And some particularly expert experts in "the changing curriculum to meet changing conditions" say, "Why teach it now? The maps will all have to be redrawn when the war is over!"

It would be a hollow task indeed to discuss the use of visual aids in geography, if geography is not going to be taught. To attempt to forestall such a calamity, I should like to use my space to warn against the political isolationism which is bred of our amusement at strange place names, our disgust with "foreign backwardness," and our vain indifference to the countries, customs, and problems of other peoples. But that is not my assignment. Let us assume that we are all "sold" on geography and let us assume that we are all "sold" on visual aids—but not oversold! That is, we welcome visual aids as a means of teaching geography; we do not necessarily welcome geography merely as a new way of employing visual aids!

Or do we? I should like to submit that geography *is* a visual aid. It gives location, depth, color, concreteness to all the other social sciences. For the sociologist it provides the backdrop for all human activity. We cannot get far with a study of man's relationships with man without some knowledge of man's relationship to the earth on which he stands and from which he draws his substance. For the political scientist, geography points up the natural barriers which separate states and the resources which comprise their strength. For the economist, geography brings to life the differences in production as the differences between climates, soils, mineral deposits and population. Geography affords a space concept to match the historian's time concept. It does for the drama of history what television will do for the radio play. Geography is a factor in literature. Setting, along with plot and character, is one of the three prime elements of

all fiction. Any great literary work reflects something of the individual author who produced it, something of the epoch in which it was produced, and something of the area in which it was produced. The reasons why Greek drama developed in Greece and the saga developed in Scandinavia are largely geographical.

My first thought, then, is that geography is a visual aid to, and an indispensable part of, the social sciences and the humanities—not simply because it provides illustrative information, but also because it provides certain principles by which the information of other fields is appraised.

My second thought is that geography, besides being a social science, is a natural science (it may be that this dual nature accounts for its neglect—everybody's business is nobody's business). As a science it has a problem exactly opposite to that of most other sciences. Where other scientists are familiar with the whole and are striving to see and understand the parts, the geographer is familiar with the parts and strives to see and understand the whole. The biologist studies the structure of the sub-visual cell with the aid of a microscope. The chemist studies the structure of the sub-microscopic atom with the visual aid of a ball-and-rod model. The geographer, on the other hand, has as his visual aid and tool the map, which integrates what his eye has seen in a thousand isolated observations. The map is an ancient and an invaluable visual aid and scientific instrument.

My third thought is that geography, whatever it is—natural or social science or both—can and should make abundant use of a variety of visual aids. Among these are:

**Maps.** Of course. Physical maps should outnumber political maps by at least 20 to 1. Don't sacrifice accuracy for dramatics; the accurate ones can be colorful, too. Don't go overboard on the airplane era; you may fly over the north pole once in a lifetime, but you aren't going to live there. Get lots of maps—lots of kinds of maps. Don't omit United States Geological Survey topographic maps and Department of Commerce aeronautical charts. Have a map laboratory. With enough maps you can give up looking for a suitable textbook. Man must be in the picture—it may be geology, but it isn't geography without him—where is he? The population map is of prime importance. Have plenty of dot maps; they can relate almost any data to its geographic distribution.

**Map projection Demonstrator.** With wire and solder one can make a grid of parallels and meridians, and, using light from a small enclosed source,

project the grid by shadows on cylindrical, conical, and plane surfaces.

**Planetarium.** The hemispheric auditorium in our big cities is wonderful. The chain-drive desk model is a bit expensive for what it can do. It is likely to give some misconceptions of size and distance relationships. Try the vegetable analogy: "Here on the desk is a pumpkin, the sun; at the back of the room is a pea, Mercury; at the back of the next room, another pea, Venus; and in the room beyond, a third pea, Earth. Three inches from it a mustard seed, the moon—and so on. The nearest next pumpkin (sun) is, on the same scale, in Japan.

**Sand Table.** A good many of the facts of earth science can be demonstrated on a sand table. The well-equipped general science laboratory used to have one. Too bad general science is disappearing!

**The Outdoors.** You're bound to live in *some* climate on *some* landform. Geography is all around you—biotic factors, edaphic factors, transportation routes, human occupancy patterns, and so on.

**Museums.** And why not your own museum? Get process displays from industrial companies. Swap specimens with distant schools. Put that collecting bug to work.

**Still Pictures.** The magazines are full of good ones. Have committees to edit them, and to keep the bulletin boards fresh.

**2x2 Slide Projections.** Slides afford still pictures with topical concentration and room-wide attention.

**Strip Film.** Film strips afford still pictures as well as diagrammatic elucidation of puzzling phenomena such as volcanism or the polar front. They have some advantage over movies in that the pace can be regulated and discussion can be interposed.

**Motion Pictures.** Motion pictures are what we think of first when visual aids are mentioned. They are the most spectacular. Besides the many excellent films now published on specific geographical subjects, almost any film of general interest contains, deliberately or unavoidably, a good deal of geographical material. Its educational value should not be wasted. It can be made at once to draw on and to reinforce the geographical understanding of the student; it will draw on his geographical understanding, if he has been given any in the first place, and it will reinforce it, if the teacher observes the cardinal visual aids rule of beforehand preview and preparation, and is the sort who never wastes an opportunity.

## Wartime Community Benefits by Visual Methods

*Visual materials prove their unique value in solving educational problems in a ship-building community.*

WILLIAM M. ZEHR

Vanport City Schools, Portland, Ore.

THE Vanport youth is growing up in a complicated culture. With the impact of war and the problems that war automatically brings to a society, we try as much as possible to direct these youths in as nearly a normal educational growth as is possible under these circumstances. In so doing, we do not overlook the dominating influences the film plays in the lives of our youth. The social adjustment of the adolescent is sharply influenced by the films he sees, so it becomes a challenge to us to make the best use of the film possibilities as is expedient in our classrooms—entertainment films as well as educational films.

We believe our school system to be unique in that we must operate our schools on a two shift program. This becomes necessary as we have 5000 students, with school facilities for 2500. The average enrollment per room is 39 children. In order to serve this ship-building community of 39,000 population to a better advantage, we conduct an extended service program which begins at 6:00 a.m. and continues until 6:30 p.m. in the same buildings that are used for regular classwork.

Another problem we had to face is the inservice training of approximately 250 teachers (with a monthly teacher turnover of about 4%) in the uses of visual material. However, our greatest problem is the lack of adequate equipment and supplies. Our school owned equipment consists of two sound projectors, two stand-

ard glass slide projectors and one stripfilm projector. In spite of more than usual difficulties, a typical visual education program is developing.

An important phase of our work is the organization of a club for boys and girls who are interested in camera and projection work. The objectives of this organization are as follows:

1. To supply an activity for those interested in the field of photography.
2. To help with the mechanics of taking and developing a number of pictures of our schools and activities.
3. To familiarize the pupils with visual aids, equipment and their application.
4. To have available to the school system at any time, capable and dependable operators of visual equipment.
5. To develop an appreciation of school equipment, care, cost and upkeep.
6. To develop responsibility promptness, and ability in helping the teacher carry out her program.

The club has undertaken two projects for the year. The first project is the making of an album of school pictures and related activities. We take pictures of outstanding bulletin boards, exhibits, displays and special attractions, such as Thanksgiving and Christmas programs. The actual developing and printing of the pictures is done in one of the apartments as the school at the present time has no facilities for this type of work.

Glass slides being made by pupils

The second project is that of showing entertainment films three times each week. Popular demand has succeeded in adding to the basic subjects and school work a selection of entertainment films which are shown in the evenings of Thursday and Friday and on Saturday mornings. The aims of this phase of our program are:

1. To develop high ideals of citizenship and love of country.
2. To offset the disintegrating influences found in a community which has none of the normal recreational activities.
3. To afford necessary contacts with the outside world.
4. To broaden and enrich the cultural background of pupils.
5. To provide wholesome entertainment for the pupils.
6. To earn enough money for needed school activities and equipment.

Two educational films in color are now in the process of being filmed. One film is on health. In this film a sixth grade girl demonstrates the approved methods of brushing the teeth, personal hygiene, adequate diets and periodical physical examinations. This film is under the advisanship of the supervisor of the school nurses, the director of school cafeterias and one of the physical education instructors. The camera club is helping with the mechanical part of the filming.

The second film is in part an answer to a very definite need which is evident in Vanport City; that of building community pride and an understanding of other people. Since all the property and equipment is government owned, many do not feel responsibility. He has no lawn to mow. What little lawn there is, the government cares for; he has very little yard in front of his apartment and feels no need of keeping that tidy and attractive. Vanport City is composed of temporary homes, therefore there is no normal pride in caring for the building or in making the apartments attractive. Out of this an air of carelessness has developed which we want to try to curb before these parents and children return to their permanent homes. The average family membership is 3.8. With this in mind, the supervisor of Visual Education with the help of one of the school principals appointed a committee of five teachers to act as advisors on this film.

The film will try to teach respect and care for property and understanding of other people and ways of making yards and apartments attractive. This will be

done through showing of contrasting apartments and yards, negro and white children working and playing together. Clean up scenes will be prominent. The picture is unified by the activities of three families living in the same neighborhood.

With these definite needs confronting the community, it is hoped that a film such as described will function as a medium of communication and help our educational system bridge the gap between in-school and out-of-school activities.

At present we are developing an in-service training program for teachers who are interested in the use and construction of glass slides. The glass slide projector is probably the oldest (1646 Kircher) mechanical means of presenting visual material. There is much to be said in favor of the continued and increased use of the lantern slide. The use of slides seems limited only by the ingenuity of the teacher and pupil. We are convinced that this is a means of bringing the real experiences and interests of the pupils directly into the classroom. The pupil-made slides help to bring about the desired intimate personal relationship which bring life and meaning to our curriculum. The continued use and exploration into the possibilities for the use of slides will definitely widen their usage.

The actual preparation of the slide induces original thought, study, research, accuracy, art and the much desired, personal participation. When the slide is projected on the screen before the audience, the individual is conscious of a satisfaction of being personally identified with the unit, satisfaction of accomplishment, dramatization, sharing and cooperating with others.

Since there is a shortage of ground glass, we purchased plain glass and cut it into pieces  $3\frac{1}{2} \times 4$  and dipped them into a prepared solution of ground glass substitute. It is natural that the individual loves and responds to color. The coloring is essential as it not only lends an artistic air to the slide, but it aids in contrasts when needed, as in maps and charts, and shows a correct presentation as in the use of slides for natural science.

In brief, we try through the use of visual material to present our traditional subjects in a manner which is alive and vivid. In doing this, we not only use sound and silent films, slides and strip films, but a great deal of emphasis is placed on the value of the bulletin boards in the individual class room and in the halls.

The officers of the Camera Club

# Regional Institutes in Audio-Visual Education in Minnesota

*An effective and practical method for the promotion and stimulation of visual teaching in schools by University Extension Divisions.*

PAUL WENDT, Director Visual Education Service, University of Minnesota, Minneapolis

WE have had examples in the past of the damage that a band-wagon approach can do to the field of visual education. The band-wagon approach is enthusiastic and noisy, with little emphasis on fundamentals; it almost always over-emphasizes one particular aspect of the field to the detriment of other equally important aspects. There may be an enormous interest in equipment for its own sake instead of as a tool. There may be a flurry of production of teaching films without much consideration of what the teachers need or who is going to buy these films.

All signs today point to an enormous increase in the use of audio-visual aids in teaching after the war. And, again, there are indications that the band-wagon parade is beginning to form. It was to help schools avoid this band-wagon approach and to urge a well-considered, well-rounded program that the University of Minnesota held a series of regional audio-visual education institutes during the second week of February. The plan of regional institutes was not new. It had been carried out successfully at the University of Iowa, at the University of Illinois, and at the University of Kansas. The purpose of holding regional institutes, instead of central institutes at the university, is to carry the instruction out to the people in the state rather than expect them to come in to the university. This democratic procedure seemed especially logical now during wartime when substitute teachers are so hard to find and gas restrictions make travel by large groups nearly impossible.

The series of institutes, sponsored jointly by the Extension Division and by the Visual Education Service, was organized by this writer. The cooperation of the State Department of Education was of course very important and was freely given. We at the University also felt that we must make use of the valuable experience of some leaders in visual education throughout the State. In all, approximately ten people toured the State in this series. These included J. M. Nolte, Director of the University Extension; Paul Wendt, Director Visual Education Service; G. Lester Anderson, Director University High School; Donovan Johnson, Demonstration Teacher, University High School; A. R. Holst, Head, Center for Continuation Study; G. W. Remington, Field Adviser, Community Service Bureau; M. I. Smith and N. L. Nelson, Heads of the Visual Education Departments of the schools of Hibbing and Virginia respectively; Harold Bauer, Superintendent of Schools at Winona, Minnesota, and until recently the Navy's utilization officer at the Naval Training Camp at Sampson, New York; and W. A. Andrews, Director of Graded, Elementary, and Sec-

ondary Schools, Department of Education. J. S. Lombard, Director Concerts and Lectures, University of Minnesota, spoke at the Duluth meeting. The institutes were held at Owatonna, February 10; Duluth, February 12; Crookston, February 14; Alexandria, February 15; and Marshall, February 17.

After a brief introduction by Mr. Nolte or Mr. Holst, Mr. Andrews opened the program with a general discussion of the value and place of visual aids in the classroom with illustrations from his own wide experience with the schools of the State. Professor Anderson's talk on "Audio-Visual Aids and the Psychology of Learning" stressed a little discussed aspect of the use of visual aids in the classroom,—that there is a very sound basis in the psychology of learning for the use of visual teaching. These two introductory talks having established the basic values, the rest of the morning was devoted to the discussion of the advantages, limitations, mechanics, and special utilization of all types of visual aids. Since Mr. Bauer was recently honorably discharged from the Navy's training program, he was able to discuss some of his experiences with the Navy's training aids and especially their non-photographic devices. (Mr. Bauer made it quite clear that he was speaking as an individual and not as an ex-officer of the Navy and that he could cover only the training devices which were neither secret nor confidential.) Proceeding to the projected aids, Mr. Nelson of Virginia spoke on both the standard and miniature slides, and Mr. Smith of Hibbing spoke on the filmstrip and the opaque projectors. Mr. Wendt concluded the morning meeting by discussing silent and sound motion pictures.

The morning's talks established the groundwork on which the afternoon meeting was built. Immediately after lunch, the panel discussion on the many aspects of setting up and operating a visual aids program in schools called on the services of all the institute members. Sub-topics included such points as methods of financing a program, inventorying and reconditioning old equipment, training and operating a student operator's club, what equipment to buy first, selection of materials, need of a coordinator, etc. In three of the five cities, local panel members who were selected for their experience took an active part in this discussion. In Owatonna this included Mr. Fogdahl of Austin; in Duluth, Mr. Stevenson, Director of Training at the State Teachers College; and in Crookston, Dr. Christianson and Dr. Addicott of Moorhead State Teachers College.

(Concluded on page 149)

# The Film and International Understanding

DR. JOHN E. DUGAN, Editor  
Hadden Heights, New Jersey

**EDITOR'S NOTE:** The items on this page may at first seem unrelated. Yet they are all related in that they bear witness to a new era in the history of the world and of motion pictures—an era in which films definitely and deliberately are being used to advance the peace of the world and the welfare of mankind on a world-wide basis.

When this department was started a little over two years ago, there were perhaps some who thought that it was fantastic and unrealistic. Yet the events of the intervening months, culminating in the reports on this page, together with many others, have proved that films can be as practical as peace treaties or cannons.

It is indeed a great day for those who believe in the use of the film for world understanding.

## Goldwyn Urges Use of Films at San Francisco Conference

**S**AMUEL GOLDWYN, Hollywood motion picture producer, upon his recent return from a mission to England for the Foreign Economic Administration, urged delegates to the United Nations Conference in San Francisco to view the motion-picture record of this war before sitting down to form a world security organization.

Urging that delegates be given an opportunity to view the vivid motion picture record of war's havoc on peoples, communities and nations, Mr. Goldwyn expressed the opinion that the showing of such a pictorial record would help the delegates to have a clearer and more forceful understanding of their mission at San Francisco.

Mr. Goldwyn points out that documentary films have been of great value to the men in our armed forces in teaching them the reasons why they are fighting on battlefields all over the world. Such films also have been shown to civilian populations in this and others of the United Nations to bolster home front morale and to teach about the war. He suggests that delegates to the all-important San Francisco Conference would not find time spent in viewing such films to be wasted.

Although the Goldwyn suggestion was completely unofficial, there is a report that his suggestion has been taken under consideration.

### AS WE GO TO PRESS

we learn that the State Department has signified acceptance of the plan to provide daily showings of selected films for delegates to the San Francisco World Security conference. Showing of films from various studios will be held daily at 5:00 p.m. and will be announced in the official Convention bulletin. The Alcazar, named the United Nations Theatre for the meeting, will be used for the showings. Documentary films will be shown at a "Conference Theatre."

## Films and Chicago's BUILD FOR PEACE!

**B**UILD FOR PEACE! is a Chicago organization which describes itself as "A City-Wide Effort to Understand the Facts about the Peace for which Chicagoans Are Fighting." It seeks to arouse public interest and to serve as a clearing house for information about Dumbarton Oaks, the San Francisco Conference, and the plans of the United Nations for world peace.

Films play a major role in this organization's program. It recently has been focusing attention upon *Watchtower For Tomorrow*, a film which explains and clarifies the Dumbarton Oaks proposals for establishing world peace. The film was produced by the War Activities Committee of the Motion Picture Industry for theatre audiences, and has had extensive showing in Chicago.

Special emphasis also has been placed upon the new 16mm film *The Peace Builders*, which is described elsewhere in this section.

Another major phase of the organization's film program is the issuance of a special bibliography of appropriate 16mm movies. The films in this bibliography are classified under four headings, in accordance with the organization of the State Department's recently issued four "Foreign Affairs Outlines."

Films listed under the four headings are given below with producers indicated:

- 1. War—How We Can Prevent It**  
Four U. S. Army orientation films: *Prelude to War*, *Divide and Conquer*, *The Nazis Strike*, *Battle of Britain*; *Russia's Foreign Policy*, and *Mask of Nippon* (National Film Board of Canada); *Monroe Doctrine* (Warner Brothers).
- 2. Prosperity—How We Can Achieve It**  
*The Bridge*, and *Grain That Built a Hemisphere* (CIAA); *Post-War Jobs* (March of Time); *Global Air Routes*, *Mutual Aid*, and *Battle for Oil* (National Film Board of Canada).
- 3. Social Progress—How We Can Work for It**  
*Power and the Land* (U. S. Department of Agriculture); *World of Plenty*, *Children of the City*, and *Partners in Production*; (British Information Services); *Story of Doctor Carver* (Teaching Films Custodian release of an M.G.M. production); *World We Want to Live In* (National Conference of Christians and Jews); *Labor Front*, *Man and His Job*, and *UNRRA* (National Film Board of Canada); *Scientists for Democracy* (Bell & Howell); *The City Brandon Films*.
- 4. Freedom—How We Can Extend It**  
*Price of Victory* (OWI); *Freedom Comes High* (U. S. Navy); *ABC-A*, and *Battle of Books* (British Information Services); *The Flag Speaks* (M.G.M. released by Teaching Films Custodians).

The bibliography also gives a brief description of each film, lists its running time, the rental price, and local sources from which it can be obtained.

At the Teheran Conference of The Big Three

## A Basic Visual Aids Program on Winning The War and Building The Peace

REALIZING the magnitude of the problems which face us in connection with finishing the war and building the peace, as well as the important part which visual aids can play in the democratic discussion of these problems, Brandon Films has just issued a "Basic Visual Aids Program on Winning the War and Building the Peace." This program is designed to serve as a medium for establishing an intelligent background for the many democratic discussions of these problems which will take place in countless communities throughout our country in the immediate and near future.

The program has three parts: 1. A new motion picture, *The Peace Builders*; 2. A filmstrip, *Building the Peace—The Great Decision*; 3. A special catalogue of available 16mm films dealing with winning the War and Building the Peace. A special discussion guide will be issued with the movie, and commentary notes plus a set of Foreign Affairs Outlines will be issued with the filmstrip. The catalogue will be oriented on the basis of the State Department's four recently issued Discussion Outlines on War, Prosperity, Social Progress, and Freedom.

The film, *The Peace Builders*,\* is the first basic motion picture of the memorable meetings and actions of the Allied leaders, from the Atlantic Charter Meet-

ing to the United Nations Conference at San Francisco. It summarizes the proceedings and proposals worked out by Allied leaders at Ottawa, Cairo, Teheran, Moscow, Hot Springs, Bretton Woods, Dumbarton Oaks, and Yalta. It was produced by the National Film Board of Canada and is the result of discussion between John Grierson, Film Commissioner for Canada, and Brandon.

The stripfilm, *Building the Peace—The Great Decision*, is a detailed visual aid for the study and discussion of the historic steps for world cooperation. It was produced by Public Affairs Films, a new production organization.

The catalogue is an up-to-date compilation of available 16mm soundfilms useful for varied programs dealing with numerous aspects of the war, building the peace, and post-war problems.

Here is an organized three-point visual aids program for dealing with pressing current problems which have implications which are both national and international. It is a challenge to all who believe that the film as a medium can be of outstanding service to humanity in these fields.

"Let each of us recognize that world peace is of immediate vital concern to every living human being, because the issue means literally life or death for ourselves and for our children. Let each of us resolve to make world co-operation for peace our personal business—study the proposals for attaining it — discuss it — will it — make it succeed."

Office of War Information

\**The Peace Builders* can be obtained for rental or purchase direct from Brandon Films, 1600 Broadway, New York 19, and also from numerous regional sources throughout the country, such as Ideal Pictures Corporation, Chicago (and its 11 other exchanges); Bell and Howell Company, 1801 Larchmont Ave., Chicago; Calhoun Company, 101 Marietta St., Atlanta; D. T. Davis, Lexington, Ky.; Visual Education Service, 116 Newberry St., Boston; Swank Motion Pictures, 614 N. Skinker Blvd., St. Louis; Kunz Motion Picture Service, 1319 Vine St., Philadelphia; Visual Arts Films, 507 Liberty Ave., Pittsburgh; Visual Education, Inc., 12th at Lamar, Austin, Texas; Film Preview, 1011 Currie Ave., North, Minneapolis; Photo and Sound, 153 Kearny St., San Francisco, Calif.

# The ABC's of Visual Equipment

Edited by

JOSEPH E. DICKMAN  
and PHILIP MANNINO

## Three Views of Film Damage

### A Technician's View of Film Damage\*

FILM Damage is one of the big headaches of film libraries and exchanges. It discourages the use of films in many schools. It has ruined many good visual set-ups in their infancy.

Most film damage is unnecessary and a little care and thought on the part of the operator will avoid it. It is generally 90 per cent carelessness and 10 per cent machine failure. No library or exchange objects too strenuously if a short scene is damaged, for usually a few dollars will repair the damage; but when a complete film is affected there are heavy replacement costs that must be borne by someone. Usually the library or exchange is very tactful in trying to collect for these damages; but they must be collected regardless of the hard feeling and loss of a customer. The customer is usually "sure" that he didn't do it. Most libraries and exchanges inspect the film upon arrival from the user. They have learned by experience that a splice in time will save further film damage. Most sound films cost from \$20.00 to \$60.00 per 400 feet reel and this is an investment which demands that they give their films expert care.

Films wear out from constant usage. A print that is well cared for and properly projected will last for at least 500 showings, but most libraries and exchanges are pleased if they are able to get 200 showings from a print.

(Continued on page 148)

\*By Philip Mannino, Film Technician, Audio-Visual Aids Library, The Pennsylvania State College, State College, Pennsylvania

### The Administrator's Views of Film Damage\*

TRUE, ninety per cent of film damage could be prevented by care in threading and in cleaning projectors. Also true, that lack of provision for teacher-training in the mechanics of projection and not carelessness is responsible for the needless destruction of film.

However, it is my contention that both the causes of film damage and the need for extensive teacher-training in projection could be largely reduced by improved engineering in motion picture projectors. I sometimes wonder whether some of the designers of projectors ever followed up by trying to thread one of them. I certainly hope that, before these engineers are consigned to eternal perdition, they make amends by alleviating the man-hours of misery they have caused projector operators by designing projectors with accessible sprockets, wide-opening film gates, and direct-threading paths. The educational possibilities of projected visual aids will never be realized until the mechanics of projection are reduced to an unobtrusive minimum.

Film scratching caused principally by a dirty film channel could be almost eliminated by designing a wide-opening film gate that would expose its beard of lint and fairly scream for cleaning. Perforations could be obviated by the use of large sprockets and rounded teeth. A spacious threading route would guarantee correct engagement between film and sprockets. Operation of the

### A NEW DEPARTMENT

THE field of visual instruction is in the process of enormous growth, but there are obstacles to its progress which must be overcome. The mechanics of visual aids have often caused distortions in their use which have stood in the way of full realization of their instructional possibilities. There are many small problems in projection such as film damage, weight of equipment, complications in operation, darkening facilities, electrical outlets, and dozens of others which in the aggregate have certainly slowed down progress in the field.

It will be the objective of this department to tackle the problems of visual equipment with a view to their solution or at least with a view to their recognition as obstacles in the way of the fullest use of visual aids to learning. As individuals, our knowledge of visual equipment is more or less limited to specific equipment under specific circumstances, but collectively our resources of knowledge and experience in the field are limitless. It is the purpose of this department to bring to bear on our problems with the mechanics of projection these resources of knowledge and experience.

J. D.

### To Our Readers Personally

The Editors of this department are both men of wide experience in equipment problems. Mr. Dickman, in addition to his regular duties, has recently accepted the Chairmanship of the Educational Film Library Association's Committee on Visual Equipment.

Your contribution of problems and solutions will do much to increase the effectiveness of this department. Send them in, early and often.

### A Teacher's Reactions

IT may seem paradoxical that one who believes her fellow-teachers', as well as her own reluctance to use films springs from timidity and fear, should be bold enough to comment on Mr. Mannino's article and to express herself very frankly concerning film damage. But constant association with such teachers and an earnest attempt to understand their reactions to the wealth of visual aid material that is being placed at their disposal, leads me to present certain facts that are not being recognized by administrators and visual equipment dealers.

Truthfully, most teachers are afraid of motion picture projectors. To realize this is difficult for one mechanically minded or for one who does not understand

(Continued on page 148)

### A Technician's View of Film Damage

(Continued from page 147)

Film care, of course, starts in the library or exchange which maintains a trained inspection staff. There the film is inspected, repaired, and cleaned. But even the finest care given to film is of no avail if the projectionist fails to do his part. All reliable exchanges and libraries maintain a well trained inspection staff to insure the user a film that is in good condition for their use.

There are many kinds of film damage. Here are the most common and what can be done to prevent them.

Scratches are caused by a dirty projector or a burr on the film channel. The projector should be cleaned before projecting films. A cotton swab dipped in alcohol or carbon tetrachloride should be used on all parts of the projector that the film will touch. Sometimes an idler or roller that has not been oiled will freeze to the shaft and cause scratches. All idlers and rollers should be checked before threading the film over them.

Burrs or nicks in the film channel are caused by cleaning the film channel with a hard metal object. Use only a cotton swab or camel hair brush. Nicks or burrs can be seen with a magnifying glass. Usually a new part is needed if it has a burr or nick on it.

Sprocket marks on the film are caused by the projectionist's not threading the projector properly. Perhaps he forgot to put the clamp over the sprocket or he put it on loosely so that it came open when the projector was started and the film rode on the sprocket teeth.

Sometimes the springs on the clamps become weak and they automatically open, unknown to the projectionist; then the next splice that goes over the sprocket will cause the film to jump off the sprocket and ride it.

Scratches and sprocket marks show up very plainly on the screen and often new film has to be discarded because of them. There is no inexpensive way of repairing this type of damage.

Pulled or torn sprocket holes result from a variety of causes. The most common, of course, is improper threading. Other common causes are dirty or worn out sprockets, sticking rollers or idlers, bad or bent reels, bad take up belts, a dirty or worn out claw, and of course a poorly cared for or worn out film.

Some projectors will not handle a green film. Film should be aged before projecting, but if it must be run, a drop of sperm oil on the film channel will ease it through.

It is the projectionist's duty to see that a film is not damaged. He should see that the projector is clean, that it is properly oiled, that it is in good condition for presenting the show. He should sit by the projector and feel the film as it comes through. If any damage is being done, the projector should be stopped and inspected to see what is causing the damage. The adage that "the show must go on" which seems to be so deeply instilled in the blood of most projectionists should be modified. A few feet of damage is excusable, but to ruin an entire film is carelessness.

The projectionist is responsible for the film while it is in his possession. His attitude toward presenting a

good show should not prevent him from shutting down the projector to correct any failure of the film's passing through the channel in good shape.

Film damage is costly, alertness will prevent it.

### A Teacher's Reactions

(Continued from page 147)

teachers. They are basically trained to protect zealously, and to teach their pupils to protect, all materials given them to use in their schoolrooms. They are almost over-conscientious in the care of all such material. Anything as expensive as a motion picture projector assumes the greatest importance, and anything mechanical presents to them immediately multiple possibilities of damage and waste. They are impressed by the administrators of visual education and by the writers of articles in their professional journals, "that carelessness is costly and unnecessary." Immediately their reaction is one of fear. Rather than make a mistake and be guilty of the charge of "carelessness," they avoid using the projectors. But what they are afraid will be called, "carelessness," if their attempts cause film damage is, in reality, the result of ignorance, a complete unfamiliarity with the proper operation of a film projector.

It is an unusual teacher who has had adequate, if any, real training in the proper use of a motion picture machine. If upon some happy occasion, she has followed blindly some too technical directions that came with the machine and has had a successful lesson, the relief when the experience is over is so great and the conviction that it was all due to luck or accident so definite, that little self-confidence is gained. But if the experience is less fortunate and difficulties arise, her confidence is completely shattered and a repetition is strategically avoided.

"Ignorance excuses no one" may be the precept accepted by administrators in this case, but it is definitely an unfair one. It is also contradictory to one of the basic laws of education, "We learn by doing." Surely they can recognize that "to learn by doing" in a classroom, without skilled direction, can be an extremely expensive and discouraging form of education. Therefore opportunity for effective learning through actual experience outside the classroom situation should be provided. Few teachers have access to motion picture projectors in their lives outside their profession, as they do their sewing machines and radio. If they are to become thoroughly familiar with the operation of a projector, yes, so thoroughly familiar that they can thread and adjust it almost subconsciously while they are watching a class of forty-five alert, expectant, and restless youngsters, ample opportunity for training the actual operation of a projector must be given. Who is to be responsible for giving this training? That lies between the administrators of visual education and the dealers of visual equipment. Who does it is not nearly so important as the fact that it is done.

Would it be too visionary to suggest that a visual education department set up two or three projectors in a projection room open two afternoons a week where

teachers might go after school to have an hour's lesson and actual experience under the direction of trained operators? The visual aids director could use high school boys who have proved themselves adept in this work, while his only responsibility for such a program would be to give it sufficient publicity and careful direction. The teacher would select for her training the kind of projector provided her school. She could thread the machine repeatedly, be taught to adjust it properly, and become familiar with the rewinding. At the end of the lesson a set of mimeographed notes covering what she has learned, important points to remember, and cautions she should observe could be provided to take away with her for immediate review and to refresh her memory before each succeeding film lesson. Simple diagrams and charts on this sheet would be helpful *after* such a lesson, but *before*, as is now the custom, they are far more confusing than intelligible. Few teachers would need to visit such a "projector workshop" often. They are conditioned "to learning," given propitious circumstances in which to learn; but merely following a chart devised for technically trained operators, independent of any trained guidance, is very likely to result, in most cases, in a discouraging and futile attempt at learning.

The use of visual educational materials on the part of our teachers, is far, far less extensive than it should be. We teachers are all willing to admit this fact. And please believe that we are eager to vitalize our work and to make our teaching more effective by the use of the excellent films that are being made available to us in increasing numbers. But because we are so keenly aware of our limitations in respect to the mechanical equipment, we are neglecting to capitalize upon all that is afforded us. I believe that I am speaking for the majority of teachers when I admit frankly that we are reluctant to use projectors so often as we should because we do not know how to operate the machines skillfully and confidently; but do believe that:

*Teachers' mistakes in using projectors are not often caused by carelessness!*

#### The Administrator's Views of Film Damage

(Continued from page 147)

projector in the open would insure a constant visible check of the progress of the film. Large sprockets with reversible teeth would more than double their life and thus prevent damage to film by undercut and worn sprocket teeth.

While film damage constitutes but a small percentage of the financial cost of maintaining a film library, the cost to the cause of visual education in frayed tempers, dampened enthusiasm, and even complete retreat, is enormous.

So, let's have more care in the operation of projectors; let's have more teacher-training and, above all, let's have well engineered equipment.

The dealer who sells visual equipment to the schools has a primary responsibility in all of these problems. He should recommend only the proper type of equipment for the immediate purpose; he should carefully

explain its operation to the administrator in charge; he should offer to assist in the training of additional operators.

### Regional Institutes in Audio-Visual Education in Minnesota

(Concluded from page 144)

Beginning at 2:45 p.m., Donovan Johnson of the University High School demonstrated the use of a sound film and an integrated filmstrip and teacher's manual produced by the U. S. Office of Education. The film used was the *Slide Rule*, Scales C and D, one of the most outstanding teaching films ever produced in the opinion of this writer. There was also discussion of audio-visual learning guides and other types of utilization aids.

To such a diverse and well-rounded program, the responses of teachers, superintendents, principals, and board members who attended these meetings were varied. That each individual part of the program interested the audience was evident by the fact that at every intermission the speakers were surrounded by a circle of questioners. At the institutes and in later correspondence there was a surprising amount of interest shown in the subject of the afternoon panel,—the general problem of how to get a program started. Apparently school administrators and teachers appreciate receiving help with some of those small problems which can become stumbling blocks out of proportion to their importance.

Not only were the registrants at the institute eager to profit from experience of other schools in the State and of other staff members, but there was general expression of opinion that the effort of the University to come out to the teachers of the State to discuss their problems was much appreciated. In a way, this response was very gratifying to the planners of the institute because it indicated that future regional institutes planned along these same lines would be well received. It is hoped that these regional institutes can be carried out again in subsequent years. Looking back over the program that was presented this year, it is hard to see how it could have been radically improved. The problem was more one of eliminating topics from the field of audio-visual education than of lack of material. It may be desirable however to expand the program by running parallel meetings in the afternoon giving, (1) extended discussion of management problems for administrators, and (2) utilization demonstrations at different grade levels and employing totally different materials.

It seems definitely established from these institutes that, especially in larger states in the Union, the dissemination of accurate information about all phases of the field of audio-visual education will be more speedily and concretely accomplished by regional institutes than by any other method.

# Summer Courses in Visual and Audio-Visual Education, 1945

The following courses have been reported to date. Title, and number of course are given, as well as dates of summer session and name of instructor. Figures in parenthesis show semester or quarter credits. An additional list will appear in May.

## Arizona

- State Teachers College*, Tempe May 28-June 30  
 Visual Aids in Education Ed. 233gs (2) Payne  
 Laboratory in Visual Aids Instruction Ed. 236gs (2) Cool  
*University of Arizona*, Tucson July 9-Aug. 11  
 Visual and Auditory Aids in Teaching Ed. 117 (2) E. L. Larson

## Arkansas

- University of Arkansas*, Fayetteville July 23-Aug. 25  
 Audio-Visual Education 433 (4½ qr.) C. H. Cross

## California

- Occidental College*, Los Angeles July 2-Aug. 11  
 Audio-Visual Education (4 to 6) Francis W. Noel  
*State Teachers College*, San Francisco June 26-Aug. 6  
 Visual Instruction Ed. 152 (2) Anna V. Dorris

## Colorado

- Colorado A & M College*, Fort Collins July 23-Aug. 17  
 Visual Education Ed. 121 (3 qr.) Floyd E. Aspinwall  
 (For vocational teachers)  
*Colorado State College of Education*, Greeley  
 (3 and 4 qr. hours) July 2-Aug. 10; June 18-Aug. 10  
 Visual Education Ed. 108a-208a Dr. Helen Davis  
 Radio in Education Ed. 108b-208b Helen Langworthy  
*University of Colorado*, Boulder June 29-Aug. 22  
 Visual Aids Ed. 137 (2) Lelia Trolinger

## Connecticut

- University of Connecticut*, Storrs June 25-Aug. 3  
 Audio-Visual Aids in Education Ed. 345 (3) Davd E. Strom

## Illinois

- Bradley Polytechnic Institute*, Peoria July 26-Aug. 11  
 Visual Aids Ed. 337 (2 or 3) Albert F. Siepert  
*State Normal University*, Normal July 2-Aug. 24  
 Audio-Visual Education S240 (3) C. L. Cross

## Indiana

- Ball State Teachers College*, Muncie June 11-July 13  
 Audio-Visual Education Ed 451 (4 qr.) Evelyn Hoke  
*Indiana University*, Bloomington June 25-Aug. 18  
 Utilization of Audio-Visual Aids Ed. 523a (2½);  
 Administration of Audio-Visual Aids Ed. 523b ((2½);  
 Selection of Audio-Visual Aids Ed. 624 (2½)  
 All conducted by Carolyn Guss-L. C. Larson  
 Research in Audio-Visual Aids Ed. 727 (Cr. Arr.) L. C. Larson  
 Radio in Education Ed. 527 (2½) H. J. Skornia

## Iowa

- Iowa State Teachers College*, Cedar Falls June 5-Aug. 24  
 Audio-Visual Education 480 (3 qr.) H. A. Riebe  
*Iowa Wesleyan College*, Mt. Pleasant May 29-July 7  
 Visual Education Laboratory 91 (2) Prof. Schilz

## Kansas

- State Teachers College*, Emporia June 4-July 31  
 Visual Education 60 (2) Overholt  
*State Teachers College*, Pittsburgh June 4-Aug. 3  
 Visual Education 190 (2) O. A. Hankammer  
*University of Kansas*, Lawrence June 27-Aug. 18  
 Visual Education in Elementary and Secondary  
 Schools A158 (3) Fred Montgomery

## Kentucky

- University of Kentucky*, Lexington June 11-July 18; July 19-Aug. 25  
 Visual Teaching Ed. 186 (4 qr.) First Session Louis Clifton  
 Second Session Mary Rees Land  
 Motion Pictures in Education Ed. 246 (4 qr.)

## Maine

- University of Maine*, Orono July 2-Aug. 10  
 Motion Pictures in Education Ed. 79s (2) Paul S. Miller

## Maryland

- Western Maryland College*, Westminster July 23-Aug. 31  
 Audio-Visual Aids Ed. 413 (2) Sara Smith

## Massachusetts

- Boston University*, Boston July 2-Aug. 11  
 The Use and Teaching of Visual Aids in Educa-  
 tion S130 (2) John G. Read  
*Harvard University*, Graduate School of Educ. July 2-Aug. 11  
 Audio-Visual Aids in Teaching S1 (2 to 6) James F. Barclay

## Michigan

- Northern Mich. College of Education*, Marquette June 25-Aug. 3  
 Visual-Auditory Education 410 (2) Joseph Dewey  
*Michigan State College of Agriculture and Applied Sciences*,  
 East Lansing June 19-July 27  
 Visual Aids Ed. 430 (3 qr.) Eldon Robbins

## Minnesota

- State Teachers College*, Winona June 11-July 20  
 Visual Aids Workshop (4 qr.) Harold Bauer  
*University of Minnesota*, Minneapolis June 18-July 28  
 Visual Aids in Teaching Ed. C.I.105su (3 qr.) Paul Wendt

## Montana

- Billings Polytechnic Institute*, Polytechnic June 11-July 13  
 High School Methods (3 qr.) H. K. Moore

## Nebraska

- Concordia Teachers College*, Seward July 15-Aug. 4  
 Use of Visual Aids in Education Ed. 143 (1) C. T. Brandhorst  
*State Teachers College*, Wayne June 4-Aug. 3  
 Audio-Visual Education (2 qr.) G. E. Seeck

## Nevada

- University of Nevada*, Reno July 17-Aug. 24  
 Audio-Visual Aids in Teaching Ed. 80 (2) Thad Stevens

## New Mexico

- New Mexico Highlands University*, Las Vegas  
 Visual-Sensory Aids in Rural Schools Ed. 271 (3)  
 June 4-July 13  
 Visual-Sensory Aids Ed. 453 (3) July 14-Aug. 17  
 Both courses given by Lois Roquemore-Lester B. Sands  
 Audio-Visual Business Education Bus. Ed. 477 (3)  
 June 4-Aug. 17, E. Dana Gibson  
*University of New Mexico*, Albuquerque July 3-Aug. 25  
 Visual Education 110 (2) Reid

## New York

- Columbia University*, New York City July 2-Aug. 10  
 Audio-Visual Aids to Instruction Ed. s217A  
 (2 pts.) Max R. Brunstetter-Etta Schneider Ress  
 Laboratory Course in Audio-Visual Instruction  
 Ed. s 217Ax (2 pts.) Etta Schneider Ress  
 Radio in the Classroom Ed s217D (2 or 3 pts.)  
 To be announced

*N.Y.U. School of Education*, New York City July 3-Aug. 10  
 Selection and Use of Visual and Auditory Aids  
 (2 pts.) Grant Leman  
 (given both sessions; July 3-20; July 23-Aug. 10)  
 Visual Aids in Education 131.1 (2 pts.) July 3-20  
 Ludwig Madsen  
 Methods in Visual Education 131.2 (2 pts.)  
 July 23-Aug. 10 Ludwig Madsen  
*St. Bonaventure College*, St. Bonaventure July 1-Aug. 13  
 Audio & Visual Instruction Ed 434 (3) Rev. Cornelius Welch  
*State Teachers College*, Buffalo July 2-Aug. 10  
 Visual Education, Techniques and Materials (3 qr.)  
 S. A. Czurlies  
*Plattsburg State Normal*, Plattsburg July 2-Aug. 4  
 Audio-Visual Aids Ed. 317 (3) Charles T. Smith

**North Dakota**

*State Teachers College*, Minot June 4-July 27  
 Audio-Visual Education 258 (2 or 4 qr.) Carl A. Pearson

**Ohio**

*Kent State College*, Kent June 18-July 27  
 Use of Visual Aids in Instruction 337 (3 qr.) Argra Ruffer  
*Ohio University*, Athens June 11-Aug. 4  
 Audio-Visual Education 141 (2) W. A. Yauch

**Oklahoma**

*Oklahoma A & M College*, Stillwater June 4-July 8  
 Introduction to Visual Education; Visual Aids  
 (3 qr. each) H. Pruitt  
 (also 2 two-week Workshops June 11-23, July 9-21,  
 each carrying 2 hr. credits)  
*University of Oklahoma*, Norman June 1-29  
 Workshop in Audio-Visual Aids 409 (2)  
 Betty Blanton-Roy Bondurant-W. B. Ragan

**Oregon**

*Eastern Oregon Normal School*, LaGrande June 11-July 18  
 Audio-Visual Aids in Education Ed. 435 (3 qr.) R. E. Badgley  
*Southern Oregon Normal School*, Ashland June 11-July 20  
 Construction and Use of Visual Aids Ed. 431 (3 qr.)  
 W. W. Wells-Angus Bowmer-Florence Allen  
*Oregon State College*, Corvallis June 18-July 27  
 Construction and Use of Visual Aids Ed. 431 (3 qr.)  
 George B. Eby  
 Educational Cinematography Ed 532s (3 qr.) George B. Cox

**Pennsylvania**

*Beaver College*, Jenkintown June 4-July 13  
 Visual Education 228 (3) Carl E. Seifert  
*Bucknell University*, Lewisburg July 2-Aug. 10  
 Visual Education Ed. 258 (2 or 3) John W. Rice  
*Geneva College*, Beaver Falls June 11-July 11  
 Visual Education (3) John S. McIsaac  
*Grove City College*, Grove City May 31-July 21  
 Visual Sensory Education 44 (3) R. G. Walters  
*Marywood College*, Scranton June 30-Aug. 6  
 Audio-Visual Aids to Teaching (3) Sister M. Sylvia  
 Motion Picture Appreciation (3) Sister M. Sylvia  
*Muhlenberg College*, Allentown July 9-Aug. 31  
 Visual Education Ed. 32 (3) John E. Trainer  
*Seton Hill College*, Greensburg July 2-Aug. 10  
 Visual Education (2 qr.) Sister Marie Martha  
*State Teachers College*, Bloomsburg July 2-Aug. 10  
 Visual Education 2-1 (1) H. H. Russell  
*State Teachers College*, East Stroudsburg June 25-Aug. 4  
 Visual Education (1) F. B. McGarry  
*State Teachers College*, Edinboro June 25-Aug. 3  
 Visual Education (1) F. S. Heinaman  
*State Teachers College*, Kutztown June 25-Aug 4  
 Visual Education (1) Allan F. Bubeck

*State Teachers College*, Mansfield June 25-Aug. 3  
 Visual Education (1) Cyril L. Stout  
*State Teachers College*, Millersville June 25-Aug. 4  
 Visual Education (1) M. E. Stine  
*State Teachers College*, Shippensburg June 25-Aug. 4  
 Visual Education Ed. 6 (1) Leslie C. Krebs  
*Temple University*, Philadelphia July 2-Aug. 10  
 Audio-Visual Education 1 & 11 135s, 136s,  
 (2 each) Blair Daniels  
*University of Pennsylvania*, Philadelphia July 5-Aug. 15  
 Visual and Sensory Techniques Ed. 526 (2) J. H. Minnick  
*University of Pittsburgh*, Pittsburgh June 25-Aug. 3  
 Visual Education S141 (2) Herbert Olander  
*University of Scranton*, Scranton July 9-Aug. 17  
 Visual Aids (3) L. Paul Miller  
*Villa Maria College*, Erie June 26-Aug. 3  
 Visual Education Ed. 5 (4) Sister Irma Claire

**South Dakota**

*University of South Dakota*, Vermillion June 11-July 18  
 Audio-Visual Education Ed. 172s (2) Ray Cash

**Texas**

*Baylor University*, Waco June 5-Aug.24  
 Audio-Visual Education 297 (5 qr.) M. L. Goetting  
*Southwest Texas Teachers College*, San Marcos June 4-July 15  
 Audio-Visual Education 273 (3) Ruby Henderson,

**Virginia**

*Roanoke College*, Salem June 15-Aug. 17  
 Preparation and Use of Classroom Materials in  
 Visual Education (3) Miles S. Masters  
*State Teachers College*, Farmville  
 Audio-Visual Education Ed. 314 (3 qr.) June 18-July 21  
 The School Use of Motion Pictures Ed. 414 (3 qr.)  
 July 23-Aug. 25 Both courses given by Edgar M. Johnson  
*Virginia State College*, Ettrick June 18-Aug. 18  
 Audio-Visual Aids to Instruction (3) Walter N. Ridley

**Washington**

*Seattle Pacific College*, Seattle July 25-Aug. 30  
 Audio-Visual Aids to Instruction Ed. 133b  
 (2½ qr.) Paul Wright  
*State College of Washington*, Pullman June 11-Aug. 3  
 Audio-Visual Aids in Education Ed. 161b  
 Research in Audio-Visual Ed. 161c (2-6) Claude Simpson

**West Virginia**

*Morris Harvey College*, Charleston June 4-Aug. 23  
 Visual Education Ed. 341 (3) Harry M. Brawley  
*Salem College*, Salem July 16-Aug. 24  
 Audio-Visual Education Ed. 109 (2) Oliver S. Ikenberry  
*West Virginia University*, Morgantown July 16-Aug 24  
 Audio-Visual Instruction 221 (2) H. B. Allen

**Wisconsin**

*Marquette University*, Milwaukee July 2-Aug. 14  
 Problems in Visual Education 201.71 (3) G. E. Vander Beke  
*St. Clare College*, Milwaukee June 18-July 28  
 Audio-Visual Education (2) Sister Julitta  
*State Teachers College*, Eau Claire July 19-Aug. 24  
 Audio-Visual Education (3 qr.) Hazel Ramharter  
*State Teachers College*, Milwaukee June 25-Aug. 17  
 Audio-Visual Education (3 qr.) Harold Stamm  
*The Stout Institute*, Menomonie June 18-July 27  
 Visual Education Ed. 360; Experiments in Visual  
 Education, Ind. Ed. 560 (2 each) Paul C. Nelson  
*University of Wisconsin*, Madison June 23-Aug. 17  
 Visual Instruction. Ed. 165 (2) W. A. Wittich

*Readers who know of visual courses to be given this summer are earnestly asked to send us names of the institutions offering them, with as complete data as possible, for listing in the May issue.*

# The Literature in Visual Instruction

## A Monthly Digest

ETTA SCHNEIDER RESS, Editor

### EVALUATION

- **Teacher Evaluation of Classroom Motion Pictures**—Stephen M. Corey, University of Chicago—*Elementary School Journal*, 45:324 February, 1945.

Two assumptions are usually made when a motion picture to be used in the classroom is evaluated. First, that the picture is a means to an end; and secondly that the appraisers have clearly in mind the desirable changes in behavior to be caused by the use of the picture. The more explicit or definite the purposes to be served, the more precise and satisfactory the evaluation of the film can be.

There are five fundamental questions which, if answered unequivocally in the affirmative, mean that the picture is a good one for classroom use. These questions have been organized in the form of a rating scale that appears in the article. Briefly, they are: (1) Is the content of the picture related obviously and definitely to what is taught? (2) Is the picture authentic? True to the facts? (3) Are the level of difficulty and the pedagogy of the picture appropriate for the maturity level of the pupils with whom it will be used? (4) Is the picture technically and aesthetically satisfactory? (5) Does the picture represent adequate exploitation of the medium? Could equally good lessons be taught with less expensive instructional materials?

The pooled judgments of several qualified persons in answering these questions would provide a good evaluation of a given film, since none of the questions can be answered with complete objectivity and a consensus would be helpful.

### TEACHER TRAINING

- **Teacher Training in Visual Education in Virginia**—Martin L. Hogan, state supervisor, Bureau of Teaching Materials, State Board of Education—*Virginia Journal of Education*, March, 1945.

The article describes the status of pre-service and in-service training for the use of visual aids in teacher-training institutions within the state.

### UTILIZATION

- **Are Science Films Used Scientifically?**—David Schneider, Evander Childs High School, New York—*High Points*, 27: No. 2 p. 44 February, 1945.

There is little evidence on the way in which motion pictures are used in science teaching. Many teachers cannot find the time to include a few worthwhile films in their courses, in spite of the fact that they are readily available (in New York City science classes) and have been proven useful.

Those who do use motion pictures may be classified into three groups: First the individual who does nothing more than merely show a film. The more reels he can squeeze into one class period, the better. Secondly, there is the one who only uses films for introduction or review. Finally, there is the group that has for years been using the film as a powerful stimulus to thinking.

One approach to increase the number of teachers that use films intelligently, is to remove the word 'aid', and regard a film as an educational experience, comparable to the lecture, demonstration or socialized recitation. Then we must learn to broaden the use of films as a means of direct instruction, and not only for introduction or review. Good teaching guides would help, such as the ones prepared for pre-induction training subjects.

The cooperation of public libraries and of cinema-amateurs of the community should be enlisted to improve and increase the availability of educational films.

- **The Motion Picture as an Aid in Geographical Instruction**—William M. Gregory, Western Reserve University, Cleveland—*School Science and Mathematics* 45:223-9 March, 1945.

There are several methods of organizing geographical material into film form: (1) collections of raw observational pictures for laboratory study; (2) scientific pictorial surveys of various environments; (3) geographical pictorial descriptions of man in his natural environment; (4) a narrative of man's activity in a selected location; (5) analytical illustrations in maps, charts, diagrams; (6) geographical problems to aid in their understanding and lead to their solution; and (7) documentary films of unreviewed picture records of events. But some "documentaries" over-dramatize some facts and neglect others.

There are 600 geography films which, if used for classroom instruction, must be more carefully selected. Lack of standards, free films used just because they are free, rented films used quickly because they must be returned quickly, and the high cost of better films are some of the bottle necks.

Examples are given of good films that convey geographical information better than any other medium . . . Success of a good film is determined by the technique of presentation. Teachers can best use what is available by careful advance preparation and follow-up. A good picture may extend over two or three class periods, thereby allowing the pupils opportunity to observe details and participate in discussion and critical thinking.

- **Film News**—Grace Gilbert—*Clearing House*, 19:260, December, 1944.

A good summary of principles underlying the use of films for discussion, with a few illustrative titles and the ways in which they can be used.

### LIBRARIES AND FILM DISTRIBUTION

- **Possible Development of Film Service through Collaboration of Schools and Libraries**—William Porter Kellam, Librarian, West Va. University—*West Virginia School Journal*, 73:14 February, 1945.

The local library and school system should help to distribute educational motion pictures, much as books and other materials are now being circulated. A state university cannot do the job alone.

For a state such as West Virginia, the author imagines a situation in which local, county and regional film-lending services are made available. In the future West Virginia there is a citizenry that is able and willing to be taxed for adequate support of schools, libraries, museums, playgrounds and other cultural services. As a result there is a large public library in each of the larger counties. A bookmobile goes out to every school and community bringing weekly supplies of new books and films. Projectors are loaned to those organizations that have not bought their own. Films are provided by librarians who suggest the right film for the right occasion. Bookings are made by telephone, delivered by bookmobile or mailed. Then there are fortnightly film forums in library buildings. But these are all possibilities for the future!

### OTHER VISUAL AIDS

- **Still Pictures Tell a Story**—Chet Ullin, Assistant in Visual Education, Seattle—*Nation's Schools*, 35:52 March 1945.

(Concluded on page 154)

# Brilliant Illumination WITH THE RCA PROJECTOR

**Efficient** projection performance is assured in classroom, assembly hall and school auditorium because the light system is correctly engineered.

Read how RCA Projectors provide better illumination:

**1.** Any standard 750- or 1000-watt Lamp with medium pefocus base can be used.

**2.** The precision-built RCA Reflector is made from heat-resistant pyrex glass that has a silver coating. A properly designed reflector redirects 30% to 45% of the light, which would otherwise be lost.

**3.** A large two-element Condenser Lens with one element "aspheric" to produce more uniform illumination at the screen.

**4.** A fast two-inch F1.65 Projection Lens is standard equipment. All air-glass surfaces are coated, increasing picture brilliance and contrast.

**Other features:** The new RCA 16MM projector will include other important advances in projector design, such as even-tension take-up; simplified film path for easy threading; completely removable gate; amplifier with inverse feedback for true sound; rewind without changing reels; standard tubes and lamps; sound stabilizer to keep sound on pitch; aero-dynamic cool-

ing to prevent hot spots; lower film-loop adjustable while in operation; theatrical framing.

**Availability:** Because of military demands, these new RCA projectors are not available now for civilian use. But investigate the new RCA projector before you plan postwar purchases for your school. Write: Educational Department 43-24F, RCA Victor Division, Radio Corporation of America, Camden, N. J.

**RADIO CORPORATION OF AMERICA**

RCA VICTOR DIVISION • CAMDEN, N. J.

LEADS THE WAY.. In Radio.. Television.. Tubes..  
Phonographs.. Records.. Electronics

sources of the Pacific Northwest. They included a film in color and black-and-white; kodachrome slides; and black-and-white photographs. The non-projected aids (the photographs) were arranged for display on large panels with accompanying diagrams and captions.

These materials may be used as follows:

1. Motion pictures and selected color slides or photographs used in the exploratory stage.
2. Motion pictures shown for a view of the whole subject before the various parts are studied.
3. Individual research carried on with the still pictures and stereograph.
4. Group discussion may be held during the presentation of the slides and pictures.
5. A motion picture may be shown to summarize the unit.

- **Filmstrips in the Middle East**—David Wood—*Sight and Sound*, (British Film Institute publication), 13:87 January, 1945.

An interesting account of the use made of OWI filmstrips when adapted for Arab and Palestinian audiences. They find filmstrips much better than motion pictures because the leader can control the tempo of the images and can read or relate the commentary.

#### RADIO AND TELEVISION

- **Television as an Educational Force**—Worthington Miner, CBS, New York—*Indiana Teacher*, 89:155 February, 1945.

The possibilities of television for education are limitless, now that color may be transmitted and images may be shown greatly enlarged for group viewing. In many ways television holds out a promise for a realistic type of experience that even color motion pictures lack. There is the actuality and the intimate, informality of a telecast that come closest to the real experience.

For education, the author visualizes programs as the following: an art exhibit currently held in Moscow; a display of new furniture models from the Amana Society in Iowa; jet-propelled planes in action; historical biography dramatized; regular programs showing artists at work; musical programs with important and interesting visual backgrounds or accompaniments; special programs put on for a school system within a city or county or state.

- **Television in Education**—Rohama Lee—*Film News*, 5: No. 10 p. 3 December, 1944.

A summary of the current status of television broadcasting in the United States, and a plea for greater expansion as soon as feasible. In Great Britain, television had been developed by 1939 to the point where theaters were using it to show sports events, and modern apartment houses had built-in sets for each tenant.

- **Tools for Learning: Audio Education**—Max U. Bildersee, supervisor radio education, N. Y. State Education Department—*New York State Education*, 32:197 December, 1944.

Four definite purposes may be served by radio in the elementary classroom: to motivate interest; to present information; to summarize or follow-up; and to entertain.

Other audio aids that may be effectively related to the curriculum are phonograph records, school-made recordings and transcriptions of radio programs.

- **FM for Education**—by William Dow Boutwell—published by the U. S. Office of Education, 20 pp. illustrated. Available from the Superintendent of Documents, Government Printing Office, Washington 25, 20 cents.

This bulletin, illustrated with photographs, charts, and diagrams, gives suggestions for planning, licensing and utilizing FM radio stations owned by school systems, colleges and universities. Five FM channels have already been allocated to schools by the Federal Communications Commission, and educators have petitioned for ten more.

#### TEACHING GUIDE

- **White Flood: Film Guide**—Helen Eagle Glannon, Newark, N. J.—Educational Film Library Association, 45 Rockefeller Plaza, N. Y. 20 11p. 50c 1944.

This guide provides exactly the type of background material a teacher would want in using so beautiful a motion picture as *White Flood*, the story of glaciers. The mood and rhythm of the film's pictures and musical score are the outstanding characteristic of the subject. It is inevitable that further information will be wanted after seeing it, and for the casual observer this guide offers excellent material. Further knowledge of glaciers and the origins of the world should be explored in greater detail through books and other media. An excellent reading list is provided in this guide. This brief booklet is a pattern of a useful teaching guide that may well be applied to other films.

#### PERIODICALS

- **Film World**—Non-Theatrical Film Magazine, 6060 Sunset Blvd., Hollywood 28, Calif. vol. 1, no. 1. February, 1945.

This trade journal for 16mm. film producers and distributors plans to serve as a clearing house for new developments and future trends.

The first issue resembles other trade journals of the 35mm. industry, with clipped phrases announcing headline news. "Bean New Publisher of Educational Screen"; "School Field Looms Big in Survey" (returns show 15 new companies planning production of postwar sound projectors); "March of Time Invades 16mm. Field with Big Film Program", and so on.

There is a section devoted to brief descriptions of new films, and one that charts the production activities of various companies.

- **Russia—a Building America** unit, issued by the Department of Supervision and Curriculum Development of the N. E. A., 2 West 45th St., New York 19, N. Y.

Numerous maps, charts, and photographs, and a simply-written text enable this unit to present a clear and vivid picture of both the old Russia and the new. Sections describe the Russian people and the land in which they live, and give a concise history of life under the Tsars and the events leading up to and following the Bolshevik revolution. Briefly described are the governmental structure of the USSR, the role of the Communist Party, education, agriculture, industry, and trade under the Soviets; the achievements and failures of the Five-year plans, and a description of daily living in the Soviet Union. A concluding section points out similarities between the USSR and the U. S. but emphasizes differences that must be understood if the cooperation established to win the war is to develop into cooperation for lasting peace. A useful "balanced" bibliography is included in the unit.

#### SOURCES OF INFORMATION

- **Educational Film Catalog**—Dorothy E. Cook and Eva Rahbek-Smith, ed.—H. W. Wilson Co., N. Y. \$3.00 a year.

A revised edition of the standard film source book includes the publication of 9 issues annually, with a bound volume including Title List giving only basic information; part 2 is a selected, classified list with annotations; part 3 is a subject index for part 2.

- **Business Education**—edited by Margaret G. Cook, Librarian, New Jersey State Teachers College, Montclair, N. J. 75 cents must accompany order (no stamps accepted). 45 pp. mimeo. 1944.

One of the latest compilations in the series of teaching aids prepared by this educational institution—listing sources of charts, exhibits, field trips, films, slides and filmstrips, games, maps, phonograph records and transcriptions, pictures, posters, and publications dealing with business education.

Chapter headings are "General Information," "Junior Business Training," (31 pages) and "Commercial Subjects" (12 pages).

# NOW!

**G**OOD NEWS for educators! Permanent ownership of Encyclopaedia Britannica Films is now made easier by a new "Lease-to-Own" plan. Brings the year-round use of these famous teaching tools within the small budget. Permits use of films by more departments, more teachers oftener: improves teaching effectiveness.

Whether large or small, your school will benefit by this plan. Today, Encyclopaedia Britannica Films—through its teacher-tested Erpi Classroom Films and Silent Teaching Films (formerly Eastman)—offers the most comprehensive, authoritative library of sound and silent film titles. Each has been expressly produced for classroom use.

For complete utilization, a Teacher's Handbook is included with each film. This affords a complete outline of what to do before, during and after the showing of each film. Makes it easy to integrate the subject matter with your own curriculum. Stimulates the pupil to productive follow-up activity.

For complete information, fill out and send coupon at right — today! No obligation, of course.

## Bigger Film Program For the Seventh War Loan

THE Seventh War Loan has been set for May 14 to June 30. The over-all quota—corporate and individual—is 14 billion dollars, the quota for individual bond sales the biggest in the history of the War Bond Drives—7 billion dollars with 4 billion in E Bonds alone.

Sales in the Sixth War Loan Drive totaled \$21.6 billions or 54 per cent over the quota. In recognition of the valuable contribution that the 16mm Industry made to the success of that Drive, J. Edward Shugrue, Director of the Motion Picture and Special Events Section of the War Finance Division of the U. S.

Treasury Department, has created a Publicity and Promotion Department headed by Max E. Youngstein, formerly Assistant Director of Advertising and Publicity for 20th Century Fox, and Co-ordinator of Advertising, Publicity, and Exploitation for the 35mm Film Industry during the Sixth War Loan. The preparation of promotion material for 16mm films is one of the most important functions of this new department. Merriam H. Holtz continues as Special 16mm Consultant to the War Finance Division.

Mr. Shugrue has announced that the use of 16mm films in the Seventh War Loan will be intensified and expanded more than ever before, and that the films selected will be the most effective to date. The experience gained in the Sixth War Loan has been used to produce a well-rounded 16mm film program that will appeal to the school audience, the industrial type of audience, and the mixed audience. It is indicated that there will be eight to ten short subjects of from fifteen to twenty minutes each, and several 2½-minute "impact" trailers, made available to the Treasury Department by various branches of the Armed Forces.

The first prints are being sent to 16mm distributors this month.

The list of films includes three short subjects from the U. S. Navy which have been prepared from hitherto unreleased combat material, entitled *Remember These Faces*, *Midnight*, and *My Japan* (tentative title), and six "impact" trailers: *This Could Be America*, *The Voice of Truth*, *Iwo Jima*, *Back Home*, *Time for Sale*, *Mission Completed*. The Coast Guard is making available a two-reel picture, *The Story of a Transport*, and possibly a nine or ten-minute short on *Iwo Jima*. *D-Day Minus One* (running time 20 minutes) is to come from the Army Air Forces, and the Army Ground Forces will supply *Action at Anguar*.

Russian footage is being screened for the purpose of securing a film to show what our Russian Allies are doing with the material we are shipping to them on Lend Lease. Prints of a 3½-minute War Bond Trailer titled *Your Future Security*, produced by the Department of Agriculture for the Treasury, have been shipped to that Department's film depositories with the idea that these prints be attached to Department of Agriculture films which are now widely distributed in farm areas. This film is designed for farm audiences.

A dramatic picturization of bonds in action, as they help to win the war and secure the peace, is unfolded in the new War Finance Division short subject entitled *Mr. and Mrs. America* (running time 12 minutes). Action shots from the battlefronts illustrate the power of Bonds as a weapon of war. In the latter half of the film, attention is directed to the War Bond's role in the post-war world—how regular Bond purchases will assure new opportunities, homes, education and other benefits for post-war security. Appearing in the film are President Roosevelt, Secretary Morgenthau, Eric Johnston, Phillip Murray and William Green, each of whom emphasizes the importance of buying and holding War Bonds.

(Continued on page 158)

Two scenes from "Mr. and Mrs. America" illustrating war in the Pacific.

# 16MM SOUND PICTURES that are **MUSTS** for **SCHOOLS**

**Now Available**

**COURAGEOUS MR. PENN**  
(Clifford Evans in title role)

A notable and inspiring photoplay on the life of one of history's great men—William Penn, compelling and timely in its application to present world problems. Penn fought in his day for the same principles over which we are now engaged in a great war—freedom from intolerance, tyranny and injustice. Settings, costumes and manners of Restoration England are strikingly portrayed as are the character, courage and final great achievement of William Penn in founding Pennsylvania and Philadelphia, and establishing those principles of Government which were later to become the foundation of our American democracy.

**Available Sept. 1st**

*(Book now and avoid disappointment later!)*

## **TOM BROWN'S SCHOOL DAYS**

(Cedric Hardwicke, Freddie Bartholomew, Jimmy Lydon)

A faithful and absorbing translation of the famous classic picturing school life at Rugby in the early 19th Century. The film spotlights the career of the renowned Dr. Arnold, head-master at Rugby from 1824-41, who introduced needed reforms, replacing rowdiness with the honor system. It is a stirring film, authentic in atmosphere, finely acted and directed.

## **SWISS FAMILY ROBINSON**

(Thomas Mitchell, Edna Best, Freddie Bartholomew)

This screening of a beloved world classic has captured all the charm, engaging humor and excitement of the original. It's all there—the rebellious family taken by idealistic father from decadent London life to colonies, the ship-wreck by tidal wave, the escape to an uncharted isle on a raft of barrels, the hidden treasure, the house in the tree-tops, the fun and fear with wild animals—and all the other exciting and delightful adventures.

## **LITTLE MEN**

(Kay Francis, Jack Oakie, George Boncroft)

A rousing and modern version of Louise M. Alcott's book, "Little Men" emerges on the screen as adult entertainment featuring drama, romance and hilarious comedy, yet retaining the charm of the original work.

## Experimental Research in Audio-Visual Education

By DAVID GOODMAN, Ph.D.

Title: CHILDREN'S PREFERENCES FOR TRADITIONAL AND MODERN PAINTINGS

Investigator: ELIAS KATZ, Ph.D.

Completed Columbia University, 1944

**Purpose**

To determine elementary school children's preferences for traditional paintings as compared with modern paintings. Although children's preferences for paintings are one factor which must be considered, other factors must also be taken into account. Among these are (1) the fundamental art values which art teachers are striving to inculcate in all children; (2) shifts in standards of "acceptable" art (in recent years, this trend has been in the direction of the greater acceptance of modern paintings) (3) individual differences among children in their interests, and level of art appreciation; (4) attitudes of school administrators towards the modern movement in art; (5) appropriate methods of teaching art appreciation, etc. These varied and changing considerations indicate some of the complexity of the problem. Only when all these sub-problems have been studied, and their results integrated, can there be a completely satisfactory solution to the general problem of the selection and use of paintings for picture study in the elementary schools.

**Previous Investigations**

A survey of eleven previous studies of children's preferences for paintings has shown that (1) there has been a growing interest in recent years in the whole problem of elementary school children's preferences for paintings; (2) most of the studies have been limited to preferences for subject matter in paintings; (3) investigations have proceeded on an individual basis, without any coordinated approach; (4) certain specific findings as to children's preferences for subject matter at various age levels have been reported by different investigators; and (5) these studies have been limited by such factors as inadequate statistical treatment and contradictory evidence. By combining the results of some previous studies, it would seem that, in

the elementary school, original differences in preferences for paintings at lower age levels tended to become less and less as children grew older.

**Procedure**

In this study, children's preferences for traditional and modern paintings were measured by means of an original test, in which two types of paintings were used. Traditional paintings were selected from the Elementary Art Syllabus and Course of Study of a large public school system. These were paintings of a traditionally "accepted" type, Italian, Dutch, French, and German Renaissance paintings. Eighteenth Century English portrait paintings, and some Nineteenth Century American academic paintings. For the most part, these paintings have been widely recommended for picture study in elementary schools.

Modern paintings used in the test were the best available examples of modern painting from the schools of Impressionism, Post-Impressionism, Cubism, Expressionism, as well as contemporary American and Mexican paintings of the social scene. For the most part, these paintings have not been recommended for picture study in the elementary schools.

In all, 64 pairs of paintings were selected, each pair composed of one traditional painting and one modern painting similar in subject matter. Each pair was submitted to eleven competent judges, and was included in the test if approved by a majority or more of the judges. On the average, there was 84.2 per cent approving of all the pairs by all the judges. Color reproductions of the approved pairs of paintings were photographed in Kodachrome, and mounted in pairs in 2"x2" lantern slides. This made it possible to obtain reactions to a pair of paintings simultaneously, and removed the distracting influence of extraneous factors.

The test was administered by the writer to 2,437 boys and girls in the Second Grade through the Sixth Grade in five schools, from November, 1940, through January, 1941. Three of the schools were New York City public schools, one was a New Jersey township public school, and one was a private progressive school in New York City. Each school was characterized by a different socio-economic level, with variations in location, size, cultural background, and intelligence level of the children. It was thus possible to investigate the variation among preferences

(Continued on page 160)

# KEYSTONE *Overhead Projector*

## "Now we use lantern Slides in the Classroom"

So writes a teacher who has recently been provided with a Keystone Overhead Projector. Like many other teachers she is enthusiastic over these advantages:

The lantern and the teacher are together at front of the room **before the class.**

The slide is right side up on the projector's open slide table, clearly visible to the teacher in all details.

She can point out items of reference on the slide, with the corresponding shadow

of the pointer appearing on the screen. Likewise writing or drawing on etched glass will reproduce on the screen.

The projector is ideal for tachistoscopic work when combined with the Flashmeter.

It is air-cooled and provided with heat-absorbing glass so that lamps of 500-watt, 750-watt or 1000-watt may be used.

It is easily adapted to the projection of 2"x2" slides.

which might be attributed to differences between the schools.

The testing procedure was developed and standardized through preliminary experimentation. This included standardization of verbal directions, as well as physical conditions for showing the paintings, and securing quantitative reactions to them.

### Conclusions and Implications

1. The test of preferences for traditional and modern paintings in this study gave evidence of validity and reliability.

a. Validity was demonstrated by the high consensus of agreement (84.2%) among eleven competent judges with respect to all items in the test, and by the power of the test as a whole, as well as individual items in the test, to differentiate among the children when grouped by grade, sex, and school.

b. Reliability was estimated both by re-testing and by odd-even correlation, the coefficients averaging between .75 and .80.

c. As a valid and reliable measuring instrument, the test in its preliminary form provided quantitative estimates of the nature of any changes in children's preferences for traditional and modern paintings at the elementary school level. With appropriate revisions, the test's validity, reliability, and range of usefulness could be extended to a point where it might aid in studying preferences for other forms of art, at different age levels, at different socioeconomic levels, etc.

2. The results of the test indicated that, in general, the elementary school children in this study preferred traditional paintings to modern paintings, in a ratio of about three to two. Since most of the paintings which are recommended for picture study in the elementary schools, as well as most of the paintings with which children come in contact outside of school, are of the traditional type, it is not surprising that traditional paintings were in general more preferred than modern paintings. What should be kept in mind, however, is the relatively small margin (three to two) by which traditional paintings were in general preferred to modern paintings. This would seem to indicate that paintings which adults generally believe that children should be taught to like (that is, traditional paintings) constitute only in part the paintings which children themselves actually do like. Indeed, in sixteen out of sixty-four individual pairs of paintings, all the children preferred the traditional painting less than the modern painting. This discrepancy between adult standards and children's preferences has been noted by other investigators.

3. Preferences for traditional paintings increased from the Second Grade through the Sixth Grade.

4. The lower the grade level, the greater the preference for modern paintings as compared with traditional paintings.

5. It is probably just as true at the elementary school level, as has been suggested for the secondary school level, that "... a frequent reason for failure to develop appreciations is that the content of a course is determined by purely adult standards ..."

6. The shift in preferences from modern paintings towards traditional paintings with increasing age may be interpreted as indicating that as children get older, they gradually acquire adult standards of taste, until their original spontaneous liking for modern paintings has been overlaid with "a borrowed standard."

7. The results of the test indicated that preferences for traditional paintings as compared with modern paintings tended to become somewhat stabilized in the Fifth Grade and Sixth Grade, since there was no statistically significant difference between the mean preferences scores of these two grades.

The results of the test indicated that the variation among children's preferences for traditional and modern paintings may be attributed to differences between the schools. Among the many factors which may have accounted for

In the *Versatal*, this exclusive, patented inner-locking design assures **automatic locking** of the square elevating rod at the correct picture dimension. Inner spring (A) and notched rod (B) eliminate external locking devices.

## Only DA-LITE Screens Have This Positive Automatic LOCKING FEATURE

- It assures correct picture proportions
- It eliminates separate adjustments of case and screen fabric
- It prevents ripping fabric from roller

Da-Lite tripod screens—the *famous Challenger* and the *popular-priced Versatal* illustrated here—are the only portable screens that offer **automatic locking** at the correct picture proportions, (without separate adjustments of the fabric or the case.) Other improvements include: **rigid design** that holds

case and top slat in perfect alignment assuring a wrinkle-free picture surface; **self-adjusting** tripod legs; **easy adjustment** of height; and the same fine **plastic-coated glass-beaded** fabric as is used in the highest priced Da-Lite models. For convenience and lasting satisfaction, ask your visual education dealer for DA-LITE Screens. Write for literature!

In the *Versatal*, case bracket (A) is securely clamped in fixed position to tubing (B) which is raised or lowered to adjust the height.

(Reg. U. S. Pat. Off.)

# DA-LITE SCREEN COMPANY, INC.

Dept. 4ES 2723 No. Crawford Ave., Chicago 39, Ill.

these differences between the schools were (a) differences in age from school to school, (b) differences in I. Q. from school to school, (c) differences in picture study instruction within each school, (d) differences in the socio-economic status (home environment) of children within each school.

9. In general, where the subject matter of the paintings was portraiture, the traditional painting in the pair tended to be preferred more than the modern painting. Where the subject matter was landscape, the modern painting in the pair tended to be preferred to the traditional painting.

10. In general, girls preferred the traditional painting more than boys did, where the subject matter was portraiture, while boys preferred the traditional painting more than girls did, where the subject matter was landscapes.

### QUESTION BOX ON FILM PRODUCTION

**QUESTION:** Please describe any or all the possible methods one could employ to eliminate the annoyance as well as the embarrassment caused by film breaks during public screening.

**ANSWER:** The first thing to do with any film that is to be projected before an audience is to preview it. Any weak spot or complete break will show up in time to avoid the embarrassment you speak of. If the film is too long to be previewed, a quicker method of inspection could be made by running the film on the rewind machine. During this process it is a good idea to keep the edges of the film between the thumb and index finger. Broken or torn sprockets can thus be discovered in time and mended.

If your own splices come apart, they may be due to many causes. The splices or any part of the film itself may become brittle and break, if the film is kept in too warm or too dry

an atmosphere, a change in climate to a cooler spot in the room may restore the film to a healthy condition.

The splicing fluid may have become too thick. This is due to evaporation which takes place every time the cover is removed from the bottle. This change in the viscosity of the fluid renders it less effective as a binding material. I suggest that you use the smallest size bottle for your film cement, thereby removing the opportunity for this liquid to reach the dangerous old age.

In preparing the film for splicing be sure to remove the entire emulsion from that part of the film which is to be covered with cement. The smallest bit of emulsion left on the film base will prevent the perfect welding together of the two parts. Before applying the film cement be sure that the film base has been thoroughly dried. Water will weaken the splicing fluid, and sooner or later will cause the splice to come apart.

If there is a film tension control on your projector it pays to become its friend and learn exactly the amount it will stand before it gets temperamental and starts to chew and maul the film. Proper lengths of film loops while threading the machine also keeps the projector in good humor.

In spite of all these precautions "gremlins" still find a way of sneaking into a film performance, and playing havoc with the projectionist's nerves. To reduce the time lost during these unfortunate interruptions it is worth investing in a second pick up reel and to keep it on hand during public performances. Should a break occur, the broken end of film from the supply reel can easily be attached to this second pick up reel in less time than it takes to make a splice. If a second pick up reel is not available a piece of scotch tape or a narrow strip of gummed paper can be used to make a speedy, temporary splice.

## South Chile

(Office of Coordinator of Inter-American Affairs, 444 Madison Avenue, New York City) 18 minutes, 16mm sound. Produced by Julien Bryan. Apply to distributor for rental sources and terms governing purchase.

The film opens with a map of the southern hemisphere superimposed on the northern. Animation is used to show the route of Magellan on his round-the-world voyage. A map of South America is followed by a map of Chile with its 2600 miles of shore line. This introductory sequence closes with scenes of southern Chile—its mountains, glaciers, lakes, and plains.

Life among the Araucanian Indians is depicted through scenes of their primitive spinning and weaving, thatched houses, the rain dance, unique grave markers, and woman's headdress composed of hundreds of tiny silver coins. The commentator explains that these people have been gradually driven farther south until by a treaty of 1883 certain sections were turned over to them for a permanent reservation.

The third sequence deals with physical features of the country. High mountains, immense glaciers, turbulent streams, scenic lakes with modern lodges vouch for the claim that here are American Bavarian Alps that may rival former European tourist attractions. Picturization of burned timberland due to volcanic action, hauling of logs by teams of oxen, and the sawing of these logs by electrically driven machinery is supplemented by the commentator's stating that almost half of Chile is covered by timber which has not been exploited due to primitive transportation.

Next is shown the activities of the people on the island of Chiloe where the potato thrives and is the chief export. This is followed by scenes of the worst weather in the world—that on the southwestern coast of Chile. The high mountains protect the eastern part and thus effect livable conditions.

The film closes with scenes of the sheep raising industry. Here are pictured the city of Punita Arenas where the wool is exported, immense pastures with literally hundreds of thousands of sheep, the shearing by highly skilled workmen, grading which is done by experts brought from England, machine baling of wool, the dipping of sheep into creosote baths, and the housing and feeding of the workmen.

The closing part shows additional views of this country's unusual scenery and the statement that this is one of the world's few remaining frontiers.

**Committee Appraisal:** An interesting and informative film on the physical features of South Chile and the extent to which the Indians and other peoples are beginning to take

advantage of not only their own potentialities, but also the available resources. The skillful teacher will wish to use the film for studying not only the preceding points but also for the contrast between a primitive and a modern civilization. The film should be useful for student and adult groups interested in both the physical and economic geography of South Chile.

## Action

(British Information Services, 30 Rockefeller Plaza, New York City) 10 minutes, 16mm sound. Produced by British Ministry of Information, London, England. Apply to distributor for terms governing purchase or rental.

Emphasizes the importance and benefits of games that provide training and exercise in discipline, strength, and alertness.

Introductory scenes show some children and adults enjoying games while others because of lack of opportunity or shyness never play at all. Numerous shots of cricket, soccer, rugby, and rowing demonstrate that games help people work together, teach them strategy and tactics, and accustom them to working under difficulties.

Following are views of coaches on playing fields instructing players in javelin throwing, cricket, medicine ball, boxing, wrestling, tennis, swimming, water polo, and dancing. The narrator points out that in each of these sports there is fun and that the benefits include good health, discipline, and coordination.

Next, young people are shown going to youth centers where they select the type of recreation which appeals to them. The activity and coordination required in various games are compared to the requirements of several jobs—the boy pedaling a bicycle to the man operating a treadle, the boy running to catch a ball to the brakeman running to jump on a train, and the boy wrestling to the man unloading freight.

In summary the commentator states that games increase fleetness of foot, neatness of hand, quickness of eye, the power of concentration, initiative, resourcefulness, and drive.

**Committee Appraisal:** An excellent film portraying the British recognition of the importance of an organized, recreational program for youth during wartime. The film medium is used successfully to portray the participant's keen enjoyment and complete absorption in the games. An effective film for showing the contributions of organized play to the individual's health and morale, and general physical fitness. Should be useful for physical education and recreational groups on the secondary, college, and adult levels.

## The Scout In The Forest

(Boy Scouts of America, 2 Park Avenue, New York City) 26 minutes, 16mm sound-color. Purchase price \$125. Apply to producer for rental sources.

This film presents the contributions of the Boy Scouts of America to wise forest management through their efforts in improvement cutting, planting, and conservation.

The opening sequence of the film by means of scenes of forests and commentary indicates such values as an opportunity for adventure and life in the wilderness, wood products, the habitat of wild life, and vocational opportunities for a large number of men employed in various phases of the lumber industry.

The major portion of the film is devoted to the basic principles of forest management among which the first illus-

This monthly page of reviews is conducted for the benefit of educational film producers and users alike. The comments and criticisms of both are cordially invited.

Producers wishing to have new films reviewed on this page should write L. C. Larson, Indiana University, Bloomington, Indiana, giving details as to length, content, date on which the film was issued, basis of availability, prices, producer and distributor. They will be informed of the first open date when the Teacher Committee will review the films. The only cost to producers for the service is the cost of transporting the prints to and from Bloomington. *This Cost Must Be Borne By The Producers.*

trated is improvement cutting. Scenes show that the trees marked for removal and later removed should include dead trees, crooked trees, shade or wolf trees, forked trees, and crowded trees. The "before" and "after" of correct tree cutting is demonstrated through wash drawings.

As the commentator states that for more than three decades the Boy Scouts have been planting trees, the film shows a Scout camp in Macon, Georgia, which because of a planting program begun thirty or forty years ago is now able to cut one-half million feet of lumber per decade and yet be surrounded by trees. The procedure and principles of good planting are shown in detail.

The film lastly treats fire as the single greatest enemy of forests. The role of the Scout in combating and preventing forest fires is depicted in scenes showing trained Scouts fighting fires, using caution in making and extinguishing camp fires, breaking matches in two before throwing them away, and cooperating with fire wardens employed by the federal government.

**Committee Appraisal:** The film in its portrayal of the work of the Scouts in the conservation of forests demonstrates the kind of a program necessary for the maintenance of this important national resource. The committee felt that one of the strong points of the film was the skillful organization and treatment of content for effective teaching. Highly recommended for use not only by Scout troops, but also by elementary, secondary, and adult groups interested in wise forest management.

### Grow Your Own

(United States Department of Agriculture, Extension Service Washington, D. C.) 20 minutes, 16mm sound. Apply to producer for a list of depositories and terms governing purchase.

This film deals with the problem of raising a garden—planning, planting, cultivating, and harvesting—and emphasizes the basic rules of successful gardening.

The picture begins with gray-haired John Smith studying the seed catalogues and plotting his next spring's garden on paper. The final selection of seed, however, is left to Mrs. Smith for she best knows the family appetites. Later Mr. Smith collects the tools and materials needed and sees that all are in working condition.

The actual making of the garden covers the essential facts of good gardening—the preparation of the soil, different methods of fertilizing according to the type of soil enrichment selected, the laying off of rows and planting of seed, transplanting of plants, watering, cultivating, and control of insect pests by chemical dust baths.

Gardener Smith tired by the unusual exercise in the hot sun, takes a nap. During this time he dreams of the growth of his garden and slow motion photography depicts the gradual unfolding of the embryo and its development into the sturdy plant.

The last sequence deals with the essential "don't's" exaggerated to drive home the facts portrayed without which the gardener's efforts would prove fruitless. "And don't forget" the narrator adds, "these gardens are worthy of serious thoughts. There are millions of them scattered across our land, with millions of gardeners."

**Committee Appraisal:** A timely and helpful film on home gardening presenting the basic rules of gardening in a simple but nevertheless thorough manner. Humor is occasionally used to advantage to emphasize the more salient points. Teachers will be interested in checking on the student reaction to the exaggerations used to review the "don'ts." The committee questioned both the relevance and the effectiveness of the dream sequence. Unanimously recommended by the committee for use in intermediate grades through high school and adults and some even felt it could be used on the primary level.

## Summer Project at Occidental College

Notable as a joint attempt of educators, radio people  
and motion picture people to study the possibilities of  
wider and improved classroom use of motion pictures,  
records and radio, an experimental project in audio-  
visual technique will be undertaken next summer at  
Occidental College, Los Angeles, California, according  
to an announcement by Dean Arthur G. Coons. Only  
teachers and qualified persons will attend the project,  
which will be in the nature of a seminar and workshop.  
General direction will be by a board of 18 heads of  
visual education in California school systems, together  
with technicians from radio and motion picture studios.  
Actual leaders are expected to be Lt. Comdr. and  
Mrs. Francis W. Noel.

Proximity of the studios and the unusual attention  
accorded audio-visual education in Southern California  
schools make this area unique in its opportunities for  
leading post-war development, says Dr. Coons. Need  
for the revision of old audio-visual techniques has been  
emphasized by the Army and Navy's success in the  
training of combat personnel through newer methods.

Reports of findings made during the summer will be  
sent to the American Council on Education for the  
possible use of schools throughout the country. Methods  
evolved, however, will be tested on local school children  
before they are released for use in other areas.

## Photographic Industry Coordinating Committee

At a conference called by the special advisory com-  
mittee appointed some months ago by the Photographic  
Manufacturers and Distributors Association, represen-  
tatives of nine trade and professional associations met  
in Chicago on March 15, 1945, to form a provisional  
Photographic Industry Coordinating Committee. This  
Committee represents the first serious effort to unite all  
elements of the photographic field into a single service  
unit that will function in the best interests of all. The  
participating groups included the Allied Non-Theatrical  
Film Association, Biological Photographic Association,  
Educational Film Library Association, Master Photo  
Finishers and Dealers Association, Microfilm Group,  
(now being formed) National Association of Film  
Producers for Industry and Education, National Asso-  
ciation of Visual Education Dealers, National Photo-  
graphic Dealers Association, Photographic Manufac-  
turers and Distributing Assoc., Visual Equipment  
Manufacturers Council.

The objectives of the new committee were defined  
as follows:

The Photographic Industry Coordinating Committee  
shall endeavor to foster, enrich and develop the mani-  
fold services of the photographic industry to society.  
Toward this end it shall collect experiences, information  
and scientific data from all available sources and dis-  
seminate this knowledge to all fields in which photo-  
graphy is being or can be used.

# Notes

It shall promote cooperation with and between organs of industry, government, education, commerce and the public generally, and rally maximum support for causes that involve the common welfare.

It shall serve as a channel of co-ordination between all affiliated national trade and professional associations in any way connected with the photographic industry, providing when possible for periodic over-all meetings at which the various elements, now so effectively organized in their own proper trade and professional associations, may get together for the furtherance of their broader interests.

Joseph Dombroff, president of the PMDA, was elected provisional chairman, and secretaries of five of the attending groups were designated as a provisional secretariat: William F. Kruse, ANFA; Miss Avis Gregersen, BPA; L. C. Larson, EFLA; Bernard A. Cousino, NAVED; Wilfred L. Knighton, PMDA; Selwyn Schwartz, NPDA; O. H. Coelli, VEMC. Mr. Knighton will serve as provisional secretary of the committee until organization is complete. Committees were appointed to formulate objectives, recommendations concerning membership qualifications and organizational procedures, legal counsel, finances, and general activities. Reports and recommendations of the committees will be acted upon finally at another meeting to be held in New York City between May 14 and June 1.

## CIAA to Expand Literacy Film Program

Preliminary experiments with literacy films—especially designed to test the use of motion pictures in helping to teach illiterates to read—indicate that such films can be utilized with much success for this purpose, as well as for teaching the basic facts of personal health.

Special health and literacy films used in these demonstrations were planned and developed by various departments of the Office of the Coordinator of Inter-American Affairs, in cooperation with educational specialists from the other Americas, and with the Disney Studios in Hollywood.

Departments of the Office of Inter-American Affairs particularly concerned with the production of these health and literacy films are the Department of Basic Economy, responsible for the administration of inter-American cooperative health, sanitation, and food supply programs; the Education Division, which carries out similar cooperative programs in education; and the Motion Picture Division, concerned with the advancement of information about the American hemisphere through motion pictures.

The actual experiments were conducted with groups of adult illiterates in Mexico, Honduras, Ecuador, and in Spanish-speaking localities of the Southwestern United States.

Results of these first exploratory experiments show that film-taught illiterates gained almost equally in health information and reading ability, when com-

pared with teacher-instructed illiterates, and consequently, that the films can be successfully used as teacher aids. They further suggest that for the best educational results, films and personal teaching should be combined, along with the use of other teaching media—filmstrips, flash cards and printed materials.

Altogether, four health films and four reading films were produced, with the literacy films dependent upon two of the health films for subject matter. The two fundamental health films are "The Human Body" and "The Unseen Enemy". The two supplementary health films concern malaria and tuberculosis. Two of the four reading films concern the experiences of Jose, a young farmer, in building up physical vigor, endurance, and personal health. The other two are devoted to the experiences of another young farmer, Ramon, who drinks polluted water and thus becomes the victim of the unseen enemy—bacteria.

In view of their potential usefulness as educational tools for combatting illiteracy and in promoting personal health, a new series of films is being projected. These new films will involve a longer period of instruction, and they will be guided in their production by the facts learned from the preliminary demonstrations and the recommendations of the experimenters. Additional health films also will be produced.

The films to teach literacy will be used in conjunction with a variety of other basic films; incentive films which show the benefits of literacy; health films which show the benefits of cleanliness and balanced diet; agricultural and scientific films; and others.

**Young People's Film Study Club**

A Film Critics Club for young people, to explore the use of the film for the purpose of creating a better understanding among the peoples of the world, and to serve also as a forum for the discussion of topics relating to the film, and later, perhaps, as a student workshop for the production of films—is now being organized jointly by the Division of Education of the Philadelphia Museum of Art and the Division of Visual Education of the Philadelphia Board of Public Education.

An outgrowth of the vital role that films are playing today in providing essential instruction, entertainment, and information for countless millions of people the world over, the Film Critics Club is designed to give young people an opportunity to become more familiar with the many problems involved in film making and to enrich their appreciation of the film as a work of art.

Comprising more than 100 youngsters drawn from every senior high school in Philadelphia, the Film Critics Club will meet at the Art Museum on alternate

Saturday mornings from 10:30 to 12 noon, beginning February 26 through June 3. In direct charge of the organization of the project are E. M. Benson, chief of the Division of Education, Philadelphia Museum of Art and Paul E. Long, assistant to Dr. John T. Garman, director of Visual Education, Philadelphia Board of Public Education.

The meetings will be devoted in part to discussions relating to the films included in the Art Museum's current free film program *This Is Your World*—as well as to a critical evaluation of major Hollywood film releases.

Every possible facility—the advice and encouragement of the most distinguished authorities in the field, conference quarters, projection facilities, a lending library of books on the history of the film—will be placed at the disposal of the Film Critics Club. It is hoped that it will become a permanent organization dedicated to the task of creating a truly appreciative audience for fine films and to encourage the making of films that do justice to the genius and idealism of the American people.

**Priority Regulations on Equipment Eased by WPB**

The War Production Board has authorized manufacturers of restricted photographic equipment and accessories to fill non-military orders for less than \$500 without preference rating. Educational institutions, therefore, may now apply their MRO AA-2 priority rating on the purchase of equipment, the total of which does not exceed \$500. Prior to November, 1944, an MRO preference rating could only be extended to \$100 on purchase of photographic equipment. For anything above that amount, it was necessary to make application to the local WPB on a 1319 form.

Only high priority ratings will continue to get prompt delivery, orders bearing AA-1 rating being delayed thirty to sixty days, and AA-2 orders longer.

**Audio-Visual Education Meetings**

A Lake County Audio-Visual Conference is to be held the afternoon and evening of May 4 in the Senior Assembly of the Waukegan, Illinois, Township Secondary Schools. Dr. Stephen M. Corey of the University of Chicago will preside as chairman of the program, which has been arranged by Orlin D. Trapp, Director of Industrial and Visual Education. Speakers include W. A. Wittich, Lt. James W. Brown, USNR, William F. Kruse, W. Roger Zinn, Harry E. Erickson, and Carl F. Mahnke.

The Connecticut Audio Visual Association met in Stamford, Conn., Saturday, March 24. Talks were given on "A Librarian Looks at Audio-Visual Aids," "The Motion Picture Industry Views Audio-Visual Education," "The Sound Film Strip in Health Education." Many new films for the war effort were projected, as well as the new 16mm classroom version of *A Tale of Two Cities* (courtesy of Teaching Film Custodians.)

# Current Film News

■ **CASTLE FILMS, INC.**, 30 Rockefeller Plaza, New York 20, producers of many films recording historic events, recently was obliged to change a release because the war in the Pacific has raced so far beyond the most optimistic military schedules. A complete reel depicting the invasion of Luzon in the Philippines and the winning of Manila was almost ready for distribution when news came that the Marines had landed on Iwo Jima and spectacular battle action movies of the historic struggle were on their way to this country by air. It was at once decided that, for two reasons, the Philippines film story had to be delayed. One was that the motion pictures of the battle for Iwo were of too much importance to collectors of historic movies to be discarded. The other reason was that the need today for the conservation of film required that the two news stories be covered in one reel. Therefore, the film previously announced as a single-story *News Parade*, is now called:

**MacArthur Liberates Manila—U. S. Marines Capture Iwo Jima**, incorporating the complete story of each action with all their dramatic highlights intact.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, announce the following new 16mm. sound film releases:

**Children of the City**—30 min.—made by Paul Rotha Productions. It deals with juvenile delinquency and seeks to present in human terms, the British approach to the problem. Actual scene is Scotland, but the film may be taken as representative of the British attitude generally. It deals specifically with the subject by telling the story of three boys from 10 to 14 years of age, who are involved in a charge of petty larceny. The Juvenile Court in Edinburgh studies the history of each child with respect to background, home environment, parental influence, physical and mental attributes, to discover causative factors and recommend remedial measures. The film then points out that these boys are but three out of a whole generation which often nears the borderline between play and crime, a state of affairs accentuated by war. Over-crowded playgrounds, gangs of children playing in mean surroundings are shown as posing the real problem—the free out-of-school hours which are a large and important part of a child's life. The film ends on a constructive note in its advocacy of play centers and organized activities of all kinds.

BIS points out that although the film deals with juvenile delinquency, it does not attempt to exhaust the

subject. One aspect of the subject, for example—the problem of the teenage girl—is not touched upon at all.

**Housing in Scotland**—14 min.—explaining and describing the need for half a million new houses in Scotland, which is being met by plans and models of houses temporary and permanent, shown to prospective tenants.

**Air Battle**—8 min. No. 5 in "Act & Fact Series"—a thrilling account of the greatest air combat since the Battle of Britain. Allied fighters blast the Luftwaffe out of the skies on New Year's Day, 1945.

■ **COMMONWEALTH PICTURES CORPORATION**, 729 Seventh Avenue, New York 19, announce its exclusive 16mm. release of

**Leopard Men of Africa**—8 reels—filmed by Dr. Paul Hoefer, producer of "Africa Speaks." It is the photographic record of Dr. Hoefer's last expedition into the wilds of the African Congo, revealing countless fascinating and astonishing wonders of deepest Africa. Here are shown earthquake plants that forecast volcanic disasters, the seldom photographed Cheetah in closeup; a baby Dick-dick saved from a lion's jaw, sub-human monsters stalking their prey, antelopes that

dance, billions of "bomber locusts" deadlier than diving Stukas; and many more thrilling marvels.

■ **ATLAS EDUCATIONAL FILM COMPANY**, Oak Park, Illinois, has just completed the following two subjects:

**The Story of Magnesium**—a 40-minute production made for the Hills-McCanna Company of Chicago, who is distributing it without charge. The story of the miracle metal is told from the refining beds where it is taken from sea water, to the finished airplane parts produced in the Hills-McCanna foundry, with detailed treatment of mass production methods in the making of cores and molds. Several scenes are devoted to the laboratory, with microphotographs showing

the effect upon the metal of heat-treating, pickling, etc. Magnesium's outstanding quality—its lightness—is graphically illustrated.

**Seven Days Adventure**—16mm. sound and color, running 40 minutes—produced for the Georgian Bay Lines, Chicago, from whom it can be secured free. This subject presents historical information, commercial data and scenic wonders of the Great Lakes region. Starting with a tour of Chicago, the film moves on to Mackinac, Isle Royale, Houghton, Duluth, Detroit, Cleveland, Buffalo, and Niagara Falls, pointing out many interesting details.

■ **THE PRINCETON FILM CENTER**, Princeton, New Jersey, is distributing a new, two-reel color motion picture in 16mm. sound, produced for the Association of American Railroads. Title of this picture is:

**Life Line of the Nation**—portraying the extraordinary wartime job America's railroads are doing today, hauling more war goods, freight and passengers than ever before.

The picture which is available for a small service fee, makes a special appeal to adult service clubs, schools and colleges.

■ **DEVRY FILMS & LABORATORIES**, 1111 Armitage Ave., Chicago 14, has been appointed exclusive distributor of a new educational 16mm. sound film, titled:

**Ominous Arms Case**—3 reels—produced for the National Plumbers' Association by Pure Water Films, Inc. This is a highly dramatic subject designed for showing in connection with health programs. It depicts the hidden dangers from water-borne diseases which lurk in obsolete and worn-out plumbing installations. It is obtainable on a free rental basis.

## New Catalogs

The Eighth Edition of its 16mm. Sound Film Catalog has been issued by Post Pictures Corporation, 723 Seventh Avenue, New York City. New releases, in both feature pictures and short subjects, are included. Through illustrations and full descriptions the type, character and classification of each picture are made clear. Many of the films feature well-known stars such as Fredric March, James Cagney, Adolphe Menjou, Carole Landis, Joan Bennett, Roland Young, and others.

Post also releases many historical, travel, science, sports and religious subjects, and selected groups of westerns, cartoons, musical comedies and serials.

The catalog can be had free upon request from Post Pictures Corporation.

# IT'S HERE!

## JANUARY

The January editorial of EDUCATIONAL SCREEN stated that, as soon as events indicated the approaching end of the war, the subscription price of the magazine would be increased.

## APRIL

The rapid conquest of the Ruhr, and the progress of our Armed Forces in the Pacific during recent weeks indicate that the plans for further expansion of EDUCATIONAL SCREEN'S publishing service to the educational world may be accelerated in the near future, so, effective

## JUNE 30

the regular subscription price of EDUCATIONAL SCREEN will be increased to \$3.00 in the United States; \$3.50 in Canada; and \$4.00 in foreign countries. The single copy price will be increased to 35c.

The present subscription price of \$2.00, \$2.50, \$3.00 will apply until that date. **(Former rates for two- and three-year subscriptions are discontinued effective with the publication of this announcement).**

Until June 30 old subscribers may extend their subscriptions at \$2.00 per year up to a maximum of 3 years.

New subscriptions will be accepted on the same basis, subject to the limitations imposed by present paper quotas.

### NOT A SINGLE SUBSCRIBER

complained about the announcement of the proposed price increase following the publication of the January editorial. Several subscribers wrote that they had always wondered how we could give so much for \$2.00. One reader volunteered the reassuring statement that the practical ideas in EDUCATIONAL SCREEN were worth ten times the subscription price!

### OLD SUBSCRIBERS AND APPROXIMATELY ONE THOUSAND NEW ONES

may save themselves the effect of this change up to a maximum of three years by filling in the enclosed blank and MAILING IT PROMPTLY.

-----  
**BEFORE I FORGET**

EDUCATIONAL SCREEN  
64 E. Lake St., Chicago 1, Ill.

Please renew my subscription to EDUCATIONAL SCREEN for.....year(s) at the rate of \$2.00 per year. (\$2.50 Canada, \$3.00 foreign). My check for \$.....is enclosed.

Check here and add \$1.00 to your remittance if you wish a copy of "1000 and One" before the present stock is exhausted.

# AMONG THE PRODUCERS

## ITTC Expansion

George A. Hirliman, President of International Theatrical and Television Corporation, 25 West 45th St., New York, has announced the closing of two franchise deals whereby six additional 16mm. exchanges will be opened in Boston, New Haven, Portland (Maine), Memphis, New Orleans and Charlotte. These I. T. & T. branches were made possible through the closing of deals with Arthur Lockwood and Louis Gordon for the New England area, and with Wells Alexander and Russel McGee for the South. The latter will continue to operate the Atlanta office, and in addition to setting up exchanges in Memphis, New Orleans and Charlotte will also take over the present Walter O. Gutlohn office in Dallas. This expansion is in line with Mr. Hirliman's plan to eventually set up 30 branches for domestic distribution of the company's 16mm. product.

Plans of the Walter O. Gutlohn Division of ITTC, include the addition of six new religious films to their 16mm. release schedule. The first of these is *The Virgin of Guadalupe*, the story of the miracle of Topeyac and the conversion of the Mexicans from the worship of heathen gods.

Announcement is also made that ITTC and subsidiaries, including Walter O. Gutlohn, Inc., Certified Film Distributors, Circle Film Laboratories, and Film of the Month Club, Inc., has currently under way, through S. Duane Lyon, Inc., advertising agency, a national advertising campaign in various magazines and trade journals, one of the main purposes of which is to acquaint the trade with the fact that Walter O. Gutlohn organization has been taken over by ITTC and that it will continue as a leader in the production and distribution of 16mm. film in the educational, religious, industrial and entertainment fields.

## DeVry on Inspection Trip

E. B. DeVry, president, DeForest's Training, Inc., and secretary-treasurer, DeVry Corporation, Chicago, is making a personal inspection tour of the southwestern states and sections of Mexico.

The primary objective of Mr. DeVry's tour is to obtain first-hand information regarding educational and entertainment requirements of army camp training personnel and to confer with DeVry distributors and theater operators in the territories he will visit. Mr. DeVry will confer also with school supply dealers and educational leaders on the upward trend in post-war demand for sound motion picture films and equipment in elementary and high schools as well as in colleges.

## New Portable Screen

Radiant Screen Corporation, 1140 West Superior Street, Chicago 22, reports that it has just brought on the market a newly-developed completely efficient portable screen unit, ranging in sizes from 7' x 9' to 11' x 14'.

This Radiant *Fold-Pak* screen consists of a light but sturdy rust-proof, fully collapsible steel frame with springs to hold screen smooth and flat and supported on legs that raise the screen

Section of *Fold-Pak* screen showing springs holding fabric smooth and flat.

as high as five feet above ground. The screen fabric can be folded, is washable and is said to possess unusual brightness. When the screen frame is dismantled, the complete *Fold-Pak* unit fits into a compact portable,

The *Fold-Pak* set up for projection

lightweight, but sturdy, carrying case, simple to transport.

It is further described as being ideal for use on large or small stages, in auditoriums, large outdoor gatherings, road shows, conventions, lodge halls, industrial plants and camps, and answering the need for a portable screen that can be assembled and dismantled in a few minutes without special tools—a screen strong enough to stand rough handling and frequent set-ups, yet light enough to be carried in a portable case.

## Official Opens Chicago Branch

Phincas T. Bluerock, General Sales Manager of Official Films, Inc., in New York, announces the opening of a Chicago branch office at 8 South Dearborn Street, with Mr. Harold Heyward as Manager. Ten midwestern states comprise the territory covered by the new office.

## Professional Model Hollywood Viewer

A high quality ground and polished lens, with extra large covering capacity and extraordinary magnification, is a feature of the new Professional Model Hollywood Viewer just announced by Craftsmen's Guild, 1668 N. Van Ness Ave., Hollywood 28, Calif. This lens is so large that the entire picture appears with no cutting of corners.

Another worthwhile feature of this attractive plastic viewer is the precision with which the lens can be focused by means of the spiral groove molded into the lens mount. The viewer will take any thickness of 2x2 inch slides, in cardboard, glass or metal mounts, and each viewer comes equipped with three film tracks, for 35mm., 16mm. and 8-mm. film strips.

Transparencies appear as large as they would if projected to cover a screen eight feet wide at a distance of ten feet. These efficient little viewers are extremely useful to color slide enthusiasts; they also are in demand by school and college classes. Dentists use them for viewing X-Ray films, and sales organizations employ them for showing full color views of their products.

Professional Model Hollywood Viewer

## "E" Award to Pacific Sound Equipment

The highly coveted Army-Navy "E" was awarded February 8th to the Pacific Sound Equipment Company of Hollywood, manufacturers of portable electric phonograph-transcription players and spring-wind phonographs.

These are the machines used at advanced bases and on vessels of war for the playing of the radio transcriptions produced and distributed by the Armed Forces Radio Service. They provide a continuous flow of all of the most popular radio network programs to the men and women of all branches of the service.

## Filmstrip on Distributive Education

Recognizing the ever increasing popularity of distributive work as a career for young people, schools all over the country are adding retailing courses to their curricula. The announcement of the release of a new sound slide film on food and fountain service should be of special interest to teachers of such courses. This new audio-visual aid is entitled *Tommy Fork and His Fountaineers* and is the fourth in a series produced by the Syndicate Store Merchandiser. The film includes an entirely new feature, an added film quiz. The main part of the film is followed by a series of

An example of wrong counter conduct

silent, still pictures each of which contains several examples of poor service. The audience uses these pictures as a basis for class discussion and a review of what they have learned.

*Tommy Fork and His Fountaineers* is especially adapted for use in high school classes since it assumes no knowledge of fountain work on the part of the audience but treats the fundamentals of the subject simply and completely. For this reason too, it is useful in any Distributive Education course on food service, and although the action takes place at a variety store fountain, the principles involved are basic to food service anywhere.

The film tells how a typical inexperienced counter girl learns about food and fountain service with the aid of a likeable group of cartoon characters. A set of serviceware comes to life to teach

her the importance of care and attention to personal appearance, the mechanics of good service, proper customer approach, correct use of the cash register, the prevention of behind-the-counter accidents and the way to give extra service that builds up trade.

Further information about this film may be secured from the Visual Training Division of the Syndicate Store Merchandiser, 79 Madison Avenue, New York City, New York.

## Eldon Imhoff on Victor Staff

Eldon Imhoff, former associate visual education specialist with the War Department, has been added to the sales staff of the Victor Animatograph Corporation, Davenport, Iowa.

Eldon Imhoff

Mr. Imhoff's background includes 15 years activity in various branches of still and motion picture photography, as well as installation of equipment in these fields. With this experience is combined a practical knowledge of these mediums and their application to schools, industry and military training.

Shortly after the outbreak of the war, Mr. Imhoff was invited to headquarters of the Eighth Service Command, where he with seven other men, under the direction of Major Dennis Williams, formulated initial plans for the army's film training program and the navy camps in that service command. Since then and until joining Victor, he was visual education specialist at Camp Hood, Texas.

## Rheumatic Fever Sound Filmstrip

"Jimmy Beats Rheumatic Fever," a 15-minute sound filmstrip, has just been released by the Metropolitan Life Insurance Company. The strip was made under the supervision of George M. Wheatley, M. D., Assistant Medical Director of the Company.

It was produced primarily for parents, teachers and others who work

with children. It is an eight-year old boy's story about his successful battle with rheumatic fever. Because his mother was alert to minor signs of illness, the doctor was able to diagnose rheumatic fever in the early stage. Under medical guidance and with the assistance of the Visiting Nurse, Jimmy's mother created many diversional activities which aided his recovery during the months in bed. The filmstrip also stresses the importance of following the rules of healthful living and of medical supervision to prevent a recurrence of rheumatic fever.

Officials of the New York City Department of Health and the Board of Education are recommending it for training courses for nurses and teachers as well as for mothers clubs. Requests for the strip should be addressed to Welfare Division, Metropolitan Life Insurance Company, 1 Madison Ave., New York 10, New York.

## Current Film News

(Concluded from page 168)

Bell & Howell Filmosound Library, 1801 Larchmont Ave., Chicago 13, has prepared a new list of its educational films in 16mm. sound and silent. To facilitate selection, the films are separated into three sections: (1) Color films, sound and silent; (2) Sound films, black-and-white; (3) Silent films, black-and-white. In each section the films are grouped by subject matter.

All are available for rental and most of them can be bought outright. Those films which are available on long-term lease are so indicated. Essential data is given on each, such as grade level suitability, length, rental rate, sale or lease price, and quality rating. Detailed descriptions of contents and any further information desired will be supplied on request to the library.

Included in this extensive listing are the product of leading independent producers of educational films, such as Bray, Burton Holmes, and Knowledge Builders; as well as many school- or teacher-made motion pictures.

Two new attractive catalogs are being distributed by Visual Education Service, Inc., 116 Newbury St., Boston 16, Mass. One offers a classification of Social Studies films in 16mm. silent and sound, selected from the VES library as an aid to teachers who are planning for the postwar period. The films in this Social Studies catalog have been arranged in the following main groupings: (1) Our Country: The United States; (2) Our Neighbors in the Americas; (3) Our World as a Modern Community. Each group is further classified.

The other VES catalog, generously illustrated, is devoted principally to "The Latest in Sound Entertainment Pictures," including features, musicals, sports, westerns, comedies, cartoons, and novelties.

**Capture his Imagination!**

AND you have done what a thousand books might never do alone—you have given him the will to learn!

When you use motion pictures as a teaching help, you make it easier for the student to acquire knowledge—easier to retain what he has learned—easier for you to convey more in less time.

Encyclopaedia Britannica (Erpi) Classroom Films and Silent Teaching Films (formerly Eastman) are professionally created to be used by teachers as a part of the regular school curriculum. They are authentic—each

film has been prepared in collaboration with an authority in that particular field. They are compelling—they command and hold the pupil's undivided attention, arouse his interest in further study. They are easy to use effectively—accompanying each film is a teacher's handbook on methods for integrating the film with a systematic course of study.

Your school budget (even a small one) permits you to have your own film library right now! The new "Lease-to-OWN" plan offers all schools a new, low-cost way to enjoy the benefits of a

film library from the very beginning. You can select your titles from the foremost collection of sound and silent educational pictures available.

With "Lease-to-OWN" you will have the right film at the right place at the right time. Payments on a year-to-year basis are as low or lower than film rentals. And there's no liability beyond the budget year. In 2 or 3 or 4 years the films become yours. Take your choice! That's "Lease-to-OWN"! Let us give you complete information without obligation. Fill in the coupon below and mail it today.

**TEACHER'S HANDBOOK**

A review of the film, suggestions for coordinating the material of the film with your curricular program, and supplementary references for students' further study . . . all these and more are contained in the Teacher's Handbook which accompanies each film.

# AMAZING IN PERFORMANCE

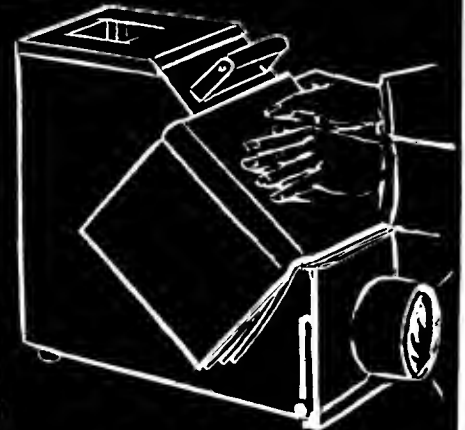

*For every classroom  
 in your school!*

**New BESELER  
 Model OA\* Opaque Projector**  
**Weights only 11 lbs.**

**\$29<sup>50</sup>**  
 Special School  
 Contract Price

Faithful detail and color projected from books . . . magazines . . . prints . . . photos . . . sketches . . . postcards . . . drawings . . . clippings . . . and any other kind of opaque material. No glass slides to make — no pasting, tacking or adjustments of any kind. Just place the material in the simple carrier — the projector does the rest.

This new BESELER Model OA (300-watt lamp) projects amazingly superior images up to six feet square. Its efficient design and incredibly better light performance make it ideal for classroom work. Its low price of \$29.50 makes it possible to provide a BESELER Model OA Opaque Projector for every classroom in your school!

OR — YOU MAY HOLD LARGER MATERIAL, SUCH AS AN OPEN BOOK, DIRECTLY OVER THE STAGE OPENING.

# HANDMADE LANTERN SLIDES — and the KEYSTONE OVERHEAD PROJECTOR

make an Excellent  
Combination for presenting your  
Original Ideas QUICKLY  
and ECONOMICALLY

★ THE KEYSTONE LANTERN SLIDE OUTFIT. Complete outfit and instructions for making Handmade Lantern Slides.

By using the KEYSTONE LANTERN SLIDE OUTFIT, you can quickly and easily make inexpensive, clean-cut, attractive lantern slides that show drawings, charts and diagrams, typewritten outlines, texts, and other material. You gain these advantages:

1. BETTER LOOKING PRESENTATION
2. DIFFICULT SUBJECTS ARE MADE CLEAR
3. YOU SAVE TIME AND MONEY

For fifteen years the Keystone View Company has been developing and perfecting superior materials for the making of Handmade Lantern Slides. Only the most attractive and projectable Handmade Lantern Slides are of real service to the instructor. You will find everything you need in the KEYSTONE LANTERN SLIDE OUTFIT.

The OVERHEAD PROJECTOR is the last step in making the classroom use of handmade lantern slides interesting, practical, and effective.

Write for full details today.

**Increasing Fact Retention  
Through *Eye AND Ear!***

**WITH THE AID OF 16 mm. SOUND FILMS**

The addition of the sound track definitely increases the retention of the facts and ideas presented to students by 16 mm. motion pictures. Numerous studies and tests had so widely established this truth among educators that the adoption by schools of 16 mm. sound-on-film was proceeding at an accelerated pace prior to the war. The remarkable experience of the U. S. armed forces in speeding up training through the liberal use of 16 mm. sound films merely confirmed the judgment of the educational field.

Now the whole world has dramatic evidence of the effectiveness of sound motion pictures as a teaching aid. Because of this it will be easier for school leaders to proceed with expanded programs of audio-visual education.

Although Ampro 16 mm. sound projectors may not be available to you until our war efforts are completed—now is the time to lay the groundwork for your visual education program. In this connection, an unusually interesting and informative story entitled: "What Will Happen in the Movies the Day War is Over . . ." is being distributed in attractive booklet form by the Ampro Corporation. Write today for your FREE copy.

### *Our Research Could Do Better*

RESEARCH is a potent instrument of progress in all fields of human endeavor, intellectual, social, scientific and industrial. As systematic procedure on an organized basis, research is a modern phenomenon dating from the founding of the great Reichsanstalt in Germany after the Franco-Prussian war of 1870. Its results put Germany in the forefront of economic and scientific achievement before other countries awoke to the value of research. The turn of the 20th century, however, saw the establishment in swift succession of the National Physical Laboratory in London, the Bureau of Standards in Washington, the Laboratoire Central d'Electricité and the Laboratoire d'Essais in Paris. From these institutions research has spread through the whole economic and social structure of the world.

From the beginning, the dual nature of research was recognized. It could be "pure" or "applicational"—the search for truth itself (the old Abbé Mendel seeking pure knowledge of heredity from his humble peas), or the search for applications of that truth (the modern miracles of animal and plant breeding evolved from the Mendelian laws). Pure research precedes, applicational research pyramids results. Both are essential. The truth about DDT was discovered some 40 years ago—the application of that truth came with World War II.

Higher research is attained by great universities, by cultural foundations, by scientific institutions, and above all, perhaps, by the great industrial organizations where all conditions are met for maximum achievement. Such research must always be the province of scholars, specialists and geniuses. The great organizations know this and can afford the cost. Such research is always important and, sooner or later, always successful, for it is conducted by the finest minds, aware of all previous findings in the field, expert in research method, and with complete resources available. It is not motivated by diplomas, degrees or credits. It is never used as a stopgap or to keep somebody busy. It never sets amateurs chasing vagaries. It seeks precise goals by scientific means. From research on that level, both academic and industrial, have come all advance in knowledge and the highest achievements of the race. We owe to research the revelations of the geologic past, knowledge of primitive man, history of long dead nations, gunpowder and printing, sources of power, countless machines, the magic of light and lenses, electricity in all its manifestations, wonder-working drugs, ever swifter communication and transportation, with undreamed of progress still to come. Small wonder that research has become a word to conjure with, a fetish, a wildfire growth. It has spread from the sanctums of scholarship and the laboratories of science and industry outward into the community and downward through college, high school, even into the grades. Everybody's doing it! And that is just the trouble . . . especially in the audio-visual field.

Educational research differs substantially from industrial research. For one thing, it is used widely and wisely as assignment work of unquestionable value to the student, regardless of the importance of results secured. The mass of theses that gather their dust on the back shelves of college libraries, unread since the day they were accepted, yielded real values to the writers. A more crucial difference is that, while industrial research deals with measurable facts and figures, educational research is constantly concerned with imponderables, the reactions of variable human minds.

Results of the former can be specific and concrete, of the latter only approximate and general. There is a vast difference between the determination of weights, densities, stresses, valences . . . and the measurement of psychological response, thought, learning, imagination, emotional nuance.

Naturally enough, the audio-visual field has made perhaps the feeblest contribution to the total of educational research. First, it is a very young field. The earliest Ph.D. thesis on visual education to be accepted by a university was J. J. Weber's at Columbia in 1922. Since then, there has been much confirmation, some amplification, but little advance on Weber's findings. Second, too little of our research has been done by qualified writers. Many beginners in the field mistake their enthusiasm for a call to research. A new convert to the visual idea is liable to "do a thesis" immediately. Third, the field seems to have an infinite capacity for repetition. The great bulk of our research has been devoted to proving over again the obvious and unshakable truth that we can teach better with pictures than without them. Any live teacher who ever used pictures seriously for teaching knows this without research. Is research, then, of no value in the audio-visual field? Most emphatically it is! We have only to cease piling up proof of the self-evident and begin real research on questions yet untouched and needing answer. More and more teachers are beginning to voice these questions. For example:

*What proportion of the total contents of a motion picture can actually be seen by the eyes of children . . . of youth . . . of adults? Since the act of seeing is purely physiological and practically instantaneous, while the process of observing is psychological, involves thought, and takes time, What proportion of the total contents of a motion picture can be observed by children . . . by youth . . . by adults? If these proportions are found to be less than expected, Can they best be corrected by running the motion picture over and over, or by still projection of key scenes from the film? Since discussion and interpretation are admittedly vital for optimum learning from pictures, Is a still or a moving picture more conducive to effective discussion? If still pictures should be found to enhance the teaching efficiency of the motion picture, How can still and moving pictures be most effectively combined for a unit showing? Since silent and sound motion pictures have not been scientifically tested against each other, What is their relative value as teaching tools? As this value will doubtless vary according to subject matter, What subjects can best be taught by sound films and what by silent? Assuming that the mind can pay 100% attention to a single set of stimuli received through a single sense, What happens to the 100% attention when two sets of stimuli are received through two senses simultaneously? If attention is found to divide and fluctuate between simultaneous sound and sight sensations, What modification in the content, degree, continuity or arrangement of the sound will correct the difficulty?*

For answers to these, and many other questions, both pure research and applicational research are urgently needed. Many veterans in the field, and many others, have their own opinions on these questions. Expert and serious research is the supreme means for confirming or correcting these opinions. The audio-visual field needs to know the truth and, most importantly, it had better know nothing but the truth.

## With Liberty at Stake, "Courageous Mr. Penn" Speaks Again

**Q**UAKER WILLIAM PENN, who fought a profligate court for liberty and justice, speaks again through motion pictures—and through the magic of a Bell & Howell Filmosound Projector.

The timeliness of the film, "Courageous Mr. Penn," can hardly be questioned. It is history that is particularly interesting and inspiring in the light of present-day problems.

This and the thousands of other fine 16mm. sound films for the study of history, geography, the manual arts, and every other school subject, may be rented from the B&H Filmosound Library. The cost is moderate, yet as presented

in these films any subject becomes alive, vital, full of meaning. And when shown with a Filmosound Projector, both pictures and sound are clear and natural.

War-accelerated research in Opti-onics—optics, electronics, and mechanics—is resulting in Filmosounds even better than before. Better in true-to-life sound; in cooler, more quiet operation; in simplified controls.

# Film + Teacher + Motivation = Learning

*Fine emphasis on certain problems and procedures in the use of sound motion pictures in teaching.*

WHAT real reasons do pupils have for learning from films? Are these reasons ever pointed out to them? Do we merely assume that by virtue of its magic presence the projector causes learning to take place automatically?

Certainly much literature in visual education bears evidence to a none too happy answer. It has considered such phases as utilization, definition of terms, preparation, follow up, discussion, etc. Yet one vital consideration rarely touched on is that learning from films needs motivation, the *sine qua non* of learning. The magic presence of the projector is supreme, and the newness of the visual technique seems sufficient. However, the educator knows, when he stops to remember, that there is no short cut to learning. Devices may be invented to decrease the number of responses a pupil makes in accomplishing a particular learning hurdle, but the degree of permeability of each pupil remains unchanged.

Motivation then must be considered equally important to the proper use of the projector as a thorough knowledge of how to thread the film into it. This is particularly true since only a few films are designed with motivating devices built into them. The Erpi film, *Heart and Circulation*, and the British science film, *Hydraulics*, are examples of films where the producers have been careful to motivate the learning that is desired from the films.\* In applying a mechanical device to a psychological problem, it is not logical to assume that the two should work together without assistance from both the producer and the teacher.

The inevitable question then is, how? The answer is manyfold. Unquestionably much classroom learning takes place because the teacher decrees it shall be done, or because some other outside force exerts its pressure. We do not propose to debate the merits of this type of extrinsic motivation for educators do not agree on the value of learning by this means. Although it is wholly lacking in imagination, we can offer motivation by decree as at least one method for its achievement. This type of motivation may take the form of learning in order to pass the test that is to be given right after the film is shown or the incentive may be merely to escape punishment by being able to answer a number of questions presented orally by the teacher after the film has been shown.

Insofar as we in education are concerned with the problem of learning through visual aids and its relationship to building interests as a definite part of the total structure of the human being, then our genuine concern must be rather with intrinsic motivation. We must be willing to probe deeper into the whole question of film utilization and examine those factors which play an important part in the learning process as it is

JOHN L. HAMILTON, Formerly of  
The University of Minnesota,  
Now Film Officer  
British Information Services, Chicago

aided by films. It is insufficient to define the new words the pupils are going to hear on the sound track if interest in the material is not first developed. Nor can interest be developed if pupil experiences are not made the source of some motivation. There are many related factors which play an important part in motivating learning through films.

Let us examine four factors that are of special importance to the classroom teacher. These are (1) Problem of meanings, (2) Definition of objectives, (3) Guidance to learning and (4) Pupil interests. Before launching on a brief discussion of these points the writer is assuming (he hopes not unwisely) that the teacher has certain classroom conditions under control. These are the conditions one hears expounded at length whenever a number of visually inclined teachers get together. Described without emotion and as briefly as possible, these are:

- (1) The projector is set up with the film threaded in it and ready to go at the beginning of the class period.
- (2) The teacher knows how to run the projector.
- (3) The teacher has previewed the film and knows its content.
- (4) The subject matter of the film has been taken into consideration in planning the unit.
- (5) The film has been selected because it fits the particular curriculum unit and grade level. (This does not necessarily argue against films and curriculum being designed together. Perhaps some day they will be.)

The question of meaning is an important one for the teacher who hopes that some learning will be achieved. Not only are meanings of words as spoken by the commentator important, but the meanings of the pictures, the relationships between these two and the relationship of these with meanings outside the realm of the film itself are also vital. Unexplained activity in the pictures can be as confusing to the learner as having the commentary mention things not shown.

The teacher must be alert to all problems of meanings as they are directly related to the matter of motivation. Since all films used today are not designed to fit the curriculum at a particular grade level, the matter is acute. Frequently the commentary is spoken at too great a rate of speed. Words may be introduced that need definition in terms of their use in the film as related to their general use.

Pictures can convey information, misinformation, or no information. The fault may lie with the producer of the film if the latter two be the case, but greater scorn should be heaped on the teacher who fails to recognize the need for defining meanings in the case of pictures as well as words. Frequently the popular magazines, *Life* for example, run a series of photographs that were taken of familiar objects at high

\*Other titles that show some attention to motivation are: *Know For Sure*, *Elephants*, and *Springs*.

magnification. Usually these familiar objects take on an entirely different appearance, and consequently, different meaning when viewed with the camera's magnifying eye. For example a microphotograph of a newspaper picture would appear only as a series of dots. This is only an instance of how the camera can change the meaning of a familiar object. Both the angle at which the camera is set and the lighting utilized contribute to learning set and, therefore, should be important to the teacher. For the sake of motivation, the teacher could well profit by discussing the important points to be covered by the films. Perhaps a brief outline for the class would serve this worthy purpose.

This leads to the second point in the four being considered, that of definition of objectives. Unless the student has some concept of what he is to learn from the film, his set for learning is stunted. Unfortunately for those who are making the best of the present materials in this field, film producers are sometimes prone to imitate Hollywood in their efforts to make teaching films. They avoid such revealing words as "The purpose of this film is to . . ." at the beginning or anywhere for that matter. Our teaching films have been built on the foundation that they are really a form of propaganda and hence their function must not be

evident to the observer. To define the problem briefly, the teacher must decide what is to be learned from the film and define the objectives accordingly. This information should be imparted to the pupils.

Guidance of learning is directly related to the matter of defining the objectives. After these have been formulated, guidance has only just begun. Many films tend to convey the idea that everything to be said on a particular subject is contained therein. This is unfortunate from the standpoint of motivation if we can generalize from the statement of an outstanding educational psychologist, that a limitation of ideas is better than attempting to cover a broad area. It is better to cover a few items well than many carelessly. It is necessary for the teacher to guide pupils to these items.

Again the ghost of the feature motion picture rears its head in the field of teaching films when one suggests that it might be a good idea to point out things the pupils should look for. This is supposed to be bad for it will spoil the film for the class. Much better to reduce the entertainment value of the film and increase its teaching value. Motion picture appreciation should be divorced completely from classroom teaching via films.

The last factor to be considered is that of pupil interests. Obviously it is unwise for the teacher to go to extreme lengths to find out ways of relating film material to pupil interests. On the other hand, if the teacher expects that the pupils are going to be interested in a film automatically he is in for a sad disappointment. It behooves the teacher to know where the current enthusiasm lies among the particular age group with whom he is dealing.

Perhaps a good example of the use of pupil interests lies in the current youthful zest for aviation and information about flying. The film *Hydraulics* can well be introduced by an explanation that the hydraulic principle is used in many different ways in the modern aircraft. The hydraulic principle makes it possible for the gun turret to be swung around so easily; it makes the folding up of the wheels and landing gear possible. These are things that make the study of hydraulics interesting. Instead of depreciating pupil interests, it is well to capitalize on them.

Within the area of pupil interests is the relationship of participation in meaningful activities to motivation. So often pupils are asked to write a theme, make a list, or even look at a film without making any connection between the activity and the everyday life of the pupils. Making a list of the uses of the hydraulic principle in modern aircraft may be an exceedingly interesting task if it is made challenging by the teacher and not presented as one more dreary thing that must be in by eight o'clock the next morning.

No effort has been made here to present a complete text on the motivation of learning when films are used in the classroom. Rather an attempt has been made to point out four factors that play an important part in any kind of learning situation and therefore are applicable to the use of films. To date, the failure to consider motivation as a part of learning through film is due to the assumption that the film is so novel in itself that motivation is unnecessary. In due course this attitude will be corrected and some really serious thinking will be done about the psychological implication in the use of motion pictures in the classroom.

From the film "Hydraulics," showing liquid tubes (top) containing fluid that operates car brakes (bottom).

# Trends in Audio-Visual Instruction in Illinois

*A Four-Installment Audio-Visual Survey of Schools in Illinois (May and June), and in the 48 States (September-October).*

ALVIN B. ROBERTS, Principal  
Haw Creek Township High School, Gilson, Illinois

FIVE years ago the author made an extensive study of audio-visual education in the state of Illinois.\* In making that study, 1,980 questionnaires were mailed to schools or school systems throughout the state, with the exception of the schools of Chicago and Cook County. The study revealed some very definite trends, and led to some definite suggestions for furthering the audio-visual movement.

Since that study was made, the nation has become involved in a second World War, and the training program of the Armed Forces has given startling proof of the value of audio-visual materials as teaching aids. Administrators and instructors are now taking deeper interest in the subject. Numerous meetings, throughout the state and nation, have acquainted school people with these materials, their function, methods of use, and problems of administering an audio-visual program. In order to get a more complete picture of what is happening in this field, the author has made a second survey.

The purposes of this survey are:

1. To see how the trends, that were evident five years ago, developed.
2. To determine, if possible, the new trends.
3. To determine what can be done to promote a wider and more efficient use of audio-visual materials.
4. To determine the effect of the training program of the Armed Forces upon the audio-visual program of the public schools.

In securing information for this study 600 questionnaires were mailed to schools or school systems in the state of Illinois (exclusive of Cook County). The schools were divided into three groups on the basis of enrollment, each group receiving 200 questionnaires. The groups were as follows: A (over 500), B (over 150), and C (under 150). Of the 600 questionnaires mailed, 195 were returned. Of the 195, 12 were received too late for tabulation, and 18 reported no audio-visual program. (Hence this survey is based on returns from 165 schools, or 27½% of the total mailing. Percentage of returns on previous survey was 15½%). Questionnaires returned from each group total as follows: 47 from A, 80 from B, 38 from C.

In the study made five years ago, 315 schools were carrying on an audio-visual program. The 315 schools owned a total of 654 projectors of all makes and types or over 2.6 projectors per school. The 165 schools reporting on this study own 498 projectors or over 3.07

projectors each. As may be expected, the highest ratio of projectors (5.7 per school or school system) is found in group A. In group C the ratio is 1.6 per school. However, on the basis of projectors per student the small schools rank equal with or above those in group A.

CHART I

	Group A (Over 500)	Group B (Over 150)	Group C (Under 150)	Total
Number of Replies from Schools or School Systems Grouped by Enrollment	47	80	38	165

Chart I shows the distribution of projectors per type and by groups. As one may expect, the 165 schools reporting on this survey own more 16mm. sound projectors than did the 315 on the previous study. This is true also of the 2x2 and the 35mm. strip film projector. The increase in the number of 16mm. sound projectors was to be expected and was definitely indicated on the previous study. However, the increase in the 2x2 and the 35mm. strip films, was greater than indicated.

CHART II

Projectors Owned	Group A	Group B	Group C	Total from 165 Schools	Total from 315 Schools on previous survey
35 mm Sound ...	4	2	0	6	27
35 mm Silent ...	4	2	9	6	61
16 mm Sound ...	66	54	21	141	108
16 mm Silent ...	41	17	11	69	160
3¼ x 4 Lantern Slide .....	45	27	6	78	134
2 x 2 Lantern Slide	25	17	4	46	21
35 mm Strip Film	52	41	10	103	100
Opaque Projector	29	13	7	49	63
Totals .....	266	173	59	498	654

Chart II covers Cameras, Screens and opinions on school made materials. A study of Chart III shows the types of projectors the schools of the three groups expect to buy. The increase in the purchase of the 2x2 and the 35mm. film strip projector would seem to indicate that teachers recognize more fully the value of the still picture as a teaching aid. However, the 16mm. sound holds first place in the greatest number for purchase. One factor that will have a tendency to check the further purchase of the small still-picture projectors, is the scarcity of materials for use in them. From the number of schools that expect to buy 2x2 cameras, and on the basis of those now owned, it would seem that a large portion of these materials will be produced by the teachers themselves. The glassbead screen in comparison with other types is used in the ratio of 2 to 1. This is a much higher ratio than indicated on the first survey.

In regard to the material owned or rented, it was difficult to set up a clear tabulation without dividing

\*See "Status of Visual Instruction by Projection in Illinois", *Educational Screen*, September, 1939.

CHART III

Questions	Group A	Group B	Group C	Total from 165 Schools	Previous Survey
Does your school own a movie camera? ...	YES 9	2	2	13	40
	NO 34	70	26	130	239

The second portion of Chart IV, on annual expenditure, was even more difficult to tabulate. The amount appropriated, or used for rental and purchase of audio-visual materials, ranged from 0 to \$2,275. However, the greater number reported annual expenditures of less than \$250.00. There seems to be more general recognition now on the part of school people that there should be an annual appropriation for the rental or purchase of these materials. The amount is far from adequate in the large majority of schools. There are, however, far more schools that have an annual appropriation than there were on the previous study.

Concerning the length of the film, Chart V shows that the general preference is for the shorter films, films running from 15 to 30 minutes having general preference. Of the 56 schools that have used O. W. I. films, a small majority report that the films were satisfactory. However, in regard to their use following the war, many

expressed the view that films of this type might become an agent of propaganda.

As is shown in the section dealing with administration (Chart VI) there has been a considerable increase in the number of schools that have a director of the audio-visual program. In the schools that do not have a director, the responsibility is shared by principal, teacher, and superintendent. The large majority of schools use student help and provide a training program for the students. It is also encouraging to note the large number of schools that report that their teachers know how to operate projectors.

Schools could be given considerable assistance in the development of a well balanced audio-visual program through the use of simplified forms. Forms that show not only the number of audio-visual materials wanted, and the date these materials are scheduled for use, but also the distribution of these materials in a given subject area, and within a particular unit. Those indicating that such forms would be helpful are about in the same ratio in groups B and C. While forms of this type can be used to advantage by all schools, they will serve best the smaller ones. However, the greatest preference for help of this kind comes from those in group A. There is also considerable demand for assistance in helping the schools correlate films with the curriculum. The fact that such a large majority

Since most schools rent a large number of their films, the films cannot be kept for a long enough period of time to fully develop a unit of work. The large majority feel that short strips of 35mm. film, containing from 25 to 50 or more still scenes from the film, would be helpful in preparing a class to see the film and in the follow-up work.

The replies to the question, "Are teachers getting maximum value from films" are in practically the same ratio, on both studies. The reason given most

# Group Discussion Through Motion Pictures\*

*A careful study of methods and potentialities for the development of film forums for adult education.*

ETTA SCHNEIDER RESS

THESE critical times have greatly nurtured the traditional American custom of group discussion. Such problems as postwar planning and war strategy are vital—though controversial—to every man, woman and young person in this country. The open forum is enjoying vast popularity under the sponsorship of military, civic, religious, social, political and educational groups. The men and women who are now working under wartime strains still remember the depression years and they incline more and more to gather together to find out how best they may assure a decent standard of living after the war for themselves and their fighting men.

Most of the forum-goers are not the "reading kind." They would rather listen to a speaker on a platform, to a radio analyst, or watch a film than read an authoritative book. At least that is what they themselves claim to prefer. For such audiences the motion picture is an appropriate aid to discussion. But therein lies the challenge, and the danger. Of course the motion picture is an excellent medium for transmitting ideas to a diversified public. But, which motion pictures, and how are they to be used? We aren't yet sure—but many people are asking . . .

Studies have been undertaken in the past to promote the use of motion pictures for discussion. Each of these brings a little light and a great deal of inspiration to try further. Back in 1936 the Commission on Human Relations of the Progressive Education Association began its extensive study of the use of excerpts from dramatic films with adolescents; in 1940 a modest study was made of a film-reading-discussion program by the Brooklyn People's Institute, United Neighborhood Guild; and most recently the Film Forums Project, sponsored jointly by four educational organizations, arranged for film forums in public libraries.

Certain recurring statements from all of these studies must be emphasized and brought before the attention of all those who are planning film forums. *First*, the non-theatrical 16mm. films now in existence were not designed to provoke discussion. They were produced to give information or to propagandize (in the widest sense of the term.) It places upon the forum leader, then, the responsibility of adapting the films to the purposes of open discussion. This leads us to the *second* generalization: that the quality of a discussion is closely allied to the skill of the discussion leader. All of the principles that would apply to a good forum must apply to a film forum, with the

added factor an information-type of film to be adapted. A *third* important truth brought out by experimenters is that a discussion to be good, must have a focus. It must be based on an unsolved problem which has been recognized by the group; it should introduce enough new material into the group's thinking to give the members the feeling that they have learned something; and finally, it must end on a constructive note that would lead to further interest, investigation or action.

The Human Relations Study had as its purpose the teaching of human relations through the objective but universally-appealing medium of dramatic motion pictures. Short films, carefully edited from feature Hollywood productions, were used as part of a larger program of education in human relations in twenty-two cooperating schools. Great effort was expended in training the teachers to lead discussion and in using the films most effectively.

The Commission on Human Relations found the motion pictures extremely helpful to demonstrate to young people what makes us behave as we do. The motion picture was able to draw out otherwise timid or maladjusted adolescents because the situation under discussion was a projected one and not a personal one. The collection of film excerpts has now been generally available, but it is still limited to those who attempt to use films as part of a study program. Special teaching guides are designed to promote good group discussion. These are the precautions that were recommended by the Commission if further use was to be made of their films<sup>1</sup>.

The Brooklyn People's Institute probed further into the possibilities of the motion picture, though on a very small scale. The People's Institute sponsors reading-study groups among housewives, with discussion leaders drawn from the staff of local libraries. From the twenty-five or more groups that have been operating for many years, a few were selected to determine whether or not the film would be suitable to implement the regular reading-discussion-study program. There were three aspects to the study<sup>2</sup>; a) the use of films that had a direct bearing on the subject matter of the books that were being read; b) an analysis of the effectiveness of the dramatic, the documentary and the didactic films respectively; and c) a study of propaganda films to note how much influence they had on attitudes, and how well they provoked discussion.

\*Based on the doctoral project, "Film Forums in a Public Library" in partial fulfillment of the requirements for the degree of doctor of education at Teachers College, Columbia University, N. Y., 1944.

<sup>1</sup>For a list of titles, consult the catalog of the New York University Film Library, 71 Washington Sq. So., N. Y. 12.

<sup>2</sup>"The Use of Selected Motion Pictures and Associated Discussions" Anne H. Barnard, Ed. D. Project, New York University, 1941. Unpublished.

From the first phase of the investigation, audience and group leaders agreed that the motion pictures used had helped to strengthen and focus ideas read in books. A film such as *Bordertown* or *Fury* could lead to a very intense discussion, but a discussion based on a book with high emotional impact was not quite so provocative. This is due to the fact that there must be some lessening of emotions from the time of reading to the time of discussion. Most important, however, was the conclusion that films helped to broaden or orient a subject for discussion, but books still retain the function of providing details.

The second and third phases of the study led to the following significant conclusions (already cited above):

- a) That discussion, to be good, ought to have a focus.
- b) That films cannot do the job alone. A good discussion based on a film showing should stimulate additional reading and investigation.

The investigators urged the production of films that present problems and provoke thought but do not attempt to give all the answers.

The most recent investigation on the use of films to promote group discussion was that of the Joint Committee on Film Forums. It involved some 300 film forums held in about 40 public libraries throughout the nation, during the period February, 1941 to June, 1943. The Film Forums Project had as its chief aim to find out if motion pictures can help to promote reading and discussion among adults. After a few demonstration film forums, the Joint Committee invited public libraries to participate. The Committee offered financial aid, booking service on recommended motion pictures, and book lists. The cooperating library was asked to plan and organize a series of film forums.

A film forum, it should be explained, consisted of a meeting centered about some current problem, as "Minority Problems", "Soviet Russia", "United Nations at War", and the like. One or two films would be shown at the beginning, and the librarian or an invited member of the community would conduct a discussion. Reading materials were prominently displayed in each library, and book lists distributed. The Committee found the meetings successful for attracting non-users to the library, and helped as a public relations medium. The average attendance was 42 persons, at a cost of about \$10 per program (including rental on projectors). There was little evidence, however, that these forums had helped to increase the circulation of related books. A pity!

This study brought into sharp focus some of the strong possibilities of film forums as well as some of the persistent problems. It was found, for example, that librarians were quite capable of organizing film forums and, with additional training in the use of films and in the technique of leading a discussion, they could make of libraries effective centers of community education. The impetus given by these film forums has resulted in similar meetings under various types of sponsorship, such as USO clubs and YMCA groups.

It is heartening to note this growth in popularity of motion pictures as a basis for discussion. But it also presents a challenge to those who are working toward good group discussions. The question may well be asked: Are these really film forums, or are they movie showings with some incidental value as a source of information?

To explore this question, the author undertook the detailed study of a series of film forums held in one of the cooperating libraries of the Film Forums Project, namely, the Walt Whitman branch of the Brooklyn Public Library.

#### Film Forums at the Walt Whitman Library

The Walt Whitman library is a small branch of the Brooklyn Public Library system. Built over 40 years ago, it recently found itself in the center of a vast public housing project near the Brooklyn Navy Yard. The 3,500 families that occupy this housing development are all war workers. These families are obviously the largest number of library users or prospective users.

Under the direction of a newly-appointed branch librarian, and with the help of the administration, a series of film forums meetings was initiated. This was to be the first attempt of the library to attract adults for other than book-lending purposes. The six meetings were held in the spring of 1943. Following is a list of the topics chosen, possible issues, and the films shown. The author served as film consultant for the entire series.

#### Plans for the Film Forums Series

**Our Russian Allies.** (a) Has the Russian nation justified our confidence and continued relations with that country? (b) Need we fear communism because of Russia's war successes? Films: *Under Siege, Report from Moscow, Three in a Shell-Hole.*

**Ships in Action.** (a) Ships or airpower to win the war? (b) British ship workers and American: how do they compare? Films: *Shipbuilders, Corvettes, Troopship.*

**Production Soldiers.** (a) Are the men at the machines fighting the war? (b) How serious is absenteeism and how can it be eliminated? Films: *Around the World with GM, Arm Behind the Army.*

**Our Fighting Allies** (topic selected by the audience). (a) The problems at the battle fronts around the world. (b) What are our fighting allies like, and how well are they meeting the foe? Films: *Men of Timor* (substituted for *Kokoda*), *Listen to Britain, The France that Fights.*

**British Gains in Wartime.** (a) How has democracy been strengthened during the war in Britain? (b) What can we learn from the British? Films: *Wartime Factory, Five and Under, Health in Wartime.*

**The World to Come.** (a) What should we expect for ourselves and the fighting men when the war is ended? (b) Should we plan now, and along what lines? (c) Who should participate in postwar planning? Film: *The Last Stronghold.*

(To be concluded in June)

# Good Film Library Service?

WILLIAM F. KRUSE  
Manager, Films Division, Bell & Howell Co.

“YOUR prints are so much better, so is your service,” is a formula of praise from patrons which every film library manager yearns to hear, especially if his extra effort at print maintenance and service methods have really earned it. What are some of the things that a conscientious, forward-looking library head does to keep up print quality and improve rental service? Even granted equal personal attention to the suitability of each subject and its screening before purchase, also equal objectivity in cataloging and substantially the same prices, one library's services may be considerably better than another's. Why?

Two identical new prints may come out of a laboratory's developing machines on the same day. They go to two different libraries. After each has been rented to ten different customers, one library's eleventh patron gets an entirely satisfactory print, in good condition, well packed, and in plenty of time for his showing; while the other eleventh patron might get a scratched, dirty, torn print, that loses its loop, has pieces missing, leaders gone, and comes poorly packed—and late. The former case has enhanced the prestige not only of the good library but of the whole 16mm industry. In the latter example everybody concerned has been given a black eye.

The methods by which good service is given are no hidden trade secret. They begin before the print is born, with the careful selection of only the best of films made available in 16mm, and the total or partial rejection of material that would lower the standards of non-theatrical film usage. These standards differ from those that govern the theatre. Stricter than either the Hays or Legion code, for they are to be shown to schools, churches and fireside groups, nevertheless they can be far more liberal ideologically, for in 16mm film selection, each film program is usually tailored to fit its own specific audience.

## Preparing Prints For Use

When first processed by the laboratory the prints are “green,” their emulsion is soft and easily scratched, and they are sometimes improperly dried. The experienced library head has his prints treated to toughen their emulsion and build up their resistance to water, oil and abrasion damage. A very minor degree of lubrication, so infinitesimal that it cannot pick up foreign matter that would cause scratches on future runs, also helps condition and preserve the new print. On the basis of laboratory findings supported by over ten years' field experience, the Vap-O-Rate process, in which toughening agent and lubricant are both applied in vaporized form under vacuum, has proved very satisfactory.

The treated print is then inspected, by projection, against standards set by the prevailing average of better class lab work. The 35mm “Academy” leaders are replaced by clean white stock on which is clearly writ-

Machine in foreground impregnates film with vapor toughening chemical and lubricant; negative polishing machine, under glass, washes, dries and polishes prints.

ten the name and number of picture and print, and the number of parts to the subject. The leader is amply long to allow the picture to be started at the aperture. At the end of each section a “Brief Intermission” title is spliced, to condition the audience for the very brief interval during which the next part is threaded up. A short section of black leader is provided after each end title, and ahead of most main titles, to allow for splicing several films together on large reels. This splicing leader is gradually consumed and is replenished as needed; no splice is ever made into the picture itself.

## Reels, Cans, Containers

The film is mounted on the sturdiest reel obtainable, one with flanges that will not bend out of shape to scrape and scuff the edges of the running film, or pinch it to cause a series of uneven shocks and strains or the sprocket holes or even spillage during projection. Reels fitted with side-tension hubs are easier on film than types that hold the end too tightly in a hub slot. Individual metal containers, well designed to permit of easy opening, and holding the reels snugly but without binding, do wonders to protect film from dirt and damage. The packaging is completed by sturdy fibre shipping cases, just large enough to hold the film order. Every high-standard library must insist on getting back its own reels (or their equal) and its containers, for to tolerate substitution of inferior accessories would lead to quick and costly deterioration.

## Inspection Routine

The efficient library permits no returned rental prints to go back on its shelves uninspected. And this inspection is no casual routine; every film is run through clean, soft cloth, and this wiping is supplemented when needed by a thorough laboratory cleaning on an adapted Cinex negative polisher. If there is the slightest indication of damaged sprocket holes, the film is run through a mechanical defect indicator. A measuring

machine is used to check up on possible removals of footage. Original splices, made on the heavy-duty professional laboratory splicers, are easily identified, every "foreign" splice is therefore a danger signal to be investigated.

The condition of a print, after each use, is indicated graphically on its own stock card. Normal wear and tear is expected, and its progress is reflected in the gradually lengthening and darkening red and green "wear lines" on the card. In this way no patron can ever be blamed for damages caused by previous users, yet every danger spot for continued damage is quickly exposed. An experienced film inspector can diagnose probable causes of damage quite exactly, the offender is advised of the nature and extent of the damage and is urged to investigate and remedy its cause at once.

**Film Damage**

When replacement footage is needed the print must be retired until the new lengths can be obtained from the laboratory that holds the negative. Upon receipt, after a delay of weeks and sometimes months, this replacement has to be inspected and (if satisfactory) inserted, and the whole print projector-inspected to make sure that the replacement has been properly matched. It may seem harsh to file charges for film damage even where the offender is inexcusably and solely responsible, but the out-of-pocket cost to the library always far exceeds any such charge. The print must be shelved for an unpredictable period, possibly running into months, other bookings against the print have to be adjusted, entirely innocent later renters have to be mollified on substitutions, the lease period for which the print was bought is running out without any return, skilled help is involved in reconditioning the print—it is a headache for everybody. The saddest part is that such damage is utterly avoidable if only a little care is taken to operate the projector correctly and to keep it clean and in repair.

From the viewpoint of public policy the prevalent demands for "insurance" against film damage is decidedly open to question, as this represents the purchase of immunity against pure and simple personal negligence, without any sort of adequate corrective or preventive pressures. Insurance that spreads a community risk equitably among many contributors is fine, but insurance that provides immunity for the reckless at the expense of the innocent is another matter.

**Aids to Better Booking**

Equally important as the supplying of prints in good physical condition are the measures taken to assure the library patron his film in time for his showing date, and freedom from worry over possible miss-outs. The first steps toward this happy situation rest with the renter himself. When placing his order he should read the suggestions in the catalog from which his order is usually placed, and make his selection on the basis of the descriptions, audience level, price and selection data it contains. Are shipping name and place clearly indicated? The showing date—and hour? Mounting instructions and possibly special cautions on types of substitution permissible? Preferred transportation is usually via express but are there exceptions and special conditions that should be detailed? State clearly the

# The Film and International Understanding

## Religious Films for International Understanding

DR. JOHN E. DUGAN, Editor  
Hadden Heights, New Jersey

WILLIAM L. ROGERS \*

THE presentation of the sort of films which we are discussing is in general initiated by two different agencies within the Protestant churches: the educational boards, which have responsibility for the curricula of the Sunday, vacation, and weekday church schools; and the mission boards, which have the responsibility for raising funds to support foreign missions.

### Church School Curricula

Since the church school curricula center around Bible study and related moral and ethical considerations, international understanding and good will is approached from this point of view. Usually the study grows out of some pertinent Bible passage. Formal consideration in pupils' tests is limited to perhaps two or three times per year, aside from incidental references in connection with lessons on foreign missions.

The subject may thus come up for study under such a topic as "Worship Around the World." In this case understanding of other peoples is promoted through a study of how they worship and through emphasis on the point that all people have in common a need to worship God. In other cases the subject may be approached directly through a study of children of other lands. Both of these approaches offer wide latitude for the use of films, slides and other visual aids.

### Effect of Missions

The direct approach to developing international understanding in the church schools is, however, not so large as the indirect approach provided by the mission boards in their promotion of the cause of foreign missions to the whole constituency of the churches. The mission boards in their efforts to raise funds long ago discovered that it was necessary to educate the people at home concerning the people in mission lands—their ways of living and their problems. These mission boards also were among the first to discover the effectiveness of visual aids in teaching these facts and to utilize visual materials for this purpose on a large scale.

The boards of most of the larger denominations organized extensive libraries of stereoptican slides, beginning around 1915. The investment more than paid for itself, and as a result the mission boards today own, produce, and distribute not only stereoptican slides, but also Kodachromes, photographic enlargements, and silent and sound motion pictures. Thousands of churches throughout the country which are now using visual aids owe their start to the mission boards.

While cultivation of international understanding is a by-product of this promotional program, it is an

EDITOR'S NOTE: Religious films touch upon phases of experience which are common to millions of people throughout the world. How can they be used for better international understanding?

Mr. Rogers deals with this question from the standpoint of the Protestant churches, because that is the phase of the problem with which he is most familiar. This in no way implies that much of what he says may not be applied to other religious groups or to the broader field of all films for international understanding.

Surely the criteria which he lists for films about foreign countries has valid application over a very wide field.

important one, limited only by the fact that the promotion and hence the visual materials deal only with those countries which comprise the "foreign mission field." Even so, it embraces a large area: Africa, India, the Near and Far East and Latin America.

It may surprise some to learn that visual materials supplied by mission boards are useful in developing international understanding. Many people still have the mistaken idea that missionary interests still uphold the sentiment of the old hymn about mission lands, which describes them as a place where "only man is vile." Quite the opposite is now true, at least among the larger and more liberal denominations.

### Film Criteria

The Religious Film Association (which is comprised of agencies of nineteen Protestant denominations) un-

Native rescues American pilot—From "We Too Receive"

\*Director of Visual Education, International Council of Religious Education; Executive Secretary, The Religious Film Association.

doubtedly represents the attitude of the mission boards which distribute films in the following requirements which it has set up for films on foreign countries:

1. The people must not be ridiculed in the film regardless of how queer their customs and costumes may appear.
2. As far as possible the people must be portrayed as human individuals with the same basic needs as ours and with potentialities for development similar to our own.
3. The situations in foreign lands must not be portrayed as hopeless, that is, beyond help which may be offered.
4. When possible, achievements of nationals who have been given an opportunity to develop should be featured.
5. Films must not adopt the "Mother India" approach which concentrated on social evils without giving a fair appraisal of social and cultural achievements.

Aside from ethical considerations, there is a very practical reason why mission films should meet these requirements. People in general are more willing to give money to help those who are "worth helping." Thus, the films which form the most effective missionary propaganda are those which show cultural and personal achievements of the people of mission lands—triumph over poverty and physical handicaps—inmate human worth. As a result, the majority of the mission films and other visual materials are helpful in developing an appreciation of the people of other lands and of their problems.

The development and use of visual aids in the churches has a long history and considerable variety. Probably the most ambitious visual aids project ever carried out was that presented in connection with the celebration of the Methodist Centenary in Columbus, Ohio in the summer of 1919. The state fair grounds were transformed into a huge living exhibit representing the work of the Methodist church in mission fields both at home and abroad. The people of all these lands were present in their native costumes and appeared in settings typical of their homes. Dramas representing life in these lands were presented daily. The major purpose was to let the people at home get a glimpse at life in the mission fields . . . develop a phase of international understanding.

#### Film Production

In recent years the churches have cooperated to a certain extent in the production and distribution of motion pictures and slide sets dealing with foreign countries. In 1938 they set up the Africa Motion Picture Project in cooperation with the Harmon Foundation. A photographer was sent to Africa with prepared scripts (subject to local adaptation) to film not only the work of missionaries but also the African's way of life. Since the Project's eight silent films and their utilization are typical of the present day approach they are analyzed here.

1) *Song After Sorrow*—deals with life in a model leper colony. Instead of emphasizing the horrible disfiguring aspects of the disease it shows how the people are taught to overcome their handicaps and how, while receiving treatment, they are able to do constructive work in the colony, raising much of their own food and even securing and helping prepare a vital medicine that they need.

2) *Story of Bamba and Ngono and Her People*, are short dramas centering around a boy and girl, respectively, who were trained in mission schools and grew

Burial scene in "The Forgotten Village"

up to give a life of service to their people. Both stories are based on actual fact and present basic information on the life of the people as background for the story.

3) *What a Missionary Does in Africa* is a forty-five minute documentary film intended primarily to "humanize" the missionary. It necessarily shows the background of the people among whom the missionary works. *The Light Shines in Bakubaland* is similar but is biographical, dealing with the adventures of a real missionary while pioneering in a new field.

4) Three other short films are entirely documentary in nature and deal solely with the life and culture of the African. They are typical of films used by churches as background material for mission study to give a proper setting for consideration of the work of the missionary. These films are *Children of Africa*, showing child life, how the child helps his parents, games and schooling; *A Day in an African Village*, showing regular occupations and customs of the Congo villager; and *How an African Tribe is Ruled*, showing the transition from independent tribal rule when justice was administered through trial by ordeal to the present system under which the tribal chieftain is responsible to a resident commissioner for the enforcement of laws based on modern codes.

#### Use of Films

These films are used in Sunday evening services, in mission study groups, young people's societies, Sunday, weekday, and vacation church schools. The method of use varies considerably depending upon the group, the leader and his experience in visual education. Too often, even as in the public schools, the film is presented merely as a special program item. In Sunday evening church services the minister frequently speaks, following the showing of the film, outlining the reasons for carrying on missionary work or pointing out elements the people of the mission fields and the people at home have in common.

In young people's meetings the showing of a film is usually followed by discussion of the points made by

(Continued on page 208)

# The Seventh War Loan Drive Is On!

ON May 14 the Treasury Department launched the Seventh War Loan Drive with 14 billion dollars of bonds as the goal. Because of the successful role 16mm films played in the Sixth War Loan, they are now recognized as an essential media for stimulating bond sales. The Office of War Information, Bureau of Motion Pictures, has from the very start been one of the most important factors in the organization of the 16mm War Bond program. There is constant coordination between the OWI and the Motion Picture and Special Events Section of the War Finance Division. Other government agencies, such as the Department of Agriculture, Public Health Service, and Office of Education, are cooperating more closely in this campaign in obtaining maximum distribution and use of the films selected for War Bond sales incentives. The Army and the Navy are using mobile units to carry projection facilities to places which normally could not see the films.

Intensive efforts have been made to search out every 16mm projector in the country so that a maximum number of screenings can be arranged. Schools and churches are two of the most important outlets for the exhibition of War Bond films, as they have the physical facilities and many of them have projection equipment. Where such equipment does not exist, it can easily be borrowed or rented by getting in touch with the local 16mm State Chairman or distributor. As the Drive will last until June 30, many schools will be closed during the latter portion of this period. However, arrangements should be made to keep the school open for special screenings.

Again the Armed Forces have provided footage for the Seventh War Loan. The films which were selected with the objective of reaching all types of audiences, include one Coast Guard production, two short films and five 2½-minute trailers from the Navy, and two

from the Army. A brief description of the films follows:

**Story of a Transport** (20 minutes) is the U. S. Coast Guard's motion picture record of its task in moving thousands of troops to the battle zones, and depicts the colorful career of the 24,000-ton transport "Wakefield," formerly the peacetime luxury liner "Manhattan." Flashbacks show the liner on pleasure trips, and then in her grim war role. Highlights of the film are scenes of the Wakefield being bombed at Singapore, burning in the Atlantic and, then, refitted, crammed with troops found for the battlefields of Europe.

**Remember These Faces** (15 min., color)—a U. S. Navy production which tells how American lives are being saved on the battlefields. It is the story of the courage and sacrifice of the members of the medical force who go ashore with the troops in invasion.

With its action beginning on a Pacific Island, newly taken by our fighting men, the camera follows the wounded from the front line to battalion aide stations, to evacuation hospitals, to transports, and finally to hospital ships and giant aircraft which will rush them to base hospitals and the world's best medical aid.

**Midnight** (8 min.), another Navy film, is a thrilling review of Naval action around the globe. The action opens at longitude zero, Greenwich, England, where local midnight and the Navy's official midnight coincide, and goes on to portray simultaneous operations of the Navy throughout the world—all types of craft in combat action, fleet preparation, life-saving activities, men fighting, sleeping, working, and training.

**Action at Anguar** (22 min.)—produced by the Army Ground Forces, is the story of the untried 81st Infantry "Wildcat" Division, which after a month's furious fighting crushed veteran Jap troops who fought to the death on Anguar, one of the most strategic islands in the Pacific. Conquest of the island represented a crucial step in the reconquest of the Philippines.

**D-Day Minus One** (18 min.) produced by Army Air Forces, is skillful picture reporting of one of the most thrilling assaults of the war—the invasion of France by troop-carrier and glider, hours in advance of D-day attack assault on the Normandy beach. In vivid, dramatic terms, the tactics of the airborne branch of our fighting forces is depicted. In the opening sequence paratroops and airborne men are seen waiting for the "big jump", then visited by General Eisenhower just before taking off. Transports and gliders stream across the Channel, and over the French coast. Paratroops are seen in close combat with the Nazis and glider troops join the assault while miles away the fury of invasion begins to break on the beach.

The Navy trailers are:

**This Could Be America**—an enactment of what could have happened if the enemy had been able to bomb America, and the reasons why it did not happen that way.

**The Voice of Truth**—portraying the effect of Jap propaganda broadcasts on a group of Marines on their way to battle; how the stores of black markets, needless strikes, political factions, and failure to meet war quotas, can impair the morale of our fighters.

**Two Jima**—starting with the pre-invasion bombardment and barrage, this film shows part of the terrific struggle of the Marines to capture the island, the most costly battle that branch of service has ever fought.

**Mission Completed**—a picturization of a few moments on the deck of a carrier as her Avengers return to the deck from a raid, emphasizing the cost in men and machines of an aerial war.

**Time for Sale**—scenes from a captured newsreel made by the Japanese, showing the horrors of prison treatment in the Philippines and how American lives might have been spared if we could have effected earlier landings there.

In a foxhole on Iwo Jima's volcanic beach, war dog "Butch" stands guard over sleeping Private—From "Iwo Jima."

(Concluded on page 196)

# Is Your Projector Showing These Films?

At Iwo Jima beach, litter of wrecked equipment bears mute witness to the ferocity of Japanese resistance. (From "Iwo Jima")

# STORY OF A Transport

(Lower left) A Marine casualty undergoes treatment aboard a transport.

(Lower right) Back at Pearl Harbor, a group of wounded are lowered from the ship to ambulances which will take them to a base hospital.

The former luxury liner Manhattan, now the war-busy Coast Guard-manned troop transport Wakefield. Fighting men and battle gear are packed in tight on board the Wakefield, bound for the battlefield.

(Right) Last mission for two fighter planes. Both pilots were rescued by the quick action of their comrades.

Additional films to be used include:

**All Star Bond Rally**, produced by War Activities Committee, Motion Picture Industry (15 min.), in which many Hollywood stars appear—Bing Crosby, Bob Hope, Fibber McGee and Molly, etc.

**Fury in the Pacific**, a joint pictorial effort of the Marines, the Army, Navy and Coast Guard. It is a stirring portrayal of the capture of the Japanese strongholds at Peleliu and Anguar by naval bombardment, plane bombing and amphibious charge upon the beaches, under hail of cannon.

**The Enemy Strikes**—produced by the Army Pictorial Service from German film captured after "the Bulge" was retaken.

Those who wish to make their 16mm equipment available for the showing of these and other War Bond films, should establish contact with the 16mm State Chairman or his representative. The list of State Chairman is given below. The allocation of all film prints is made through the OWI to recognized 16mm. distributors throughout the country, but it is primarily the task of the 16mm State Chairman and the local War Finance Committee to handle the distribution of the prints within any specific state.

#### State 16mm Film Chairman

**Alabama**—E. E. Sechrist, Dept. Visual Instruction, Public Schools, Birmingham 1.  
**Arizona**—Kenneth Kelton, 33 South Fifth Ave., Tucson.  
**Arkansas**—T. M. Stimmett, State War Film Coordinator, State Department of Education, Little Rock.  
**California (Northern)**—W. A. Patterson, Photo & Sound Inc., 153 Kearney St., San Francisco 8.  
**(Southern)**—H. U. M. Higgins, War Film Coordinator, 229 North Broadway, Los Angeles.

## Trends in Audio-Visual Instruction

(Continued from page 187)

frequently for failure of teachers to get the maximum value from the film, was that the teachers do not know how to use the film, or do not understand its function. Further study of this chart shows the sound film as having preference on all grade levels. Although several qualified their answers by stating that teachers would not use silent films, their reactions were given on preference rather than from experience.

Chart VIII shows that 135 of the 165 schools reporting own radios. Most of the schools are apparently using the radio for class instruction since the common practice is to use the machine in the class room. Apparently the teachers are attempting to utilize not only the programs that come during school hours, but also those that are scheduled in "out of school hours". A total of 111, out of the 126 replying, indicate that transcriptions will lead to a wider use of radio programs. Machines for making records are used almost as much by music classes as they are by literature, language, and speech combined.

# The Curriculum Clinic

## Should It Be Audio-Visual Aids or Audio-Visual Materials?

G. LESTER ANDERSON  
University of Minnesota

FILMS, records, slides, models, the radio and television, are called *audio-visual aids*, as every teacher knows. Implicit, if not explicit, in the typical teacher's attitude toward, and use of, such materials is the idea that they are "aids", devices by which one can, perhaps, teach with greater economy of time and energy those things which would be taught anyway, whether or not such aids were available. This is a limited conception of the use of such materials. It must be replaced by an attitude toward, and use of, such materials which conceives of them not as "aids" to the management or learning of other materials—traditionally the printed page and the spoken word—but as materials which are important and significant in their own right.

Learning is best defined as change in behavior which is correlated with experience. Experience is the method of modern education. The teacher is the organizer of experience—experience which will result in ways of acting and thinking which are deemed significant educationally.

The experiences within the school cannot be direct. Education resorts to the various devices which have been devised by men to record experience. Lincoln's or Roosevelt's inaugural address is printed or recorded in a transcription. The conquest of Iwo Jima is photographed and becomes our newsreel. Wordsworth has great thoughts and they are printed in a poem.

These "records" among other things are the raw materials of education. They are the materials with which pupils interact, hence they are the materials of the educative experience. A modern program of education cannot limit itself to printed materials and the spoken word of the teacher. All the various media which men have devised to record or symbolize men's experiences, and out of which come their feelings, thoughts, ideas, skills, appreciations, attitudes, and motives, are legitimately educational materials.

This contrast between an *audio-visual aids* and *audio-visual materials* approach to films, transcriptions, and so on, can be drawn another way. As aids, such materials are thought of primarily as devices of instruction. They are used to initiate, orient, motivate, guide, or summarize instruction. As materials they are primarily materials of curriculum. As curriculum materials their role is not to motivate, guide, or summarize. Rather, they are to be figuratively handled or manipulated, studied and learned for their own sake.

While it is true that a distinction between curriculum and instruction is difficult to defend when the curriculum is looked upon as experience, most classroom teachers and principals would still make such a distinction. In their minds the audio-visual aid is used,

WALTER A. WITTICH, Editor  
Bureau of Visual Instruction  
The University of Wisconsin

---

**EDITOR'S NOTE:** It is high time that we look upon the film in the classroom as a powerful means of communicating ideas which, in many cases, is even a better form of experience than actually being there or living through the learning situation. This article very cleverly points out what thinking teachers now know; namely, that the teaching film is not a crutch, a support, or a mere aid, but rather it is an experience in living, a portion of our environment, an experience with which children interact, learn and guide their thinking. Hence, let's seize upon the teaching film as a valuable curriculum material.

---

for example, to motivate or summarize; it is not an integral part of experience. Let us illustrate, however, the idea that audio-visual materials are curriculum material. If one could approach, let us say, the study of *Othello* without the stereotypes of educational procedure to guide one, which would be the better material to deal with—*Othello* as printed material, *Othello* as recently recorded by Columbia with Paul Robeson, or *Othello* on a sound film? Probably we should say that most educative experience would be to see *Othello* on the stage, but lacking that experience we would choose the film, the record, and the printed play in that order. The point is that *Othello* on a film or on records is curriculum material and *Othello* printed becomes the aid. The film or record has significance in its own right.

To maintain an educationally sound position, we should perhaps say that the study of any material—be it *Othello* or American history or the function of angles, is seldom an end in itself. The study of *Othello* among other things contributes to our understanding of human nature. The study of American history is undertaken in part so that we can better solve current social problems. The navigator of a B-29 has studied the function of angles so that he can plot his course, arrive at his target, and get home again. Nevertheless, we do not speak of the study of *Othello*, American history, or functions of angles as aids; we consider the study of these materials as being intrinsically significant.

Man has in recent years devised new techniques for recording and transmitting his experiences—the radio, the film, and television. These techniques are of the same cloth as printing. Except for academic inertia and academic tradition these communication media would be used on a qualitative basis of equality with printing in the classrooms of America.

Radio, film and television have won their place as aids, but let us not confine our use of them to that level. Let us rather define our educational goals and purposes, and select our materials—be they printed, photographed, or recorded in wax—and proceed to the free use of them as the materials with which pupils interact without the limiting attitude that they are "aids to instruction".

# KNOWLEDGE-- ---up to the minute

NEW facts, new developments, new changes arise daily out of the swiftly moving events in a world geared to war and war production.

The Spencer Model VA Delineascope is performing an invaluable service, because, in addition to lantern slides, it can project the printed page, charts, photographs, diagrams and even opaque parts and objects. *Visually*, it keeps military, production and training groups, large and small, abreast of last-minute developments.

Many of these Delineascopes are now being released for civilian, school and college use. Write us for details.

*More than 50,000 teachers have requested a copy of our free manual—"Opaque Projection—A new Frontier in teaching."*

AMERICAN OPTICAL COMPANY

# The ABC's of Visual Equipment

**O**UR projectors like our automobiles are growing older every day. Unlike the brook they cannot go on forever. Proper care of projectors, always important, is vital in wartime. The prospect of replacing and adding projection equipment in the schools is still not too bright, yet the steadily increasing use of films places a heavier demand on equipment than ever.

While the existence of simple trouble-free equipment is a pious hope for the future, there is now a dire need for common-sense care of the more or less complicated mechanical-optical-electronic device that delivers the audio-visual experience to the pupil. **J. E. D.**

Edited by  
**JOSEPH E. DICKMAN**  
and **PHILIP MANNINO**

## Care of 16 mm. Sound Projectors

**T**HE care of the 16mm. sound-on-film projector is so simple that no special skills are required. By observing the following few simple rules you will get dependable service at a minimum of cost.

**Rule 1.** Select a custodian.

Let him have complete charge of the equipment. It will be his duty to see that the equipment will have the proper care. He must approve all persons who are to use it. He will have on hand all necessary supplies to keep the equipment in proper working order. It will be his duty to see that the equipment is used properly, kept clean, and correctly oiled.

**Rule 2.** Use care in transportation.

Since the projector is portable it may be moved from one installation to another. Most 16mm. sound-on-film projectors are housed in carrying cases. Some are contained in one unit weighing from 60 to 90 lbs.; others are contained in two separate units each weighing from 40 to 50 lbs.

When transporting these cases, caution should be taken that they are not bumped. Projectors are precision-built and are made to take a certain amount of abuse, but there is a limit. Handle them as you would a \$500 radio. Set them down gently. When transporting them by car, set them in the car where they will be cushioned against road shocks.

**Rule 3.** Use care in setting up for a show.

Place the projector on a sturdy table of sufficient height. This is necessary in order to avoid the use of makeshift elevators such as books or blocks of wood. Sometimes the projector seems solid enough at first, but the shifting of the weight of the film from the feed-reel to the take-up reel, especially when using a large 1,600 ft. film, may cause the projector to go off balance and fall, inflicting serious damage on the projector. The line and speaker cords must be placed out of the way so that no one can trip over them. These cords might be strung high on hooks along the wall. Another precaution that will pay dividends is to wrap a turn or two of the line and speaker cord around the table leg. Then, if anyone should happen to trip over these cords, the table would get the shock

and not the projector. Use a similar method at the speaker end; it will prevent torn-out plugs and wires.

**Rule 4.** Always oil and clean the projector before each showing.

In oiling the projector follow the manufacturer's directions. Use only the oil he recommends. If other oil is used trouble may develop as it may gum on the gears and cause the projector to become sluggish. Never over-oil the projector. Too much oil will get into non-mechanical parts and damage them. It will also get on the film, lenses and condensers, seriously reducing picture brilliance. Make sure all rollers and idlers run free. A sticking roller or idler may scratch film.

Clean the projector before every showing. Especially clean every part that the film will touch. Clean the sprocket teeth and get the emulsion and dirt off the channel and rollers. Use alcohol or carbon tetrachloride on a camel hair brush or cue tip (available at any drug store) to get out all the dirt. Never use a sharp object to remove the dirt; it may nick the parts and cause scratches on the film.

When using new film it may be necessary to clean the projector before every reel. On new film the emulsion is soft and will stick to the film channel and on sprockets. This will cause the film to jam and tear out sprocket holes or cause the film to chatter, producing a jumpy picture on the screen. Clean the objective and condensing lenses to get a bright, clear picture.

**Rule 5.** In case of break-down let only an experienced repair man work on your projector.

When projector failure occurs, if it is beyond the repairing of belts, replacing lamps, replacing amplifier tubes, or motor brushes, don't let amateurs tinker with it. They usually aggravate the damage, turning a minor repair into a major one. Special tools and skills are needed for serious repairs, and usually these are to be found only in the factory or in your dealer's repair shop.

Amplifier trouble can be corrected usually by your local radio repairman, but when taking the projector to him take along the amplifier schematic circuit diagram so that he will know where to locate the trouble. He can replace defective parts which are standard. Some parts, not standard, usually can be had from his jobber. Of course a regular projector dealer will carry all parts. If you are near him let him do the job.

**Rule 6.** Store the equipment properly.

When the showing is completed the projector should be taken down and the arms, cords and spare reels placed in their proper compartments. See that everything is in place for the next user. One missing item may ruin the show.

*for the*  
**World of Tomorrow**

**T**HOUSANDS of teachers confronted with the problems of modern education agree that instructional classroom films help immeasurably in speeding the learning process—help the teacher in preparing the student of Today for the inevitable responsibilities of citizenship in the World of Tomorrow.

With this educational goal ever in view—the Instructional Films Division of I. T. & T. takes understandable pride in the part it plays—by offering educators, through its subsidiary Walter O. Gutlohn, Inc., an authoritative film library of over 1000 subjects from which selections can be made to integrate successfully with school curricula.

Name of School: .....

Address of School: .....

Before storing the projector make sure spare projector and exciter lamps, spare belts, and cleaning implements are in the cases. Put dust-proof covers over the cases and store them in a dust-free, dry place.

**Rule 7.** Have your projector overhauled periodically.

At the end of the school year your projector should be given a complete overhaul, cleaning, and adjustment. No matter how well it is working it will need some attention. This will not only assure top performance in projection but will prolong the life of the projector and prove a real economy in the long run.

## St. Louis Division of Audio Visual Education Anniversary

**T**HE Division of Audio-Visual Education of the St. Louis Public Schools, which celebrated its fortieth anniversary on Wednesday, April 11, 1945, is the oldest institution of its kind in the United States. Just as the Division, formerly known as the Educational Museum, pioneered in a new field of education at the turn of the century, so the St. Louis school system today is among the leaders in the nation in developing and expanding audio-visual teaching materials.

In celebration of its anniversary, the Division held open house at its headquarters, 4466 Olive Street. A highlight of the program at the reception was a fifteen-minute radio broadcast by Station KMOX dramatizing the history of the Division of Audio-Visual Education. Teachers, parents, and students were invited to tune their radios to this station to participate in the city-wide radio celebration of the anniversary.

The Educational Museum had its inception in the St. Louis World's Fair when exhibits from all corners of the earth were assembled in Forest Park. The late F. Louis Soldan, then Superintendent of Instruction, and the late Carl G. Rathman, Assistant Super-

Elizabeth Golterman (left), with Amelia Meissner (center) at the fortieth anniversary celebration.

intendent, recognized the unusual opportunity which would never return—and appealed to the exhibitors to donate parts of their displays to the public schools. Many interesting exhibits were secured by the Board of Education and these formed the nucleus of the Educational Museum. This material was assembled in the Wyman School Building and, on April 11, 1905, Superintendent Soldan formally invited the Board of Education to inspect the exhibits which would be sent to teachers for use in the classrooms.

Miss Amelia Meissner was appointed the first curator of the Museum, a position which she held until her retirement in 1944. Under her guidance was developed in the succeeding years the large collection of visual aids which are now available to St. Louis school children. The Board of Education officially changed the name of the institution from Educational Museum to the Division of Audio-Visual Education in 1943. Miss Elizabeth Golterman was named by the

Samples of exhibits at the St. Louis Division:

(Left) This case which now houses a Missouri Marsh diorama, was once a regulation golden-oak book case.

(Right) Children learn how pioneer Missourians made butter by trying out a wooden churn.

# "No Wonder the Pictures Are So BRIGHT and CLEAR!"

**THE CHALLENGER MODEL**  
Square size (for vertical slides) locks auto-  
matically at rectangular size (for movies)

A prominent educator made the above remark recently after learning how carefully Da-Lite Glass-Beaded Screens are made.

The specially selected plastic-coated fabric in Da-Lite screens is snow-white and therefore absolutely neutral in reflecting the true colors of colored pictures. The surface is covered uniformly, by Da-Lite's exclusive process, with millions of tiny glass beads of highest quality. Da-Lite's method of

beading screen fabric results in maximum light reflection over the entire picture area. It also assures firm adherence of the beads to the fabric.

Ask your visual education dealer for time-proved glass-beaded screens, available in many styles and sizes for all requirements.

*Look for the Name*

*When You Buy!*

Board to succeed Miss Meissner as director of the Division.

When the Museum was established in 1905, a one-horse wagon which visited each school once a week was able to deliver and collect all the materials used in the individual schools. Today two large trucks, operating on regular schedules, are required to transport the Division's teaching materials. In addition to the materials used in the classrooms, special exhibits are maintained in the Division's headquarters where teachers may bring their classes for study. In recent years a lecture service has been developed through which visiting classes may learn from illustrated talks.

In 1917 the Board of Education acquired its first teaching films when the Ford Motor Company made a substantial donation of moving pictures to the St. Louis Public Schools. Since then the film library has expanded until today the Division maintains more than 2,300 teaching films, the majority of which are sound films, for loan to schools. Collections at the Division of Audio-Visual Education also include 39,995 photographs, 1,500 filmstrips, 12,772 booklets, 8,360 lantern slides (both standard and 2x2), 352 foreign dolls, 1,400 phonograph records, and 9,875 separate specimens to illustrate science lessons.

Recognizing the importance of audio-visual aids in a progressive school program, Philip J. Hickey, Superintendent of Instruction, appointed a Visual Education Committee in 1942, composed of classroom

teachers and principals. Cooperating with the staff of the Division of Audio-Visual Education, this Committee made an extensive survey of visual education in the public schools. The study revealed a pronounced increase in the interests of teachers in the use of visual materials for classroom instruction and an urgent need for additional visual education materials and equipment in the schools. Using the findings of the study as a basis for his recommendations, the Superintendent of Instruction formulated a long-range visual education program in St. Louis which has been introduced and adequately financed this year by the Board of Education.

Recently the responsibility for the development of radio education in the public schools was assigned to the Division of Audio-Visual Education after the Board of Education's unanimous decision to apply to the Federal Communications Commission for the assignment of a frequency modulation wave length in the high frequency spectrum allotted to education. A Committee on Radio Education, composed of teachers and principals, has been appointed to serve as a policy making body similar to the Visual Education Committee. This Committee is working with the Division of Audio-Visual Education in the planning and production of educational broadcasts, the development of radio techniques in high schools, and the intelligent utilization of radio programs in the classrooms.

# The Literature in Visual Instruction

## A Monthly Digest

ETTA SCHNEIDER RESS, Editor

### FILMS AND LIBRARIES

- **Motion Pictures in Libraries**—Etta Schneider Ress—*Wilson Library Bulletin*, 19:561-3 April, 1945.

Although recent articles have stressed the use of films for discussion in libraries, it is pointed out that there are many other interesting ways in which a projector may be put to use. Films are a source of information and as such are worth the consideration of the library profession, especially because they may conceivably bring knowledge to the nonreading public.

Films are now being used on a tremendous scale for education outside of the school: in the armed services, for civic administration in liberated areas, in Latin America, in factories, industrial schools and the like. The movie theater is also bringing information to the public through films produced by the War Activities Committee, or by the governments of Allied Nations. But it is for the purpose of using films in educating for world citizenship that the library can make a contribution.

There are two broad applications of the motion picture in a public library; films used in conjunction with a larger program of activities; and films used *per se*, unrelated to any other of the library's activities. As an example of the former type of use there are motion picture programs that would motivate an extensive study program, (as one on child care); those that would be used with study groups or clubs already under way (book-study group, arts and crafts, etc.); those used as part of a seasonal forum series (U. A. and World Affairs, or similar topics); those that would fit in with a recreational program, and so on.

The library could exercise its function as a community center by showing films that have no direct connection with its regular program: free public showings of new short subjects and educational releases; children's story-hour movies; film forums held at regular intervals, wherein the topic changes each time; and community meetings where movies are shown and brief question-and-answer periods follow.

Whenever movies are used in a library it is important that the librarian be convinced of their value, that the purpose be clear, and that there be some planning and preparation in advance.

### TRENDS

- **Eyes for War**—*U. S. Camera* 8: no. 2 30-31 March, 1945.

A brief statement is given of the use of audio-visual training aids in the Navy, especially the service rendered through the Training Aids Development Center in N. Y. C. Definite proof of the advance made in educational training is that recruit training which originally took 12 weeks now has been cut down to 6 weeks. . . . It is reasonable to believe that the recruits have learned as much.

Of special interest are the three excellent charts that illustrate the article. They represent the specialized type of teaching aid developed by the Navy.

### RELIGIOUS EDUCATION

- **Basic Problems in Visual Instruction**—Paul G. Kiehl—*The American Lutheran*, February, March and April, 1945.

The first three in a series of eight articles to be published as a basis for understanding the value of visual aids in the church program.

The author reviews some of the well-known principles and reasons for using visual aids in any educational program. He indicates some of the reasons for slow progress, and then enumerates the range of materials included in "visual aids."

### UTILIZATION

- **The Science Teaching Film Comes to the Elementary Grades**—W. A. Wittich—*School Science and Mathematics*, 45:298 April, '45.

At the primary level there are films on natural history, such as *The Black Bear Twins*, *Robin Redbreast*, and so on, that establish visual imagery and thus serve as a background for both reading and language arts.

At the intermediate level, where natural science phenomena become increasingly complex, authentic realistic experiences are necessary. The thinking teacher will investigate the text film, will select only those that are true text films. She will avoid using great numbers of them and will use those few with full realization that the tried and true tenet of psychology and classroom method are necessary.

- **Visual Tools in Learning**—Paul T. Williams, supervisor of Visual Education, N. Y. State Department of Education, Albany—*N. Y. State Education*, 32:440 March, 1945.

Visual tools are, in themselves, reservoirs of potential aid in the direction of assisting the teacher in his job. If these tools are left to "drift for themselves" they will be of very little instructional value. In evaluating them we must be realistic, neither a "flat rejector", nor an "all-out acceptor."

There is no one visual tool that will do the best job for every teaching situation. There is, however, a particular job that can best be done by a specific tool, assuming it is well used.

The article gives a lucid exposition of how visual tools may be used and should be examined in its entirety.

### PRODUCTION PROBLEMS

- **Critical Report on Inter-American Films**—*Film News*, 6: No. 4, p. 5, April, 1945.

Part of the critical report, "Latin America in School and College Teaching Materials" by the American Council on Education includes a discussion of the motion picture program of the CIAA as it operated before November, 1943. This chapter was written by Helen Hardt Seaton of the Council, and Keith Adamson of the State Department.

Recommendations were mainly to producers, indicating where good films are yet to be made to supplement what the CIAA is distributing. There is a need to distinguish between films for instruction and those for general information to be used with nonschool audiences. Suggestions are also given to theatrical producers of short subjects, as travel films.

- **Health Film Production**—Adolf Nichtenhauser, M. D.—*Film News* 6: No. 2 p. 3 February, 1945.

There is a general belief that health films are bound to become the most important type of educational films produced in the postwar period. The question is whether a mere rise in output without a change in production methods is likely to yield the films we need.

We may get 10 films on the common cold, and 8 additional films on the basic foods. They may be produced in cooperation with teachers, health executives or publicity directors who have no knowledge of film technique or of health education; they may again try to tell too much in ten minutes, with many words but little action, aiming to appeal to every audience at once, but satisfying none.

There is a way of avoiding such production, viz., the

(Concluded on page 206)

# 16MM SOUND PICTURES that are **MUSTS** for **SCHOOLS**

**Now Available**

**COURAGEOUS MR. PENN**  
(Clifford Evans in title role)

A notable and inspiring photoplay on the life of one of history's great men—William Penn, compelling and timely in its application to present world problems. Penn fought in his day for the same principles over which we are now engaged in a great war—freedom from intolerance, tyranny and injustice. Settings, costumes and manners of Restoration England are strikingly portrayed as are the character, courage and final great achievement of William Penn in founding Pennsylvania and Philadelphia, and establishing those principles of Government which were later to become the foundation of our American democracy.

**Available Sept. 1st**

*(Book now and avoid disappointment later)*

## **TOM BROWN'S SCHOOL DAYS**

(Cedric Hardwicke, Freddie Bartholomew, Jimmy Lydan)

A faithful and absorbing translation of the famous classic picturing school life at Rugby in the early 19th Century. The film spotlights the career of the renowned Dr. Arnold, head-master at Rugby from 1824-41, who introduced needed reforms, replacing rowdyism with the honor system. It is a stirring film, authentic in atmosphere, finely acted and directed.

## **SWISS FAMILY ROBINSON**

(Thomas Mitchell, Edno Best, Freddie Bartholomew)

This screening of a beloved world classic has captured all the charm, engaging humor and excitement of the original. It's all there—the rebellious family taken by idealistic father from decadent London life to colonies, the ship-wreck by tidal wave, the escape to an uncharted isle on a raft of barrels, the hidden treasure, the house in the tree-tops, the fun and fear with wild animals—and all the other exciting and delightful adventures.

## **LITTLE MEN**

(Koy Francis, Jack Oakie, George Bancroft)

A rousing and modern version of Louisa M. Alcott's book, "Little Men" emerges on the screen as adult entertainment featuring drama, romance and hilarious comedy, yet retaining the charm of the original work.

systematic coordination of health film production and the development of better production methods.

First we should develop competent methods of production planning. A practical study would be made in a given area; health educators, subject matter specialists, sociologists and psychologists together with film specialists would study teaching needs and audience needs. They would prepare outlines giving purpose, content and treatment, type and range of audience, potential market, estimated cost, and so on.

#### RADIO

- **Skill in Listening**—Alice Sterner, Katharine H. Saunders, and Milton A. Kaplan—National Council of Teachers of English, Chicago 21, N. Y. 48p 1944.

The purpose of this bulletin is to strengthen the communication arts in the United States by improving one of the most important avenues of information; the auditory sense. It is noted that illiteracy, meaning the ability to read and write, can be overcome for citizenship education, by the ability to listen and speak. Listening is defined as much broader than radio listening alone; it involves every situation in which we listen to another, on the telephone, in church, in school, at the movies, and so on.

Practical suggestions are given for graded instruction in listening. Opportunities for listening are afforded by reports, by discussions, recordings and radio broadcasts. There is a chapter on how to appraise and use news reports and one on radio drama as part of education in the dramatic arts.

A useful bibliography on radio drama, sources of information on education by radio, books on the radio industry, and on radio news completes the pamphlet.

- **Radio in Postwar Education**—Nathan A. Neal, WBOE, Cleveland—*School Science and Mathematics*, 45:154-67 February, 1945.

An excellent overview of the status of broadcasting for education, indicating some possibilities for the future. Among the future developments appraised are FM, television and facsimile broadcasting. Workers in radio education are referred to the original article.

#### STILL PICTURES

- **Picture Books**—*U. S. Camera*, 8: No. 2 p. 28 March, 1945.

An illustrated review of the many photographic books about the war that are now available. The trend toward depending upon photographs to convey information is evident in this résumé, a trend which although not a new idea at all is currently very popular. Books on the best seller lists that contain excellent photographic illustrations include: Ivan Dmitri's *Flight to Everywhere*, *Battle Report*, Cecil Beaton's *British Photographers*, *Railroads at War*, Stevenson's *Child's Garden of Verses* with photographs by Toni Frissell, *First of the Many*, Bourke-White's *Purple Heart Valley* and *The Valley and Its People* (TVA).

#### STUDY GUIDE

- **Victory-to-Peace Series**—Association Press, 347 Madison Ave., N. Y. 17, N. Y.

A series of discussion guides has been prepared under the sponsorship of the Motion Picture Bureau of the YMCA and the Institute of Adult Education, Teachers College, Columbia University to assist forum leaders who are using motion pictures as the basis of discussion. Films for which guides are already available include: *Peace Builders*, *Postwar Jobs*, *Negro Soldier*, *The Bridge*, *Partners in Production*, *War Where You Live*, *Our Enemy the Japanese*.

The guides are brief, four-page leaflets which contain some background information and related filmstrips, films and books.

## The Film and International Understanding

(Concluded from page 193)

the film. In the church schools the emphasis is likely to be on mutual interests of the children shown in the film with the children in the school. The teacher, for example after showing *Children of Africa*, might ask the children to tell how the children in the film helped their mothers. She might then ask the children how they help their own mothers thus making the point that African children have homes and mothers and household chores which are just as important to them as ours are to us. Thus the children in the school come to realize that Africans are "people" . . . an important first step in international or inter-racial understanding. Kodachromes are used in the same way.

As in the public schools the use of visual aids often lead to special projects. The children may be stimulated, for example, to make a model of an African village or to present a drama written by themselves about life in foreign lands. In both cases the projects lead to further study of the country involved . . . and to better understanding. Oftentimes the film or the following project leads to an exchange of letters, and even of toys, with children of other countries.

Church mission studies are planned by the Missionary Education Movement, an interdenominational agency, so that a different country or area is covered each year. During the past year South East Asia has been the territory under consideration. In this connection *High Stakes in the East*, a film dealing with the Netherlands East Indies, has been very widely used. Next year India is the country to be studied and the mission boards are hopeful of producing their own film in this field.

Several denominational and interdenominational agencies are now promoting the study of international relations and their bearing on peace. There is not a great deal of religious visual material bearing directly on this subject as yet, but good use has been made of the film strips *How to Conquer War* and *We Are All Brothers*. Some use has also been made of films such as *World of Plenty*.

### Present Trends

Two unusual recent films have been used very effectively in promoting foreign missions with corresponding values in international or inter-racial understanding. In 1944 the National Council of the Protestant Episcopal Church arranged for the production of *We Too Receive* by Cathedral Films. This film based on a recent news story tells of an American pilot shot down over New Guinea who was rescued by natives educated in a mission school. The film contains no direct promotion of missions—only the incidental reference to the mission school. While the theme, of course, is that the missionary movement is a two way proposition it is obvious from the picture that even the New Guinea native who comes immediately out of an uncivilized background has human worth which can be further developed through friendship and understanding. This film was shown in three to four thousand Episcopal churches inside of four months. Results were so satisfactory that the National Council is arranging to produce another film for use in its every member canvass next fall. *We Too Receive* is so entirely free from denominationalism that it is now being used by churches of many denominations.

A couple of years ago several mission board executives saw a theatrical presentation of John Steinbeck's *The Forgotten Village* and were impressed with its value in promoting understanding of the underprivileged people of nations throughout the world. The picture contains no scenes of missionary activities but is the simple story of a family in a remote Indian village in the mountains of Mexico. The people are poor, ignorant and so superstitious that when an epidemic strikes down the children of the village they depend upon the charms of the "wise-woman" in preference to the medical assistance of doctors and nurses brought from Mexico City by a heroic young man of the village. In spite of the scenes of poverty and human misery the picture stimulates the feeling that the courage of the young man and his village teacher shows that here is a people worth knowing and helping.

*The Forgotten Village* has been leased by a number of denominational mission boards and shown in hundreds of churches and missionary gatherings across the country. Similarly the churches have made a rather wide use of films released by the Office of the Coordinator of Inter-American Affairs as background material for mission studies of Latin America.

At the present time there is a very strong trend in the direction of joint production by the churches of films on the mission fields. The idea would be to combine financial resources to secure technically excellent productions which all could use and which would be supplemented by short films featuring the work of individual denominations. In fact this is one of the developments contemplated by the churches now as they consider plans for creating the Protestant Film Commission—of which more will doubtless be heard later. In any event it is probable that the films which are jointly produced will deal largely with backgrounds of life in foreign countries and as a result will be beneficial to the total movement for international understanding.

## New Directors of Visual Aids in Cleveland and Detroit

Mr. Lesley Frye, who has been associated with the Cleveland Public School System for several years, has succeeded Max Klein as Director of Visual Education for the Cleveland Public Schools. He has also been appointed State Seventh War Loan Chairman for Ohio.

In Detroit, Mr. Joseph K. Boltz has relinquished the direction of the Department of Visual Education to take a position on the staff of the Detroit Citizenship Study. His successor has not been named yet but the work of the Department will be carried on by Dr. Arthur Stenius, Coordinator.

## Change in Office of Inter-American Affairs

Under an executive order in March, the President changed the name of the agency formerly known as the Coordinator of Inter-American Affairs to the Office of Inter-American Affairs, and appointed Wallace K. Harrison director, at a salary of \$10,000 a year. Mr. Harrison has been acting executive officer since Nelson A. Rockefeller, formerly CIAA director, was named Assistant Secretary of State. He formerly was also acting head of Hemisphere Films, which was organized last year to carry on the film work of CIAA after the war. This company, however, is expected to be dissolved soon, since its intended program may be carried out by the State Department.

## Film on Sight Prepared for Industrial Plants

A three-reel 16mm sound motion picture on care of the eyes has been made by the U. S. Department of Labor for showing in industrial establishments before groups of workers and supervisors. The film features Milton M. Bowman, Eye Safety Consultant, dramatizing the talks he has given before war workers. Twenty-four illustrations of the importance of eye care to the war effort, are given.

The film may be obtained on free loan through the regional safety offices of the Department of Labor

## More Navy Incentive Films

Three new Navy motion pictures, containing some of the most vivid combat action of the war, are now available for showing to war plants, Rear Admiral Clark H. Woodward, Chief of the Navy's Industrial Incentive Division, has announced.

The new films are *Pacific Milk Run*, which emphasizes the long-term job of whittling down an estimated quarter million Japs who are active on by-passed Pacific Islands; *Brought to Action*, an epic account of the second naval battle of the Philippines; and *Corregidor to Iwo Jima*, which depicts the mighty invasion and bloody struggle of Iwo Jima.

Other current Navy films available in both 16 and 35mm. sizes include *LVT-Beachbuster*, the story of the Marine Corps' versatile amphibian and its key role in the Pacific offensive; and *On to Tokyo*, which high-

# Notes

lights surprise landings at Mindoro and B-29 raids over Tokyo. The films listed are obtainable from 85 official depositories of Army and Navy incentive films.

## Tyler To Head AER Coming Year

In the annual election just completed for 1945-46' officers of the Association for Education by Radio Dr. I. Keith Tyler, Director of Radio for Ohio State University was re-elected president. Luke Roberts, educational director for station KOIN, Portland, Oregon was elected vice-president; Robert Hudson, Director of the Denver Rocky Mountain Radio Council, 2nd vice-president; Kathleen Nichols Lardie, Supervisor of Radio for the Detroit Public Schools, secretary; George Jennings, acting director of the Radio Council—station WBEZ of the Chicago Public Schools, treasurer.

## Conferences and Workshops

Under the sponsorship of the State Department of Instruction, a conference on post-war educational plans was held on April 27th at the University of New Mexico in Albuquerque. C. R. Crakes, Educational Director of the DeVry Corporation, addressed the conference and presented detailed recommendations for setting up a visual education program in the schools of New Mexico.

Miss Norma Barts, Visual Aids Counselor for the DeVry Corporation, will be in charge of a series of one-week workshops and conferences on audio-visual instruction, to be held as follows:

Week of June 25th, University of South Carolina, Columbia. Week of July 23rd, St. Mary's College, Los Angeles. Week of July 30th, Highlands University, Las Vegas, New Mexico.

Morning and afternoon sessions will give attention to all forms of audio-visual materials of instruction and equipment.

A visual education conference under the chairmanship of Dr. Otto A. Hankammer will be held at the Pittsburg, Kansas, Teachers College June 13 and 14, headed by Dr. Walter A. Wittich of the University of Wisconsin and Lt. James E. Brown, Officer-in-Charge, Training Aids Section, Ninth Naval District.

Dr. Wittich will speak Wednesday morning on "The Power of the Teaching Film", and Thursday morning on "Newest Tool to Learning." He will also conduct demonstrations at the afternoon sessions, one on the secondary level the first day, on the elementary level the following day.

The titles of Lt. Brown's addresses will be "How Training Aids Materials Are Serving the Armed Forces," and "College-Level Implications of the Armed Forces Training Aids Programs."

The Division of Instructional Service, North Carolina State Department of Public Instruction, sponsored a series of five state Audio-Visual Education Institutes the week of March 12-17, in the cities of Greensboro, Asheville, Charlotte, Fayetteville, Greenville and

Raleigh. Preparing the room for projection, operation and maintenance of projection equipment, and the techniques of using films in the classroom, were topics discussed.

### Nurses School Finds Films Great Aid in Training

Several months experience with the Victor Animatophone sound motion picture projector presented by the Oak Cliff, Texas, Lions Club, has proved its great value in nurses' training, according to officials of the School of Nursing of Methodist Hospital, Dallas.

Writing in the Cadet Corps Chronicle, official publication of the hospital school, Lydia Whithurst, R. N., Clinical Instructor reports, in part:

"The Nursing Education Program already being accelerated under the U. S. Cadet Nurse Corps Program was quick to recognize the value of visual education. Just as the Army was able to use this means of teaching large numbers of men quickly and thoroughly, the schools of nursing have employed the same means to the same ends. Student nurses who have previously spent long hours in classrooms listening to lectures on surgical procedures are now able to see these procedures demonstrated in half the time by use of the movie projector. This means of teaching saves valuable teaching hours in schools where the current nursing shortage has cut the educational staff to the minimum. Student nurses are more interested and thus absorb details which would have otherwise been overlooked.

"However, the movie projector need not be regarded principally as a teaching unit during war time. With a loosening of priority on new unused film, a new field will be opened. Each individual nursing school will be able actually to take moving pictures of any procedure of educational value. The appearance of a patient suffering from some rare disease can be photographed and copies of this film sent to other schools where such a disease may not be seen. Surgical operations performed by specialists in the field and the accompanying nurse assistance will penetrate remote rural schools of nursing. With the rapid advance of modern medicine new nursing procedures must be evolved. They can be photographed in the school in which they originated and be shown in schools all over the country long before a book on the subject could be printed."

High tribute to the efficacy of the equipment was also paid by Janette Hughes, R. N., Director of Nurses, in a letter to the Victor Animatograph Corporation, Davenport, Iowa, stating "The Victor Machine has been the most valuable teaching equipment we have ever had in our nursing educational department and I assure you that visual education is much more effective than many of the traditional methods used in the past."

## Good Film Library Service?

(Concluded from page 191)

title of picture wanted—and possible second choice. Better still is a description of the occasion, and type of audience and the length and approximate price range of the program, with the choice left to the library.

Here the experience and human qualities of the expert film booker go to work. She checks to see whether any print of the selected subject is available for the desired booking date—if not, she "blocks" a suitable substitute, first checking her record of all previous rentals by the patron to assure against duplication. If time permits the patron is consulted on the substitution, if not it is shipped nevertheless, for "the show must go on." This "customer card" carries data on earlier general instructions and indicated preference—also less complimentary notations if the patron has made himself a bad record for repeated film damage.

Booking cards are numerical, the numbering scheme designed to group films by source and class, thus facilitating substitution and group booking. A master file lists titles alphabetically while the general catalog groups them by subject.

The rental order is typed in numerous copies, one going to the patron as an acknowledgement-invoice.

### Shipments and Returns

The shipping date is fixed with transportation conditions in mind, and is generally as early as the prior renting schedule of the prints will permit. The library must work on the premise that prior renters will start prints back promptly, either on the booking date or at very latest the day after. Failure to do this dislocates later schedules, penalizes the library with the expensive extra work of making last minute emergency substitutions, and subjects the innocent later renters to the annoyance of getting a program different from the one announced. Fortunately such late returns are rare and getting rarer. But they also are noted on the customer card—and in flagrant cases the offender is billed for extra rental time.

The typed orders are filed by shipping date. Other copies, in numerical and alphabetical sequence respectively, permit instant cross-checking. On or before the shipping date the order is picked. Delayed returns and the partially-picked orders awaiting them are red-flagged to permit last minute inspection and inclusion. The Receiving Department automatically gives special handling to films arriving after the scheduled due-back date. Several times daily express trucks make their pickups, or parcel post shipments are dispatched. The programs are on their way to school, church, club, private home or other community unit to entertain or to inspire or to teach. The film rental library has done its job. It represents a unique and vital service channel for education, recreation and communication in our increasingly complex community. The highest standards should govern its services. For the present, libraries that give this service enjoy a well-deserved competitive advantage. For the good of the industry and of the community interests it serves, however, the sacrifice of this "edge" will be a worthy forfeit when all other film rental sources also come to operate on the highest attainable level of service.

# Current Film News

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, report the release of the 16mm sound film.

**Outworking**—13 min.—which shows men and women putting in their spare time to break up bottlenecks in munition-making, either by work at home or in groups at outwork depots in their communities. These workers are volunteers, on short shifts and paid standard wages. They include housewives, teachers, actors, clerks. Chorus girls put in extra hours making camouflage nets. Carbon cylinders for radios are farmed out and readily produced by village wives and mothers. A home worker makes frames for packing parachutes. There is no clocking in and very little absenteeism. By breaking down mechanical production into a number of simple operations it has been discovered that intricate assemblies can be undertaken by outworking units. The film shows numerous examples of this novel method of stepping up production of urgently needed wartime weapons.

■ **OFFICE OF WAR INFORMATION**, Bureau of Motion Pictures, Washington, D. C. has completed arrangements with the War Department to distribute henceforth industrial incentive films released by the Industrial Services Division, Bureau of Public Relations, War Department. Only those subjects designed exclusively for war plants will continue to be distributed by the War Department and the three commercial distributors who have been doing the job—Castle, Gulton and Modern Talking Picture Service.

25 subjects so far have been transferred to OWI for release through its regular distributors. These films are:

**Army Air Forces Report**—40 min.—Gen. Henry Arnold's official report on the organization and expansion of our Air Forces, locations and missions of our 15 Air Forces in action, and the job done by American workers, fliers and ground crews.

**The Case of the Tremendous Trifle**—20 min.—dramatizing the important war role of small parts and the workers who make them.

**Cotton at War**—13 min.—its vital importance in the war program.

**Earthmovers**—14 min.—shows heavy equipment in use by Corps of Engineers and Seabees.

**The Hidden Army**—17 min.—how women rallied to make good the material shortages.

**Lifeline**—18 min.—record of the opening attack against Rendova and Munda and the magnificent job done in saving American lives.

**They Deliver the Goods**—20 min.—graphic portrayal of the never-ending battle of supply.

**Road to Berlin**—20 min.—how submarines menaced our convoys; the importance of many jobs, big and small, performed by those who are vital links in the life line to the front and whose war work has received little publicity.

**Film Communiques No. 1-11**—eleven films covering a variety of war subjects.

**Why We Fight Series**—a group of five pictures that show the war worker the enemy's methods of education,

military propaganda and "incidents." They are a dramatic picturization of why we fight. The titles are: *Prelude to War*, *The Nazis Strike*, *Divide and Conquer*, *Battle of Britain*, *The Battle of Russia*.

■ **PICTORIAL FILMS, INC.**, RKO Building, Rockefeller Center, New York, has signed a renewal contract with RKO-Radio Pictures for the 16mm distribution of 13 additional subjects in the series of 2-reel documentary films *This is America*.

"Sailors All", "Letter to a Hero", "New Men", "Mail Call", "News Front",

The illusion of intimate reality is constantly maintained on film. Many successful marketing men have been utilizing the power of informative movies for some time—and the Armed Forces have further proved this medium for implanting knowledge to be a faster, surer method.

Informative movies provide constructive data, assure continued utilization of your product, and promote greater customer satisfaction.

We are proficient in the making of special films that tell your story easily and quickly. Let us know your problem.

**FILMCRAFT** *Productions*  
 203 W. JACKSON BLVD., • CHICAGO 6, ILL.

 Eastern Office: 2828 Decatur Ave., Bronx, N. Y.—FOrdham 7-9300

Aircraft Carrier", "Viva Mexico", "Hot Money", "They Fight Again", "Rockefeller Center", "Brazil Today", "That They May Live", "Navy Yard", are the titles of the new 13, making 25 in the complete *This is America* set to date.

Pictorial Films will announce a new policy in distributing this series shortly.

■ **OFFICIAL FILMS**, 625 Madison Ave., New York 22, announce the following new releases in their 1945 Volume of News Thrills:

**Iwo-Jima**—the most desperate battle in Marine history. After a terrific 70-

day bombardment by air and sea, 800 ships bring 40,000 marines for the invasion. At a cost of many lives and hundreds of landing craft, the air fields fall to our troops. The film concludes with the raising of the U. S. flag on Mt. Suribachi. Official's initial sound prints of Iwo-Jima did not include this footage. It later came through unexpected-

■ **THE JAM HANDY ORGANIZATION**, 2900 E. Grand Blvd., Detroit, Michigan, has produced a new film for the Ralston Purina Company on:

**The Science of Milk Production**—4 reels in 16mm sound. The film condenses a vast amount of scientific data into a simple and easily understood account of how the cow functions as a "milk factory." It was produced with the cooperation of Professor W. E. Peterson, nationally-known authority on

ly, and Official announces that purchasers of the original sound prints may obtain the additional footage on the raising of the flag on Mt. Suribachi from local photographic dealers, without charge.

**Manila Liberated**. Against fierce Jap resistance American troops recapture the capital of the Philippines, and joyous citizens hail the liberating Yanks. In the same reel are shown the Lingayen Gulf Battle, landings on Leyte and Luzon and spectacular paratroop attack and recapture of Corregidor.

■ **OFFICE OF INTER-AMERICAN AFFAIRS**, which is now the official name for the former Coordinator of Inter-American Affairs, 444 Madison Avenue, New York 22, lists six new subjects in its most recent newsletter, including three Julien Bryan productions:

**Bolivia**—20 min.—pointing out the geographic, climatic and productive conditions of the country.

**Peru**—20 min.—a study of its modern social and economic life, and of the attempt to meet current problems.

**Uruguay**—16 min.—a pictorial journey which indicates the relative ease, wealth and contentment of the people, as well as the agricultural and economic basis of the country's good fortune.

The following two films were produced in collaboration with the Office of Strategic Services:

**Southern Brazil**—20 min.—dealing with the states of Parana, Santa Catarina and Rio Grande de Sul, Brazil's great cattle country and its granary.

**Wings Over Brazil**—15 min.—the progress made by Brazil in aviation.

dairy husbandry at the University of Minnesota, whose studies of and experiments with the milk cow form the basis of much of the film's content. Other findings were contributed by the Ralston Purina Research Department. The film shows that the productive life of a cow is in four periods—dry cow, calf, growing heifer, and milk cow. Through the use of animation, and natural color in some sequences, is revealed the workings of the cow's digestive and milk-producing organs. The correct diet for the cow is stressed, and the importance of proper milking, if the product is to be plentiful and of good quality. The correct use of the milking machine is explained and demonstrated. Schools and other organizations interested in showing this film are directed to write to the Ralston Purina Company, St. Louis, Mo.

The others subject available, is:

**Gracias Amigos**—20 min.—a dramatic story, narrated by Lowell Thomas, of the contribution made by our southern republics to the winning of World War II.

### Entertainment Releases in 16mm

■ **COMMONWEALTH PICTURES CORPORATION**, 729 Seventh Avenue, New York 19, has acquired exclusive 16 mm. distribution rights to the United Artists feature release:

**International Lady**—12 reels—starring George Brent, Ilona Massey and Basil Rathbone—a drama of mystery

and intrigue, a combination of exciting adventure and romance with much suspenseful action.

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, have acquired many Universal features which have recently been released in 16mm, among them:

**Crazy House**—8 reels—a mad, merry tale providing opportunity for the crazy antics of Olsen and Johnson.

**His Butler's Sister**—9 reels—starring Deanna Durbin, Franchot Tone and Pat O'Brien. Young singer finds her

brother a butler, instead of millionaire as she had been led to believe, but through him she gets audition with his boss and finds happiness.

**You're a Lucky Fellow, Mr. Smith**—6 reels—concerning a marriage of convenience between willful heiress and young soldier. Much of the action takes place in a pullman car, sidetracked because of a fictitious measles scare. The cast includes Allan Jones, Evelyn Ankers, Billie Burke, and Patsy O'Connor, the new juvenile star.

# AMONG THE PRODUCERS

## New Opaque Projector Available

A new projector for opaque material has been produced and put on the market by the Charles Beseler Company, 243 East 23rd Street, New York 10. This Beseler Model OA Opaque projector is the latest product of this well-known and long-existing firm in the projector manufacturing field. Simple in construction, light weight, and easy to operate, the projector has been widely and successfully used in training service men in the various branches of the Army and Navy. It will project material up to 5" x 5" in size, is equipped with a 300-watt prefocus lamp and sells at an extremely modest price. Further information will be supplied on request to the Charles Beseler Company.

## Color Slides Distribution

Exclusive distribution of the 2x2 color slides produced by Dr. Block of Los Angeles, is now being handled by Munday and Collins, 814 West Eighth Street, Los Angeles 14. A variety of subject matter, carefully prepared for elementary, high school and college levels, is currently available, including such studies as Trees, Fruits, Vegetables, Flowers, Farming, Animals, Harbor Activities and many others. Function and Form in Modern Housing has been designed for Home-Making and Home-Planning Classes. Study guides accompany each separate series.

## A Slidefilm for Home Economics Classes

A 50-frame all-color slidefilm, *How to Cook Meat by Dry Heat*, accompanied by a teacher's manual, is now available for the use of home economics teachers in instructing their students in the techniques of roasting, broiling, and pan-broiling meat. Produced for the National Live Stock & Meat Board by Francisco Films, Chicago, this material is being distributed through the Society for Visual Education, 100 East Ohio Street, Chicago.

## Kodachromes on Forestry and Lumbering

Western Colorfilms, 3734 N. E. Chico Street, Portland 13, Oregon, producers of motion pictures, slides and filmstrips, announce the availability of visual aids on western subjects in the fields of forestry, lumbering, agriculture, fibre flax products and others. Of interest to schools studying regional resources is a series of 2 x 2 Kodachromes, slides covering forestry and lumbering in the pine areas of the west. Forestry spe-

cialists from the pine industry selected the views.

The company invites suggestions from schools as to their needs for visual aids dealing in western subjects.

## Six More ITTC Exchanges

George A. Hirliman, President of International Theatrical and Television Corporation, announced today the acquisition of six additional exchanges throughout the western part of the

United States. These six territories will be operated from the key cities of Los Angeles, California; San Francisco, California; Seattle, Washington; Portland, Oregon; Salt Lake City, Utah; and Denver, Colorado.

The opening of these branches was made possible through the closing of deals with Alvin Gordon, Robert Erlik and Toby Anguish, under whose management these offices will be run.

These six branches will be known as International Theatrical and Television Corporation of the West, and they will handle all 16mm product of I. T. & T. and its various subsidiary and affiliated companies.

# ANNOUNCEMENT

---

---

**W**E are proud to announce that the Spencer Lens Company will operate under the name of its parent company after June 30, 1945.

Please change your records to show our new name:

AMERICAN OPTICAL COMPANY  
Scientific Instrument Division  
Buffalo 11, New York

The name SPENCER, as in the past, will be a hallmark appearing only on the finest scientific instruments.

Since 1935, when the Spencer Lens Company was purchased by the American Optical Company, facilities for research and manufacturing have been greatly increased.

The change of name and closer integration with the American Optical Company, the largest producer of ophthalmic products in the world, will provide new opportunities to improve products and render better service.

**Spencer Lens Company**

BUFFALO 11, NEW YORK

*Scientific Instrument Division of*  
AMERICAN OPTICAL COMPANY

# A Stitch in Time Saves *Filmosounds* Too!

We advise that every B&H projector, even though apparently in first-class shape, be sent to us, or to your nearest B&H Authorized Service Station, when school closes for the summer. The projectors will be thoroughly cleaned, lubricated, and inspected. Any parts which show serious wear will be replaced.

Then, after careful testing, the projectors will be returned in time for the autumn school opening, ready for another season of vigorous use.

Cost of this "stitch in time" service is nominal. Results in continuous, trouble-free performance are highly satisfactory.

This leads to a word for prospective Bell & Howell users. Such a service is evidence of one thing: namely, that once you become a B&H owner, your camera, your projector . . . your satisfaction . . . all continue to be of great importance to us.

Bell & Howell Company, Chicago; New York; Hollywood; Washington, D. C.; London. *Established 1907.*

**OPTI-ONICS**—products combining the sciences of **OPTics** • **electrONics** • **mechanICS**

### **GOOD NEWS! SCHOOLS CAN NOW GET THE NEW, IMPROVED FILMOSOUND 179**

Your educational and entertainment plans can be formulated. For Filmosound 179 can be secured on AA2 priorities, the rating for which schools are eligible. Orders will receive attention according to their ratings, in sequence of receipt, and will be filled as equipment becomes available. To avoid delay, order now.

# STEADY

*...steady as a Searchlight*

—that's the kind of projection you get with the new **DEVRY**

## 16mm. SOUND-ON-FILM PROJECTOR

That "searchlight-steady" screening you get with a new DEVRY 16 mm. sound-on-film projector is the result of refinements built into them by master craftsmen who also build 35mm. equipment for the world's finest theaters.

That clear definition of image . . . that uniformity of illumination over the screen's entire surface . . . that soft, natural brilliance that assures viewing comfort because it is kind to the eyes—these are theater standards of performance that the NEW DEVRY brings to classroom, conference room and auditorium. *No visible jump, no weave, no blur!*

DEVRY "searchlight-steady" projection gives you the clearest of black and white detail, the full splendor of natural color, everything, on the film—rock-steady, "Nature-Real."

Your DEVRY 16mm. sound-on-film projector is a 3-purpose unit that (1) safely projects BOTH sound and silent films; that (2) projects BOTH black and white and color films without extra equipment; and (3) with 25-watt amplifier and sturdy 12" speaker in separate balanced carrying cases to provide you with portable Public Address facilities—indoors or out.

DEVRY 16 mm. SOUND-ON-FILM PROJECTOR MODEL 16-1966

# You can clean this Projector Aperture in a few seconds

because the new RCA gate is removable

Dust and dirt at the projector aperture obscure the screen image and cause increased film wear. The completely removable RCA gate makes instant cleaning possible. Note the four easy steps shown below.

**ONE-HAND REMOVAL**

Just lift the gate and slip it out for cleaning. When you replace the gate, the pilot-pin construction assures correct alignment, and the initial focus has not been disturbed.

**CLEAN THE GATE**

With the gate in your hand, it is easy to clean the film-pressure shoes quickly. Dust on the gate can mar the projected picture.

**WIPE THE PLATE**

Just wipe, and the aperture plate is cleaned. A clean aperture means longer film life. A dirty aperture may cause wear.

**READY TO GO**

The gate and aperture cleaned in a few seconds, you are ready to go with clear, brilliant projection. The gate is sturdy and strong, with positive optical alignment.

**Other features:** The new RCA 16mm Sound Film Projector will include other important advances in projector design, such as even-tension take-up; coated lenses; simplified film path for easy threading; amplifier with inverse feedback for true sound; rewind without changing reels; standard tubes and lamps; sound stabilizer to keep sound on pitch; aero-dynamic cooling to prevent hot spots; lower film-loop, adjustable while in operation; theatrical framing.

**Availability:** These new RCA projectors will be available soon. Investigate the new RCA projector before you purchase. For detailed information on the new RCA 16mm Sound Film Projector, send for descriptive booklet. Write: Educational Department 43-28F, Radio Corporation of America, RCA Victor Division, Camden, N. J.

# A Scientific Aid to Teaching

## Increases Fact Retention Speeds Transmission of Skills

Even prior to the war, as most educators know, 16 mm. talking motion pictures had successfully passed scientific tests of their effectiveness as teaching aids. They had demonstrated again and again their ability to increase *measurably* both fact retention and understanding—and to speed up the rate of acquisition of technical skills.

Thus, as an accepted scientific tool of learning, 16 mm. sound motion pictures will inevitably play an increasingly important role in modern education. Soon—as efficient 16 mm. sound projectors become again available for civilian needs—the time will arrive to put into action expanded audio-visual teaching programs.

Keep in touch with the newest developments in the 16 mm. sound-on-film field. Write today for the interesting FREE booklet, "What Will Happen in the Movies the Day the War is Over . . . ."

### 16 mm. Silent Projectors

Many schools are using Ampro 16 mm. silent projectors to take advantage of the large libraries of 16 mm. silent educational films.

## Editorial

### Another Step Forward

SINCE recorded history began, the race has been striving earnestly to improve its education. Yet, to judge from the declarations of many leading scholars, education is still far from perfection. If educational progress still falls short, after some thousands of years of effort, what should be expected of visual educational progress in a mere two or three decades? Comparatively, visual education began just the other day and is certainly entitled to a few imperfections. One of them concerns us here—the widely prevalent idea that a motion picture, used alone, is all the visual aid needed for teaching a given topic perfectly.

Speeches and writings on visual instruction, whether by real authorities or mere enthusiasts, tend to follow a standard pattern. They commonly open with the solemn, well-worn admonition to “select the visual aid that exactly fits the subject.” Next comes the recital of visual aids from which selection can be made, to wit, “motion pictures, slides, filmstrips, prints, stereographs, charts, posters, diagrams, graphs, maps, models, dioramas, etc.” Then—having sufficiently demonstrated broad grasp of the subject by this impressive inventory of stock on hand—the speech or article settles down contentedly and exclusively to motion pictures. Small wonder that so many schools and schoolmen think motion pictures an exact synonym for visual education!

There are encouraging signs, however. More and more, wholesome emphasis is being laid on the contrasting fundamental qualities, the distinctly different teaching values of still and motion pictures. Quite recently, more and more teachers urge that a film be stopped at intervals for reflection, for discussion, to give the class time for a bit of thinking. The really interesting question seems to be not “whether to use movies OR stills” but “how to use movies AND stills.” The real problem is not “Which shall we use to teach a particular topic?” but “How combine the two to teach that topic better than either can do it alone?” The idea is not new. It was merely lulled to sleep years ago from various causes and an awakening may not be far off, thanks to the training programs of World War II.

We first met the idea in France in 1918, from the experience of an American teacher of modern languages who was serving with the French Army Command. He was asked what he could do to help French troops get their minds “off the war” during their three-day rests back from the front. He ransacked various American centers in Paris for such motion-pictures, travelogues, and glass slides as could be made into patchwork programs, surrounded with talk, on the American way of life in peacetimes. From four months before the Armistice to six months afterward, he made the circuit of camps and *baraquas* throughout France and the Rhineland. The express purpose was to entertain, or

at least to distract, the French soldiers and their officers. But they insisted on taking it as “education”. After ten months of it he realized it was the best teaching he had ever done in his life. It was not a “research” project, hence does not stand as scientific proof. But inasmuch as the experimental audience totaled some quarter of a million in the ten months, and inasmuch as the observed reactions and results were practically uniform throughout the experiment, it might be considered a substantial “straw” of implicational evidence.

There being no “laws of visual education” officially formulated at the time, the American had to dig out a few for himself. His equipment, cared for and operated by a French cinematographer assigned him by the Army, consisted of an antique stereopticon and a hand-cranked movie projector that could stop anywhere to make any frame a still. Before starting a film, the speaker invited the audience to signal for stopping the picture (by hand-claps, foot-stamps or yells) wherever they wanted to ask a question or argue a point. While the film was running, subdued chuckles and murmurs permeated the *baraque*. When it stopped, total silence fell and eager talk began. While it ran, the soldiers did their enjoying; when it stopped, they did their thinking—sensory experience and active participation. Within the first few weeks a significant discovery was made. Different audiences tended to stop the same film at the same points! This automatically determined the optimum lengths of footage between pauses for each film. With these key points established, the film was stopped there regularly and the audience signal was no longer invited. It was not needed. The number of key points naturally varied—from three to ten—for the particular films in this nondescript collection. Finally, the total discussion time was much longer than the running time for every film. The audiences wanted it that way—movies AND stills.

Some of the American *conferencier's* findings and personal convictions impressed us then, and still do. We have spoken, written, and chatted them ever since. Here are some in his own words: “The eye cannot see motion, but loves it. . . . It will pursue whatever moves and gladly ignore what doesn't. . . . Delight of the chase is full compensation for anything missed. . . . The motion picture, then, is unquestionably the most interesting, stimulating and enjoyable of all visual appeals. . . . But there are always ‘key points’ that call for thinking and discussion. . . . For maximum mental profit from a motion picture, punctuate with stills.”

In World War I, the idea was just an idea. World War II is bringing it to life and action. For the idea to function smoothly in the classroom there are still some problems to solve. But they will be solved as fast as the visual teaching field decides it wants them solved.

N. L. G.

# Audio-Visual Aids and Teacher Training Institutions

STEPHEN M. COREY  
The University of Chicago

*A concise survey of the present status of teacher-training in audio-visual methods with trenchant suggestions for improvement.*

**A**UDIO-VISUAL instructional materials are too infrequently and too ineptly used at all educational levels. One of the best ways to increase both frequency and expertness of use is to concentrate on the teachers in training in our several hundred teachers' colleges. There is, however, a measure of disagreement on how best to exert an influence of the right sort on these young teachers in training.

Many persons emphasize the advantages of one or more formal courses under such titles as "The Use of Audio-Visual Aids." Consequently most institutions training teachers offer, if not during the regular year during the summer session, at least one, two or three-credit course dealing with the educational use of motion pictures, slides, film strips, recordings, school journeys and "live" radio programs.

A somewhat different solution to the problem of impressing teachers in training with the advantages of audio-visual instructional materials does not preclude offering courses but places relatively greater stress upon having all members of the teacher training faculty use a wide variety of these materials in their own teaching courses. The theory is that teachers are more apt to teach as they are taught than they are to teach as they are taught how to teach. In other words, if young people preparing themselves for the teaching profession are to be maximally impressed with the pedagogical and psychological importance of audio-visual curriculum materials, and if when they start teaching they are to consider audio-visual aids an integral part of the total materials available for instruction, such materials should be in actual use throughout the teacher

training curriculum. Courses called "Philosophy of Education" or "Educational Psychology" or "General Methods" or "Special Methods" or "Child Development" or "Psychology of Adolescence" or "The School and the Community" as well as courses in "Science," "Social Science" and the "Humanities" must be taught in such a fashion as to take advantage of pertinent and available audio-visual materials.

Such wide use of varied instructional materials in teacher training courses is difficult to achieve because only limited materials are available. One of the chief functions of audio-visual aids is to provide a rich variety of learning experiences so that the words which are eventually used to communicate ideas will convey adequate meanings. Consequently instructing mature persons, such as college students, permits relatively greater dependence upon abstractions and verbal communication than can be justified in the case of more immature learners with limited experience. This undoubtedly explains in part the relative lack of audio-visual instructional materials for collegiate grade courses especially in the area of pedagogy.

If nothing else is done in a teachers' college but offer a single course dealing with audio-visual aids some good is certain to result. A course of this sort necessitates the purchase of a minimum amount of equipment and indicates that at least one person on the faculty is interested in a variety of instructional materials. Without such equipment, or the live interest of one person, little can be accomplished. Frequently the person teaching the course is too busy, or, for other reasons, unable to do much to service the entire college

TABLE I  
Audio-Visual Materials and Practices in 13 Teacher Training Institutions

\*No systematic in-service training on the procurement and use of audio-visual instructional materials.

by giving counsel to faculty members regarding sources of materials and utilization techniques. Some teacher training institutions operate an audio-visual aids bureau which owns a large rental library of slides or motion pictures. Frequently, however, these bureaus exert a much stronger influence away from the campus than they do on the "home" faculty.

In a study recently made of thirteen teacher training institutions\* located in Wisconsin, Illinois, Iowa, Minnesota, Missouri, and Indiana, the author had an opportunity to learn something about current practices in such schools with respect to audio-visual instructional materials. Table I describes the basic aids owned by these institutions and gives also their total enrollment including the campus laboratory school. An asterisk follows the letter representing these institutions which do not provide any systematic inservice staff training involving audio-visual materials.

This table supports a number of interesting generalizations. There is not a very close relationship between the total enrollment of the institution and the equipment owned. The correlation between the number of sound motion picture projectors owned and the total enrollment for example is only plus .35. The correlation between the size of the institution and the number of different motion picture titles owned is plus .16. The number of 16mm. sound motion picture projectors owned range from one for every 2,000 students to one in every fifteen class meetings or say a maximum of ten times a year.

Representatives of these thirteen teacher training institutions reporting the equipment they owned also estimated the number of different motion picture films used annually by the average college teacher. These estimates made by the person primarily responsible for administering the audio-visual program ran as follows:

TABLE II

Institution	Mean annual films used per teacher	Institution	Mean annual films used per teacher
B	6	I	2
C	2	J	5
D	1	K	2
F	3	L	10
H	1	M	10

Three of the thirteen institutions submitted no data on this point. The median number of different motion pictures used per year by the typical professors of all of these institutions was 2.5. This figure implies that under present circumstances members of teacher-training college faculties are not making adequate use of the equipment already owned by the institutions.

As was indicated in Table I, ten of the thirteen institutions provided no systematic in-service training to facilitate more frequent use of audio-visual instructional materials. The need for such in-service training was suggested by the fact that the most common problem faced by the directors of audio-visual services in these institutions was faculty apathy based upon lack of familiarity with either materials or utilization methods. Probably the chief reason for the non-existence of in-service training programs or the sketchiness of those

in existence is the fact, commented upon above, that in most cases the director of the audio-visual service found it necessary to spend almost all of his time servicing the equipment and filling out routine orders which left almost none free for consultation.

The argument that the best way to make students appreciate and use intelligently audio-visual curricular materials is to have such materials used as an integral part of the teacher training curriculum is but a special case of a more general proposition. If, for example, the faculty in a teacher training institution wanted the young people attending it to use excellent evaluation materials when they went out to teach, the institution might stress either one of two practices. The first would be to introduce into the curriculum a course called "Classroom Evaluation of Learning." This is what happens in many institutions. The second possibility would be to have not only the course, but also to devote a great deal of time and effort to improving evaluation in all of the courses offered in the institution. Again, the hypothesis is that students are much more apt to appreciate and value classroom tests if the tests used to measure their own learning are good ones, than they are if the teachers college concentrates all of its efforts on developing one or two "Testing" courses.

Similarly a teacher training institution that has a fine guidance and personal program is more apt to graduate young people sensitized in the value of such work than is another institution that has very little in the way of a personal program of its own but offers an excellent two-hour course on guidance.

These illustrations could be multiplied. To bring the argument back to the use of audio-visual materials, the frequent and intelligent use of these "aids" in connection with the regular teacher training curriculum is more promising than organizing one or more audio-visual courses. In some institutions the mere presence of a course encourages the mistaken conclusion that the matter has been taken care of.

### Summer Courses in Audio-Visual Instruction

(Supplementing April and May lists, 1945)

<b>Alabama</b>	
<i>University of Alabama, University</i>	June 11-July 20
Audio-Visual Instruction (4½)	E. E. Seebriest
<b>Connecticut</b>	
<i>State Teachers College, New Haven</i>	July 23-Aug. 10
Audio-Visual Aids in Education (2)	Leonie Brandon
<b>Nebraska</b>	
<i>University of Nebraska, Lincoln</i>	(dates not given)
Organization and Administration of Audio-Visual Aids (3)	David McCulley
<b>New York</b>	
<i>Mt. St. Joseph Teachers College, Buffalo</i>	July 5-Aug. 10
Audio-Visual Aids to Teaching Ed.204 (3)	Sister M. Bibiana
<b>Pennsylvania</b>	
<i>Pennsylvania State College, State College</i>	June 18-29; July 2-Aug. 10
Visual and Other Sensory Aids in Education Ed.424 (2 & 3)	Course given at both sessions by John E. Dugan
Visual and Other Sensory Aids in Education Aug.13-Aug. 31 Ed.424 (3)	Mary W. Streyfeler
<b>Texas</b>	
<i>Southern Methodist University, Dallas</i>	June 4-25
Course on Visual Education with Lectures and Workshop Procedures (3)	Margaret Carter

# Trends in Audio-Visual Instruction in Illinois

(Concluded from the May issue)

ALVIN B. ROBERTS, Principal  
Haw Creek Township High School, Gilson, Illinois

CHART IX shows that 135 of the 165 schools reporting own radios. Most of the schools are apparently using the radio for class instruction since the common practice is to use the machine in the class room. Apparently the teachers are attempting to utilize not only the programs that come during school hours, but also those that are scheduled in "out of school hours". A total of 111, out of the 126 replying, indicate that transcriptions will lead to a wider use of radio programs. Machines for making records are used almost as much by music classes as they are by literature, language, and speech combined.

One of the major factors that has had a tendency to retard the use of audio-visual aids, is the teachers' lack of training in the use of these materials (Chart X). On the former study, 70% of the schools reporting felt that the further development of their program was retarded because of lack of teacher training. Apparently no progress has been made in this field as 85% of those reporting on this survey also check this as a limiting factor. Increased awareness of the lack, however, may account for the changed percentage.

How shall this training be provided? Both surveys show that first choice is for the short informal course; second, the extension course; and third, formal courses in universities and teachers' colleges. The short informal course is first choice probably because it is one of the best methods of providing training for those in service. Not only is there a demand for training of this sort, but schoolmen are willing to help promote such courses.

Will the schools of tomorrow own their films, get them from large rental libraries, or from small libraries servicing from eight to fifteen schools? (Chart XI) In the A and B group, 50% indicate that they expect to establish their own libraries. The smaller schools will probably have to depend upon some centralized source. Opinions are rather evenly divided in the three groups as to the large or small rental library. Six schools reported the service of small libraries as unsatisfactory,

while only one reported the service of a large one as poor. Probably the schools in group A and B will own from 40 to 100 films, rounding out their programs with films secured from large rental libraries. Judging the small libraries by those established to date, they cannot or have not given the service the larger ones have.

How have the trends that were evident five years ago developed?

1. More School Boards are making annual appropriation for audio-visual materials; while in many instances, this amount is not adequate, it is a step in the recognition of audio-visual materials as a teaching aid and not a fad.
2. More and more schools are designating one teacher as director of the audio-visual program. However, only a few schools allow the director sufficient time to devote to the development of the program.
3. More schools are using good classroom films, than was the case five years ago.

CHART IX

Do teachers prepare students to listen to special programs?	Yes	32	31	14	77
	No	6	23	15	44

## ERRATUM

The first installment of this article (May issue) showed a serious numerical discrepancy in the text references to the tables. The Charts themselves were correctly numbered. But, in the text, Chart I should read Chart II, Chart II should read Chart III, etc. The error will of course be corrected in the reprint of the series.

**CHART X**  
Teacher Training

Questions	Totals				
	Group A	Group B	Group C	From 165 Schools	Prev. Survey
Do you believe teachers lack of training hinders development of your program?	Yes 32	66	30	128	196
	No 7	8	4	19	56
If training is to be provided for teachers which type of instruction do you believe will be more valuable?					
Formal courses in the university and teachers colleges?	10	20	14	44	67
Formal extension courses providing the teachers an opportunity to experiment with visual materials in her own classroom?	28	24	12	64	75
Short informal courses conducted by a well qualified person at a low expense?	32	47	12	91	125
Would you be interested in promoting such courses after the war?	Yes 26	35	17	78	
	No 0	3	3	6	

4. Many industrial firms have eliminated most of the objectionable advertising from their films. Judging from comments, many are suitable for class instruction; consequently, schools are using them more frequently.
5. While some attention has been given to the special uses of films, such as for vocational guidance, adult education, and promotion of general health there is still a wonderful opportunity for further development in this area.
6. Five or more teacher training institutions in the state are giving formal courses in audio-visual instruction, and one is offering a course by extension.
7. More teachers know how to operate projectors, and this is essential, even though student operators are used.
8. More schools are providing training programs for students. This will be of considerable help especially to those who are going into the teaching profession.

On the whole, the progress, while slow, is encouraging.

What new trends, if any, are apparent?

1. While not new, there is a more definite trend toward the production of 2x2 colored slides. School made slides are excellent for studying the local community, and especially for use in the lower grades.
2. On the basis of projectors the schools expect to buy, there is a trend toward a better balanced audio-visual program, since many schools are considering buying still picture projectors.

**CHART XI**  
Trends

Questions	Totals				
	Group A	Group B	Group C	From 165 Schools	Prev. Survey
Do you believe that, depending entirely upon the large rental libraries for material, you can develop an audio visual program that will meet the needs of your school?	Yes 23	31	13	67	111
	No 23	31	24	78	130
Do you believe small libraries servicing from eight to fifteen schools will more adequately meet your needs?	Yes 17	37	18	72	121
	No 22	27	14	63	99
Has anything been done in your section of the state in setting up small libraries?	Yes 14	9	2	25	35
	No 22	43	24	89	191
Do you expect to build up a library of films in your school?	Yes 23	29	7	59	40
	No 20	30	22	72	201

3. The Superintendent of Public Instruction has encouraged school boards to give more consideration to audio-visual aids and to make an appropriation for the rental or purchase of these materials. What can be done to promote the wider and more efficient use of audio-visual materials?
1. There is a definite need for the creation of a State Department of Audio-Visual Instruction. This department can provide the following services:
  - a. Assist schools in setting up a well balanced audio-visual program. This service is needed, and will be needed until the schools can have a trained director.
  - b. Assist the schools in the selection of audio-visual equipment that can be effectively utilized and still be within the limits of the school budget. Many school men select a projector without giving much consideration to the cost of materials to use in it.
  - c. Establish a library of 2x2 slides. Most of the slides could be obtained from various schools. Many excellent teaching units covering topics of interest to all the schools of the state could be so developed.
  - d. Provide information and suggestions on the establishment of small film libraries, especially those to service the smaller high schools, the elementary, and the rural schools on a county basis.
  - e. Be prepared to assist with the planning and timing of educational radio programs when the FM broadcasting stations come into use.
  - f. Give assistance to schools in designing new building so that audio-visual aids can be used more effectively.
  - g. Conduct work shops and clinics at various centers in the state as a part of the inservice teacher training program.
  - h. Select and make available to the schools films that will be helpful to them in developing an adequate health and a vocational guidance program.

The fact that Mr. Vernon L. Nickell, State Superintendent of Public Instruction, has already asked school boards to give more consideration to the use of audio-

(Concluded on page 237)

# Group Discussion through Motion Pictures

(Concluded from the May issue)

**A**FTER the first meeting, the branch librarian and the author would confer weekly to consider what changes would be necessary at subsequent meetings. Changes that had to be made included: finding better avenues of publicity, finding guest resource leaders, and securing pertinent pamphlets and literature for distribution.

Much time was spent in visiting the community, speaking with social workers, community leaders, and individuals. These contacts helped to inform the planners about the community, but they also served to make the community aware of the library's program. Each day the staff of the library would chat with borrowers to find out the reaction to the film forums. This was a very effective method of self-evaluation.

The procedure at the meetings was as follows: At 8 o'clock on alternate Wednesday evenings, the book service of the library was discontinued and one-half of its large room—the children's corner—was darkened and made ready for the meeting. Posters, mimeographed circulars, local newspaper announcements, and word of mouth advertising were used to attract the audience. Allowing a few minutes for late-comers, the meeting would begin at about 8:10. There was a brief introduction by the chairman, and the films were shown between 8:15 and 8:40. The group would remain for discussion until 9:15 or at latest 9:30. This schedule was found to be very satisfactory, for it gave adequate (but not too much) time for film showings, and ample time for the discussion period, with time for resource leader and members of the audience to express themselves. The meeting was adjourned early enough to allow the group to browse around the book display, examine special exhibits, or stop to chat with one another or with the guests.

For the purposes of this study, the author made stenographic notes of the discussion at each meeting and, in the light of stated criteria, described and critically evaluated them. Space does not permit the inclusion of this material in this article, but the descriptions and critique may be read in the unpublished doctoral study which may be secured through inter-library loan.<sup>3</sup>

A few incidents may be mentioned for the human interest they contain: At the first meeting, there was genuine, but puzzled interest. The attitude of the group appeared to be, "Why should the public library want me to see such films and why do they want my views on Soviet Russia? What are they really

*A careful study of methods and potentialities for the development of film forums for adult education.*

ETTA SCHNEIDER RESS

up to?" The films and discussion reassured them. . . . Some change of plan was necessary at the second meeting because of a heavy rain. The meeting to attract shipyard workers was doomed to failure because no adult would venture out. A group of young boys and girls of pre-adolescent age came up and asked to be allowed to stay because the titles of the films interested them. The librarian consented and the meeting was exciting and educational, especially educational to the adult observers present because it revealed the great amount of information these young people had about ships in wartime. A merchant seaman who spoke, made the meeting especially interesting, since he had had first-hand experience with submarines, torpedoes, and so on. . . . And then there was the meeting with the "heckler". He was a well-intentioned but confused young man who helped the forum considerably by provoking every person present to take part in the discussion.

At each of the six meetings the audience stayed on beyond the showing of the films. The consensus of opinion at the final meeting of the series was that the film forums should be continued.

## Outcomes

Since this was an informal type of research without statistical evidence as a measure of success, the only outcomes that can be cited are those that have been

A scene in "Report from Moscow" (Brandon Films Release)

observed by subsequent events. It should be repeated that this branch library was a rather unexciting place, where reference books and out-dated works of fiction were stored and loaned. Under the leadership of a new, progressive librarian, these film forums were an opening wedge to attract non-users to the library. The library staff was prepared to meet any new demands that might arise from the forums, including a more up-to-date and popular book service.

<sup>3</sup>Ress, Etta Schneider. "Film Forums in a Public Library." Ed. D. Project. Report. 168p. 1944. Teachers College, Columbia University, N. Y.

The following outcomes can be directly or indirectly attributed to the film forums:

a) The Brooklyn Public Library purchased a 16mm. sound projector that is circulated by book truck to all branches upon request. The machine is set up and operated by a skilled technician. Films are secured through the central library and all financial expenses paid there.

b) Film forums were continued on a monthly basis at the Walt Whitman Library, with no interruption during the summer months.

c) A mothers' club has been formed and each month films are shown as a basis for presenting information on child care. Demonstrations, lectures and special reading materials accompany these film showings. The library has created a "mothers' corner" where books, pamphlets and exhibits on a special topic are attractively displayed. Mothers also have access to a collection of books that are recommended for reading aloud to their children.

d) Activities for young people have been initiated along lines suggested by their parents. During the summer, a travel club was set up under the direction of a library staff member. Pre-adolescent boys and girls were taken on a weekly trip to points of interest in the city. Younger children were given outdoor story-hours, a soap sculpture club, and a music club. Scout groups are being organized with the help of the librarian.

e) The library has occasionally gone out to the community. The projector and films are used at tenants' meetings in the housing project. The staff librarian goes into the nursery school to read to the children, and the regular story-hour of the library is sometimes held in the community rooms of the housing project.

f) Special exhibits and activities to meet the interest in home-making have started. There are weekly cooking classes in the library's own kitchen with the assistance of the local Red Cross.

g) War workers and other adults interested in technical subjects now have access to books that have been secured especially for them.<sup>4</sup>

But, it might be asked, how effective were these film forums as discussions? First we must consider how effective were the films.

The films used were informational and documentary in nature, with none of the emotionalism of dramatic films seen at the movies. Yet they were interesting, even entertaining, without the use of extraneous devices, as song shorts or comedies. These meetings revealed the eagerness of average American working men and women for information on current problems, especially if such information is made comprehensible through the sound motion picture.

The films were most effective for bringing information, for providing a setting or background as a basis for a common experience, and for reviewing past events as a guide in understanding the present and the future. For example, films from Britain that

From "World of Plenty" (British Information Services)

were used at the second meeting (on *Ships in Action*), and at the fifth meeting (on *British Gains in War-time*) brought authentic information; the films used at the fourth meeting (on *Our Fighting Allies*) created an emotional setting for considering the problems common to all the allies; and the film used at the final meeting (on *The World to Come*) served as a satisfactory review of past events.

As a means of promoting discussion, however, the available motion pictures were found to be weak. Only one could be considered a discussion-type of film. This was *Arm Behind the Army*, used at the third meeting on war production. The film stresses the need for finding a more satisfactory method of cooperation among workers, management and the armed forces, but it does not suggest a specific course of action.

This lack of suitable films to provoke discussion is an obstacle to the film forum movement. It makes necessary the adaptation of existing films which were made for educational purposes, and such adaptation is good only in the hands of a skilled discussion leader. Although the need and desirability of a nation-wide group discussion have been recognized, no agency has yet started to produce motion pictures of a thought-provoking nature.

Most 16mm. (non-theatrical) films are produced by educational producing companies, as teaching devices; or by agencies intent on exerting some influence upon public opinion. Among the latter are industrial firms, government agencies and propaganda agencies of various types. The films used in this study were considered the best available for the purpose. Thirteen of the fifteen films used had been made by our own or another government, one had been made by an industrial firm, and one was an edited compilation of newsreel shots by a nontheatrical distributing company. At least fourteen, then, of the fifteen motion pictures had been made to promote morale and to enlist support for the war effort.

It must be concluded, then, that film forums at present must depend on films that were not intended for forums at all, but for propaganda in the wildest sense of the term. This places upon the forum leader the responsibility of adapting the films to promote free discussion.

<sup>4</sup>Described in "A Public Library in a Housing Development" by Emma Bassinor. *Wilson Bulletin*, 18:378 January, 1944.

### Two Kinds of Forums

How effective were the forums in this series? First we must clarify the term "forum". There are two types of meeting that are commonly called forums. One type has a socializing purpose, wherein a group of neighbors assemble for the purpose of gaining new information and of exchanging opinions and experiences. The other type has the more serious purpose of bringing together a group of individuals to consider a vital issue upon which thought and intelligent action are needed.

The forums in this series—and most forums commonly described as film forums—are the first type. In this series, the people always remained when the films were over, because they enjoyed the informal discussions which followed. It should be remembered that this venture into community education was launched in a new community, where families were still strange to the neighborhood and to one another. As a series of informal discussions, then, these meetings might be considered successful.

But, it was for the second purpose that the meetings had been planned! The forum leader (librarian) had hoped to promote serious group discussion which might result in the formation of study groups or an increased interest in reading. But her failure must be attributed to the fact that she had not clearly established in her own mind the purposes and directions along which discussion should go.

### Recommended Principles and Procedures

The film forums series held at the Walt Whitman Library has revealed what other film forums throughout the nation have undoubtedly experienced, viz. that we have hit upon a very good means of adult education but that we must greatly refine our methods. Out of the past experience of other forum leaders, and of other film forum leaders, we may map out a frame of reference and a technique that will lead to a stronger and more potent forum movement. Some principles and suggested procedures are here given:

#### Principles:

1. Select films according to stated criteria, such as:
  - (a) The film should be well organized and should contain information not well imparted by another medium.
  - (b) The film should be of high technical quality and should have no distracting elements.
  - (c) The content of the film should be significant and accurate.
  - (d) The film should be suited to the particular audience, with respect to: language, maturity of treatment, and length.
2. Determine in advance the purpose for which the film is to be used. Among the purposes are:
  - (a) To motivate interest in a subject for further study
  - (b) To bring in concrete form factual data to implement a subject already under consideration.
  - (c) To provide a common background or mood.
  - (d) To recapitulate what has already been considered, or to review a sequence of events.

3. Write out the technique to be used for each meeting to clarify the purpose and the time allotments for each phase. An outline for a good discussion might include:
  - (a) A clear statement of the issue or issues to be considered
  - (b) A summary of important facts and opinions that must be taken into account
  - (c) The place of the film or films in the discussion
  - (d) A few good leading questions to be used where necessary so that the group will consider the most pertinent facts before making decisions
  - (e) A few of the possible solutions or lines of action
  - (f) Definite suggestions for further reading or follow-up, including books and periodicals as well as organizations actively working in the field
4. Make arrangements for the projection of the films
  - (a) Strive for a smooth performance, with a minimum of distraction and a maximum of showmanship
  - (b) Have the projector and projectionist on hand well in advance of the meeting to check on the condition of the projector
  - (c) Check on the conditions of darkening, ventilation, acoustics, seating and the like

#### Procedures:

- A. Organize a time schedule, somewhat as follows:
  - 15 minutes for opening remarks and introduction
  - 30 minutes for the showing of films
  - 30 minutes for follow-up discussion
  - 15 minutes for summation and planning ahead
  - 90 minutes for whole meeting
- B. Have a definite idea of the follow-up that might be undertaken, after the showing of the film.
- C. Vary the technique of showing and using motion pictures and some very interesting results are possible. The most common technique is to have some brief introduction, show the films without interruption, and then hold a discussion. A few suggested variations are:
  - (1) The use of two films that show sharp contrast in viewpoint.
 

At a film forum in Ohio, two films on Negro life provoked a lively and fruitful discussion. One gave a positive, charming picture of one farm family; the other described the conditions of a large proportion of the Negro population and stressed the lack of opportunity.
  - (2) The second showing of a film to clarify misunderstandings, or for general appreciation.
 

This technique is not uncommon in the classroom, but it has never been reported for adult groups. Where a film is full of information, or where there is some doubt about interpretation, a second showing would be advisable at the same meeting.

Sometimes a beautiful film, like a good piece of music needs repetition. A British documentary film, *Listen to Britain* is a good illustration. This picture consists of actual sights and sounds of everyday life in wartime Britain. Scenes shift from factory to playground to canteen to concert

hall, back to factory, and so on. Critics regard it as a highly artistic production, yet many lay audiences have been confused by its seeming lack of unity. A second showing with one group heightened appreciation and promoted keener understanding of the spirit of the British people.

- (3) The interrupted showing of a long film, to permit discussion on each section separately.

Occasionally a long film, such as *The Land* or the British film *World of Plenty* is more effective as a discussion aid when the showing is interrupted. The latter film, for example, is organized in three sections: food as it was, food as it is during the war, and food as it might be. The problems of production and distribution as applied to both great Britain and the United States are described. The film is crowded with information and opinion, and tends to be confusing. An interrupted showing, with time for discussion of each of the three sections, would help considerably and would be preferable to two showings of the entire film without interruption.

- (4) The showing of the film near the end of the meeting, after there has been some group discussion.

At times a film may need some explanation.

Perhaps the first part of the meeting would be devoted to presenting information, exchanging experiences and suggesting a solution. Then the film would be shown and a critical discussion held with great effectiveness.

By way of illustration, the U. S. Signal Corps film *Arm Behind the Army* is a good film but one which needs supplementation with lay audiences. The picture stresses the importance of the production front in keeping the armed forces supplied. Enemy intrigue aims to divide the civilian population and the military forces so that supplies will be reduced. Before this film is shown to an audience of civilians they should have certain facts before them: just how fifth columnists work, and how they have disrupted the war effort here and abroad; and what problems are causing labor-management disputes which when carried to the point of strikes are a help to the enemy.

Greater care in planning and carrying on the ever-growing film forum movement can do much to educate the American people for participation in their democratic way of life. We have the intellectual curiosity and adult audiences have shown an active interest. What we need is more and better leadership, and better films.

## We Make Our Own Instructional Material for Reading

*How creative activities of students and faculty are coordinated into usable form as visual teaching material.*

MARY VAN HORN

Henry Reis School, Evansville, Indiana

FOR some years two first grade teachers in our school had been experimenting with slides in teaching beginning reading. Mr. Alex. Jardine, now acting superintendent, observed the work and decided to conduct an experiment with the purpose, as stated in the final report, "to determine whether the use of visual aids for teaching beginning reading would produce measurable improvement in reading achievement over the more formal method of teaching reading." Under his direction, with Miss Blanche Eckert assisting, eight teachers participated. There were four control groups consisting of eighty-seven children, and four experimental groups consisting of ninety-three children. The final report prepared by Mr. Jardine, "A Visual Aids Experiment in Beginning Reading," contained tables and conclusions definitely favoring such teaching procedure.

Since Miss Eckert and I had experimented together, I watched the study with great interest. The results apparently justified the use of the technique. As I continued with it, however, there was clearly a need for material that had continuity and was systematic in vocabulary development. So I planned to prepare such material, using the same vocabulary as was used in the basic pre-primers adopted by the system. Then, when children should be transferred to another school, they would have had the same vocabulary. I could

use the basic readers as supplementary material, by permission of Scott, Foresman, the publishers.

My plans were to spend my summer preparing the material. All during the year I had jotted down ideas for my stories. Miss Della Fricke, director of art education, became interested in the project and undertook the task of illustration. As I wrote the stories, I wrote descriptions of the pictures wanted. She then sketched and colored the pictures on paper the size of the slides. The reading material to go with them was written in manuscript writing on cellophane and placed between plain glass slides and taped. India ink or Higgins Eternal show well on a screen.

The gelatinized slides are prepared by cleaning the slides thoroughly with ammonia. Then Nelson's No. 1 Photographic Gelatin is dissolved in a small quantity of slightly warm water and placed in hot water until thoroughly dissolved. To apply, hold the slide in a horizontal position and pour about a teaspoonful of gelatin solution on the center of the glass. Tilt in various positions until the surface of the glass is completely covered, or a small paint brush may be used to cover the entire surface. The slides should be set aside for several hours to permit the solution to harden. When the solution has hardened, trace with India ink the pictures to be used. When dry, paint with Velox Photographic Water Color. When dry, cover with

another plain glass slide and bind with tape. This type of slide shows clearly in a light room.

In all, thirty-five stories were written with one hundred illustrations—material equivalent to that of three pre-primers. The stories were written in manual form with the teacher's story, the script for the children to read and the pictures interwoven as the lesson would be developed.

When I began using the material I discovered one disadvantage, that when the children could read it they longed to read to their families. So I began laboriously duplicating it. Mr. Earle Tomey, my principal, discovered this and suggested having books made. He went to the directors of business education at Evansville College who cooperated by having the children's stories and pictures duplicated in her department. They assembled the books and sent them to an instructor of printing at one of the high schools. He had the titles printed on the covers and bound them nicely. The material was arranged to make three different books—Part I, Part II, and Part III. Then Mr. Tomey arranged with a teacher of art in the department at Henry Reis School to have her classes color the illustrations. Her classes worked on them as they had time, usually after they had completed their regular work. They worked at this most of the year, coloring the books while they were not in use in the first grade. As the children completed the material in one book, the book was loaned to them to take home just as a library book is loaned.

Every teacher who has taught for any length of time has some ideas of her own she would like to try out. The slide furnishes a very good medium for presenting one's own material. This material can be adapted to the particular environment; as, for example, a safety problem peculiar to the district or stories about children in settings similar to the environment of the children for whom they are written. The correlation of reading materials with other parts of the curriculum is possible. For example, the material

Enjoying the product of their own schools

prepared in this project contained stories about a color party which correlated with the art material. Since the material was not available without infringement upon copyright, it seemed logical to make it. The main value to the writer is that it provides material which enables me to use a method of teaching which I seem to use most successfully. In the beginning all of the children's attention is focused where the teacher can direct. Practically complete concentration is attained. While the child is learning to read from left to right and down, he is not also involved in holding a book. When he does pick up a book, he can read for himself with greater confidence and satisfaction. The children are delighted both with the making and the using of the slide material. They enjoy meeting Miss Fricke who illustrated our stories. They are keenly interested in the story of how our books were made when they know so many people who helped make them.

I can make hats.  
 I can make a blue hat.  
 I can make a yellow hat.  
 I can make a red hat.  
 I can make a purple hat.  
 I can make a green and orange hat.

# The Curriculum Clinic

## Canadians As They See Themselves

WALTER A. WITTICH, Editor  
Bureau of Visual Instruction  
The University of Wisconsin

J. MARGARET CARTER  
National Film Board of Canada

THE longest undefended border in the world extends almost four thousand miles, from the Atlantic coast to the Pacific, between Canada and the United States. As neighbors we share the same coastal formations as well as the mountain ranges and interior plains. Living side by side in complete harmony for generations, we have tended to be one another's best customers: Canadian lumber for U. S. coal, newsprint for citrus fruits, copper for oil. Statistics show that the United States purchases twice as much from Canada as from any other nation and that Canada is the United States' second best customer.

In spite of these happy manifestations of friendly cooperation and good will, and in spite of a common language, common culture and customs, how well do the peoples of these two nations really know one another? Specifically, what provisions are made in the schools to stimulate a deep and sympathetic understanding of the similarities and diversities among the peoples of these two countries?

A study<sup>1</sup> was made early in 1930 to determine the kind and nature of instruction about Canada in the schools of America and the extent of education about the United States in the schools of Canada. The results of this study indicated that instruction about their neighbors was poorly organized in both countries. On the whole, Canadian students demonstrated a greater awareness and knowledge of their neighbors to the south than did American pupils of their closest neighbor to the north. A recent doctoral dissertation<sup>2</sup> says: "American schools and colleges do appallingly little to teach about Canada, and most of this, especially in the High Schools, seems poorly organized."

Both nations have come to recognize the fact that there is a real and definite need for a systematic interchange of accurate information among the young people of each country. An official recommendation was made by the National Council for the Social Studies in November, 1942 to the effect that "Special units on Canada and Latin America should be included in the Social Studies Courses". In 1944 a bilateral committee on Education, made up of Canadian and United States educators, was established. The first publication<sup>3</sup> of this committee outlined the areas of study as follows:

"The first task of a farsighted program for Canadian-United States relations is that of widespread study of the

indigenous cultures and characteristic qualities and problems and trends of each nation. The geography and resources of the land, the composition and distribution of the population, modes of living, industries, agriculture, school systems and religious foundations, agencies of communication, transportation facilities, trade cultural traditions, social strengths and tensions—these are legitimate areas of study for friendly but independent neighbors. From this study by the citizens of the two countries should come knowledge, understanding, and mutual respect. At the same time each nation would profit by the social experience of the other."

Films can play an important and significant role in this process of building a mutual understanding between the youth of the two countries. But let us take extreme care to note our similarities and our differences in their proper perspectives. For example, would we in the United States support the idea of the Canadians producing a film about us to show Canadian pupils that we are a nation of gum-chewing, hot-dog eating, strap-bangers bound for Coney Island, avidly reading the latest exploits of Chicago gangsters in the "world's greatest newspaper"? Not a bit of it. Such bizarre treatment of these phenomena, which are by no means typical of America, would be no more acceptable to us than would an American-made picture be to Canadians if it likewise were to stress striking incongruities. It would not be fair to picture Canada to American pupils exclusively as a land of snow and ice peopled now and then with picturesque red-coated mounties rushing here and there to capture their man with unerring success, and bushy-faced fur trappers responding to the names of Jean Baptiste and Francois Coté.

For purposes of objective analysis let us rather see what the Canadians consider typical of themselves. Films made by the Canadians to interpret to their fellow countrymen the cultures and characteristics of the many and varied racial and occupational groups within the framework of her own nation provide interesting and valuable material for American pupils. The way of life for the herring fishermen of New Brunswick is vastly different from that of the wheat farmer in the Canadian West. The social background of the Ukrainian Canadians of Manitoba is in marked contrast to his countryman living in the modern city of Montreal. And so these films devoted to the many environments of Canada's population form a rich underlying fabric of material that would otherwise be difficult to bring into the classroom.

If we propose to make a comparative study of the United States and Canada, it would be reasonable to point out the similarities between the two countries on the one hand and to note the significant differences on the other. Canada's National Film Board has produced many films which could effectively be adapted to such a comparative study.

## I. Canada and the United States Have Many Factors in Common

### 1. Geographical Proximity

*Great Lakes*—(2 r.) (color) Showing the lakes as great industrial region, with an immense amount of diversified cargoes flowing between the two countries.

*Niagara Frontier*—(2 r.) Crossroads of inter-continental shipping. Port of call for ocean-going steamers. Train traffic from all Western Hemisphere converges to cross over the six international bridges.

2. **Peoples**—Canada, like the United States, is made up of the peoples of many lands having various religious and cultural differences.

*Peoples of Canada*—(2 r.) Men of many races have crossed from the Old World to the New to lay the foundations of a true democracy through cooperation and mutual respect.

*Ukrainian Christmas*—(2 r.) (color) Ukrainian community near Winnipeg celebrates Christmas with ancient songs, traditional dances and brilliant costumes in the home. Solemn ceremonies in the Greek Orthodox Church.

*Iceland on the Prairies*—(2 r.) (color) Peoples who came to the Canadian West from Iceland have contributed richly to the Canadian heritage.

### 3. Common Belief in the Dignity and Welfare of Man

#### (a) Health and Nutrition

*Get Your Vitamins*—A four minute cartoon showing the main vitamin groups and the foods rich in each.

*Main Dish*—(2 r.) Exigencies of wartime food planning. Diagrams show housewives how to buy and cook wisely and well.

*Vitamin Wise*—(2 r.) Demonstrates vitamin values of staple vegetables and fruits, and urges housewives to make the best of their stock.

#### (b) Education

*Lessons in Living*—(2 r.) What happens to a school when the community fails to realize its responsibilities. Transformation which comes when community learns true meaning of education for its children.

#### (c) Child Welfare

*Before They Are Six*—(2 r.) Canada's day nurseries for children whose mothers work in essential war industry. Practical information on health and welfare.

#### (d) Public Affairs

*Labor Front*—(2 r.) War mobilization of United States manpower. The workers prove their ability to produce a tremendous volume of materials. When final victory comes, they will justly expect to find the opportunities of peace.

*The People's Bank*—(2 r.) In fishing and mining, farming and industrial settlements all over Canada, Credit Unions have put cooperative finance to the test of half a century.

*A Man and His Job*—(2 r.) Typical Canadian workingman from depression years to the present. Shows the growth of democratic Unemployment Insurance Act.

*Welcome Soldier*—(1 r.) The rehabilitation program including discharge benefits, vocational and technical training. Veterans' Land Act, local boards, Civil Service, trade preferences for returned soldiers, sailors, and airmen. Medical and surgical treatment for disabled men.

### 4. Both are Agricultural Nations

*Food, Weapon of Conquest*—(2 r.)—Historical value in emphasis laid on vital part played by food in the strategy of war.

*Farm Front*—(2 r.) Panoramic survey of great changes in Agriculture during past five years by Western Canadian farmers. Shows interchange of ideas to be great incentive to change.

*Farmer's Forum*—(1 r.) Better distribution of agricultural products depends not only on administration of experts but also on understanding and cooperation of those who till the soil. Shows how Farm Forum radio program educates farmers to realization of tasks which face them.

*Heritage*—(2 r.) Prairie Farm Rehabilitation Act restored hope to farmers of drought-stricken Western plains through engineers and scientists on experimental farms and stations.

**II. Canada and the United States have Significant Differences, Other than the Fact that Canada is an Independent Self-Governing Nation within the British Commonwealth while the United States is a Democratic Republic.**

**1. Canada is bi-lingual** (More than 30% of her population is of French origin.)

*Alexis Tremblay, Habitant*—(3 r.)—Alexis Tremblay and his family are dedicated to the soil, like his ancestors who came from France to the St. Lawrence over three hundred years ago. *Chants Populaires*—A delightful series of one-reel films featuring French-Canadian Folk Songs combined with animated cartoons.

*Painters of Quebec*—(2 r.) Seven painters of Quebec, with examples of their work, demonstrate French Canada's great and varied inspiration. Interspersed are scenes of Quebec Province, oldest settled territory in the Dominion.

*Habitant Arts and Crafts*—(1 r.) The thrifty French habitant preserved his mother country's traditions and made himself proficient in old Indian crafts such as snowshoe making, shipbuilding, wood-carving, baking in outdoor ovens, growing flax and spinning.

Gaspé children waiting the return of the fishing fleet.

**2. Canada's Northland in Process of Development**

*Look to the North*—(2 r.) Swift development of Canadian Northwest for strategic purposes. Land now being conquered will prove shortest air route from Western hemisphere to Europe and Asia—a mainstream of continental traffic.

*Land for Pioneers*—(2 r.) Great potential riches in rocks and tundra of Canada's Great Shield, east of Klondike, are today being skilfully exploited, along with farm areas, fisheries, forests, and rivers.

*Northwest By Air*—(2 r.) How Canada's Northwest airlines conquered almost impenetrable natural barriers of river and mountain on Pacific Coast.

**Trends in Audio-Visual Instruction**

(Continued from page 229)

visual materials, and to include an appropriation for the rental or purchase of these materials in the budget is indicative of his interest in this field. Consequently, one may expect that he will cooperate with school boards and administrators in developing an audio-visual program.

What effect has the training program of the Armed Forces had upon the audio-visual training in the public schools?

1. It has been proved that audio-visual materials are valuable aids to teaching.
2. It has aroused the interest of most teachers, even many of the most conservative.
3. It has helped create a more favorable attitude on the part of the general public.
4. It has given considerable impetus to the whole audio-visual movement, and it is up to the schoolmen to keep the ball rolling.

Considerable progress has been made during the past five years. Judging on the basis of interest as expressed by both teachers and administrators, it seems safe to predict considerable progress in the post-war period, if teachers, teacher training institutions, State Departments, and producers of audio-visual materials and equipment will work together to promote this movement.

## Regional Meetings of State 16mm War Loan Chairmen

New York Meeting of War Loan Committee, April 11-12

**R**EPRESENTATIVES of the 16mm. Industry, U. S. Navy, Office of War Information and U. S. Treasury met with the State 16mm. Film Chairmen for the Seventh War Loan at the beginning of the Drive to discuss plans for the 16mm. War Bond Program. Three such regional conferences were held in New York, Chicago, and Portland, Oregon.

The goal is a film audience of 30,000,000 people in the forty-eight states. This can be accomplished if maximum use is made of all prints of Treasury War Finance Films. "To be effective, these films must reach every man, woman and child in the country," says a letter from Washington. "This will be

Chicago Area Group Meeting, April 13-14

Regional Conference at Portland, April 16-17

easy if every 16mm. sound projector owner will pledge his service to the War Finance Committee."

Consult the War Finance Committee chairman or 16mm. film chairman of your state, or your local film distributor, for complete information on Treasury film programs. Since the list was published in our May issue, additional films have been made available. They are:

*My Japan* (produced by the Navy, approximately 20 minutes)—captured Japanese footage showing what confronts us as we draw near Japan.

*Who Died?* (produced by the Office of Strategic Services)—a five-minute impact bulletin on America's boys who have given their lives fighting our battle.

*The Fight for the Sky* (Army Air Forces, 20 minutes)—the story of the fight for the freedom of the air in Europe.

While the Seventh War Loan extends from May 14 through June 30, all bonds purchased through July 7 are credited to this Drive. Therefore, War Bond film showings will continue through July.

# The Film and International Understanding

## Films for Understanding at San Francisco

DR. JOHN E. DUGAN, Editor  
Hadden Heights, New Jersey

FILMS for international understanding have been used at the San Francisco Conference in a manner and on a scale hitherto unprecedented in human history. Even an overview of this use requires some preliminary classification.

### Variety of Films and Uses

There were a variety of films and a variety of uses to which they were put. The film program at the Conference can be classified under the following headings:

1. Films made at the Conference
  - a. For the delegates themselves
  - b. For newsreel purposes
  - c. As a record for posterity
2. Films brought to the Conference for showing
  - a. About the United Nations
  - b. About world problems
  - c. Entertainment films
3. Facilities for film showings
  - a. United Nations Theatre
  - b. Conference Theatre

### Films Made at the Conference

The Conference itself was filmed, but in a way that far exceeded coverage for mere newsreel purposes. Of course the newsreel coverage was important and facilities were provided for taking such films and rushing them for release to the world. But the filming of the Conference for its own purposes was unique and important in another way.

Two special camera crews were provided to record the activities of the Conference itself for showing to the delegates. Work on these films was rushed so that it was possible for delegates to see these films within 36 hours after the events took place. These films were listed in the United Nations Theatre programs as "United Nations Theatre Newsreel, Complete showing of detailed Conference activities." It would not be surprising to learn that these showings had an effect upon the proceedings of the Conference itself.

Both types of films which were taken at the Conference no doubt will contribute to a record of the proceedings for the rest of the world and for posterity.

### Films Brought to the Conference for Showing

Films about many nations were brought to the Conference for showing, as were films about general world problems. Entertainment films also were provided by the motion picture industry.

### Delegate Theatres

Two theatres were provided for the use of delegates in viewing films which were shown. The United Nations Theatre was an old theatre which had been completely modernized and remodeled for the benefit of the delegates by the motion picture industry. The

---

**EDITOR'S NOTE:** The material upon which this article is based was supplied through the courtesy of Mr. Leonard Stone of Berkeley, Calif.

---

following statement appeared on the printed program: "This theatre is provided with the compliments of the American Motion Picture Industry exclusively for those holding official credentials to the Security Conference, the delegates and staffs."

The American Motion Picture Industry also provided facilities for the screening of documentary films in the "Conference Theatre" on the mezzanine floor of the Sir Francis Drake Hotel.

In an interview with George Hitchcock, Mr. Glen Allvine of the Motion Picture Producers and Distributors of America said: "The motion picture is without doubt the greatest medium for international understanding the mind of man has conceived. If the delegates of 46 nations can get together to promote that understanding, then the American motion picture industry can certainly unite to do its part."

### Conference Film Programs

The United Nations Theatre program changed daily. In general it consisted of the Conference newsreel mentioned above, an entertainment feature, and one or two shorts, usually of a documentary nature.

The Conference Theatre programs, devoted to documentaries, also changed daily. The following programs for May 1-May 4 are typical:

(All showings are continuous)

Tues. <i>Why We Fight—Orientation Films Produced by the</i>	
May 1 <i>War Department of the United States of America</i>	
Battle of China.....	.60 minutes
Divide and Conquer.....	.60 minutes
Battle of Britain.....	.50 minutes
Battle of Russia.....	.45 minutes
Gracias Amigos .....	.18 minutes
Wed. <i>Selected Films Produced by the British and Austra-</i>	
May 2 <i>lian Governments</i>	
The Grassy Shires.....	.14 minutes
Country Town .....	.16 minutes
South Africa .....	.14 minutes
New Zealand .....	.22 minutes
Australia Calling .....	.20 minutes
Thur. <i>French Films Dealing With the Period of Liberation</i>	
May 3	
The Next Time We See Paris.....	.12 minutes
The Liberation of Paris.....	.20 minutes
France Regains Her Frontiers.....	.15 minutes
Newsreel Magazine .....	.10 minutes
Inside France .....	.20 minutes
Fri. <i>Films of the Union of Soviet Socialist Republics</i>	
May 4	
From Vistula to Oder.....	.40 minutes
The Battle of Sevastopol.....	.50 minutes

# The ABC's of Visual Equipment

Edited by  
JOSEPH E. DICKMAN  
and PHILIP MANNINO

**T**HE physical end product of all our money and efforts in projected visual aids is the picture on the screen. Extensive preparation and expensive film and projector are of no avail when the product is a dull, fuzzy, out-of-focus picture which the eye must pry from a classroom wall. Just a little time given to the suggestions contained in this article will pay rich dividends in improved visual instruction.

J. E. D.

## Brighter Classroom Movies

**M**ANY users of visual aids complain of the poor or dark picture projected on the screen. They often ask "What can I do to get a bright, clean picture on the screen?" Here are a few suggestions that will help achieve the desired results.

First, clean objective lens, condensing lens, and reflecting mirror. Remove lens from the barrel. Using a soft camel's hair brush, remove all dust. Then, using a silk cloth or lens-cleaning tissue, remove all remaining dust, oil, and finger marks. Caution! never use anything but silk or lens tissue to clean the lens as any other material will scratch the lens surface. Several liquid-type lens cleaners are on the market and these are recommended. These will remove oil stains and finger marks without much effort, reducing the possibility of scratching the lens.

The condensing lenses are in front of the projection lamp. Follow the same procedure in cleaning them. Be sure to replace these in the same order as they are removed.

The reflecting mirror is located behind the projection lamp. Remove the projection lamp and clean the mirror in the same manner that the lenses were cleaned. Be careful NOT to disturb the adjustment of this mirror since light efficiency will be cut down considerably if the adjustment is out.

Lamps that have sagged filaments or have darkened from long usage, as well as lamps that are bulged, should be discarded. In these cases a new lamp will make quite an improvement in the picture. When inserting a new lamp make sure that it fits in the socket and is locked in place. The lamp filaments must be parallel to the lens.

Projection lamps are available in various voltage and wattage sizes. Most standard projectors will handle several lamp sizes but, when in doubt, consult your dealer or manufacturer.

For the average classroom where projection distances do not exceed 30 feet, the 750 watt, 115-120 volt 25 hour lamp will give sufficient light. If the distance is up to 40 feet, then the 750, 105-110 volt lamp will give a brighter image on the screen. If the projection distance is up to 50 feet then the 1000

watt lamp should be used. Most 16mm projectors cannot be used efficiently to project at a distance of more than fifty feet unless arc lamps are used.

Use the following procedure to clean the projector thoroughly; clean the aperture, making sure that all dust particles are removed. Use a cue tip or camel's hair brush dipped in denatured alcohol. Clean gate and case rollers as well as any place that the film may touch.

Projectors that are equipped with still-picture attachments have fire screens which cut down the amount of light to prevent the film from burning when the still picture is shown. Sometimes the fire screen will fail to operate correctly and stick, with the result that either the film is burned when using it as a "still" or the light is inadequate for the motion picture. Check this fire screen and if it is not working properly have your local dealer correct the trouble.

Good projection screens are prerequisite to bright movies. If the screen has a worn or torn surface discard it. If it is dirty it should be cleaned or painted. Beaded screens cannot be painted; but they can be cleaned. Dust can be brushed off with a feather duster. A moist chamois rubbed lightly over the beaded surface will clean the beads. Most spots can be removed by rubbing lightly with an art gum eraser. Beaded screens when not in use should be rolled into the cases and stored in a dust-free, dry place.

Screen placement is very important. To get an undistorted image the screen must be "squared off" with the projector. A leeway of 17 degrees is allowable. The screen must be placed in such a manner that all can see without strain to the neck and high enough so that the view of the bottom of the screen will be unobstructed.

When projecting color film, which is denser than black and white, the projecting distance is limited to forty feet. Use the largest wattage lamp that your projector will take and a beaded screen. For best results the screen should be in total darkness.

A clean picture is dependent on clean films. Dirty films will give poor screen images; scratched films will annoy the viewer.

The room in which the projection is to be made should be well ventilated and darkened for best results. It is especially important that the screen be darkened.

A clean projector using clean, clear films on a clean screen, in a properly darkened room, will give a bright, clear image on the screen.

P. M.

# Buy Good Design—In Hand-Made Lantern Slides

By ANN GALE

Roosevelt High School, Chicago

PEOPLE are on a buying spree. Well-designed objects always will be a pleasure to see, while many of the poorly designed objects for sale today will be despised or thrown out in a few years. Simple lines, good materials and good construction make good design. The objects sketched below show comparisons of furniture, lamps and jewelry.

1.) The top sofa is too florid in line and too heavy in construction whereas the lower one is lighter and very simple in line.

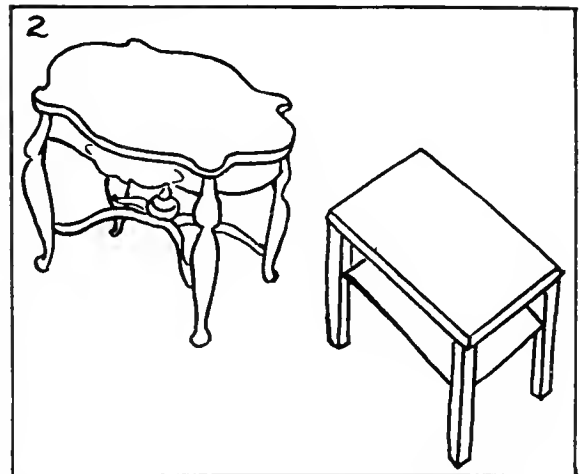

2.) The first table is over-ornate with an unattractive abundance of curves while the second one is very simple in line and construction.

3.) One chair is too heavy with unnecessary curves on the back and arms. The other chair is lighter, better proportioned and more simple in line.

4.) The first dressing table is what the decorators derisively call borax modern with loud veneer patterns with poor though simple lines. The other dressing table has the structurally simple lines of good modern design.

5.) The lamp being held up by ornate carved feathers is something to avoid while the other is more simple in design.

6.) In a few years the naturalistic over-curved tulip set with imitation stones will be forgotten while the simpler flower design better adapted to metal will still be worn.

The simplest type of hand-made slide is made by drawing or tracing on finely finished etched glass with ordinary medium lead pencil. Color, by special crayons or inks, enhances the slides greatly. Fine effects are obtained by blending with crayons. About one-third inch margin should be left all around the slide. The slide is readily cleaned with soap or washing powder to receive a new picture.

# The Literature in Visual Instruction

## A Monthly Digest

ETTA SCHNEIDER RESS, Editor

### UTILIZATION

- **Demonstration Lessons Using the Film "The Corn Farmer"**—Lucille Kenney, Lakewood, Ohio, public schools—*School Science and Mathematics*, 45:447 May, 1945.

The following lesson was given at the geography section of the Central Association of Science and Mathematics Teachers with a seventh grade class.

The showing of the one-reel sound film, *Corn Farmer*, was divided into 4 parts. This technique requires a thorough study by the teacher in advance and careful planning as to places to stop. During the discussion of each part, pertinent ideas may be noted on the blackboard.

The teacher asked three general questions in introducing the film. 1) How many different kinds of work do the farmer and his family do? 2) How much is done by machine, and how much by hand? 3) How does the work fit the season?

At the end of the entire discussion, the blackboard reveals a) a list of the farm jobs required of a corn farmer; b) an analysis of those that can be done by machine and those that are still done by hand; and c) what the farmer and his family do the year round. As a further review, the teacher asks the group to examine the list of jobs and indicate those that involve corn.

The final question during the summary has lead-on value: It is said that corn goes to market on the hoof? What does this mean? Did we see it in the film?

- **Visual Aids in Technical Writing at the University of Texas**—Joseph Jones, Asst. Prof. of English—*Journal of Engineering Education*, 35:292 December, 1944. (Reprint available)

A course on technical writing for Engineers and science majors is required of all engineering students at the U. of Texas and recommended for many science majors. There are several sections of it, all taught by members of the Department of English. These use visual aids to some extent, with the following results:

A display stand is used for semi-permanent display of samples of technical articles, student reports and the like. For this type of material the instructor also uses the combination opaque-lantern slide projector. The students, too, use this projector for presenting their own reports and thereby learn to manipulate it.

Still unexplored are the sound film and the filmstrip for teaching technical writing. The writer recommends that some of the technical societies underwrite the expense of producing special films.

- **The AAF Convalescent Training Program as Social Education**—Lt. Eugene J. Taylor—*Social Education*, 9: 125 March, 1945.

The Army Air Forces has for nearly two years been engaged in a program of physical and mental reconditioning of sick soldiers. The period of convalescence, when a soldier has been released from medical care and can only rest to await full recovery is particularly important because the soldier must be able to resume the long and strenuous activities of air combat.

Part of the convalescent training program, described in broader detail in this article, consists of the use of motion pictures. Hospitals are all equipped with projection facilities, and among the films shown are the orientation films, good travel, industrial and commercial films, and newsreels. Informal discussion usually follows the presentations.

Field trips are also organized to nearby points of interest.

- **What the Schools Can Learn from the Army's Films**—C. F. Hoban, Jr.—*Education Outlook*, 19:97-106, March, 1945.

Among the lessons derived from the army's film program that have implications for postwar education are: (1) Training films not only teach skills better than any other teaching procedures but they also result in better teamwork and more independent learning; (2) Theatrical techniques can be used to heighten audience interest and to improve teaching quality, replacing the academic, pedagogical organization of subject matter of prewar films; (3) Films can be successfully employed to teach broad social values and ethical concepts on a mass basis; (4) Films can be used for the development of character traits and the control of emotions.

The article develops further each one of these statements and should be read in its entirety.

- **Use and Distribution of Audio-Visual Materials**—Morley P. Toombes and K. L. Gauthier—*The School* (published by Ontario College of Education, University of Toronto) 33: 468,571 March, April, 1945.

In the first part of this article the authors give a lesson plan based on *Power in Canada* which some teachers had said did not fit into the course of study. The second part proposes a pattern of distribution for Canada. Each province would have a large library of films, to be supplemented by local ones in schools, public libraries, etc.

- **Films for Nursing Education**—M. R. Brunstetter, Teachers College, Columbia University—*American Journal of Nursing*, 45:298 April, 1945.

An extensive discussion of the possibilities and problems involved in the use of motion pictures for nursing education. The article should be read in its original, as it contains valuable ideas for the use of films in other areas. The author indicates the types of films available, some of the important sources, the importance of careful selection and some pertinent criteria, principles of use, and a few of the mechanical needs.

### FILMSTRIPS

- **Clio and the Camera**—Clayton S. Ellsworth, College of Wooster—*Miss. Valley Historical Review*, 31:579 March, 1945 (Reprint available)

Teachers of history should examine the possibilities of the filmstrip because it is inexpensive, simple to operate and easy to handle. One successful use of the sound slide-film was the teaching of the Morse International Code to a group of Navy cadets, whereby the group learned to use the code much more rapidly than by former methods.

The author has a bibliography of sources of slidefilms for the teaching of history, available upon request. He describes the filmstrips of the U. of Penn. University Museum on the American Indian; those on South America by such travelers as James Sawders and Perry Weimer.

There are several good films for teaching history; unfortunately many fall short in editing or photography. Historical slidefilms should be improved in three major directions: photography should be of professional quality; the scenario should be carefully planned by trained historians; and better quality should be attempted in the use of color, and further attempts should be made to introduce sound.

(Continued on page 244)

# 4 Steps to Useful Citizenship

## How Instructional Films Help Your Students Master Each

**1. The 3 Rs** — The useful citizen knows how to read, write and do simple arithmetic. Instructional films help speed the learning of these fundamental requisites.

**2. Geography, History, Government, Literature, Science** — Knowledge of the world in which he lives helps the useful citizen face the responsibilities and enjoy the rights and privileges of citizenship. Instructional films stimulate learning by presenting information in an interesting thought-provoking manner.

**3. Building Stronger Community Relationships** — Cooperative group projects growing out of experiences gained through instructional films develop increased spirit of friendliness and cooperation among students.

**4. Trade or Profession** — By learning and practicing a trade or profession, the useful citizen supports himself and his family. I.T.&T. new vocational-training films help students develop and improve skills.

**ONLY** with your help can sound films enable students to master the four steps to useful citizenship. For, in showing instructional films, your planned guidance spells the difference between waste and retained learning.

To help you enrich the quality of your pupils' experiences and expedite their learning, the Instructional Films Division of I.T.&T. offers an authoritative film library of over 1,000 subjects from which you may make selections to integrate successfully with your school curricula.

Upon request, we shall gladly mail to you the descriptive catalogue of instructional films now available, and keep you advised of new films as they are produced. Fill out and mail coupon for your copy.

## STILL PICTURES

- **The Use of Textbook Pictures**—Paul T. Williams, New York State Dept. of Education—*Nebraska Educational Journal*, 25:91 March, 1945.

Textbook illustrations should play a more significant role than they are now doing. Publisher, author, illustrator and teacher must work together to select the best illustrations for books and to assure that these will be used intelligently with children.

The selection of appropriate illustrations approximates an art. They must relate directly to the text, and they should be appropriate for the mental level of the reader. For all the subject matter areas the criteria would apply equally: 1. the illustration should have one central theme and should avoid details that detract; 2. the picture should be rich in thought content; 3. it should supplement the text and aid in its interpretation and clarification; 4. it should be clear, distinct and artistic; it should furnish a vicarious experience which corresponds closely with a real situation; and 6, the titles and sources should be given.

In using textbook illustrations, it is not enough to draw attention to the picture. Discuss it from the point of view of the text being read; leading questions to test powers of observation could be used.

## FILM FORUMS

- **Taking Films to the People**—Morten Parker—*Adult Education Journal*, 4:59 April, 1945.

The National Film Board of Canada's program of films for adults has been organized to serve the following groups: industry, farms and trade unions. Traveling projectionists are employed to take the films to the people. The Industrial Circuits, for example, include 40 projectionists who go into factories, shipyards, lumberyards, and the like. The Rural Circuits include 80 projectionists reaching farmers, fishermen and ranchers.

Film forums have successfully become part of these traveling programs, especially among rural people. A discussion trailer is usually attached to the last film on the program and a forum, organized with the aid of a local film committee, follows.

- **Films for Forums**—Evelyn Oelen—*Adult Education Journal*, 4:53 April, 1945.

A list of films suitable for discussion, with a request by the author that groups communicate with the Institute for Adult Education, Teachers College, Columbia University, N. Y. 27, if they have used these films, or if they would like discussion aids.

## TRENDS

- **P.E.P. Broadsheet on British Documentary Films**—Political and Economic Planning—*Film News*, May 1945.

An excellent summary of the British documentary film movement in the last fifteen years. It is in effect a summary of the facts contained in a report to be published soon by the Oxford University Press.

The report gives a brief history with factual data about the persons and films that were outstanding in the developmental years. Then there is a resume of the British documentary in wartime, including the methods of distribution; followed by a description of the educational film trend. There are proposals for future organization of the non-theatrical film industry in Great Britain.

## PRODUCTION

- **Standards for Training Films**—William Exton, Jr., Lieut. Commander, USNR—*Film News*, May, 1945.

This article was adapted from a chapter of a book on Standards and Testing in Training Aids.

The experience gained in producing training films for this war has been valuable but the author contends that the standards set for itself in all but a glowing few of its past performances, and the standards set for it by its eager utiliziers are far too low and unimaginative; and the current rewards for mediocre productions are far too high. The training film of the future will reveal its fullest stature

only when exacting and discriminating standards require this infinitely versatile medium to demonstrate the fullest range and application of its effectiveness.

## PHOTOPLAY APPRECIATION

- **Choosing Movies Intelligently**—Edgar Dale, chairman. Committee on visual education, National Congress of Parents and Teachers—*New York State Education*.

This informal article, addressed to the members of the Congress, makes an appeal to parents to give every encouragement to the good films that are shown in theaters, to start early in developing good taste in children, and to make use of the preview lists issued by the "National Parent-Teacher Magazine."

## SOURCES

- **Consumer Education for All Ages**—Lili Heimers and Margaret G. Cook—Montclair State Teachers College, Upper Montclair, N. J. 1945 18p. mimeo. 50c

A unique source of various types of materials dealing with the following topics: consumer economics, the house and its equipment, the health of the family; and clothing and its care.

- **The People of America: Intercultural Education**—Lili Heimers and Margaret G. Cook—Montclair State Teachers College, Upper Montclair, N. J. 1945 10p. 25c.

Teaching aids listed for this subject are organized around the following topics: our origins, our beliefs, contributions to American culture, toward unity, and suggestions for music and festivals.

- **Teaching Materials for Industrial Education**—*Industrial Arts and Vocational Education*, April, May, June 1945.

A rather extensive compilation for the use of teachers in this specialized area, consisting of titles and addresses with no attempt at evaluation.

- **French Language Films**—*Modern Language Journal*, 29: 247 March, 1945.

The titles, with brief description and rental rate of those National Film Board of Canada subjects that have French commentary. These, it is indicated, are available from Brandon Films and other agencies.

- **Educational Film Guide**—H. W. Wilson Co., 950 University Ave., New York, N. Y.

A questionnaire in the March 1945 issue of the "Educational Film Guide" (formerly "Educational Film Catalog") settled a number of problems including the future name of this publication. By a vote of two to one the name "Educational Film Guide" won over the nearest competitor. It was also decided to drop all information about 35mm. non-theatrical films.

The 1945 annual will be ready in June. This will include all films listed in the 1944 annual, the September 1944, the March and April 1945 issues and many new films which have been recently issued or selected for inclusion in this Guide.

On the March questionnaire, more people indicated that they preferred slide films or filmstrips and recordings to be in a separate catalog or catalogs.

## PERIODICALS

- Veterans**—Vol. 10 no. 4, *Building America*, 2 West 45th Street, New York City, 30c.

This issue is especially important as it brings together vital facts that help us in developing attitudes on the future of war veterans. There is an illustrated, documented section describing the benefits promised to veterans in previous wars fought by our nation. Then there is a detailed account of the war department's current activities in behalf of service men, with a concluding section on the problems of the immediate future.

- Light Metals**—Vol. 10 no. 5, *Building America*, 30c.

The science and economics of the use of aluminum, magnesium and beryllium. Their importance as war materials is described, and illustrations given of some new and outstanding products to be expected after the war.

# HANDMADE LANTERN SLIDES — and the KEYSTONE OVERHEAD PROJECTOR

make an Excellent  
Combination for presenting your  
Original Ideas QUICKLY  
and ECONOMICALLY

★ THE KEYSTONE LANTERN SLIDE OUTFIT. Complete outfit and instructions for making Handmade Lantern Slides.

By using the KEYSTONE LANTERN SLIDE OUTFIT, you can quickly and easily make inexpensive, clean-cut, attractive lantern slides that show drawings, charts and diagrams, typewritten outlines, texts, and other material. You gain these advantages:

1. BETTER LOOKING PRESENTATION
2. DIFFICULT SUBJECTS ARE MADE CLEAR
3. YOU SAVE TIME AND MONEY

For fifteen years the Keystone View Company has been developing and perfecting superior materials for the making of Handmade Lantern Slides. Only the most attractive and projectable Handmade Lantern Slides are of real service to the instructor. You will find everything you need in the KEYSTONE LANTERN SLIDE OUTFIT.

The OVERHEAD PROJECTOR is the last step in making the classroom use of handmade lantern slides interesting, practical, and effective.

Write for full details today.

# Teacher Committee Evaluation of New Films

L. C. LARSON, Editor  
Ass't Prof., School of Education  
Consultant in Audio-Visual Aids  
Indiana University, Bloomington

Assisted by CAROLYN GUSS  
and ELIZABETH MEANS  
Extension Division  
Indiana University, Bloomington

## Central America

(Encyclopaedia Britannica Films, 20 N. Wacker Drive, Chicago, Illinois) 11 minutes 16mm. sound. Purchase price \$50 less 10% educational discount. Apply to producer for rental sources. Discussion guide available.

Beginning with a brief history of Central America, the film covers the economic, physical and human geography of Central America.

Introductory animated maps and accompanying commentary locate Central America, indicate the separate countries that comprise it, and emphasize such historically significant facts as discovery by Columbus in 1502 and Balboa's crossing the Isthmus of Panama in 1513.

A brief sequence is devoted to the cultural background of the present inhabitants. Close-ups show predominant facial characteristics of the mestizos, a race which is the result of the blending of the Spanish and Indians and which comprises the greater percentage of the population.

The next sequence devoted to the physical geography identifies the winds that blow across Central America, the various kinds of soil that account for varied crops and industries, and the sections that have rich mineral deposits.

How the people make their living is next treated. Scenes show great cattle ranges in the western part, the extensive farming section on the high central plateau, and the world's greatest banana tracts in Eastern Central America.

The conclusion of the film points out that, even though at the present time Central America is exporting many raw products and importing manufactured articles, with her development she will play an increasingly important role in world commerce and exchange of products.

### Committee Appraisal:

This film makes a contribution to the need for instructional material on the Central American area. Considering the fact that the film gives historical background and covers physical, economic and human geography of the several countries in this area in eleven minutes it should be useful as an instructional film. Teachers of geography and social studies on the upper elementary, secondary and college levels will find it valuable.

## It Doesn't Hurt

(Coronet Productions, Glenview, Illinois) 11 minutes, 16mm., sound, color. Apply to producer for purchase price and rental source.

This film tells the story of the boy who due to wrong diet and lack of dental care had decayed teeth, but responded to all admonitions with, "It doesn't hurt."

Although the story opens with George and his mother in the dentist's office, it immediately shifts back to the behavior that culminated in that visit. In preparing for school when admonished by his mother, George brushes his teeth in a hasty ineffective manner. In fact it is done so ineffectively that he never once touches in the cavities the harmful germs which are personalized as "Old Man Rot." This gnome-like creature with scraggly hair and snaggle teeth dodges the brush and between George's strokes gloats over his escape. He even gets in some good strokes of his own thus bit by bit destroying the dentine and also tells how he will soon be able to work on other teeth and boasts that he hasn't hurt George—"yet".

The next sequence shows the school dental inspection.

Here George's response when warned by both dentist and nurse that he must see his dentist is, "But it doesn't hurt." However the day of reckoning does come when George is too miserable to play baseball—the game he loves most.

The succeeding portion of the picture depicts George with the dentist. Animation is used to show George's pain. By this time "Old Man Rot" has reached the nerve. The dentist advises George concerning his food and then shows him the correct technique of brushing teeth.

The film closes with resulting changes in George. He willingly brushes his teeth and does it so efficiently that "Old Man Rot" is exterminated. Free from pain he hurries back to school and happily joins his classmates in play.

### Committee Appraisal:

This film uses a fairy-tale approach through its fiendish personalization of decay to convey an effective lesson in dental hygiene. The committee felt that children would be intensely interested in the film and that favorable attitudes toward proper diet and care of teeth would result.

The problem of correctly brushing the teeth was well developed through demonstrations by the dentist and George; the problem of proper diet, however, could have been more completely developed by the use of flashbacks showing some of the children with good teeth eating well-balanced meals. All who saw the film were impressed by the naturalness of the children and the balance between realism and fantasy. Highly recommended for use in primary grades. Upper grade children, high school students and adults will also appreciate the film.

## The Attitude Gyro Indicator

(Sperry Gyroscope Company, Central Film Service, Great Neck, New York) 18 minutes, 16mm. sound. Produced by Audio Productions, New York City. Apply to producer for rental sources and purchase price.

This film shows the mechanism and use of the attitude gyro indicator and its function in instrument flying. The picture begins with the picturization of a world globe below a suspended ball painted to represent a lateral gyro indicator (upper half white, lower black, and lateral lines at 30° intervals). The general principles of how the indicator functions is demonstrated with a model airplane in various positions relative to the gyro.

The second sequence deals with the mechanical structure of the attitude gyro indicator. While the various parts are shown and their functioning depicted pictorially, the commentator contributes additional factual data including how this mechanism is based on the law of gravity, that the electrically driven motor has an rpm of 23,500 and that it is a more reliable gyro than the directional and horizon gyro indicators.

The last part of the film pictures the actual functioning of the instrument. A plane is shown in straight-forward level flight and then the attitude gyro is filmed during the same period of flight. This is repeated for glides, left banks, rolls of different types, loops, and Immelman turns.

### Committee Appraisal:

An interesting and instructional treatment of the operating principles and function of the attitude gyro indicator. Even though the content is highly technical, the material was organized and explained effectively through the use of models and actual demonstrations of the functioning of the instrument in a plane. Recommended for use in classes in aeronautics, physics and general science and for adult groups with a particular interest in aeronautics.

**WITH ENCYCLOPAEDIA BRITANNICA FILMS**

To children, the world about them is a "bundle" of mysteries. Questions like the above are their key to the solution of these mysteries.

To the teacher who has to answer such questions, who has to explain the normal phenomena of our everyday world, the classroom film is a great boon.

For, with the classroom film, the wonders of nature and the laws of science become crystal-clear. Time and distance are telescoped, facts become alive and meaningful, learning becomes a thrilling experience.

Encyclopaedia Britannica Classroom (Erpi) Films and the Silent Teaching Films (formerly Eastman) are professionally created to be used by teachers as a part of the regular school curriculum. Available right now are approximately 500 titles, including films on Primary Chemistry, Physics, Astronomy, Geol-

ogy, Biology, Geography and the Social Sciences.

A new "Lease-to-OWN" plan offers all schools—even those with small budgets—a low-cost way to enjoy the benefits of a functional film library from the very beginning. With "Lease-to-OWN" you will have the *right* film at the *right* place at the *right* time. And there's no liability beyond the budget year. Let

us give you the complete information, without obligation. Fill in and mail the coupon today.

**TEACHER'S HANDBOOK** with every film. Contains a review of the film, suggestions for coordinating the material with the teaching program, and supplementary references. Also, Visual Learning Guides for classroom utilization of film content are available for many sound films.

## Housing in Scotland

(British Information Service, 30 Rockefeller Plaza, New York City) 14 minutes, 16mm. sound. Purchase price \$15.50. Produced by Merlin Productions, London, England. Apply to distributor for terms governing rental.

Kaleidoscopic scenes of soldiers, women in industry, and youngsters evidence the need for adequate housing facilities in Scotland. The commentator points out that at the end of the 18th century Scotland led the world in housing and community centers, and progress continued until World War I during which time housing conditions were poor. Worst of all were the miners' houses—all alike, all unattractive, no provision for social needs, only houses to hold beds.

Even though the Herculean task of meeting Scotland's future housing needs must wait for a release of materials, experts and architects have done much planning and have perfected several models. Prospective tenants are given an opportunity to inspect these model apartments, houses, and tenements. The film shows a veteran and his mother on a tour of inspection through one of these government projects. They are favorably impressed by the electric washer, the electric refrigerator, the built-in cupboards, and other modern conveniences.

The last sequence of the film points out the fact that even though only a small beginning has been made to the solution of the problem nevertheless coordinated effort is being exerted to meet the urgent need—apprentices are being trained, sites are being selected, types of houses are being determined, and building planned for the immediate future. The summary statement of the commentator emphasizes the thesis of the film, namely, that only a house is needed for each family unit but that the house must be attractive, sanitary, pleasant, and convenient.

### Committee Appraisal:

An interesting and sympathetic film on how a national government is planning to meet one of the more important needs of its people. Present housing shortages are admitted and a post-war program is projected frankly and specifically. Even though dealing with the housing problem in Scotland nevertheless the committee believes that this film would be applicable in studying the needs and planning for housing in this country. Secondary colleges and adult groups discussing problems of housing will find it a valuable film.

## Watchtower Over Tomorrow

(Office of War Information, Washington 25, D. C.) 15 minutes, 16mm. sound. Produced by the War Activities Committee of the Motion Picture Industry. Apply to distributor for terms governing purchase and a list of rental depositories.

Beginning with a prologue by Secretary of State Stettinius, who points out that our Government under the leadership of President Roosevelt has been working to avoid future wars, the film proceeds to depict pictorially the incidents which culminated in the Dumbarton Oaks Conference and the San Francisco meeting and shows one way of avoiding a third World War.

The film conveys its message through an off-stage narrator who addresses two occupants of a crowded city bus. As the narrator explains the structure, the functions, and the functioning of a World Security Council, various scenes show the meeting of representatives of all nations and their working together in committees to solve international problems. The film indicates that the Council will work on such problems as monopolies, currency stabilization, national trade, and international justice.

When one of the two passengers on the bus who has agreed with the workings of the Council to this point, questions how it will work when some one nation decides to "jump" the Security Council, the off-stage narrator proceeds to explain while the film shows that such a nation would be paralyzed by being deprived of communication and commerce with the rest of the world. If such action did not

## --USE **DA-LITE** SCREENS!

(Reg. U. S. Pat. Off)

For average projection requirements of either movies or slides, the Da-Lite *glass-beaded* surface is best. Its snow white plastic-coated fabric, specially treated beads of uniform size, and smooth, even application make every picture brighter and clearer. *Many styles* are available including hanging screens (both spring-operated and electrically controlled) and the Challenger and Versatol tripod models—the only tripod screens that can be adjusted in height without separate adjustments of fabric or case. Ask your visual education dealer for *time-proved* Da-Lite Screens!

### THE DA-LITE CHALLENGER

locks automatically at correct picture proportions. Many other advanced features.

### Write for FREE Data Book!

This 40-page book gives helpful information on screen surfaces—white, silver and glass-beaded—selection of the right size of screen for each projection need, and full details on Da-Lite screens, the line that has been famous for fine quality for 36 years.

## DA-LITE SCREEN COMPANY, Inc.

Dept. 6ES 2723 No. Crawford Ave. CHICAGO 39, ILL.

force the aggressor to change its plans of war, the Council would interfere more drastically by declaring a war to stop the potential war.

Thus the film portrays the workings of an international organization which will be the "Watchtower Over Tomorrow."

### Committee Appraisal:

The committee feels that this is an outstanding film on international cooperation for a post-war peace. It presents in an interesting and lurid fashion the basic plans underlying the organization and operation of a World Security Council. Highly recommended for either providing information on the means of a post-war international organization or furnishing the basis for discussion of the problems of avoiding a third world war. Junior high school, high school, college and adult groups should find this film particularly valuable.

## QUESTION BOX ON FILM PRODUCTION

Conducted by DAVID SCHNEIDER

Evander Childs High School, New York City

**QUESTION:** We have several hundred feet of motion picture film shot at sixteen frames per second. Do you think it would be possible to add sound in the form of commentary and music for a school assembly program?

**ANSWER:** There are several ways of adding sound to amateur-made films. The simplest of all for any school program, is to have a commentator speak into the microphone of the school's public address system while the organist provides background or theme music. Of course all this

requires several rehearsals to assure perfect synchronization.

By obtaining two phonograph turntables the amount and variety of music can be greatly increased. If you jot down on a sheet of paper a brief description of each scene of your movie, together with its footage or running time, you can easily match the mood of the picture with the appropriate music. By using a wax pencil on each phonograph record you can safely indicate the starting and stopping points for each musical selection. You now number the records in consecutive order to conform to the sequences of your movie. If each of these turntables is provided with a volume control, your presentation can be made more effective by the use of the fade-in and fade-out devices. Here again timing is very important. Therefore be sure that the commentators and the turntable operators are sure of their cues.

If you would like to go one step further, take your commentator, your film and your phonograph records to a recording studio. There, while your film is being projected through the window of a sound-proofed projection booth, the voices of your commentators and all your musical selections can be put on a large sixteen inch record. (You'll have to be sure that the records selected for your re-recordings are free from royalty fees.) This sixteen inch record can now be played back on a turntable that makes 33 and  $\frac{1}{3}$  revolutions per minute instead of the standard 78 r. p. m's.

If you have dreamed of adding sound right on to the film itself, I'd like to report that your dream can now be made into a reality. This is due to the fact that some one also had similar visions and turned his dreams into a patented device of adding sound at the unorthodox rate of 16 frames instead of the conventional 24 frames per second. If you like more details, I'll be glad to direct you to the inventor of this new device. All I can say is that I've seen it work.

## Wisconsin Visual Education Institute

The Third Annual Visual Education Institute, sponsored by the University of Wisconsin, will be held July 16-20 during the summer session of the University at Madison. The five-day meeting will be taken up with formal addresses, classroom demonstrations, audience discussion of audio-visual problems, and film showings. Speakers will include; Lieut. James Brown, USNR, Chicago; L. C. Larson, Indiana University; Joseph E. Dickman and Don Rogers, of the Chicago Public Schools; Charles Hoff, University of Omaha; Esther Berg, N. Y. Society for Study of Experimental Education; Ellsworth Dent, Society for Visual Education, Chicago; C. R. Crakes, DeVry Corporation, Chicago; V. C. Arnsperger, Encyclopedia Britannica Films; Roger Albright, Teaching Film Custodians; Margaret Carter, National Film Board of Canada; Leslie E. Brown, Former Director of Adult Education, Springfield, Ill.; Robert E. Scott, Superintendent, Hennepin County, Minn.

Other contributors, who will serve on the board of consultants along with the above speakers, are: John Hamilton, British Information Services; C. R. Reagan, Office of War Information; Oscar Sams, Office of Inter-American Affairs; Donald Bean, Educational Screen; Anatole Lindsay, Films Incorporated; Dean Douglass, RCA Educational Director; and W. A. Wittich, University of Wisconsin.

Complete program of the Institute can be obtained upon request to Mr. W. A. Wittich, Acting Director, Bureau of Visual Instruction, University of Wisconsin, Madison.

## California Assembly Bills for Audio-Visual Aid Support

A most recent important advance in the field of audio-visual education in California was the creation of a Division of Audio-Visual Education in the State Department of Education by Superintendent Walter F. Dexter. The new Division must, however, be financed adequately by the State Legislature, if it is to be able to carry on the work for which it was created. A bill is now before the education committee of the California State Assembly to make an appropriation for the support of the Division of Audio-Visual Education. Superintendent Dexter is urging that an appropriation of not less than \$166,000 be set up for operation of the Division during the next two years.

Another bill, authorizing the establishment of a radio broadcasting system for educational broadcasts over FM network, is also under consideration.

## Disposal of Surplus War Property

Section 13 of the Surplus Property Act of 1944 provides that "Surplus property that is appropriate for school, classroom, or other educational use may be sold or leased to the States . . . and tax-supported educational institutions and other non-profit educational in-

# Notes

stitutions which have been held exempt from taxation under section 101 (6) of the Internal Revenue Code."

School buyers who are interested in the purchase of surplus government property, which includes audio-visual equipment, should send for a copy of the pamphlet, "Small Business Problems—Buyer's Guide for Surplus Property," revised edition, which is available for ten cents from the Government Printing Office, Washington 25, D. C. This publication gives disposal agencies and regional offices, and indicates the types of surplus materials handled. A "Surplus Reporter" is issued from each regional office at intervals listing what the Treasury Procurement Division has to sell.

## Annual Midwestern Forum on Visual Teaching Aids

The Executive Committee of the Midwest Forum on Visual Teaching Aids has announced that a somewhat different kind of meeting will be conducted this summer because O.D.T. rulings preclude a large assembly. This annual event will be a local conference in between two other institutes at the University of Chicago, Gray's Reading Institute and Reavis' Institute of Administration Officers. Some forty leaders in the audio-visual field have been invited to participate in a round-table discussion both morning and afternoon of Saturday, July 14. The group will assemble in the Rosenwald Museum, which is located in Jackson Park at Hyde Park Boulevard and 57th Street, Chicago.

The agenda for the round-table will consist of a consideration of problems submitted by the invited guests. Suggested topics for discussion so far received include the following:

How can war-born audio-visual materials be preserved and utilized in civilian education? How can valid research projects be instituted to evaluate the results of audio-visual teaching materials in the Armed Forces? What are the responsibilities of teacher-training institutions for teaching teachers how to utilize modern audio-visual instructional materials? What standards should be set up for the production of visual materials? What assistance can public schools expect from State Departments of Education in the development of audio-visual materials? What is the future of school-produced audio-visual materials? Who shall select films to be used in the school and in terms of what criteria should the selection be made? What role can audio-visual materials play in adult education programs?

A dinner meeting of the Executive Committee is scheduled for Tuesday evening, June 12, to consider the final program. Members of the Committee are: Stephen M. Corey, Orville T. Bright, Joseph E. Dickman, Harry E. Erickson, Harry O. Gillet, William J. Hamilton, William F. Kruse, Lawrence C. Larson, J. Stanley McIntosh, William C. Reavis, Alvin B. Roberts, Ernest C. Waggoner, Donald P. Bean, Robert M. Cole, Orville C. Peterson. Mr. William C. Reavis will act again as General Chairman.

A group of Fact Films Dealing With Subjects in the Public Interest, For Use in Film Forums, Discussion Groups, Classrooms, Adult Education Centers, Industrial and Farm Organizations.—

## Industrial Relations, Cooperatives, Full Employment, Post-War Economy.

16mm Soundfilms For Rent and Sale

### THE LABOR FRONT

21 Minutes Rental \$3.00 Sale \$72.00

The immense job free labor has done along with all sectors of the population in the global war against the Axis. The new responsibilities of Labor and the new attitudes toward it. Will the post-war bring unemployment and insecurity or will we treasure the greatest asset a nation can have—the living force of its people?

### PARTNERS IN PRODUCTION

28 Minutes Rental \$1.00 Sale \$45.00

Using a problem of readjustment at a north country coal mine as an example, this film outlines the story of Joint Production Committees in wartime Britain. An authentic picture of Labor and Management in collaboration, and a striking portrayal of democracy at work. Cooperation for war production provide a background for peacetime.

### A MAN AND HIS JOB

17 Minutes Rental \$3.00 Sale \$50.00

The problem of unemployment traced in story form from depression years of the twenties to the present time. Deals with the insecurity of the early period; the rise of Unemployment Insurance; planned manpower employment in wartime Canada. Stimulates discussion and study of problem of avoiding mass unemployment at the end of this war.

### THE PEOPLE'S BANK

20 Minutes Rental \$3.00 Sale \$50.00

Story of the purpose and growth of Credit Unions in fishing, mining, farming, and industrial communities and settlements. Set in Quebec, New Brunswick, Nova Scotia, Manitoba, and Saskatchewan; with farm and town families taking part to show how this form of community cooperation has helped solve emergency problems and local business enterprise.

**Audio-Visual Conference on County Level**

Over 500 teachers and visitors crowded the Waukegan (Illinois) Township High School Auditorium on the afternoon and evening of May 4, when W. C. Petty, County Superintendent of Schools, presented the chairman of the audio-visual conference, Dr. Stephen M. Corey, of the University of Chicago. A half-day holiday had been declared throughout the entire Lake County school system, twelve commercial exhibits had been arranged for, and a two-session program offered eight presentations on widely varied aspects of visual instruction. The conference was organized by Orlin D. Trapp, Director of Industrial and Visual Education at the high school.

A talk and film demonstration on "The Use of Sound Films and Other Visual Aids in Industrial Education," by William F. Kruse, opened the program, citing experiences, mainly, of the in-service educational program of the Bell & Howell Company. Next W. Roger Zinn, of the Jam Handy Organization gave a lively, humorous talk on the use of filmstrips in the classroom. W. W. Wittich, emphasized the responsibility of the classroom—and in the evening session gave an inspiring demonstration of his theses with a group of high school students, on the subject of "Brazil," that was unquestionably the high point of the meeting. Lieut. James W. Brown used 2x2 slides to illustrate his talk on the use of visual aids in the armed forces. In the evening session there was a demonstration of wire recording; Harry Erickson, of RCA, called for a friendly man-to-man attitude toward 16mm. projectors; and Carl F. Mahnke showed a vocational guidance film and talked on the growing importance of this field.

Particularly commendable were the detail arrangements. An intermission of almost two hours was set aside to permit contacting the commercial exhibitors. Four makes of sound projectors and two for slides were operated by student members of the High School Audio-Visual Club. All in all this audio-visual meeting, on a county scale, was felt by those present to provide an excellent pattern to be followed in other communities.

**Television Programs by Chicago Schools**

A new television program using high school students, high school faculty members and administrative officers of the Chicago Public Schools has been inaugurated in Chicago and may set a pattern for school system participation elsewhere. A three way experimental arrangement has been worked out by George Jennings, Acting Director of the Radio Council of the Chicago Public Schools; television station WBKB, Chicago's only television station now in operation, and the Admiral Corporation, Chicago manufacturer of radio and television sets.

The program is a half-hour show, presented once each week, and made its debut Friday, April 6 under the title of "Young Chicago." Programs are of two types: Variety entertainment presented by talented students and "public relations" programs presented by various departments of the Chicago school system.

In connection with the Western Arts Conference held in Chicago May 11 and 12, "Young Chicago" presented an art demonstration the evening of May 11; the program for May 18th ended a two-week celebration in Chicago observing the Centennial of the First Public School Building in Chicago, the Dearborn School. This was a then and now program directed and staged by Mr. Jennings.

The chief purpose of this activity Mr. Jennings explained, is to encourage as much television participation as possible among high school students while television is still in the experimental stage. A second purpose is to provide experience for radio staff and departmental heads of the Chicago School system in preparation for the time when television will become a medium of effective classroom instruction.

"Young Chicago" has been discontinued for the summer but will be resumed in the fall.

### Los Angeles Audio-Visual Conference

According to the 17-page Report on the Second Annual Invitational Audio-Visual Educational Conference, held in Los Angeles March 23, the participants had a stimulating day's session. The guests were welcomed by the sponsors of the conference, Dr. Clarence Pierce, President of the Los Angeles Board of Education, and Dr. Vierling Kersey, Superintendent of the Los Angeles City Schools.

Six section meetings in the morning offered a variety of topics. In order that all attending the conference could benefit from these sectional discussions, the six chairmen summarized them when the whole group reassembled at 1:30.

Mrs. Grace Dreier, Head Supervisor of the Elementary Curriculum Section, was chairman of the first section meeting, "Teaching of Spanish." She described the Spanish-speaking program which is being carried out in the Los Angeles elementary schools through phonograph records, accompanied by a set of photographs, the back of which have words written in Spanish. As chairman of the second section, "How Audio-Visual Materials Help in Teaching the Fundamentals," Dr. Walter Hepner, President of San Diego State College, stressed that there is a place and a great need for audio-visual tools to assist in the teaching of the language arts. Mr. Leo B. Hart, Superintendent, Kern County Schools, presided over the third section, "Financing a School Budget." He urged that school boards ask for enough money to make an audio-visual program effective. Mr. D. C. Myers, chairman of the fourth section, "The Use of Audio-Visual Tools in Business," told how audio-visual teaching devices reduced the training period for the employees of his firm, the Southern California Gas Company. Mr. Francis Daugherty, Principal of Roosevelt High School, was chairman of Section 5, "Experimental Program in Audio-Visual Education." He and panel members brought up problems of teachers and administrators. Mr. Edgar Wilson, Director of Vocational Education in the Compton City Schools, presided over the sixth section, "Audio-Visual Program for the Returned Veteran." His group discussed the need of

1813 ORCHARD STREET, CHICAGO 14

directing audio-visual tools to the specific problems of the veterans. He emphasized the need of adequate teacher preparation for dealing with them, and recommended the use of Army and Navy lectures to explain the psychology of the returned veteran.

The general session which followed consisted of a panel on "How a School Administrator Looks at Radio," led by Mr. Maruce G. Blair, Director of Secondary Curriculum, Los Angeles Schools. Panel members included: John Carroll, Superintendent, San Diego County Schools; N. Evelyn Davis, Supervisor, Audio-Visual Department, Long Beach City Schools; Gwendolyn Peacher, Director of Education, Columbia Broadcasting System; Glenn Gardiner, Dana Jr. High School; Harry Haworth, Supervisor, Library and Visual Service, Pasadena City Schools.

### NEA Creates Audio-Visual Division

In view of increased emphasis on visual aids, largely resulting from the training programs of the Armed Forces, the National Educational Association has instituted a Division of Audio-Visual Instructional Service. Its Executive Committee has authorized the employment of a qualified director to work with teachers groups in developing and using audio-visual tools.

### Encyclopedia Art Collection on Tour

For scarcely two years past Encyclopedia Britannica has commissioned the painting, by leading American artists, of over 116 pictures to illustrate various articles in Britannica publications. The artists were selected by a questionnaire to some fifty leading artists, museum directors and art dealers throughout the United States. The interesting result is "the most complete representative collection of contemporary American painting ever assembled."

Instead of consigning such an outstanding collection to the storehouse after serving its original purpose, Encyclopedia Britannica wisely decided to make it accessible to the whole country. The first step was the preparation of a beautiful brochure, reproducing the original 116 pictures, many in their original colors, with detailed accounts of the artists.

The second and greater step was to route the entire collection for exhibit "all over the country wherever it is wanted and wherever it can be looked at by an interested public." It will be shown at leading galleries and other public places—about one month at each—in a tour that may extend through five years.

The first month's showing was at the Art Institute in Chicago April 12-May 13. Following showings, scheduled through 1945, are as follows:

- Mezzanine Galleries, Rockefeller Center, N. Y., June 6-July 8
- Museum of Fine Arts, Boston, Mass., July 26-Aug. 26
- Corcoran Galleries, Washington, D. C., Sept. 13-Oct. 14
- Dayton Museum of Art, Dayton, Ohio, Nov. 1-Nov. 25
- Carnegie Museum, Pittsburgh, Pa., Dec. 18-Jan. 27

### School in Visual Education for Church Workers

The International Council of Religious Education will hold the second annual Workshop in Visual Education for church workers, August 13-18 at Conference Point Camp, Williams Bay, Wisconsin. This beautiful summer camp site, owned and operated by the International Council, is well adapted to school purposes.

The school is planned particularly for church school superintendents, age group supervisors in the churches, chairmen and members of visual education committees, supervisors and teachers of weekday church schools, chairmen of boards of religious education, pastors and directors of religious education, teachers of visual education courses and supervisors of vacation religious education.

The faculty will include the best available leadership in the country for each type of study or laboratory group. Dr. Paul H. Vieth, Horace Bushnell Professor, Yale Divinity School and pioneer leader in the use of motion pictures and slides in churches, will direct the general seminar on Principles and Philosophy of Visual Education.

Each morning there will be specialized seminars dealing with utilization and administration. Such seminars include: "Visual Methods and Materials with Children," Miss Ruth Elizabeth Murphy, Director of Vacation Religious Education, International Council of Religious Education; "Administering Visual Education in the Local Church," Rev. Alexander Ferguson, Director of Visual Aids, Congregational Christian Churches; "Using Slides and Films with Young People and Adults," Rev. William S. Hockman, Director of Religious Education, Lakewood, Ohio Presbyterian Church; "Regional Programs of Visual Education," Rev. Frank A. Lindhorst, Executive Secretary of Des Moines Area, Board of Education, The Methodist Church.

The afternoons will be devoted to gaining skill in making and planning new visual materials. Laboratory groups include:

Introduction to Photography; How to Make 2 x 2 Slides; How to Make Motion Pictures; Planning New Films and Slide Sets for Older Groups; Films and Slide Sets for Children, led by Miss Elsie Miller, Children's Department, Board of Education, The Methodist Church; Making Non-projected Visual Materials, directed by Mrs. August Beck.

In addition, the General Secretary of the Religious Film Association, Rev. William L. Rogers will lead the seminar, "Denominational Book Store Representatives."

During the evenings the group will review motion pictures and slide sets from the standpoint of utilization. There will also be a special Clinic in Advanced Photography for those who bring motion pictures and slides with them and wish to have them evaluated. Educational exhibits of equipment and materials are also a feature of the Workshop.

The \$5.00 advance reservation fee and requests for further information may be sent to Dr. Mary Leigh Palmer, Director of the Visual Education Workshop, International Council of Religious Education, 203 North Wabash Avenue, Chicago 1, Illinois.

# Current Film News

■ **Y. M. C. A MOTION PICTURE BUREAU**, 347 Madison Avenue, New York 17, announces the addition to its rental library of a series of four 1-reel 16mm sound films, under the title of *World Spotlight*, which were written by the Editorial and Research Departments of Look Magazine and produced by Newsreel Distributors, Inc., and Pathe Studios.

**America Prays** depicts the significant findings in an intensive study made to determine the spiritual strength of our country, to find out how many of our population of 134 million men, women and children believe in God, attend church or Sunday-School regularly, and make use of prayer—in these days when the things of the spirit are important as never before.

**Challenge to Crime** describes a common-sense way to help rid any community of juvenile delinquency which has flourished under war-time social conditions. The plan was created by a young girl in her teens who organized a successful cleanup campaign among the youngsters in her home town, Moline, Illinois, and offers a genuine challenge to other communities to do likewise.

**Luckiest People on Earth** presents in an amusing and informative manner some very convincing evidence that to be a plain, ordinary citizen in these United States of America is to be an extremely fortunate person.

**Kings of Sport** shows the great champions of the sports world in action on the diamond, the gridiron, the track, tennis court, in the boxing ring, etc.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, are offering four recent subjects in 16mm sound, namely:

**French Town**—2 reels—made jointly for the British Ministry of Information and the U. S. Office of War Information. The film tells the story of the rebirth of a war-ravaged French town, liberated by the Allies. The problems of transport, food and housing are acute, but the French people and the Allies work them out together. Sir Cedric Hardwicke speaks the commentary.

**A City Reborn**—2 reels—presenting plans under which the bombed English city of Coventry will be rebuilt. It will have 20,000 new houses, new schools, hospital, health and recreation centers. The focal point will be the restored cathedral with gracious space around it. Main roads will go around the city. The suburbs will be self-contained, each with its own cinemas, cafes, clubs and shops.

**Willing Hands**—1 reel—description of the activities of the WVS (Women's Voluntary Services for Civil Defense),

which serves twenty Government Departments. The Services supervise lunches for school children, factory and land workers; collect salvage, and maintain clothing depots from which they distribute needed garments.

**Killing Farm Rats**—2 reels—a report on the millions of dollars' damage done by rats every year and extermination methods. Scientific methods of poisoning are demonstrated.

■ **OFFICIAL FILMS**, 625 Madison Ave., New York 22, offers the following

new release in their 1945 Volume of News Thrills:

**Battle of Germany**—recording the dramatic struggle for the Rhineland and showing the relentless 7,000-plane aerial bombardment of communication centers; British forces breaking through the northern anchor of the German defenses in the west, taking prisoners by the thousands; capture of Cologne, and of the Ludendorff bridge at Remagen; and the first crossing of the Rhine. In the same reel is included:

**The Yalta Conference**—a film record of this very important meeting of the Big Three, where plans were made for the final victory over Germany.

**Radiant**

**SIGHT SOUND**

MOTION PICTURE PRODUCTION

■ **OFFICE OF WAR INFORMATION**, Bureau of Motion Pictures, Washington 25, D. C., has obtained prints of two films from the Army Air Forces:

**Out of Bed into Action**—30 minutes—dealing with the rehabilitation of hospitalized Army Air Forces Personnel.

**Radio Operator**—20 minutes—a brief description of his training, showing how it fits him for the responsibilities of active duty on bombardment aircraft.

These films will be allocated to regular OWI 16mm distributors, along with the following new subjects:

**Kids Must Eat**—18 minutes—a U. S. Department production featuring the Quiz Kids. The importance of proper nutrition and the possibilities of a community school lunch program are pointed out.

**UNRRA** (In the Wake of the Armies)—14 minutes—produced by the National Film Board of Canada and supplied through the courtesy of UNRRA. The film explains the purpose of that organization—the answer to the destruction and poverty in Europe after four years of bitter fighting.

**The Story with Two Endings**—10 minutes—a 20th Century-Fox production made for the OPA. It shows the results of allowing prices to get out of hand and gives practical advice on what can be done to prevent a repetition of what happened after the Armistice of World War I.

**Men of Fire**—15 minutes—a War Department incentive film pointed at the highly important forging and castings industry.

**The Calls That Cure**—10 minutes—how the telephone is made available for the use of all at Halloran Army Hospital, its contribution to the happiness of the wounded and sick. Made for the American Telephone and Telegraph Company.

■ **COMMONWEALTH PICTURES CORPORATION**, 729 Seventh Ave., New York 19, has just released in 16mm sound, the feature production:

**The Scorched Earth**—6 reels—a starkly realistic portrayal of the wanton destruction of China and its people by the emissaries of the New Order in the Orient—the hestial Jap-

anese army with its goal of complete demoralization of destitute millions, against which China continues its courageous resistance.

■ **FRITH FILMS**, Box 565, Hollywood, Cal., have completed production recently on two 16mm films, entitled:

**The Lumberman**—2 reels, sound, color—a human study of his life and work in the beautiful northwest timberland at the foot of snow-capped Mt. Hood. The film also gives in detail the actual procedure of felling the forest giants, transporting them to the mill and cutting into lumber.

**Give and Take with Mexico**—2 reels, sound, color—a film on international cooperation and goodwill between the United States and Mexico. Various Mexican influences are brought out in our architecture, music and way of life. However, the great example of goodwill stressed is the thousands of young men of Mexico who have left their professions and farms to help us raise and harvest our crops during the manpower shortage.

■ **BUREAU OF MINES**, 4800 Forbes St., Pittsburgh, Pa., has released its first full color educational motion picture for free showing to educational, industrial, civic and other organizations. The film, which is in 16mm sound and runs 25 minutes, presents:

**A Story of Arc Welding**—illustrating the dramatic part played by the electric welding of metals to assemble and repair equipment and facilities for war and peace. A simple yet complete description of the technique of arc welding is given through the use of color photography and animation. The film shows the application of this relatively new technology in many occupations. The advantage offered by arc welding, the purpose of each piece of apparatus, types of joints, and the use of special electrodes are some of the subjects covered. Besides portraying the arc welding of today—how it is used to make refrigerators, automobiles, furniture and other domestic articles—it gives a concept of the objects of tomorrow.

#### Entertainment Releases in 16mm

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, report the acquisition of the following Universal entertainment features in 16mm sound:

**Moonlight in Vermont**—6 reels—comedy romance of a dramatic school that goes rural in order to help solve the farm help shortage and make it possible for their Cinderella (Gloria Jean) to return to school.

**Phantom Lady**—9 reels—a murder mystery starring Ella Raines, Franchot Tone and Alan Curtis.

**Never a Dull Moment**—6 reels—a zany comedy with the Ritz Brothers and Frances Langford.

**Gung Ho**—9 reels—depicting the selection and training of Carlson's Raiders for their epochal assault on Makin Island. The story, which features Randolph Scott, Alan Curtis and Grace

McDonald, has a slight, amusing romantic touch in the rivalry of half-brothers interested in the same girl.

■ **INTERNATIONAL THEATRICAL AND TELEVISION CORPORATION**, 25 W. 45th St., New York 19, has announced the company's purchase of 69 Chesterfield and Invincible feature productions. The deal provides full re-issue and complete 35mm remake rights for worldwide distribution. The company will retain 16mm rights and will re-credit a number of the productions for non-theatrical purposes.

I. T. & T., has acquired new offices in Chicago at 19 South LaSalle Street (formerly operated as the Walter O. Gutlohn, Inc. Chicago branch), and in Washington, D. C.

#### Catalog

■ **CASTLE FILMS**, 30 Rockefeller Plaza, New York 20, has just released a new catalog listing and describing the hundreds of visual training aids, both 16mm sound films and filmstrips, representing U. S. Office of Education Visual Training Units, Army and Navy Training Films and U. S. Department of Agriculture Motion Pictures, for which Castle Films is exclusive distributor. Included are films on Aviation, Agriculture, Engineering, Home Economics, Machine Shop Work, Office Practices, Supervision, and Science carefully classified under scores of subject headings.

In a foreword to the catalog Dr. J. W. Studebaker, U. S. Commissioner of Education, points out that the 683 visual aids described in the catalog represents a library of motion pictures and filmstrips which stands as one of the major achievements of wartime education, and that their use in schools, industrial plants and the armed forces has speeded up training, improved instruction, and increased production. He further reminds that the value of these visual aids is of equal importance in American peacetime education as over 90% of the subjects deal with basic skills and understandings, hence have a permanent place in American industry and education.

Castle Films will be glad to send copy of the catalog to all those to whom the catalog can be useful in teaching and training practices.

# Last Call!

As announced in our APRIL issue

## JUNE 30th

is the date on which the regular subscription price of EDUCATIONAL SCREEN will be increased to \$3.00 in the United States; \$3.50 in Canada; and \$4.00 in foreign countries. The single copy price will be increased to 35c.

The present subscription price of \$2.00, \$2.50, \$3.00 will apply until that date. *(Former rates for two- and three-year subscriptions have been discontinued).*

Until June 30 present subscribers may extend their subscriptions at \$2.00 per year up to a maximum of 3 years.

New subscriptions will be accepted on the same basis, subject to the limitations imposed by present paper quotas.

### OLD AND NEW SUBSCRIBERS

may save themselves the effect of this change up to a maximum of three years, by filling in the coupon below and

MAILING IT BY JUNE 30th

# AMONG THE PRODUCERS

## Statement by the Eastman Kodak Company

When Edison was working on a new idea—motion pictures—he used Eastman film for the completion of his invention. Also, in building his motion-picture camera, Edison used parts of a No. 1 Kodak. When Roentgen discovered x-rays, Eastman plates were quickly put to use in recording the new shadow pictures.

When other developments have occurred requiring photographic materials or equipment, Kodak has studied the needs and made supplies available.

With television arousing new interest, Eastman Kodak Company hopes to be ready to provide whatever photographic and optical supplies the television industry may require. The present Kodak relationship to the television field is an exploratory one, with the company in the stage of learning what film, apparatus, and lenses may be required.

Contrary to recent published speculations on the subject, Kodak is doing no development work on television equipment nor has it any "program" along that line; . . . but this company, as the largest photographic manufacturer, is keeping its eyes open to see how its products may fit into the needs of the new industry.

## B & H Service Craftsman Trailer

First of a fleet of mechanically-equipped service trailers which will provide door-to-door service for users of Bell & Howell Co. equipment, was exhibited to the public in Chicago May 9.

The trailers are part of Bell & Howell's postwar program to provide skilled maintenance service to schools, churches, commercial firms, organizations, and other users of its 16mm sound and silent movie projection equipment. The trailers, each to be in charge of a graduate of its training school, will operate on a regular schedule so that equipment can be serviced periodically.

Users of B&H projectors will benefit in several important ways from this new, at-your-door service plan. Their projectors will be serviced and returned to use in a matter of hours. Users will be saved the trouble and expense of packing the machines for shipment. They will also save transportation costs. Perhaps most important, the new plan will eliminate the evils which result from postponing or forgetting the periodic servicing that any machine needs.

With the trailers, as before, the emphasis will be on preventative service . . . periodic inspection, cleaning, and lubricating, plus replacement of

worn parts before they interrupt operation.

The 18 by 8 foot interiors of the trailers are partitioned into two rooms. The smaller room provides living quarters. The larger room is equipped with complete projector-servicing facilities. These include a full set of Bell & Howell servicing jigs, fixtures, and gauges, as well as an oscilloscope, a volt-ohm meter, a tube tester, and all other required special electronic testing instruments. In addition, the trailer will carry a complete stock of repair parts.

The trailers also will be equipped with a good supply of 16mm film from Bell & Howell's rental library, as well as equipment for film splicing and repairs.

Other trailer units will be added as rapidly as postwar conversion will permit, according to J. H. McNabb, president. The company plans eventually to have every section of the country under its traveling trailer program. First of the units has gone into service for Pictosound Movie Service of St. Louis.

Exterior and interior views of the Bell & Howell Service Trailer.

## A Functional Manual

Encyclopedia Britannica Films, Inc. will release soon a manual for the operation of a school film library. This important book will go far toward improving procedures so that better and more frequent use of films will be possible.

"How to Run a Film Library" is prepared in four sections:

1. Forms and operating procedures
2. Film storage
3. Care, maintenance and repair of films
4. How to offer greater technical help to the film user

This unique manual should aid greatly the organizational work for the director of visual instruction. The extremely simple forms (only two in number) are arranged so that they will fold right out of the book onto a mimeoscope for stencilling. The entire booking procedure pops up to show the complete operating procedure physically as well as in words. Years of experience with visuals have enabled Britannica Films to create a film library manual that is truly visual in every detail. While this manual is intended only for visual instruction directors and film librarians, advance copies have been seen by various universities offering summer sessions in visual education. The manual is priced at 50 cents.

## Slidefilm on International Peace

*How To Conquer War*, a slide-film running 40 minutes, has been made for use in schools, clubs and forums that are studying the problem of peace. It shows the growth of the peace-unit, from the tiniest group of cavemen to the big nation state of today. The new peace-unit always emerged with the final acceptance of a common authority to establish law and its enforcement to settle disputes which formerly led to war.

*How To Conquer War* contends that the nations must also form a new peace-unit, through the creation of authority, also based on law and law enforcement, to rid the world of war. The word for this lawful authority is "government".

The League of Nations, the first world organization, is dealt with briefly. Photos and titles show that the league could not stop the Japanese bombing of China, or the Italian bombing of Ethiopia, or the German bombing of Poland, because it lacked the power to make and enforce law. It was not a government.

After a section on American history, from 1784-1789, the film maintains that

the peace machinery of the future must have the powers that the League and our own Confederation of the 13 states also lacked—which were achieved for the latter with the adoption of the federal constitution.

The producers—Federalist Films, 391 Bleecker St., New York—hope the film will help to build support for the United Nations Organization.

### Triple Honor Accorded DeVry

More than 30 years ago this spring, the late Herman A. DeVry emerged from the basement of his humble Chicago home with the world's first portable motion picture projector. This

Mrs. Herman A. DeVry and her sons, William C. and E. B. DeVry, make final inspection of the original DeVry motion picture projector.

original "suitcase projector" as it was then called, is now in Washington to take its place in the Smithsonian Institution along with other outstanding mechanical contributions to the progress and profit of mankind. At her home in Chicago, DeVry's widow reluctantly but proudly handed over to her sons, W. C. and E. B. DeVry—the original DeVry portable projector for shipment to Washington.

This selection of the DeVry "theatre in a suitcase" by Smithsonian is one of three signal honors accorded DeVry Corporation. To DeVry employees has been awarded the fifth Army-Navy "E" Flag for production excellence. And a battery of new DeVry theatre projectors has been installed in the Sir Francis Drake Hotel at San Francisco for use in presenting news reels and documentary films to the delegates to the United Nations Conference there.

### Spencer Lens Company Changes Name

After June 30th Spencer Lens Company of Buffalo, New York, will operate under the name of American Optical Company, by whom it was purchased in 1935.

### Free Reprints Available from Victor

Valuable information on visual aids programs is contained in the following articles which have appeared recently in national publications and have been reprinted by Victor Animatograph Corporation of Davenport, Iowa, for free distribution to those interested. The titles of these reprints are:

"The Power of the Film," by Edgar Dale; "Can Schools Teach the G. I. Way?," by Walter Adams; "A Teacher's Reply to 'Can Schools Teach the G. I. Way?'," by George Scrocroft; "Organizing and Administering an Audio-Visual Program," by Virgil Rogers; "Housing an Audio-Visual Materials Center," by Max Brunstetter; "Huge Expansion in the Use of Industrial Films," based on an interview with S. G. Rose, Vice-President of Victor Animatograph; "Where and How Movies Are Used in Industry," by E. L. Schroeder.

### E. I. Dupont Buys Photo Company

Negotiations were completed today in the transfer of the business and assets of the Defender Photo Supply Company, Inc., of Rochester, N. Y., to E. I. du Pont de Nemours & Company, Wilmington, Delaware.

L. Dudley Field, since 1923 president of the Rochester firm, and George A. Scanlan, general manager of the Du Pont Photo Products Department, made the announcement jointly, emphasizing that it comes about logically because Defender is chiefly a manufacturer of sensitized paper while Du Pont mainly produces film. Defender has distributed Du Pont sheet film since 1927.

Defender business will be continued as the Defender Division of the Photo Products Department, E. I. du Pont de Nemours & Company. No changes in personnel and policies are contemplated. Mr. Field and Karl T. Molin will continue as division manager. Sales offices operated by the 50-year-old New York company will be maintained.

tern for postwar educational projects not only here but abroad. Central figure in the photograph is Harrison C. Dale, President of the University, testing the amplifier. At left is Dean E. J. Idings, Director of Extension. At right, Prof. Hobart Beresford, who supervised construction.

### DeVry Postwar Selling To be Mobile

Postwar sales plans built around the use of trailer-housed sales demonstrating units is announced by William C. DeVry, President of DeVry Corporation, Chicago. The DeVry trailer units will be equipped to give on-the-ground demonstrations of all types of audio-visual teaching and training equipment in remote country schools, theatres, businesses, and other organizations as well as those in major cities. This equipment includes all types of projectors (16mm and 35mm), motion picture cameras, sound systems, slide and film strip projectors, stereopticons, microphones, turntables, projection screens and related equipment and accessories. A representative library of DeVry 16mm. films and DeVry Filmsets will also be included.

The first of a proposed fleet of five trailer-housed units will be ready as soon as DeVry's warwork is completed. They will be 24 feet long, 8 feet wide and will have a headroom of six feet, five inches. In addition to housing the complete DeVry line of equipment, they will provide living accommodations for three persons. The unit will be powered with a 3,000-watt portable generator, making it independent of commercial power supply.

Among users of this type of equipment built at DeVry's direction are the nation's major political parties, the University of Idaho, the Russian Army, the Egyptian and several South American governments.

Designed to take its agricultural course to the most remote corners of the state—and operatable in areas where even electric power is lacking—University of Idaho Mobile Education Unit, illustrated below, suggests a pat-

# Your Pupils Test 35% Higher!

**I**F you put a value of 70% on the average learning of your pupils without using instructional films—then with instructional films your pupils will test up to 94%—a gain of 35%!

That is the proven result of a continuing series of comprehensive and exhaustive tests made by the highest authorities in the field of educational research!

Other significant results of these tests show:

- 1. Average pupils with the aid of instructional films learn as much as very bright pupils without them.
- 2. The use of instructional films vastly increases pupil participation in classroom recitation. A larger percentage volunteers to recite—and does so more frequently.

- 3. Seeing instructional films causes pupils to read voluntarily far more supplementary recommended material.
- 4. Learning is retained an average of 45% more by the use of instructional films.
- 5. Instructional films enrich course of study by opening related fields for pupils' interest.

To help you enrich the quality of your pupils' experience and expedite their learning, the Instructional Films Division of International Theatrical & Television Corp. offers an authoritative film library from which you may make selections to integrate successfully with your school curricula.

Upon request, we shall gladly mail to you the descriptive catalogue of instructional films now available, and keep you advised of new films as they are produced. Fill out and mail coupon for your copy.

## 16 MM. FILM SUBJECTS

**Among our current Paul Hoefler Productions are:**

"THE CAPITAL CITIES SERIES"—the 48 State Capitals in color and sound, each subject treated with invaluable educational technique, depicting essential elements of history, geography and other important facts. Also "THE NATIONAL CAPITAL" has been covered in a special release as part of the series.

"HISTORIC DEATH VALLEY" (color and sound)—an unusual picture of a colorful and weird region with the emphasis on educational values.

"THE YOSEMITE NATIONAL PARK" (color and sound)—a highly instructive film, portraying the historical and geological story of this world-renowned region . . . a masterpiece of color photography.

"THE STORY OF NIAGARA FALLS" (color and sound)—a comprehensive record of the Niagara River . . . Lake Erie to Lake Ontario . . . from the birth of the Falls to the present day; shown in all the gorgeous colors of the rainbow.

Scene from "Capital Cities Series . . . Paul Hoefler Production.

Scene from "Historic Death Valley" . . . Paul Hoefler Production.

Scene from "The Yosemite National Park" . . . Paul Hoefler Production.

Scene from "The Story of Niagara Falls" . . . Paul Hoefler Production.

**Included in our Guy D. Haselton releases are:**

"THE BLOOMING DESERT"—a symphony in color . . . which has inspired the subtitle, "Sweet Mystery of Life".

"THE CANADIAN ROCKIES" (color and sound)—Emerald Lake, Lake Louise, Mt. Victoria with its snowfields; numerous other lakes and mountains; Tonquin Valley with its big game animals.

"MORE DANGEROUS THAN DYNAMITE"—a timely subject on safety.

"BREAD FROM ACORNS"—primitive American Indian and his food.

"HUMMING BIRD HOMELIFE"

Present releases by Walter W. Bennett include selected subjects by this noted authority on Wild Bird Life of the American Continent. (Write for subjects available).

Also Karl Robinson's authoritative and unforgettable portrayals of Alaska.

**Special Feature Release!**

"SKI THRILLS" (color and sound) depicting all the exhilarating movement, charm and rhythm of this popular and healthful sport, amidst the inspiring High Sierras.

YOUR INQUIRY AS TO PRICES, AVAILABILITY PREVIEW ARRANGEMENTS, etc. on these subjects WILL RECEIVE PROMPT attention.

## & TRANSCRIPTIONS

Simmel-Meservey has spared no expense, in time and money, in producing "TUNEFUL TALES" Series No. 1 transcriptions . . . consisting of five subjects (see titles and illustrations at right as they appear on transcription envelopes).

MARTHA BLAIR FOX—who wrote, adapted and directed the "TUNEFUL TALES" Series . . . is well known in educational circles as a specialist in the psychology and listening interests of the young child.

**Purpose and Objective of the Series**

Has been designed to assist Kindergarten and Primary Grade Teachers in developing children's very important first listening habits.

The classics used are of the best in children's literature . . . rich in repetition, rhythm and color.

Because of the child's fundamental enjoyment of everything suggesting "a game," each program opens with a simple bit of participation . . . implementing the story thru singing of the song and stimulating the child's conscious realization of the rhythm, by marching, marking time, etc. Original music has been composed for each story in dramatic style identifying each character in the narrative with a distinctive musical theme . . . stimulating the mental imagery of the child. Sound-effects are as natural and real as possible contributing to accurate interpretation of the stories . . . helping to break up the narrative, vivifying and strengthening the story and greatly adding to the listening pleasure.

JOHNNY-CAKE . . . who escapes from the Oven

THE LITTLE ENGINE THAT COULD . . . helps deliver a trainload of Christmas Toys.

THE SHOEMAKER AND THE ELVES . . . how the elves aided the poor shoemaker and his wife.

THE THREE LITTLE PIGS . . . the ever popular story of the how one of them outwits the old Wolf.

THE LAUGHING JACK O' LANTERN . . . the little orange pumpkin who wants so much to be a jack o' lantern.

**Future "Tuneful Tales" Series No. 2**

will include such stories as "Peter Rabbit", "Little Black Sambo", "The Little Gray Pony", "The White Easter Rabbit", etc.

THE EXCEPTIONAL HIGH QUALITY OF THE "TUNEFUL TALES" Series is due to our incomparable production and talent staff:

MARTHA BLAIR FOX—recognized in academic circles for her valuable contribution in educational techniques as applied to the "young" child, thru the audio approach.

ERNESTINE HOLMES—piano accompanist in the "Tuneful Tales" Series composed and arranged the original dramatic backgrounds and musical themes. She is one of the most outstanding accompanists in America.

DARRELL MINKLER—recording and technical engineer for 20 years, is responsible for the quality and fidelity of reproduction in the "Tuneful Tales" Series. He was for ten years technical supervisor of the Chicago Studio for Brunswick Records.

CLARK CASEY . . . a sound specialist for 15 years . . . in the sound departments of such companies as Radio Recorders, C.B.S., R.C.A.-Victor. He also has been responsible for the sound effects heard on many of the coast-to-coast radio network programs.

**Upon Request We Will Mail To Audio-Visual Education Directors**

Complimentary copy of our "FIVE STAR" FILM FOLDER also prices, and other details on specific subjects in which they may be interested.

# CLEAR

— that's the kind of sound  
you get from  
**DEVRY**

## 16 mm. SOUND-ON-FILM PROJECTORS

Clarion-clear reproduction of every wave in the wide range of 16 mm.-recorded sound frequencies—whether it be speech, song, instrumental music, or sound effect—this you get with your new DEVRY 16 mm. sound-on-film projector... The ultimate of sound, whether it be crisp, clear, intelligible conversation . . . a bird call at sunset, roar of a tempest . . . or a symphony's full majesty from the highest notes of the violin to the deepest tones of the bassoon.

*DEVRY high-fidelity sound is no accident!* DEVRY sound-on-film projectors are *designed and built* for SOUND—not silent projectors to which sound is adapted.

Those DEVRY master craftsmen who produce 35mm. equipment for the world's finer theaters assure you sound amplification that is as kind to the ears as DEVRY projection is on the eyes—and as DEVRY mechanisms are easy on your film.

Your DEVRY 16 mm. sound-on-film projector is a 3-purpose unit that SAFELY projects both sound and silent films; (2) that shows *both* black and white and color film without extra equipment; and (3) whose separately housed 25-watt amplifier and sturdy 12-inch electro-dynamic speaker afford portable Public Address Facilities—indoors or out.

REMEMBER—your best buy is a DEVRY! And your Authorized DEVRY Distributor is an authority on audio-visual teaching and training equipment. Write him . . . or DEVRY CORP., 1111 Armitage Ave., Chicago 14, Illinois.

**Great News for every School  
owning a film-slide Projector!**

**Castle Films offers a NEW PRODUCT...**  
*“Epic Pictures of* **WORLD WAR II”**  
 IN 2" X 2" SLIDES

**96 SLIDES . . . ONLY \$8.50**

**48 SLIDES . . . ONLY \$4.50**

A new Castle product! A truly valuable teaching aid and influence for broadening the student mind! History-making pictures—the first of their kind—available for you to own outright at the unbelievably low price of less than ten cents a slide!

Castle's picture editors' quarter-of-a-century experience went into the selection of each photo. The result: a collection of historic and dramatic pictures that will live for all time! The very best and most important of tens of thousands of pictures made by daring photographers during World War II . . . photographs taken at the exact moment when history was made.

**A MANUAL DESCRIBING EACH PICTURE  
ACCOMPANIES EVERY SET**

It is an interesting and accurate teacher's guide for lecturing or classroom discussion.

Order your set today! Every school in the nation should own these Epic Pictures!

**A FEW OF THESE EPIC PICTURES ARE:**

- |                     |                     |
|---------------------|---------------------|
| Invasion of Poland  | Yanks Invade Africa |

For Improved Performance

the new  
**Amprosound "Premier 10"**

*A new 16mm. sound projector embodying many basic improvements derived from Wartime Experience*

War is a hard teacher—but a good one! Ampro made good projectors before Pearl Harbor, but the war taught us how to make better ones. The new Amprosound "Premier 10" is dramatic proof of this fact. For here is a machine with numerous important refinements and improvements that reaches new high levels of projection efficiency. It is now available in restricted quantities for civilian use. For the complete story of this new projector, write today for special folder on the Amprosound "Premier 10."

**AMPRO**

**A PROJECTOR *To Keep Pace***  
*with a World at War or Peace*

Today's fast-moving events can make the finest visual teaching material obsolete overnight. To keep pace with slides and films is costly . . . very often impossible.

The Spencer VA Delineascope will keep your screen alive with up-to-the-minute pictures from the latest newspapers and magazines. Anything that can be placed on the projection platform: photographs, maps, stamps, coins, even biological specimens—as well as standard lantern slides,

slidefilms and micro-slides—all are within the range of this versatile instrument.

More than 50,000 teachers have requested our free manual: "Opaque Projection—A New Frontier in Teaching." Write Dept. W12 today for your copy.

# Illustrate DISCUSSION PROGRAMS

## WITH THE NEW 1945-46 SERIES OF CORONET "PICTURE STORY" SLIDEFILMS

Informative, entertaining and thought-stimulating — Coronet slidefilms will add interest to group discussions of world events, personalities of the moment, and vital social problems. Each slidefilm contains approximately 30 pictures and captions from the Picture Story section of Coronet magazine. Each slidefilm is accompanied by a reprint of the Picture Story from CORONET, to be used as a manual. The slidefilms can be shown with any standard 35 mm. single-frame slidefilm projector. Reprints of the CORONET Picture Stories are available for individual use at \$2.00 for a set of twenty-five copies each month for eight months (200 in all).

### Thousands Used the 1944-45 Series

More than 5,000 school, discussion and educational groups, 1,000 churches, and 750 different units of the 4 branches of the Armed forces used Coronet slidefilms last year. The new series will be even finer than those released in the past.

**8 SLIDEFILMS**  
(About 200 Pictures)  
**FOR ONLY \$4.00**  
To be released one each  
month from October,  
1945 . . . through  
May, 1946

### THE FIRST THREE OF THE 1945-46 SERIES

- "The Liberated"—the story of the liberated peoples of the world.
- "The Storm"—the life story (a cycle) of a storm.
- "The German"—the story of the pre-war German people and what may be expected of them in the future.

# PICTORIAL

## Films for the Visual Instructor

We of Pictorial in planning our productions for visual education are guided by your thinking and your requirements. Accordingly, we present a most comprehensive selection of subjects, particularly well suited for various types of classroom study. Our *Schools Division* will be glad to work with you toward the solution of any of your film program problems. We list some of the subjects we have available . . . write for complete catalogs.

### THIS IS AMERICA

Reflecting the many facets of American life is R.K.O. Pathe's outstanding series of films, **THIS IS AMERICA**. Each film is a tool for the educator in interpreting current events.

CHILDREN OF MARS • ARCTIC PASSAGE  
 MEDICINE ON GUARD • NEWS FRONT  
 LETTER TO A HERO

26 Subjects in *Whole Series*

### AMERICAN HISTORY

A series of five dramatized historical subjects which will awaken new interest in the great past of the United States. Recreated are many of the outstanding figures and the events in which they played so prominent a part.

"OUR CONSTITUTION"—treats with those dramatic events leading to the Constitutional Convention in Philadelphia.

"OUR BILL OF RIGHTS"—an absorbing film depicting the highlights of this remarkable contribution to world history.

"OUR DECLARATION OF INDEPENDENCE"—such immortal characters as Washington, Jefferson, Adams, play their vital roles again in this production.

"OUR LOUISIANA PURCHASE"—the events of the famous purchase from Napoleon are vividly portrayed in this factual, dramatic film.

"OUR MONROE DOCTRINE"—a historical document of particular interest during these, our own fateful years.

### CANADIAN GOOD NEIGHBOR FILMS

Produced in Canada, this unusual series of films deals with such subjects as art, health, nutrition. These productions prove the farsightedness of the educational efforts of our Good Neighbors to the North.

CANADIAN LANDSCAPE • WEST WIND  
 VITAMIN WISE • THE MAIN DISH  
 VITAMINS A, B, C AND D  
*plus others*

### MUSIC APPRECIATION

In these outstanding films, we present the Gallico Three Piano Ensemble in keyboard concerts . . . plus many other subjects in popular music. Music students will find deep satisfaction and inspiration in these unusual films.

KEYBOARD CONCERT No. 1  
 KEYBOARD CONCERT No. 2  
 KEYBOARD CONCERT No. 3

*Our catalog also lists a variety of other subjects—Features and Shorts—in Science, Physical Training, Contemporary History, Civics, Literature . . .*

**PLUS PICTUREELS** for the Lighter Entertainment Uses—Cartoons, Musicals, Sports, Puppets, Nature Studies.

**PICTORIAL FILMS, Inc.**

R.K.O. BUILDING

RADIO CITY 20, N. Y.

**DA-LITE MODEL B**

Roller mounted screen in protective metal case. 12 sizes—30" x 40" to 84" x 84" inclusive.

**DA-LITE SCENIC ROLLER MOUNTING**

Rope and pulley operated. 6 sizes: 8 ft. x 10 ft. to 15 ft. x 20 ft. inclusive.

**DA-LITE MODEL C**

Spring operated. With or without metal case. 8 sizes: 6 ft. x 8 ft. to 12 ft. x 12 ft. inclusive.

**DA-LITE ELECTROL**

Electrically operated. For large classrooms and auditoriums. 10 sizes, from 8 ft. wide to 16 ft. wide inclusive.

**SCREENS FOR LASTING SATISFACTION**

**DA-LITE FRAME TYPE**

Solid or perforated for sound. Strong webbing around edge has grommets for lacing into stretcher-type frames. Large range of sizes up to and including 22½ ft. x 30 ft.

**DA-LITE VERSATOL**

Moderately priced tripod screen locks automatically at correct picture proportions. Three sizes: 30" x 40"; 40" x 40" (adjusts to 30" x 40") and 37" x 50".

**STANDARD CHALLENGER**

For years, the leading top quality tripod screen. Provides desired height adjustment without separate movements of fabric or case (exclusive Da-Lite feature). 9 sizes: 30" x 40" to 52" x 72" inclusive.

**DELUXE CHALLENGER**

Asturdy, extra large tripod screen with a crank-operated extension rod to raise the screen fabric to operating position. 3 sizes: 72" x 72"; 63" x 84"; and 70" x 94".

# Mining the Mind

*A vigorous plea to producers for the improvement of audio-visual materials to insure teaching tools that really teach.*

BRUCE A. FINDLAY

Supervisor Audio-Visual Education Section  
Board of Education, Los Angeles

**I**F you're perfectly satisfied with all of your audio-visual instructional classroom tools, you better turn to the next article immediately for this will bore you with a capital "B." But I believe that it is time for a little frank talk, a little introspection and evaluation.

In this field we have talked in glittering generalities, some of which have not even glittered. We have hidden behind the splendid record of the armed forces in the work that they have done with pictures. Like the infantry, we have followed the army "film tanks" into the fray, singing our "Battle Hymn of the Liberation of Classroom Teachers." Our classroom teachers, like the military staff at the outset of the war have felt there was little to worry about from now on. The war against ignorance could be won by mechanized procedures.

We have bombed the students from above; we have mined the waters of ignorance about them; we have strafed them with all manner of new techniques. We have turned mechanical magic upon the intellects of students in the vain hope that somehow or other John Smith, the country school teacher, and Mary Brown, the city instructor, would be able through the pressing of a button to produce a robot which would pour forth knowledge at such a terrific rate of speed that it would penetrate the mental armor of the Williams and Ellens in their classrooms throughout the nation.

We have even used psychological warfare. We have delved into the unconscious; we have "ventilated" educational complexes. All the time we have been hoping and praying that something would follow in the wake of the educational program of the armed forces. Surely with their unlimited resources and wealth of experience some constructive data for the solution of our educational problems would be forthcoming. Certainly a new day in teaching must be near. Perhaps we, too, should be able to show a twenty-minute picture, and at its conclusion ask, "Any questions?" There being no questions we might assume, as corporals, lieutenants, captains and majors frequently do, that the silence means, "Everything is understood." Self-deception is such sweet bliss! But unfortunately, reeling it off and reeling it in are often very different. Inability to ask questions often reflects a complete failure in comprehension.

However, in the classrooms of our schools such deception cannot be practiced. It is the classroom teacher, for whom no substitute has been offered, upon whom we must depend to solve successfully the problem of using mechanized instructional tools effectively.

Who said that anyone is trying to find a substitute for the classroom teacher? Surely no one who knows anything about teaching would make such an absurd suggestion. However, we are rightfully demanding that teachers be provided with those instructional tools which will insure the most effective teaching and which will, all other things being equal, provide relief from as much of the drudgery of teaching as possible.

In this matter of "the pick and shovel" work of teaching, we have the right to expect the audio-visual tools to help. But have they? Of course pictorial materials do illustrate. But do films really teach, do they bring to the teacher the best experience and most economical techniques in presenting a particular phase of a subject? Is the material a valid teaching tool, or is it merely an exposition of facts narrated and unfolded?

Frequently the film, that teaching tool in which we are most interested in this consideration, does not subtract from the teacher's load; it adds to it. It is her duty to preview the film or to read the study guide before the film is to be shown to her class. It is a reassuring theory that teachers always preview the films even if it means their staying after school; but the late arrival of films, often during the school day and immediately before the meeting of the class during which it is to be used, makes it difficult to put this theory into practice. And guides are always difficult to locate when the need is greatest!

Just what have the experiences and materials of the Army and Navy contributed to the solution of the problems of the classrooms of our public schools? Their training films are merely modifications of our earlier instructional films. That they have done such a magnificent job of training with these imperfect tools may be explained in terms of increased motivation and the factor of pressure that was always present in the Army and Navy's training set-up. So, it is quite evident that it is not to them that we can look for improved practices and more effective teaching tools in the audio-visual field.

But why should the public schools expect or need others to solve their problems for them? Just as the Army has spent millions on their educational program, so have the public schools. Also it has been pointed out by those interested in audio-visual work that the Army and Navy had the benefit of the nation's best talent; but were not many of the Army and Navy's best merely on lend-lease from our schools? Therefore, the responsibility for improving the audio-visual tools that are too obsolete to stand the pressure of the greater demands upon them, is ours—it is we who must assume it, independent of any practices or precedents set by the Army and Navy's training programs.

Perhaps you think that we are being a little too

Three illustrations of the classroom utilization of various types of audio-visual teaching materials in Los Angeles schools:

(Top) Projection of slides with Overhead Projector, which enables the teacher to point out items of reference on the slide, with the shadow of the pointer appearing on the screen.

(Center) Students viewing a motion picture film.

(Bottom) A class listens to an educational recording.

hard on the producers of audio-visual tools. Here is a little form of indoor sport in which you may indulge with interest and profit. Recently we selected samples of various kinds of materials which had been used and replaced for the past fifteen years. For comparison we placed on the tables the old materials and beside them the modern sets. With lantern slides, large and small, the movies, silent and sound, we used two screens and two sets of equipment. The same technique of comparison applied to phonograph records and transcriptions (78 rpm and 33- $\frac{1}{3}$ rpm). Then we compared "the father with son, mother with daughter, and even child with child." In many cases the differences were so slight that one would think twins were on exhibit. The advancement in teaching techniques was almost negligible. The modern and the old materials could be used interchangeably in many cases.

With the exception of color, which has added greatly to the interest in pictorial materials, producers have done surprisingly little for us. Even color has not been used to its maximum advantage. Only a few films have used this wonderful invention, so full of possibilities, in a way other than to effect a more decorative result. Color dresses up the film, but it doesn't substitute for teaching skills.

To complete our morning's experiment, we compared the subject matter covered in the film and slide catalogs of present-day producers with those of yesteryear. Here we found our greatest disappointment. The catalogs of previous years carried a list of sound pictures, not so complete of course, but dealing somewhat with the same type of materials as those listed in today's offerings. Little is to be gained by going into detail on this phase. Do as a well-known advertiser suggests. Try the plan yourself.

"What do you want," someone asks. "Pilgrim's Progress for \$10.00 a reel?" "No, no, a thousand times no!" But there are certain very definitely instructional materials in the fundamentals that the teachers want and they have a right to expect them to be provided. And until they are forthcoming the 94 per cent of the schools in our nation that do not have sound projection machines will continue to be satisfied to be without this modern audio-visual tool. From all indications the films that teachers need and want will not be provided unless there is an educational earthquake comparable to that of the proportions of the 1906 catastrophe.

What are we asking for? The class room teacher has a right to expect from the audio-visual field, equipment that is light and easily handled by a woman; also, materials that are hand-tailored to fit specific teaching situations, not tools that only add to the present teaching load. Anti-aircraft guns aim at a definite objective. Films and other audio-visual instructional materials should do the same. As there is no all-purpose gun, neither is there any all-purpose instructional film. Teachers in the Los Angeles system repeatedly ask for films on teaching reading, writing, arithmetic, grammar, and spelling! Then after they get films on teaching reading, writing, arithmetic, grammar, and spelling, they ask for more of them and for those that teach

(Concluded on page 298)

# Perfecting Projection Procedure for Educational Film Showings

ROBERT E. SCHREIBER (M.S.)

*A technical but thoroughly readable presentation of the "why" and the "how" of film projection for instructional purposes.* Consultant on Visual Aids, Stephens College\*  
Columbia, Missouri

AS the use of motion pictures in education increases, the tendency towards more discrimination in the choice of films to be exhibited is a gratifying concomitant. Along with this desirable tendency, however, there seems to be a growing distaste on the part of educators for anything in their film program that smacks of the theater. And, while a definite soft-pedaling of Hollywoodism in the films themselves is often appropriate, many in the field of education lean over backwards too far in order to shun any resemblance to theatrical presentation in their classrooms.

The motion picture, wherever it is exhibited—in the theatre, in the classroom, or in one's own living room—requires adequate projection and an efficient operator. This follows as naturally as the fact that one must hold a book right side up in order to read it, or that gasoline—in order to operate a car properly—must be poured into the gas tank instead of the radiator. Thus, with respect to projection at least, we educators may do well to follow the example of the local theater, where newsreels, sportsscopes, and cartoons are afforded the same projection treatment as the imposing 100 minute feature.

Let us think for a moment of the average classroom situation. Assuming that the projector has been set up, the operator removes the reel from its can and threads the projector. This latter operation—in most cases—involves getting the film in the right places—with its end tucked into the takeup reel. Preparation seldom proceeds beyond this point, and the exhibition begins. Once the lights are out and the projector turned on, anything can happen—and usually does. It is quite possible that a succession of numerals appears on the screen, the operator may not have the right film at all, the film may be in backwards, and the sound—in the event that he has remembered to turn it on at all—may either come in booming an ear-shattering crescendo, or never reach a level of audibility until the introduction is about over. All of this tends to impress the student with the novelty of having a movie in class, how unprofessional educational pictures are, and the manifest inexperience or ineptitude of the operator. The purpose of the film, of course, was not directed towards the realization of any of these things; it had a story to tell, a skill to explain, information to relay. But distraction reared its head; and story, skill, and information were lost in the chaos of mis-managed technology.

Compare this with our local theatre: the picture appears on the screen as the lights are dimmed, the

sound rises to the proper volume level at the same time, the picture is in focus, and optimum conditions of sight and sound obtain throughout the presentation. As the end title of the feature appears, the lights go up, and as the final chords of the musical score are struck, both sound and picture are turned off. The audience has seen a motion picture presentation and takes it for granted that all proceeded smoothly. A negligible percentage of the audience ever thinks of the little man in the rafter-swing booth, since the best projection goes unnoticed. Anything less than the best creates a distraction which detracts from the illusion of reality, and the motion picture loses its point and its message—whatever it may be, entertainment or education.

Of course, in our classrooms, most of us probably don't have light dimmers—or even a switch near the projector, but this is the only nicety of projection from which we may be absolved. The rest of the presentation, barring a faulty film, depends on the operation of the projector itself.

Let us go back, now, to the point where the projector was about to be threaded. Before threading, of course, the operator makes sure that the projector's beam is centered on the screen, that the speaker is immediately beside or under the screen—pointed toward the center of the class, and that all connections are secure. (And, don't forget to clean the gate! Five o'clock shadow around the aperture is disconcerting to education—as well as to romance.) He will have turned on the amplifier, and, after the tubes have heated, re-check the connections by turning up the volume slightly and listening for the speaker hiss; then retarding the volume to zero.

It is not always—but frequently—the case that the film in the small tin box, or "can", is not the same as the title indicated on the latter. Errors may occur in lending libraries or in the school's own visual aids office. Therefore, titles should always be checked by drawing off the leader until the title appears, *before* threading in the projector. This operation fulfills the triple functions of making certain that the film has been rewound, so that there is no danger of threading it in backwards and damaging the film—not to mention the pride of the projectionist—and in checking to see if there is adequate threading leader in advance of the title. In cases where the leader is very short, the operator will use only the minimum amount of film in threading.

Once the film is in the projector, preparation is not complete. In examining the length of the film leader, the operator has also noted whether it is opaque or if a series of numbers appear in it at regular intervals. The latter serve no purpose in classroom projection but are a carry-over from theaters, where their presence

\*Also associated with The Center for the Study of Audio-Visual Instructional Materials, University of Chicago

serves as the instrument of making smooth change-overs from one projector to another. In classroom projection they are something of a nuisance, since the operator must make certain that the "3" on the leader is past the projection aperture before the light may be turned on.

Whether the leader contains these "Academy numbers" or is perfectly opaque, it is well to run the film through the projector until the beginning of the title is at the aperture. Titles which "fade in" require a little added attention for a smooth beginning, since the sound track usually begins several frames in advance of the beginning of the fade. Where the sound track begins may be ascertained easily in the first examination of the leader by noting where the first "rippling" of the sound track figure occurs, in the case of variable area recording, or where the first transverse lines appear on the variable density track. Then, when the film is threaded, the operator will run the film through until the beginning of the sound track is several inches in advance of the sound drum. This will allow the projector to arrive at full speed before the sound track reaches the sound head, so that no distortion of frequencies will occur.

The operator next sets the light switch so that the lamp will go on as the projector starts. If the lens is equipped with a locking device, he will loosen it, so that the picture may be immediately focussed. Then, assuring himself once again that the amplifier is turned on, and with one hand on the motor switch and one on the volume control, he may signal for the lights to be turned off. He then turns on the motor switch. Then, after a few seconds, he gradually (but not too gradually!) turns up the volume to the proper level. He next directs his attention to getting as sharp a focus as possible and locks the lens in the optimum position. All of these operations take place in the space of a few seconds, so that before the opening title has disappeared, it will be in perfect focus and the sound at an appropriate level.

"Now," asks the operator, "may I relax?" The answer is "No!" because he has not yet adjusted the sound to the acoustical characteristics of the room. Some rooms are faced with very hard non-sound-absorbing plaster; this is the case with most classrooms. This results in considerable reverberation—or "boom"—which is somewhat offset when there are a number of people present to absorb the sound. Projectors are equipped with a "tone" control, which is a great assistance in fitting the sound quality to any particular room. It is the operator's next duty, then, to listen to the quality of the speech emanating from the speaker. If the voices sound boomy and indistinct, he should advance the tone control toward the treble. This should be done gradually, since—if done abruptly—the speech will at first sound "squeezed" and unnatural. Whenever the tone control is advanced toward treble, the volume must likewise be increased since the removal of the lower frequencies reduces the loudness of the sound. In some cases, it may be necessary to advance the tone control all the way. If this is done gradually, no distraction will result.

Attention to the tone control is not only necessary in terms of room acoustics, but in terms of the quality of the sound track as well. Many films poorly produced are recorded with considerable emphasis on the bass. Color films also emphasize bass tones in the sound track. Such films must be treated similarly to rooms with poor acoustics; i.e. the tone control must be turned towards treble. Films that are predominantly musical in nature sound best at normal or bass points on the tone control—in order that all frequencies may be reproduced naturally.

As the film runs through the projector, the operator should "stand-by" in order to change the controls when volume changes occur or to change the focus. Some films may be focussed perfectly at the start and then change. This is due largely to the fact that the outer reel portions may be somewhat dried out—causing warping of the film stock. Should the film break during projection, the projector must be stopped, the volume turned down, and re-threading take place—the film being run through far enough that the new end can be slipped under the torn end and secured on the takeup reel. Torn sprocket holes result in the loss of the loops on either side of the "gate" and cause the picture to jump on the screen. In such cases, the volume control should be retarded *before* turning off the motor—to avoid the "yowl" which would otherwise obtain were the sound track stopped on the sound head with the volume turned on. Loops may then be reset, the motor turned on, and a few seconds later the volume control advanced again.

As the film nears the end, the operator should have his hands on the controls in order to obtain a smooth ending. He will alternate his gaze between the screen and the rapidly unreeling upper reel. Occasionally a film will turn up without an "end" title—or no opaque leader on the end. It is then necessary to turn off light and sound before the end of the film has passed into the projector mechanism. In the case of film equipped with end titles, it is wise to turn off the lamp as soon as the title has registered on the screen, since the title may be very short and not followed by a strip of opaque film. The sound should not be turned off until the concluding music is completed; then it should be quickly turned off to avoid the "bloom-bloom" as the end of the film passes the sound drum. The reason for turning off the light before the film has passed through the projector or before the end title is over is obvious; running a film "out white" on the screen is as bad as eating peas with one's knife. Worse, because *everyone* is looking at the screen!

Perhaps the foregoing sounds like too much. It seems that way, maybe, because this writer has sought to indicate the *why* of doing *what*. It makes better sense that way. After all, when we show our classes a movie, we want them to get all they can out of it, don't we? Presenting a film in as mechanically adequate a fashion as is possible is the *least* that we can do. Introduce pre- and post-film discussions, yes; integrate the film with the lesson, of course; but the values to be derived from all of these depend on adequate projection.

# Showmanship in Army Technical Training

*A war-time article equally valid in peace—for schools will inevitably profit by the military achievement in visual training.*

HENRY L. KRONSTADT  
Quartermaster School, Camp Lee, Va.

IF every instructor made use of the showman's bag of tricks, he'd put box-office appeal in the most technical subject and graduate his students *cum laude*. This does not mean that the classroom should be turned into a three ring circus but if, by using the showman's technique, soldiers can be better trained, it's certainly worth the time and effort. The purpose of training is to teach and not entertain. But it's as plain as a vacant stare on a student's face that comprehension comes only after sufficient interest has been created in the subject. Army training specialists have recognized the effectiveness of showmanship in training soldiers, and have therefore provided instructors with appropriate props to dress up their lectures so that there won't be a "sleeper" in the classroom. In the Army these props are called *training aids*.

## "It Has To Be a Good Show"

Americans make good audiences; they go for an act. While only a few may attend a lecture on the wild life of Borneo, thousands will flock to see the animal act of a Barnum & Bailey circus—the same subject, but what a difference in the box office appeal! The most eloquent lecture on the right and wrong way to stack crates of Army subsistence in a warehouse will not have the effectiveness of a demonstration on the platform with a few boxes to simulate crates. Students will get a clearer idea of the subject if the object or its facsimile is in front of their eyes. With the use of an enlarged model of a 50 caliber machine gun, the parts of the weapon can be taken apart and put together as easily as a child's toy block puzzle. Training aids teach the lesson of safety. Visual charts on safety precautions in depot operation can prevent many accidents. A film strip on improvisation of materials-handling equipment in the field can save vital materiel in combat areas.

War is not all thrills and excitement. Most of it is dull and hard work. The proper way to make out a War Department Shipping Document or the correct marking for overseas shipment can hardly compete in interest with a Betty Grable picture or a Wild West rodeo, and yet the very same soldiers who must get their technical training were the civilians who flocked to these popular shows. By injecting the technique of showmanship in Army technical training, the most tedious and unglamorous subject can be fascinating enough to compete reasonably well with a trapeze act.

## It's a Habit With Them

In devising training aids, the Army makes use of the media that attracted soldiers before they entered

the service. The power of the movies, the drawing capacity of popular art shows and exhibits, the tremendous interest in window displays and department store demonstrations have their Army counterparts. The training film, illustrated charts, models, displays and demonstrations are used with conspicuous success in the Army training program. While Rita Hayworth is not the star of the training film titled, *Loading of Motor and Rail Cargo on Flat Cars*, this film has much the same quality as a good Hollywood short. Army training films are often written by men who have attained wide fame as authors, filmed by ace cameramen and directed by men who know both the popular appeal and the Army angle. The same professional talent produces models, graphs, charts and printed pieces that are used by progressive Army instructors in the training program.

## Time Is Short

Slow-process education is a peacetime luxury. The educator who teaches a liberal arts course in college can afford the time it takes, but the Army instructor cannot. In most instances a technical subject must be taught to a group of untrained soldiers within a matter of weeks. Normally the amount of technical training a Quartermaster soldier must have, for example, would usually take long study and preparation to acquire. The Army administers it in capsule form, and in a relatively short time.

Training Aids are especially valuable in quartermaster instruction. In the Army one can become a baker, shoemaker, tailor or mechanic with only a few weeks of technical training—trades that commonly take years to master. A man begins to learn his trade in his youth, spending a year or two in apprenticeship before he is even permitted to handle the tools of his trade. In the Army, eight weeks of technical training give the "minimal essentials", prepare a soldier to do specialized work under both garrison and combat conditions. Training Aids speed up instruction. They shorten the training period without too seriously curtailing the subject matter. Minor details may of necessity be omitted, but the vital core of knowledge never. The course of property accounting, for example, would take two years of study in a business college, whereas with the use of Training Aids it becomes a regular eight-week course in the Army.

### All Alike, Now

The Army is made up of men from all walks of life. Coming from varying backgrounds, they bring into their military life the habits they have acquired since childhood. The Army instructor must establish a common meeting ground in order to make his instruction understood by all students. Training Aids help to unify thinking and establish a basis for understanding. A depot may mean one thing to a college graduate, another to a high school man, and nothing at all to an unschooled recruit. But a miniature model of an Army depot, which can be vividly seen by all students will make it perfectly and equally clear to all three groups.

Army training is more than instruction for education's sake; its purpose is self preservation for the soldier and security for our national existence. In civilian life an educational failure is merely an economic barrier for the individual. In the Army, however, failure in the performance of an important military task through a lack of knowledge results in danger not only for the individual but also for those who serve with him.

#### Training Aids Do Not Replace Instructors

Training Aids are not self sufficient lessons. They simply aid the instructor in getting important points across. They should be used before the lecture begins, during the lecture, and after the lecture to drive home important points. Training Aids can be used after duty hours by being placed wherever large groups of students gather, in such places as service clubs, lounges, and PX's.

#### Methods of Supplying Training Aids

In a large installation, the plans and training-officer normally furnishes the instructor with the necessary training aids. If the unit is small, local talent from the group can produce these aids. Every Army organization has a number of talented men, soldiers whose former hobbies were photography, art model-making, and other crafts. These men can do the creative part of the job. Former carpenters, painters, and display men can do the actual construction. With proper leadership and the simplest of materials, adequate and effective training aids can be built right in the organization. Training officers supervise the enlisted personnel in the design and construction of these aids.

Training Aids must be realistic. A poor imitation of a model warehouse can be misleading. Models, charts and maps must be authentic in every detail, though simplified for instructional purposes. For instance when drawing a terrain map for a bakery section in bivouac it is best to highlight certain features such as proximity to water and camouflage protection, and eliminate all nonessential details. Training Aids must also be revealing. When building a contour model, it should be done in layers so that the various compositions of terrain are visible.

Materials for training aids should be selected with durability in mind. Because these aids are to be used over and over again, they should be made to withstand the wear and tear of constant use. Hook-up charts on

A 35x14 foot roofless model of a standard Army warehouse, built on a scale of one-half inch to the foot, gives the soldier student a realistic conception of warehouse layout without actually going to see one.

signcloth with wood braces are more lasting for use in field instruction; waterproof paints prevent rain and dampness from disfiguring charts and drawings. Compact and well-built training aids can be easily transported.

#### Types of Training Aids

The following Training Aids are most frequently used in Army instruction:

*Charts.* There are many types of charts, and their uses are varied. A chart is a sheet used primarily in connection with lectures in order to clarify or explain part of the lesson. Charts can be made of paper, sign cloth, drawing board or any other suitable material. They can be hand drawn, painted, or prepared by any form of reproduction. Charts should be kept simple and legible. It has been found that the minimum height of the letters must be at least 2 inches to be seen without strain at a distance of 75 feet. One chart should be shown at a time so that students can focus their attention on the one single point that is being made in the course of the lecture.

*Models, Miniature, Life-Size, or Enlarged.* Models make it possible to examine and demonstrate installations and equipment that are not readily available, or which are difficult to understand in their actual form.

Miniature models make it possible to demonstrate large items that otherwise couldn't be shown due to size. These can be passed around to students and examined at close range. Enlarged models magnify a small item so that details can be readily seen by all. Models may be exact in every detail, or greatly simpli-

fied to emphasize selected points for instructional purposes. Models should have all parts carefully labeled so that students can study and memorize the parts and be thoroughly familiar with them.

*Blackboard.* Of all the visual aids, the blackboard is probably used more extensively than any other. It is used for sketches, or examination questions, for outlines, for definitions, for spelling of unusual words. Frequently it can be used for student demonstrations and practice. A portable blackboard can be easily constructed by giving two coats of flat black paint to a piece of wall board 4 ft. by 6 ft. This is backed up with a 2" by 4" wood frame and is usually mounted on legs 2½ ft. high. Any size blackboard can be constructed, depending on its purpose.

Many instructors overlook or discount the use of the blackboard as a teaching aid. It is a mistake. The use of the blackboard will allow students who are slower to follow lectures and make entries in their note-books. The subject material will be seen as well as heard. This double impression increases the effectiveness of the lesson.

*Sand Tables.* The sand table is a valuable aid in creating a tactical problem and then having a class participate in its solution. The size of the sand table will depend on the scope and area of the problem. Most popular sizes are 4 ft. by 6ft. and 8 ft. by 10 ft. Larger sizes must be build in sections. The simple addition of a few blocks, and a few symbols brings opposing forces into the situation. The sand table is a shallow box set on legs. As little as half an inch of sand is used to cover the base. Hills are built up, rivers drawn in and colored with blue chalk, foliage indicated by dyed green pieces of cloth or by ground moss cured with alcohol. Realistic and accurate representations can be thus made in a relatively short time. Informal classes get the most out of sand-table instruction. The students should gather around the table. The instructor presents the problem and then asks for solutions from students. Objects representing personnel, weapons, and installations can be moved in accordance with the tactical strategy. Students should be encouraged to participate, and in their own efforts at arriving at solutions they are actually teaching themselves.

*Dummy Installations.* Inexpensive replicas, exact in size and appearance, but of simple, inexpensive design and construction are known as "dummy" installations. Supply loading for rail transport, for example, is taught with mock-up freight ears made of wood and built to full size.

Dummy installations are used when actual installations are not available or where their use would tie up needed items of equipment. They permit students to practice under conditions which closely simulate those that will be met in the field. Most dummy installations are built by the using-unit out of scrap lumber and other material available on the particular army post.

*Displays and Demonstrations.* A display is an exhibit using items, models or art work to present a given subject in a dramatic form. The display points up or emphasizes particular factors, usually by showing them against a contrasting background. A display of arctic or jungle clothing and equipment, using mannequins

and painted backgrounds for example, gives the student a vivid and clear picture of this special equipment. The students not only see the items themselves but also see them in their proper setting. Special halls or rooms are often used to house a series of displays and exhibits. The advantage is that distractions are eliminated and the soldiers are able to concentrate on the subjects being presented. The display or demonstration should be accompanied by a carefully planned lecture or commentary.

*Synthetic Devices.* Synthetic devices are substitutes that can be better employed in certain circumstances than the article itself, like a sighting device for rifle marksmanship, which can be made from wood and light hardware. Synthetic devices often simplify a complicated process. In other cases, they clarify by breaking down the steps taken in performance or by showing the component parts of the mechanism. Synthetic devices are usually inexpensive to prepare and therefore can have wide distribution. They act as substitutes for critical items and still permit the opportunity for constant practice by the individual student.

*Graphic Portfolios.* The graphic portfolio is a series of large size charts all devoted to one subject and bound together so as to present a complete visualization of the subject. The graphic portfolio permits the pupil to check his performance with the correct technique displayed on the charts, while he is in the field. This type of training aid is particularly forceful for subjects which are generally taught out of doors. Graphic portfolios can be made from the same materials and reproduced in the same manner as charts.

A sand table model, used in the Army training program, showing an aerial view of a unit in bivouac.

**Bulletin Boards.** This visual aid is an effective means of maintaining interest in the course by keeping up with current news of the subject taught. These bulletin boards are used for posting pictures and news clippings from newspapers and magazines. Bulletin boards can be built to any size from wood and wall board. It is wise to urge students to keep their eyes peeled for items of interest to the subject and have them displayed on the bulletin board. Bulletin boards should be kept up to date, and old material should be taken off as soon as it becomes obsolete.

**Training Films.** The Army uses a variety of training films in its instruction. Films chosen should be first previewed by the instructor before shown to the class. The instructor should judge whether the film fits the subject, whether it is current and whether it will maintain the interest of his group. After the showing, a question and answer period should be conducted in order to test the effectiveness of its instructional value. Feature length films are generally shown in War Department theatres on the post, and shorts can be projected in classrooms and barracks.

**Film Strips.** A film strip is a series of related still pictures representing a single subject and prepared on 35mm. celluloid strips for projection purposes. It can consist of diagrams, drawings, charts, maps, and photographs. Each frame is shown separately but the whole strip makes up one cohesive story. Film strips can be used in conjunction with practical exercises. The students actually perform the instruction covered by the pictures. Film strips allow students to participate during the showing of the film. It is possible for the student to ask questions; doubtful points can be cleared. If necessary some frames can be re-shown to help in summing up the instruction. The film strip projector is easy to setup and easy to operate. Any student in class can be given this job while the instructor is on the platform. Proper seating arrangement is vital in order to achieve a maximum of visibility for all students. The film strip can be the body of the day's lesson, but it must be accompanied by oral discussion before, during and after the showing.

**Glass Slides.** The glass slide makes it practical for the instructor to show a single picture or chart or many pictures and charts. When it is used with a shadow box, the classroom can be kept semi-light so that students can take notes. Glass slides are simple to prepare and easy to use. Sensitized glass plates are employed and a photograph is printed on these plates just as it would be on paper. Available pictures can be reduced and copied on glass slides, either 2 x 2 or 3¼ x 4 inches, or new pictures can be made and printed directly on the sensitized glass slides. A standard attachment on the film strip projector converts it into a glass slide projector.

**Opaque Projector.** With the opaque projector it is possible to project any photograph or any printed material. The image is put right into the projector and reflected through mirrors and lens. The actual color of the subject and all the details are projected on the screen. For effective use, the opaque projector must be used in a thoroughly darkened room. The original subject should fit into an area approximately 6 inches

by 6 inches. The screen image can be enlarged to almost any dimensions.

**Printed Matter.** Pamphlets, brochures, bulletins and technical magazines are used for supplementary reading and lesson preparation. It has been found advisable to provide students with course and lesson outlines, assignment sheets, reading lists, guides and aides for their work. Blank forms relating to the subject taught are distributed to the students for practical exercises. The value of such aids is measured by the effectiveness of their preparation technically as well as creatively. The material must be legible and understood by all.

**Other Training Aids.** Each camp, post or station uses training aids that have been specially devised to suit their particular needs. Besides the standard War Department training aids which are in use by all Army training centers, individual units create their own. Thus individual initiative and creativeness is encouraged and emphasized. This is especially important in units of advanced training, where the instruction is generally conducted in the field and elaborate training aids are unavailable.

### D.V.I. Elects New Officers

The New Officers of the Department of Visual Instruction, who were elected in a mail ballot conducted last spring, are: *President*, Boyd B. Rakestraw, University of California, Berkeley; *First Vice-President*, L. C. Larson, Indiana University, Bloomington; *Second Vice-President*, W. A. Wittich, University of Wisconsin, Madison. A Secretary-Treasurer will be appointed to succeed Miss Lelia Trolinger who has capably fulfilled the office for three years.

President Rakestraw has outlined an aggressive program of ten objectives for 1945-46 which includes:

A conference of all organizations in the field to discuss their respective activities and draw up a united audio-visual field program; assistance and strengthening of local D. V. I. organizations; encouraging the return of Army Personnel to educational positions; conversion of war materials and equipment to educational use; development of THE EDUCATIONAL SCREEN as the publication of the D. V. I.; permanent national headquarters for D. V. I.; cooperation with producers and manufacturers in developing new materials and equipment to serve educational organizations; making D. V. I. more articulate as a consumer group; cooperation with libraries and service organizations with a view to increasing their effectiveness in serving educational needs; increasing the independence of the whole audio visual movement from government support by greater cooperation between its educational and commercial groups.

The membership of the organization voted almost unanimously to increase the membership fees to \$3.00 per year, to assist the officers in the development of this vigorous program.

The National Education Association has appointed Mr. Verne Dameron to head the newly established Audio-Visual Instructional Service of the Association, and the D. V. I. anticipates working with him to mutual advantage.

# Audio-Visual Education in the Post War Period

ALVIN B. ROBERTS, Principal  
Haw Creek Township High School, Gilson, Illinois

*This Audio-Visual Survey of the nation covered Illinois schools in the May and June issues. This issue, with October, will present results from the other forty-seven States.*

UNFORTUNATELY many teachers, administrators, and the major portion of the general public who have read the famous article, "Can Schools Teach the G. I. Way?" feel that the Armed Forces have developed a new method of teaching. They fail to realize that the majority of the men directing the audio-visual program of the Armed Forces were previously directing the audio-visual programs of our state universities, colleges, and public schools. Fortunately, however, the publicity given to the military training program by this article has created much new and healthy interest in the use of audio-visual materials as a part of our educational program. As a result, rapid expansion in visual teaching in our schools is predicted for the post war period. However, while interest is the paramount factor in the development of this program it is by no means the only one. We may ask then, if the factors which have always tended to check wider use of audio-visual materials have been altered by the military training program?

Here are the basic factors that, in the past, have had a tendency to retard the audio-visual program in our schools.

1. **Teacher Training.** The ultimate success of the audio-visual program must be measured in terms of the contribution of these aids to the educational objectives. This in turn depends upon the teacher's knowledge of the function and proper use of these aids.
2. **Attitude of the Administrator.** In all too many cases the principal or superintendent fails to see the audio-visual program in its true relationship to the curriculum.
3. **Distribution of Materials.** These materials must be in the school at the time needed by the teacher. Consequently, materials must be booked well in advance. This requires detailed planning and the nicest cooperation between the instructors and the director of the audio-visual program.
4. **Production.** This involves a long series of problems, but possibly the most important one is closer cooperation between the producer and the ultimate consumer, the class room teacher.
5. **Board of Education Control of Purse Strings.** To sell the Board of Education a projector is one thing; to sell it an adequate audio-visual program is a much more difficult problem.

The success of the audio-visual program in the schools of tomorrow depends upon the degree to which the different groups involved will cooperate. How can the class room teacher, the administrator, the director of the audio-visual program, the distributor, the producer, and Boards of Education all work together to advance and enrich the educational program through the use of audio-visual materials? In an attempt to answer this question the author has made a study of the audio-visual movement on a nation wide basis. If all schools are to use these materials, then it is well to know how those that are carrying on an audio-visual program are doing it, what their problems are, and how they are planning to meet them.

To get an overview of the national situation the author mailed 4,125 questionnaires to schools or school systems. They were mailed according to the following enrollments. In Illinois (excluding Chicago and Cook County), with student enrollments as follows: Group A (over 500), Group B (over 150), and Group C (under 150). In the remaining 47 states 75 questionnaires were mailed, 25 to each group as listed above, omitting schools in cities with the population of over 100,000. In all, 3,515 questionnaires were sent to the 47 states and 600 to the schools of Illinois.

A larger number (eight times that sent any other state) was sent to Illinois for two reasons. *First*, the author made an extensive study of audio-visual education in Illinois five years ago, by 1,980 questionnaires, results of which were given in EDUCATIONAL SCREEN for last May and June. Certain trends were apparent. The present survey serves to check the development of these trends, and determine new trends, if any. *Second*, to have a larger percentage of returns from schools of the three groups in one state to serve as a basis for measuring trends of similar groups in other states. The returns from the state of Illinois, while shown on Charts 1 and 2 are not included in determining the national percentages. The ideas and suggestions advanced in this paper are based not only upon the above sources, but also upon many discussions with educators and with leading producers of audio-visual material throughout the period, and upon twenty years experience in the audio-visual field.

The number of questionnaires returned was very satisfactory when one considers the extra burden placed upon school people by war. Of the 600 sent to the schools of Illinois 195 (about one-third) were returned, of which 165 were tabulated. This is a 27½% return.

The total returns from the other states was 955 (about one-fourth). But 341 reported no audio-visual program or returned the questionnaire without any comments, leaving a total of 614 or 17½% suitable for tabulation. The greatest number of blank returns were from the smaller schools. Throughout this paper the percentages are based upon the total number of replies to each question or item, and not on the total return.

Chart 1 shows the number of returns per State and per School group. The returns are distributed as follows: Group A- 55%; Group B- 41%; and Group C- 5%. In Illinois the returns were: Group A- 28%; Group B- 48% and Group C- 24%. New York and Michigan hold first place in the greatest number of returns and with Colorado and Indiana, gave better than a 30% return. Wisconsin, Washington, Pennsylvania, South Dakota and Montana gave over a 25% return, while the six states of Florida, Georgia, Louisiana, Mississippi, Tennessee, and West Virginia gave less than a 10% return.

Regardless of the number of returns per state, the various items are checked in approximately the same ratio. The 616 schools reporting owned a total of 2,335 projectors (Chart II) of all types, or an average of 3.79 projectors per school reporting. According to groups, the number of projectors is (A) 5.44, (B) 1.9, and (C), 1.66 per school.

On the basis of projectors owned, the large schools probably do not have a program any more adequate than small schools, when one considers the number of students that must be served by one projector. The schools in group B rank lowest in pupils-per-projector ratio.

The projectors were tabulated according to make, but for obvious reasons these tabulations are not included in this report. Frequently, one is asked, what is the best make to buy? This question is difficult to answer. Of four makes of 16 mm. sound projectors, only two schools reported contemplating the purchase of a projector other than the make owned. This certainly indicates good service, regardless of make.

No. 2—Under \$75												

From the number of schools that have produced their own motion picture films, or 2x2 slides (Chart III), and from the number that expect to buy motion pictures of 2x2 cameras (Chart IV), it would seem that the schools will produce more of their own materials in the post war period. What help, if any, can be given the schools in this respect? Can skilled photographers now in the service be utilized, especially for the production of motion picture films?

As may be expected the 16mm. sound projector ranks first (Chart IV) of those the schools expect to buy when available. Among the other projectors, the tri-purpose, the opaque, the 35mm. film strip, and the 2x2 projectors follow in that order. There is an interesting comparison to be made here. Projectors owned (Chart II) by Group A schools are three times those of Group B schools and twenty-five times those of Group C schools. But plans for purchase (Chart IV) shows a very different ratio: the A schools are only two and a half times the B schools, and only thirteen times the C schools. Relative interest among smaller schools is growing significantly.

One of the basic problems in developing the audio-visual program is to have the material on hand when needed. To date most of the schools are depending upon the rental libraries for most of these materials. On Chart V only 4 schools in Group A own over 150 films, only 7 own from 75 to 150, and 41 less than 75. Consequently, the large percentage of the 331 schools reporting in group A are depending upon the rental libraries for the 16mm. film. A much smaller number of the schools in group B own sufficient films for an adequate program and none in group C. Therefore, the problem of distribution of 16mm. films is still, and is destined to remain for some time, one of major importance. A much greater number of schools own slides and strip film than motion picture films. However, there is still a demand for these materials on a rental basis (as will appear on Chart XII).

It is almost impossible to draw any conclusions concerning the annual expenditure of schools (Chart V)

on their audio-visual program. A few schools appropriate only enough to pay the transportation on a few "free" films, while one school reported its annual expenditures as \$3,782.50. Most of the schools reported their total expenditures as ranging from \$225.00 to \$450.00. This was spent for purchase, or rental of films and slides, or records and transcriptions, the major portion going for slides and films. The only significant statement that can be made concerning the annual expenditure for audio-visual materials is that school boards are appropriating somewhat more money for this purpose than previously. While the amount, in most schools, is far from adequate it indicates that the value of these materials as educational media is being recognized.

On the elementary level (Chart VI) the 400 foot film has preference. A considerable number prefer the longer film (15 to 30 minutes) for secondary work. Many qualified their answer by stating that the length

should be determined by the type of material presented. Chart VI also shows that the OWI films have not been used as extensively as one may have assumed on the basis of publicity given them.

Much remains to be done in the field of administration. Less than 17% (Chart VII) of the schools reporting have a director of visual instruction. In the schools not having a director this work is carried on by the superintendent, principal, or the teacher or by a combination of the three. In most cases the principal or superintendent is too busy to give the necessary time required to develop a well balanced audio-visual program. This is also true of the class room teacher who is assigned to this position, and in all too many cases the audio-visual director is not given sufficient time for the work required. Many schools are encouraging students to help with the program by providing regular training periods for them. This training will be of considerable value to those entering the teaching profession.

What then are the greatest needs in the field of administration as reflected by this survey? Over 92% indicate they should like help in correlating the films with the curriculum. This percentage is about the same regardless of the enrollment of the school. The fact that such a large number of the schools are even willing to pay for this service is indicative of the demand. Approximately 63% feel that a chart that will simplify the work of the teacher and the director in setting up the audio-visual program, will enhance this movement.

**1,400 16 mm. Sound Projectors in N. Y.**

A directory of owners of 16mm. sound projectors in New York State has just been completed by the Film Division of the State War Council. It was compiled as the result of a state-wide survey.

Some 1,400 sound projectors are listed in the directory, exclusive of equipment in use on military installations within the State. Listings are broken down, according to counties, with the names and address of owners in cities and communities.

# The Curriculum Clinic

## Communicate What to Whom and Why?

PAUL C. REED, Editor  
Director, Visual and Radio Education  
Rochester Public Schools, New York

WITH the postwar world a present actuality, rather than a remote future contingency, the paper plans of producers of audio-visual materials and equipment manufacturers are fast becoming reality. Teachers, directors of visual departments, school principals, and superintendents, sooner than they had expected, are going to be able to develop their postwar audio-visual programs. Educators are going to have greater opportunities than ever before in the history of the world to do a better, more effective, and more efficient job of communicating knowledge, ideas, and skills to those who learn.

During the past few years visual education has advanced further and faster than in the previous twenty; and this very fact may bring about mistakes, misunderstandings, and misuse of these tools as educators adapt them to their instructional programs. Many questions are raised in this process of adaptation, and much depends upon the answers that are found. Which kind of projected materials shall we use in our schools? Shall we buy filmstrip projectors? Shall we buy motion picture projectors? Should we purchase equipment to make disc recordings, or should we purchase a magnetic wire sound recorder? And once we get any or all of these things what shall we do with them? How should they be used in our classrooms? These are not new questions that are being asked; they're the same old questions. But the difference is that more educators are now interested than ever before; more are asking questions, and the answers may seem to be more complex.

This is a time for clear thinking if school funds are not to be wasted, if we are really going to advance and improve our classroom instruction, and if we are going to use these newer tools in a way that will realize their tremendous potentialities. It might help to bring about clearer thinking if two words were brought into clearer and sharper focus in relation to audio-visual thinking. Those two words are "communication and curriculum." These two words demand greater consideration by all who are concerned with audio-visual instruction; by the producers, by distributors, by school administrators, and by teachers in the classrooms.

Too many people stop their thinking about audio-visual instruction at the equipment level. They think of the equipment as an end in itself. They concentrate on the careful selection of equipment. They maintain it in the best of condition. They make sure that teachers and even pupils know how to operate it and to keep it oiled. They know all about the latest equipment developments. They know which machines are best and why. They're the "visual gadgeteers," and there are too many of them.

Then there are the "quantitative visualists." They are not particularly concerned about the equipment. They're concerned about the pictures on the screen; in fact the more pictures shown, the better the program. They believe in visual instruction and lots of it. They show pictures all the time, and they just show them and show them and show them. They'll tell you how many reels they've used in their room or in their school. They'll tell you how many records they've used and how many radio programs they've listened to. They can give you the quantitative statistics, for that's what they're interested in.

Neither the "gadgeteers" nor the "quantitative visualists" have considered the word "communication." They think of the equipment and the picture or sound program as ends alone. They do not think of the equipment and materials as *means* to ends, as the tools and the means of communication. "Communication" is a key word. Once we think of audio-visual materials as a means of communication, it provokes a most important question—"Communicate what to whom and why?" That question must be sincerely asked and completely answered before a good visual program can be developed in a school, or before there can be good instructional use of audio-visual materials. The actual completed communication of educationally significant experiences by audio-visual means is the test for effective audio-visual instruction. The concept of audio-visual materials as a means of communication must be basic to our audio-visual thinking and planning.

The question, "Communicate what to whom and why?" is equally important for producers of audio-visual materials for classroom use. Too many classroom pictures have been made just because the footage was already available or easily photographed; or just because the subject would make a good movie. The great success of the Army and Navy training film program was largely due, I believe, to the fact that they knew definitely and conclusively who were to be trained by the pictures, what the trainees must know in order to do their jobs, and why it was necessary for them to know and be able to do these things.

The answer to what should be learned in school classrooms and why, is the curriculum, and the curriculum must be the starting place and the focal point for any audio-visual program if it is to be effective. This concept must also become an integral part of our audio-visual thinking. Decisions as to which pictures should be seen and heard, and which sound experiences should be listened to, should not be made in terms of the audio-visual materials alone. The film isn't the starting point for visual think-

(Concluded on page 289)

# The Film and International Understanding

## The Film Producer-Lecturer and International Understanding

HARRY DUGAN

WITH isolationism a thing of the past, and world fraternity a promise of the future, it is essential that we become better acquainted with the people of other lands, understand their problems and their bearing on our own welfare. Writers, statesmen, educators, and many others, will lend their efforts to this purpose.

Personally, as a "pictorial journalist", I feel proud to be playing a part, through the production of films on international subjects, in the promoting of understanding and friendship among peoples. For it is not the treaties, conventions and covenants negotiated by governments that will ensure world peace and cooperation, but the support given those governments by a well informed public.

The American lecture platform is once again assuming its historic importance, an importance which has been recognized by our State Department, which considers it a most valuable agency for the dissemination of international information and the maintenance of morale in wartime. By invitation, lecturers recently met with high officials of the State Department in an all-day conference on international affairs. Some of the most outstanding lecturers in attendance were those who use films to "show what they mean".

The film, as used in the illustrated lecture on international subjects, is fast becoming one of the most potent forces on the lecture platform today. That deep-rooted, peculiarly American institution, often referred to as the "forum" or "town meeting", has been one of the most important moulders of American public opinion in our history. The advent of the radio for a time seemed to have taken over its functions, but actually there are more people going to lectures today than ever before. And with their sons and daughters writing home from all over the world, with many international conferences taking place, the American citizen not only wants to hear what it's all about, but he also wants to have a chance to see—and ask questions.

The factual film, personally narrated by the producer, is made-to-order for this situation. My own personal interest in international affairs, especially in the field of understanding and friendship, has been implemented during the last few years by the production of colored motion pictures along these lines.

Incidentally, photographing such films has a contribution of its own to make to international friendship; for the inhabitants of any country are flattered and impressed by the fact that the people of another country wish to see them through the medium of the motion picture camera.

In making lecture films I have endeavored to combine the best features of the travelogue and the factual

DR. JOHN E. DUGAN, Editor  
Hadden Heights, New Jersey

---

EDITOR'S NOTE: Harry Dugan is a photographer-producer-lecturer who makes his own films for use in his own lectures in the field of international understanding. Some of his films also have been used by Burton Holmes. What he has to say in this article is interesting because it deals with a rather unique and intimate phase of the use of the film for international understanding. (Incidentally, the writer is in no way related to the editor of this department. His material stands on its own.)

---

or documentary film and evolve a vehicle which at the same time is interesting, entertaining, informative and educational. In presenting a pictorial record of a country, it is just as important to show the people at play as well as at work, to stress the beauty of their architecture and include scenes of human interest. This uses the best features of the travelogue and dispenses with the bizarre and unusual, which more often than not gave audiences a distorted and wrong impression. In general, the pictorial record is devoted to the activities of the people, their country, their history and works, and the officials who govern them.

To illustrate, in *Down Mexico Way* I showed the industrial side of Mexican life by including many sequences of Monterey, the most industrial town in all Mexico. For the native crafts, scenes of pottery and lacquer-ware making were included. For an understanding of the geographical nature of the country, the seaports, rivers, mountains, and the new volcano of Paricutin, were pictured. For some historical background, I photographed the Independence Day celebration in Mexico City, as well as the President himself during an impressive ceremony recalling the events which gave Mexico her independence in 1810. For interest and entertainment I included most of the tourist centers such as Mexico City, Uruapan, Cuernavaca, Taxco, and Acapulco.

Being able to speak of these things at first hand is important; for the film is shown as a silent film and the lecturer furnishes the sound, narrating, pointing out essential facts, and stressing the significance of different events. As a fitting climax, the audience can, with propriety, talk back or take issue with the speaker after the film program is finished. Then too, there is the opportunity for each member of the audience to ask questions about any part of the film which aroused his particular interest.

In no other medium of public information—radio, newspaper or magazine—does the audience have quite the same opportunity to get close to a country, to combine seeing it in colorful motion pictures with an opportunity to hear about it and discuss it in such an intimate and personal way.

Since the lecturer can vary his script to meet the needs of his audience, this type of film program can be used with many types of audiences. It can be adapted

to meet changing conditions or strong current interests. For example, the presentation and audience reaction with *Down Mexico Way* for adults differed from what occurred with school and audiences, where it aroused discussion about and drove home many of the cultural, social, economic and political facts learned about that country in the classroom.

Speaking of schools, it is interesting to note that the World Education Service Council is urging the establishment of a weekly "World Friendship Hour" in the schools of the world, as a practical step toward the maintenance of world peace in the future. If such a plan becomes a reality, there is little doubt that the motion picture will have an important role in its functioning.

## Educational Film Telecasts

Facilities of the two major media of audio-visual education, television and educational films, are combined in a series of four experimental telecasts being conducted under the joint auspices of CBS Television and Encyclopaedia Britannica Films to probe the potentialities of nationwide dissemination of education and culture through the combination of the two devices.

First program in the experimental series was telecast over Station WCBW, New York, on August 7, with a group of several of the nation's most prominent educators and leading figures in government, agriculture and industry in attendance at the studios. The remaining three programs will be presented before October 1. The experiment has been undertaken with a view to programming a regular television-film educational series this Fall and Winter over WCBW if the combination of the two media under conditions of high-quality, professional programming is as successful as anticipated, Worthington Miner, manager of CBS Television, announced.

Dr. V. C. Arnsperger, vice president and director of research, and Dr. Miller McClintock, consultant in education to the Britannica film company, and their staffs are collaborating with CBS Television officers and producers in the preparation of the series.

Program number one combined a Britannica film

(Left to right) Worthington Miner, E. H. Powell and Miller McClintock examine a televisor in the WCBW Studios

The planned use of films in the field of international understanding is new; but it is built upon an older audience interest in seeing and hearing about other countries. Although not produced for such a specific purpose, the Burton Holmes' Travelogues have given us, for many years, a wider knowledge and better appreciation of the countries and people of this world. More than that, they have given many the necessary impetus and inspiration to study and travel, which of course is the best way to "know thy neighbor". Today's film lecturer is proud to build upon that tradition—Newman, Holmes, Bryan, Fitzpatrick, Wells, Hubbard, Craig, and more—knowing that his work is not merely entertainment, but that he is making a real contribution to human progress.

on agricultural techniques through the centuries with a script for live performers prepared by Rudolph Bretz of the WCBW staff and Edward Stashoff of the New York City Board of Education radio program staff and writer-producer at WNYE, the city's educational FM station.

In a five-minute introductory program, Dr. Arnsperger conducted a roundtable discussion on the significance of the new series as a precursor of what eventually, with further development of television techniques and the widespread distribution receivers, may be a most important contribution to education in the home.

"While the use of educational films by television cannot compete with their scientific use as classroom aids because they can neither be employed on a curriculum basis nor be used in the necessarily intensive and repetitive way in which they are employed by schools, both the Britannica and CBS officers believe that they should have wide acceptance and value as a general educational stimulant," Dr. McClintock said.

With the premiere of the series will also be a new approach to the use of film in television. In the programs, Britannica's films will be interwoven throughout the live dramatic sequences so that the films will flow out of the dramas as visualizations of the dialogue. The aim of this experiment is to create a unified impression and lead to the largely factual material of the films a dramatic and emotional quality that will relate them to modern problems and give them the impact of urgency and immediacy.

## The Curriculum Clinic

(Concluded from page 287)

ing; the curriculum is. There may be justifiable instances, in school situations where current curriculum is out-moded and does not meet learner needs, when modern audio-visual materials can be used to bring about a rethinking of what should be learned by whom and why. But this is not a healthy condition; at best it is expediency. Curriculum thinking should precede audio-visual thinking, and the selection and use of audio-visual materials—the means for communicating essential learning experiences effectively and efficiently—should be curriculum centered.

# The ABC's of Visual Equipment

## How to Use Your Sound Projector as a Public Address System

Edited by  
JOSEPH E. DICKMAN  
and PHILIP MANNINO

**W**HENEVER it is necessary to serve large groups, your sound projector can be used as a public address system—for assembly programs, to add amplification to the radio, or maybe for a “Vic” dance.

Your sound projector differs from a public address system in only one aspect: for input the photo-electric cell acts as a microphone. But your projector is designed so that a microphone or phonograph pick-up can be used. A microphone jack is provided on the projector amplifier. This jack automatically cuts out the photoelectric circuit and cuts in another circuit when the microphone or phonograph pick-up is plugged in. A standard one-prong plug fits into the jack. A separate volume control is usually provided for the microphone circuit, but the same tone control works for both circuits.

There are certain limitations that must be considered when you use your sound projector as a public address system. Within limits, however, the substitutes will serve the average school quite adequately.

A public address system is a permanent installation and most of the problems are solved on installation. In using your sound projector, you will encounter difficulties such as low volume, distortion, or feedback (commonly known as howl, squeal, or whistle). Since feedback is the one problem that is the hardest to control and is the cause of the other problems, let us see what causes it. Feedback is a vicious circle set up by the sound waves emitted from the loud speaker and picked up by the microphone, re-amplified by the amplifier, and sent out again by the loud speaker. This continues in a circle (as illustrated below) until a high-pitched squeal or howl is heard. This squeal is very annoying and spoils the effectiveness of the Public Address System.

Sketch A. Amplifier

Now let us see how we can overcome this problem. First, the amplifier must be large enough to take care of the room that it is to be used in. The average 16mm. sound projector has an output of 10 watts. Ten watts will cover an area of about 7,000 square feet or an audience of about 1,000 people. The larger type projectors usually have up to a 25 watt out-put and can cover an area up to 15,000 square feet or an audience of about 2,200.

**S**CHOOLS whose equipment finances are limited will favor the multipurpose possibilities of the portable 16mm. sound projector. The simple addition of a microphone converts it into a public address system. However, it must be pointed out that whenever adaptations are made to equipment additional problems arise. The accompanying article calls attention to these problems and proposes solutions.  
J. E. D.

If your set-up is to take care of large audiences at all times, it will be best to equip your projector with two loud speakers. Twelve-inch loud speakers will be the most suitable. Although two loud speakers will not increase the volume, they will tend to distribute the sound more evenly. These loud speakers must be matched to your amplifier or a serious loss of volume will result.

Placement of the loud speakers is important because the proper location will aid greatly in reducing feedback and making the program sound natural. Place the loud speakers in the upper front corners on the wall, pointed so that the sound will cross about half way to the rear of the room. The following sketch will give an idea of the placement:

Sketch B. Loud Speaker Placements

While many types of microphone will work for most satisfactory service, you should have the one especially designed for your projector.

Microphone location is very important and the best results can be obtained only when it is in the proper place. The best location is in another room away from the loud speakers, but since this isn't always possible, it must be placed in the next best location. Do not place it in the sound path of the loud speaker.

The microphone cord should not be longer than 25 feet. It should be handled carefully so as not to break the shield around the wire. If this shield is broken, trouble will result in the microphone line and it may cut off if the user happens to move the microphone.

The tone control, used correctly, will add to the naturalness of the program and can often be used to control feedback caused by certain frequencies.

Sometimes schools want to use the microphone to cover the entire stage. This can be done only by using several microphones. When using more than one microphone it is necessary to use an electronic mixer for each additional microphone. These mixers can be had on special order from the projector manufacturer.

When using the phonograph pick-up attachment the problem of feedback is eliminated. Distortion of sound is caused by overloading the amplifier and care must be taken to keep the volume down to where it can be heard without distortion. Overloading the amplifier causes tubes to burn out and it harms other vital parts of the amplifier.

Remember that correct loud speaker and microphone placement will go a long way toward solving the problems of low volume and feedback, enabling you to get the most out of your sound projector as a public address system.

P. M.

### Second Annual Iowa-Nebraska Institute on Audio-Visual Aids, October 4-6

A three-day audio-visual program will be held this year at the University of Omaha, following the same successful pattern as last year's institute with emphasis on the demonstration method. The conference will be held October 4, 5 and 6 and will be broken down into five separate and distinct divisions. Each half day will be opened with a general session for all persons in attendance, with topics of general interest. After a short intermission the group will then break up into five divisions to observe the demonstrations being given for the specific groups.

The divisions are as follows: elementary grade school level, secondary, college, religious education, and adult education. During the three-day period each of the five divisions will have at least one demonstration, under classroom conditions, of (1) sound film, (2) silent film, (3) radio, (4) maps, globes, charts, (5) slides, strip film, etc.

Included in the general sessions will be the demonstration of a faculty evaluation preview by Walter Wittich and Mr. Cumming; an address by Dr. Stephen Corey of the University of Chicago on "The Psychology of Perceptual Learning," followed by a panel discussing the psychological basis for audio-visual education. The panel will be led by Dr. William H. Thompson, head of the Psychology Department at the University of Omaha. Other members will be Dr. V. C. Arnspiger, Dr. Corey, Dr. Warren Baller of the University of Nebraska, and Dr. Bruce Mahan of the University of Iowa.

An evening dinner program will be devoted entirely to the positive consideration of the documentary film.

Participating at this session will be Miss Margaret Carter, National Film Board of Canada; John Hamilton, British Information Service; Floyd Brooker, U. S. Office of Education; and Oscar Sams, Office of Inter-American Affairs.

### Audio-Visual Aids Workshop in Akron

The Audio-Visual Aids Workshop, held May 11 and 12 for Akron, Ohio, teachers, was planned by the Visual Aids committee which worked last year with the Curriculum Study Group. The purpose of the meeting was to bring the best thinking to bear on the pertinent and important problem of audio-visual aids. Representatives from all schools were invited in order that they might report back to their schools the significant outcomes of the conference.

Superintendent Otis C. Hatton addressed the group on "Visual Education, from the Standpoint of the Superintendent." He recommended that a small committee be appointed to advise the head of the audio-visual aids department as to the type of films and audio aids needed to service the schools.

Dr. Edgar Dale, of Ohio State University, spoke on the topic, "What Can We Expect from a Visual Education Program?" stressing the use of audio-visual aids in enriching the experiences of pupils. Through the use of audio-visual aids we can get help in doing some things that we are not attempting or are not doing well, such as: 1) Family-life education; 2) Creative work in the arts; 3) Civic participation; 4) Improved use of leisure time. Dr. Dale mentioned the necessity of binding together horizontally various related fields. He felt this could be done most effectively through motion pictures.

Mr. Sumner W. Vanica, an instructor at Garfield High School, presented "Practical Problems in the Use of Visual Aids." He suggested that in contemplating the construction of new buildings, projection rooms should be considered. Mr. Vanica believed it desirable that each school have a well equipped projection room to accommodate approximately two classes and gave some suggestions about illumination and projection, audition factors, and selection and operation of a projector.

In the afternoon, Mrs. Josephine French spoke to the group on "Using Radio and Recordings in the High School." She introduced teachers from local schools to demonstrate the use of the radio and recordings in various areas of the school program—in speech, history and English classes.

Dr. Dale appeared again as the last speaker on the afternoon program. Subject of this talk was "Using Other Visual Aids." He mentioned that many opportunities for valuable experience in urban communities are being lost. The schools must compensate for this loss by using all available means in building rich concepts—demonstration, dramatization, field trips, films, photographs, blackboards, maps, etc.

Saturday morning three different films were presented by Mr. E. L. Moyer of Encyclopaedia Britannica Films, Orval Sellers of the Akron Department of Visual Aids, and Dr. Dale, each demonstrating the technique he considered desirable in using films as a teaching device.

Those interested in seeing a copy of the complete Workshop Report should contact Mr. A. J. Dillehay, Executive Director of Curriculum and Instruction, Board of Education, Akron.

26 Years' Service to Schools With  
Among the many recent additions to our

**BEYOND TOMORROW**

Charles Winninger, C. Aubrey Smith,  
Harry Carey

A thoroughly delightful film, with a warmly human story about three wealthy, lonely bachelors who find great happiness in befriending two fine youngsters—a boy and a girl. After their death in an airplane crash, the spirits of the men return to guide and influence the lives of the two. Rich in character and entertainment values.

**LITTLE MEN**

Kay Francis, Jack Oakie

Louisa M. Alcott's universally-known book has been given a rousing modern version in this RKO feature production. Drama, romance and hilarious comedy are combined to make this agreeable entertainment, which retains much of the charm of the original story. "Elsie" the Cow, contributes importantly to the fun and gaiety.

**TOM BROWN'S**

Cedric Hardwicke,

Faithful and absorbing famous classic picture in the 19th Century, of the renowned Dr. at Rugby, who introduced replacing rowdyism. Authentic in atmosphere directed, highly ente.

**AS YOU LIKE IT**

(Elizabeth Bergner, Laurence Olivier)

Shakespeare's liveliest comedy and merriest romance beautifully staged and acted by these great stars and fine supporting cast. Recommended by the Department of Secondary Education of the National Education Association. Study guide available.

**SO ENDS OUR NIGHT**

(Fredric March, Margaret Sullavan)

Remarque's great novel "Flotsam", filmed in all its dramatic realism and suspense. Unforgettable enactment by fine cast of the story of political refugees fleeing across Europe—their high courage and philosophical humor under desperate circumstances.

**COURAGEOUS MR. PENN**

(Clifford Evans, Deborah Kerr)

An inspiring photoplay based on the life of the great Wm. Penn, who fought the intolerance, tyranny and injustice of his day. His courage, and achievements in establishing the principles of liberty and justice in Government, are stirringly portrayed. Study guide available.

**WHEN THE LIGHTS GO ON AGAIN**

(Jimmy Lydon, Barbara Belden)

A psychological drama and tender love story, unfolded against the background of a small Missouri town, dealing feelingly and movingly with the problems facing the returning veteran suffering from combat fatigue.

##### PAGLIACCI

The first complete Grand Opera in Sound Film, performed by the San Carlo Grand Opera Company of 150 voices and Symphony orchestra of 75 players. Principal roles sung by Alba Novella, Fernando Bertini, Mario Valle, Francesco Curci and Guiseppa Interrante.

##### SYMPHONIC FEATURETTES

The National Philharmonic Orchestra, directed by Composer-Conductor Frederick Feher, presents: First Movement of Beethoven's Violin Concerto in B Major; Second Movement of Schubert's Unfinished Symphony; and "Slavinka" a Tone Poem composed by Dr. Feher.

# The Literature in Visual Instruction

## A Monthly Digest

ETTA SCHNEIDER RESS, Editor

### EVALUATION

- **Projected Pictures for Instructional Purposes**—Gilbert G. Weaver, *Guidance, Practical Arts & Vocational Education*, Vol. 1: p. 48, April, 1945.

In spite of the great possibilities of educational films, the author has noted some shortcomings which should be corrected in future production. 1) The average film usually covers too much territory. 2) It moves too rapidly for satisfactory comprehension. 3) There is too little explanation of technical terms. 4) Motivation is too often lacking. 5) There is not sufficient slow motion or close-ups for complete clarity, etc.

It is recommended that producers seek the cooperation of teachers that films be broken down into short units, and many other practical hints.

Teachers must put films to proper use if their full potentiality is to be realized. Step 1. Explain the purpose of the film and its relationship to previous lessons. Step 2. Review what is already known and raise challenging questions. Step 3. Direct attention to specific things to be seen in the film. Step 4. Show the picture as many times as necessary. Step 5. Pose good, thought provoking questions to be discussed after the showing. Step 6. Assign the learners jobs to be done or further reading.

- **Looking Backward in Visual Education, A. D. 2000-1945**—Clifford Ettinger—*Journal of Business Education* 20:27, June, 1945. Reprinted from BUSINESS SCREEN. A provocative article, worth reading in the original.

### ADMINISTRATION

- **Organization of a Visual Aid and Dept. for Schoolwide Use**—Saul I. Siegel—*High Points*, 27: 42, June, 1945.

The author recommends an appropriation of \$1,200 yearly in a large city high school. He indicates how teachers, a student squad of assistants and a director with a short period of free time can help in ordering, routing and projecting films and other projected aids.

- **Sylvania's Self-Supporting Visual Education Department**—Lynce S. Metcalfe—*School Management*, 14:319, May-June, 1945.

The Sylvania (Ohio) District is just out of Toledo. The visual aids center is in the Burnham Senior and Junior High School where a faculty member, William B. Wood, and a student club have developed an active service. Eight years ago the department was launched with a cash advance of \$500. At present, the club has helped to finance \$12,000 worth of equipment, chiefly through a 6-cent admission recreational movie program each week. The boys have many other duties, however: they keep the equipment in condition and repair and operate projection equipment in the high school.

Films are purchased for the District with the aid of teachers and committees. The state film service and rental or loan sources supplement the local library.

The article includes a list of the equipment and materials owned in Sylvania, and further details on the operation of the program. It is worthwhile reading in the original.

### RADIO

- **The Story of the All-City High School Radio Workshop**—Van Rensselaer Brokhahne—*High Points* 27: 33 May, 1945.

A description of the radio broadcasting workshop provided for high school students in New York City using the Board of Education's radio station at the Brooklyn Technical High School.

### UTILIZATION

- **How to Get the Most from Motion Pictures in the Classroom**—Thomas A. Chad, Burgard Vocational High School, Buffalo, New York—*Guidance, Practical Arts & Vocational Education*, Vol. 1: p. 50. April, 1945.

A strong plea is made for the teacher to preview each film to be used. The author uses the following preview technique. First he runs the film through and takes notes. Then he notes the teaching points and questions to be raised. These notes may be filed for future use or for other teachers.

To illustrate his technique, the author has given the full notes, teaching points and questions in connection with one mechanical film.

- **The Educational Uses of Films**—Program Service No. 63 USO National Jewish Welfare Board, 145 East 32nd St., New York 16. March 30, 1945.

A well-organized handbook for USO club leaders, giving constructive suggestions for using films with service men. Titles of films are indicated according to the program activities that are a regular feature of each club: group guidance, post-war problems, art, hobbies, music, forums, sightseeing tours, photoplay clubs and special occasions. Brief accounts are woven throughout of some experiences of club leaders. On page 18, for example, there are some excerpts of film forums that have been successfully conducted in Alabama, San Diego, South Carolina, and other places.

Would that there were enough good films to be worthy of the interest that such a handbook will no doubt arouse!

### MUSEUM MATERIALS

- **The High School-Museum Program**—Charles E. Slatkin, *High Points* 27: 49 May, 1945.

The High School Museum Program instituted in September, 1944, is intended to correlate the resources of the museums of New York with the high school program. This is an elaboration of the school service and educational departments that is a regular feature of the Museum offerings.

### HUMAN RELATIONS

- **Films to Better Human Relations**—Esther L. Berg, New York, N. Y.—*High Points*, Vol. 27: May, June 1945.

A critical evaluation of films that were pertinent for teaching inter-cultural understanding. A group of over 100 leaders interested in human relations met under the joint sponsorships of the New York City Board of Education and the Brooklyn Jewish Community Council.

Nine of the 17 films were shown and evaluated on forms provided. Some of the audience comments are reprinted, with positive as well as critical statements noted.

For the films and sources see both May and June issues.

- **The Price of Prejudice**—Edgar Dale—*News Letter*, Vol. X: No. 6, March, 1945.

A highly stimulating and challenging article on the danger of harboring prejudices. Democratic ideals cannot be taught incidentally. They must be deliberately developed by the teacher. The author gives illustrations of films, recordings and other materials to be used.

### PERIODICALS

- **Connecticut Audio-Visual Education Association Annual Bulletin No. 5**, May 1945—Holmes Boynton, ed., State Teachers College, New Haven, Connecticut. The article by William B. Levenson, "Values and Possi-

# NOW! SHOW TEACHERS HOW TO USE CLASSROOM FILMS!

**NEW ENCYCLOPAEDIA BRITANNICA FILMS PRODUCTION**

## **"USING THE CLASSROOM FILM"**

**SCHEDULED FOR OCTOBER RELEASE!**

Now—for the first time—an authentic teacher-training film that shows how to teach with classroom films! Dramatically presents the accepted techniques for using this advanced teaching medium! Clearly demonstrates methods for integrating film content with regular classroom curriculum, other teaching tools and methods.

Encyclopaedia Britannica Films has scheduled an October release for its new production, "Using the Classroom Film." Both present and future teachers who see this film will learn more about teaching with classroom films—and will retain that knowledge longer—because the same teacher-tested techniques were used in the production of "Using the Classroom Film" as are

used in making *all* Encyclopaedia Britannica Classroom Films. Teachers will see and learn how to apply to the use of classroom films, those pedagogical principles with which they are already familiar—will, in short, be able to teach more, more effectively.

"Using the Classroom Film" is a "must" for every educator. For more information, fill in and mail the coupon below.

### **WHAT THE FILM DOES:**

Shows steps in typical utilization of classroom film:

1. The Teaching Situation
2. The Teacher's Preparation
3. Preparing the Class for the Film
4. Showing of Classroom Film
5. Students' Questions and Review of Film Content
6. Individual and Classroom Projects Stimulated by Showing of the Film

bilities of FM Educational Broadcasting" uses the experience gained at WBOE, Cleveland as a basis for evaluation. Radio, according to the author, is a great aid to education because it is timely, it permits pupil participation, it offers an emotional experience to create desirable attitudes, it adds authority, it can integrate the learner's experiences and so on. The article (recently enlarged as a book) gives practical examples of school utilization.

In "A Dealer Looks at Visual Education" by Arthur A. Hebert, Jr., the school administrator is criticized for some of his habits in purchasing visual equipment. For example, he should accept the value of the devices and allocate adequate money in the budget. The experienced dealer can help him in many ways, by demonstrating equipment before the school board, by giving instruction in its use, by assisting in servicing it, and so on.

- **Sight and Sound**—British Film Institute—Vol. 14; No. 53 April 1945.

"Research in Education", by D. M. McIntosh (page 17) deplors the fact that significant research in this field is still to be carried on (a similar plea was made recently by Nelson L. Greene in EDUCATIONAL SCREEN. This author would like research on the effect of movie attendance on young people, and the relative merits of silent and sound films.

In "Film and the Library", by George W. Wilkie (page 18) there is further description of the great power of the Ministry of Information's documentary films as a basis for informal adult education.

### STUDY GUIDES

*Editor's Note:* Teaching guides to accompany visual materials are very important and greatly in need of creative improvement. In order to encourage producers who take pains in publishing good guides, they will be reviewed here regularly as part of the literature.

- **U. S. S. R.—The Land and the People**—William and Dorothea Cary.—Brandon Films, 1600 Broadway. New York 19, 23p.

The "Speech Notes" that accompanies the new filmstrip of the above title sets an interesting pattern. First, utilization hints are given, including a pre-test and tips on presentation. Then there is a frame-by-frame analysis of the strip with a suggested commentary in boldface type. This makes for easier reading in a partially darkened room. Finally, there is a short, selected reading list.

The filmstrip is the first of a projected series of "United Nations Filmstrips". The 85-frame filmstrip and speech notes sell for \$3.00.

- **Three to Be Served: Guide to the Film**—M. R. Brunstetter—National Industrial Information Committee, 14 West 49th St., New York 20, 15p.

This guide presents briefly and succinctly some suggestions for the use of an economics film, in which the triangle is labor, management and the consumer. The activities recommended to follow the film showing include some significant ways of balancing the point of view of the film.

### SOURCES OF INFORMATION

- **A Bibliography on Motion Pictures in Education**—Center for the Study of Audio-Visual Instructional Materials, University of Chicago—University of Chicago Bookstore, 5802 Ellis Ave., Chicago 37, Ill. 1945. 75c.

A compilation of books, bulletins and magazine articles on the various aspects of the educational motion picture appearing since 1938.

The bulletin is, in part, a supplement to the references listed in *Motion Pictures in Education—A Summary of the Literature*, by Edgar Dale et al (Dec. 1937), but it is not selective, nor are the references annotated. The chapter headings are: administration, teaching with the motion

picture, selection, film production in schools, research, teacher preparation and general information.

- **Films Interpreting Children and Youth**—Margaret Hampel, Edgar Dale, Aileen Robinson—Association for Childhood Education, 1201 Sixteenth St., N. W., Washington 6. 1944-45. 26p. mimeo.

A careful selection of forty to fifty films, filmstrips and records prepared for all of those concerned with the growth and development of children and youth. As stated by Dr. Dale in the Introduction, the use of these materials will help parents see their own children in a new light, and recognize deficiencies which may be present in their own home or community. The classroom teacher can make use of these films to secure an understanding of all the influences which bear on children.

Part I summarizes the films produced as a result of child study development in the research laboratory—the Yale, McGraw, Vassar and University of Iowa Studies. The greater part of the bulletin is concerned with descriptions of films on pre-school-age children, school-age children, health and nutrition, building school awareness, community participation, child development, and children in other countries.

- **Audio-Visual Business Education**—E. Dana Gibson, ed.—*Business Education World* 25:498 May, 1945.

A complete listing of magazine articles in this special field. Several research studies are included. This is a basic reference list of titles for those interested in business education and, or research. There has been no attempt at selection or annotation.

- **Consumer Chemistry**—Sarah Bent Ransom, ed., Instructor in Science, College High School—New Jersey State Teachers College, Montclair. 1945. 36p mimeo. 75c.

A listing of charts, exhibits, films, slides, filmstrips, pictures, publications and recordings for consumer chemistry, compiled by John Chiocca and Robert van Reen (now officers in the U. S. Army Air Forces) from materials collected by Lili Heimers, Director, Teaching Aids Service of the College Library.

This list of teaching aids is grouped under twelve main classifications; Carbon and Its Compounds; Chemistry in Agriculture; Chemistry in Medicine; Fabrics and Clothing; Foods and Refrigeration; Gases; Metals; Minerals; Paints, Dyes and Inks; Paper; Plastics and Synthetics; Water and Solutions.

### Projection Room Planning

Designed to show architects, school boards, church organizations and others how to plan or adapt rooms for showing of motion pictures or other visual aids, *Architects' Visual Equipment Handbook* has just been published by the Educational Division of Bell & Howell Company. It was prepared in response to growing requests for technical advice on both structural requirements, in classrooms, conference rooms and auditoriums, and equipment performance specifications. The company, in the past, has assisted hundreds of architects, school boards, engineers and others with installation problems, and offers the benefit of its experience in this booklet, a foreword states.

While the booklet makes recommendations primarily for the school classroom and auditorium, the fundamentals of design may be applied to the planning of churches, hospitals, public halls and home recreation rooms. Among subject headings treated are seating arrangements; screen size and type; location of equipment; projected picture sizes obtained at various distances with various lenses; illumination and acoustics; projection booths, and other structural or equipment specifications. A copy of the booklet may be obtained without charge from Bell & Howell Company, 7100 McCormick Road, Chicago 45, Illinois.

### Where the Filmstrip Can Be Used

- Junior and Senior High School.** In the study of history, geography, and modern problems; in assembly programs; student clubs.
- Grade 6.** In type studies of peoples and their ways of living.
- College.** In the social sciences. For a course on the U.S.S.R.
- Teacher Training.** As a starting point for study of the U.S.S.R.; and in courses in visual education.
- General Adult Education.** For church and civic groups, industrial and labor organizations, and other groups studying current affairs, international relations or world peace.

### Summary of Filmstrip

1. Varied people
2. Their country
3. Developing natural resources
4. Developing human resources
5. The U.S.S.R. and the U.S.A.—allies in war and in peace.

## Question Box on Film Production

Conducted by DAVID SCHNEIDER  
Evander Childs High School, New York City

**QUESTION:** I recently tried a new type of color film. When the finished pictures were returned to me, after processing, their colors seemed to be off key. Do you think I should return the film to check up on any fault in its manufacture or processing?

**ANSWER:** Before sending your film back for a check up, it would be advisable to do a little checking on the methods used in exposing it to various light conditions.

First of all, if the colors look washed out, it would indicate exposure to too much light. Similarly, if the colors are much darker than the subjects photographed, the results are entirely due to underexposure. The remedy in these cases can be found in the proper use of an exposure meter. A light meter doesn't always insure properly exposed pictures, unless that meter has been checked for accuracy. An accurate light meter doesn't give good results, unless properly used. In holding the meter against a red tie, be sure your light meter reading doesn't include top lighting from the sky. This will cause the red color to look washed out, because you have included too much sky lighting in your picture. Tilt your meter slightly downward to eliminate as much of the light that does not reach the film as possible.

If you use an exposure table instead of a light meter, remember to make corrections for darker as well as for lighter colors. The former requires just a little more than the average, the latter about a half-stop less exposure. Corrections should also be made for changes in the intensity of illumination—exposures to the winter sun require about twice as much light as the summer sun.

A second source of color distortion is due to the surrounding objects which reflect light on the subject being photographed. A green shirt or waist may appear muddy in the finished picture if it received reflected light from some orange colored flowers on the side or ground, even if those flowers do not themselves form part of the picture. We are not always aware of these resulting color distortions before photographing because we make certain psychological adjustments so that the human eye sees the green of the waist as a pure green color. If you wish to see the pure green in the finished picture, you must choose a more neutral source of reflected light.

Distant scenes tinged slightly bluish indicate the necessity of employing a haze filter. Reddish tinges indicate early morning or very late afternoon activity; no time for respectable color photographers to be about.

Check up to make sure you did not use daylight film indoors, or vice versa without the use of compensating filters for the different kinds of light. Daylight films used with tungsten light will appear slightly yellowish, while type A film used outdoors will project blue. Besides the two compensating filters for the two kinds of light, no other colored filter should ever be used with color film.

Finally, if there is a long period of delay between exposure and processing of film, it will cause certain changes in the color rendition of the finished pictures.

If you have taken all these precautions, the manufacturer of your film will be glad to look for flaws in production or processing.

**QUESTION:** I photographed some printed matter as titles to be incorporated into a film. I find that the words at both ends are much brighter than those in the middle. Please explain.

**ANSWER:** It's easy to tell that you used two lamps, but you forgot to place both lamps at angles of forty-five degrees to your printed matter. In other words your lights were not superimposed so that the middle part of your reading

matter would have received enough light from both lamps to equal the amount of light shed on either end. The next time you photograph titles be sure to use a light meter in such a way, that you take the readings over every part of the title board. Adjust your lamps till you get an equal reading over the entire area.

## Mining the Mind

(Concluded from page 276)

particular phases of each of these subjects. Certainly the film, "Churches in Spain" is beautiful; so is "Spring Comes to the Mocking Bird." But they are so general as to have no more definite objective than satisfying the aesthetic within the observer.

Isn't it about time we stopped much of this folderol and get down to "first things" in instructional films? Isn't it about time that we called upon our institutions of higher learning to divert some of their researches from the fields in which they are now working, and see what can be done to make pictorial materials really teach? Our need is not so much for new researches as it is for intelligent, practical application of ten per cent of the facts that have already been proved.

Do the teachers want this improved kind of material? Just put a sign on your door to the effect that you have a library of such teaching materials available, then jump out of the way and observe the rush from a distance.

Why don't producers make the films most needed by teachers? Some of the newer ones in the field are starting to do so. As for the others, there can be but two answers. Either producers do not know how to do so, and I do not believe this for they have been shown how we have done it in our small but rather successful way. Or they are afraid to attempt it for financial reasons. In fact, a big producer was heard to say that his company was not considering the idea of incorporating participation and other teaching techniques into its pictures because that would restrict the sale by limiting the usage. What a fallacious argument! Evidently this company prefers selling six prints to a larger system to be used in many classes, to selling sixty prints to be used in all fifth-grade classes that are studying decimals.

Finally, why *should* producers change their techniques of making films for instructional purposes? Many producers are like the producer, who remarked, "Why should we change our pictures? Nobody is complaining!" Just so long as we who buy are content to purchase materials that are not vital to the teaching of fundamental subjects, materials that are so sorely needed, just that long will producers refuse to change their production programs. So in the last analysis, the responsibility for better instructional materials is ours, yours and mine, the responsibility of the teachers of our public schools. But until we in unison, proclaim it a *must*, progress in the audio-visual field will remain static.

*Announcing*

# SOUND FILMS in Color for Classroom Use...

in *Elementary Schools*  
*Secondary Schools*  
*Colleges and Universities*

Coronet Instructional Films are again available.

Our new catalog, illustrated above, lists a wide variety of subjects designed to fit the curriculum, many in a choice of black and white or full color Kodachrome.

A request on your school or business letterhead will bring you a copy—with our compliments.

## 16mm Industry Again Active in Eighth Victory Loan Oct. 29-Dec. 7

THE use of 16mm. films in the Seventh War Loan (May 14-July 7) represented the greatest accomplishment yet in the use of fact films to do a specific job. Complete reports showed large increases over the Sixth Drive in both number of screenings and total attendance. It was announced by J. Edward Shugrue, Director of Motion Pictures and Special Events of the War Finance Division of the Treasury Department. There were 141,615 screenings seen by 33,402,950 people, compared with 86,913 screenings and audiences totaling 23,500,000 during the Sixth. So successful has been the utilization of 16mm films in selling war bonds that other nations are studying the project.

Plans are now being formulated for a Victory War Loan Drive to be held from October 29 to December 7, intended as the last of a series of eight war loans. All the resources of the 16mm. Industry will be called upon again to put this Drive over. A meeting of Treasury Department officials and state 16mm chairmen and distributors was called in Washington on August 7th and 8th to discuss plans, ideas, production and distribution, to insure the successful conclusion of the war bond program for World War II.

The problems of post-war reconversion, and the importance of war bond money in the vast hospitalization and recovery program, will be especially emphasized in the coming Drive. Films produced by all branches of the armed forces will again be made available, many of them based on various phases of rehabilitation. The first to be in the hands of distributors will be *Stillwell Road*, Army saga of the lifeline from India to China, and *The Fleet That Came to Stay*, Navy chronicle of the final phases of Pacific warfare.

David E. Strom, Director of the Audio-Visual Aids Center at the University of Connecticut, has been

appointed Associate 16mm Consultant to the War Finance Division, serving as assistant to Merriman H. Holtz in the organization of the 16mm motion picture campaign.

D. T. Davis of Lexington, Kentucky, President of the National Association of Visual Education Dealers, is the new chairman of the National 16mm War Loan Committee, succeeding Horace Jones who had headed the committee in previous war loans. Other officers are: Secretary: O. H. Coelln, Business Screen, Chicago; Treasurer: Adolf Wertheimer, Radiant Manufacturing Company, Chicago. Members of the Executive Committee include George Addes, United Automobile Workers of C.I.O., Detroit; J. E. Arnold, University of Tennessee, Knoxville; John R. Hedges, Bureau of Visual Instruction, University of Iowa; Horace Jones, President, Allied Non-Theatrical Film Association, New York; L. C. Larson, University of Indiana, Bloomington; Harry Monson, Ampro Corporation, Chicago; Bert Willoughby, Ideal Pictures Corporation, Chicago.

### Regional Chairmen

New England—R. F. O'Neil, Visual Education Service, Boston, Mass.

Eastern—Murray Goodman, Castle Films, New York City.  
Southeastern—Hazel Calhoun, Manager, Calhoun Visual Education Co., Atlanta, Ga.

Midwest—W. F. Kruse, Bell & Howell Company, Chicago.  
Southwest—John Gunstream, State Director of Visual Education, Austin, Tex.

Pacific N. W.—Kingsley Trenholme, Director, Division of Visual Instruction, Portland, Ore.

Pacific—H. U. M. Higgins, War Film Coordinator, Los Angeles, Calif.

The National 16mm. Victory Committee has met in Chicago several times, and under the able leadership of D. T.

Davis has made a most auspicious start. Regional meetings of 16mm. State Chairmen with the War Finance Division will be held as follows:

- Sept. 25—Albany, N. Y.
- Sept. 26—Cleveland, O.
- Sept. 28—Dallas, Tex.
- Oct. 1—Miami Beach, Fla.
- Oct. 3—Milwaukee, Wis.
- Oct. 5—Portland, Ore.

Several of the new 16mm. films will be shown at these meetings.

It has been announced that the War Finance Division will absorb the necessary experienced personnel of OWI upon the termination of that agency, to insure no ill affects upon film distribution of Victory Loan films.

Members of the National 16mm. War Loan Committee at meeting with War Finance Division in Washington

The only complete film of F. D. R.'s inspiring career!

## Radiant's Postwar Placement Plan

Over 600 servicemen and women will find employment in the visual educational, film library, film producing and public relations, as well as other fields, through the comprehensive and highly commendable Postwar Placement Plan introduced by the Radiant Manufacturing Corporation of Chicago, manufacturers of Radiant projection screens.

The Postwar Placement Plan, which is an entirely voluntary service, was inaugurated over a year and a half ago. Servicemen and women assigned to the Armed Forces film libraries, film exchanges, photographic and projection units, etc., received questionnaires from Radiant to secure information pertaining

Actress Irene Day assists A. Wertheimer, originator of Postwar Placement Plan, in mailing first forms to servicemen which list jobs offered by a specific group of employers.

to type of work individual is qualified for, salary, location desired, etc. The detailed information has a two-fold purpose: to get the right job for the applicant and the right employee for the employer. For example, an applicant interested in film libraries only will be referred to Film Libraries, in the territory he prefers.

Over 600 replies to the questionnaire have been received, answering all questions and applauding the idea. The applicants have been tabulated into seven geographical districts, and five different groups: Equipment Dealer, Equipment Manufacturer, Film Producer, Film Library, Industrial Field. 86 pages of applications were mailed to firms in the Visual Equipment Industry, with complete information given on each applicant—branch of the Armed Forces served, rank, age, education and experience, type of work preferred, location preference.

Radiant also sent forms to the dealers, manufacturers, libraries, laboratories, producers and industrial concerns for reporting job openings in the present and future, and for indicating their selections from the list of applicants. These incoming forms are tabulated by Radiant and sent on to the service men and women,

### Honorable Discharge Emblem awarded to veterans of the present war

Look for the little gold button on a civilian's lapel. This stands for honorable service to our Country. The emblem shows the American eagle with wings spread through a circle of gold.

Applicants already returned from overseas will be contacted and referred to the prospective employers.

The Plan is unique in that it contacts the serviceman while he is still in the service and attempts to give him a job to come home to.

"Radiant's Postwar Placement Plan has far-reaching effects," states Mr. Wertheimer. "We are bidding for those who we think are among the finest boys to be found anywhere. They have been tested under the most critical, most horrifying conditions. They were given a job to do and every day they accomplished their objective through ingenuity, invention and resourcefulness. It is our rare privilege to help place these men and, according to the favorable response we are beginning to receive, dealers everywhere are welcoming these men back."

## Bell & Howell Veteran Re-employment Program

Bell & Howell set its veteran re-employment plan in motion over a year ago, and it is operating today with surprisingly few changes. This program has been so successful that at a Bell & Howell luncheon on July 27, the National Association of Personnel Directors and the Disabled American Veterans presented the company

J. H. McNabb, president of Bell & Howell, receives award flag from Wesley Barton, of National Association of Personnel Directors

with an award, the first of its kind in the nation, for outstanding achievement in the employment and training of veterans. 117 B&H veterans were guests at this function.

(Concluded on page 304.)

# PERFECTION *in* PROJECTION!

## BESELER MODEL OA2 TRANSPARENT and OPAQUE PROJECTOR

*Specially designed for the  
various needs of the classroom*

From this one machine — from this BESELER engineering triumph — you can obtain perfect opaque or transparent projection.

You can show a book page . . . or a biological specimen . . . in faithful detail and color — and then switch to film or slides simply by pulling a lever.

The BESELER Model OA2 provides unmatched *screen illumination* of Coins, Stamps or other Actual Objects . . . Book Pages . . . Slides . . . Pamphlets . . . Films . . . Postcards Snapshots . . . Clippings . . . Letters . . . Photographic negatives for making enlargements . . . Magazine Articles and Advertisements . . . Standard Slides and Opaque Material up to 6¼" x 6¼".

Dealers everywhere will be showing this amazing projector by mid-September. However — as delivery takes four weeks — you may wish to ORDER NOW.

*Write for descriptive literature*

### BESELER MODEL OA2

Of all the BESELER projectors designed for both opaque and transparent projection, the OA2 is one of the most popular models. Some of its outstanding features are:

- More screen illumination in opaque and transparent projection.
- Self-contained elevating legs.
- Accessible doors for easy servicing.
- Modern in design.
- Readily convertible from opaque paper to standard lantern slide projector.
- Special film attachment accommodates single and double-width film and 2" x 2" Kodachrome slides.
- Totally enclosed air cooler.
- Two carrying handles.

THE BEST PROJECTOR IS THE BESELER PROJECTOR

**Charles Beseler Company**

243 EAST 23rd STREET •

EST 1869

• NEW YORK 10, N. Y.

LET OUR ENGINEERING DEPARTMENT SOLVE YOUR INDIVIDUAL PROJECTOR PROBLEMS

The plan works as follows.

A Veteran Supervisor was appointed from the Industrial Relations Department to handle all contacts with the veteran. Veterans and their friends in the company were canvassed to determine how many employees in service would return to their jobs at Bell & Howell. Engineering, sales, and production departments provided estimates of the number of employees needed in each department in the post-war period. Individual cards were then set up, carrying necessary information about each present and post-war job. Plans were developed to re-design machines to accommodate physically handicapped veterans. Standardized tests were selected to determine the veterans' aptitude, skills and interests. Foremen's meetings were held to instruct them in proper supervision of veterans.

The veteran's induction is as simple as possible. After preparing the necessary forms and taking a physical examination and standardized tests, if indicated, he is placed after a conference of the Veteran Supervisor, Industrial Relations Director, and the Safety Director. During the difficult period of readjustment to his civilian job, the veteran is visited frequently on the job, by the Veteran Supervisor, who chats with him casually and unobtrusively assists him in his adjustment. The success of the plan is evidenced by the surprisingly low turn-over during the course of its operation.

### Motion Picture Industry Open to Returning "G.I's."

That the motion picture industry will be opened to the returning soldiers who are to be mustered out is the prediction of one of Hollywood's veteran motion picture executives. Frank Lawrence, formerly with United Artists, and Metro-Goldwyn-Mayer, is now completing preliminary plans for a nation-wide organization for the construction of a series of theatres for the exhibition of commercial and industrial films.

For the past several years, Lawrence has made a thorough investigation with regard to the production and distribution of 16 millimeter films and from data compiled by him, received from all parts of the country, learns that there is ample room for at least five thousand theatres with a seating capacity of from 250 to 400 seats. These theatres can be constructed from present properties, such as stores, public garages, etc. Lawrence also states that there will be several hundred travelling auto trailer theatres and traveling portable house theatres . . . as well as open air day and night shows all in 16 millimeter. Several nationally prominent theatrical architects are completing plans for the first hundred theatres.

Many of the returning 'boys' will be contacted with the idea of having them construct or have constructed in their own communities, an 'industrial' theatre which will make it possible for them to engage in a profitable and pleasant business of their own.

### D. T. Davis Elected President of NAVED

The first order of business at the open meeting of the Board of Directors of the National Association of Visual Education Dealers in Washington August 9-10, was the announcement of the officers elected for 1945-46 by popular vote through mail ballot. The incoming officers who will take over on October 1 are: President, D. T. Davis; 1st Vice-President, B. A. Cousino; 2nd Vice-President, Tom Brandon; Secretary-Treasurer, Hazel Calhoun; Region VI Director, Jasper Ewing; Region VII Director, Merriman H. Holtz.

Sixteen new associate members, 12 voting and 1 contributing member (all of whom had applied for membership since the last meeting of the Board) were approved by the Board. One of the most worthwhile projects that NAVED has undertaken is that of film damage insurance. A committee consisting of four people was appointed to study the present insurance plan with the insurance company, with a view to broadening the service. Incoming 2nd Vice-President Tom Brandon

Reading left to right: B. A. Cousino, D. T. Davis (standing), Hazel Calhoun, and Tom Brandon.

was appointed as liaison man to work with Roger Albright of the 35mm. industry on problems of mutual interest.

In the making for some time now, the Ted Foss service manual first proofs were studied and final changes, corrections, and adjustments made. The Manual is expected from the printers very soon and will be available for purchase through the association to the entire field.

The officers are still considering applications for the position of executive secretary, and president-elect Davis called on all members present to submit names of qualified persons for consideration.

NAVED looks confidently ahead to the opportunity of rendering a truly worthwhile peacetime service, as they have done during the war in carrying out the mobilization of the 16mm. industry in the War Loan Drives.

# This IS history...

*...alive with action, color, and sound  
in a remarkable movie which points the  
way to a new technique in teaching.*

**H**istory is, of course, more than a thing of names, events, places, and dates. It is the story of the way people live.

In "Eighteenth Century Life in Williamsburg, Virginia," a motion picture becomes a veritable time machine, projecting its audiences back into the life of two centuries ago. The medium is wholly modern—Kodachrome Film, complete with sound. The net result is a totally new conception of the vitality, the meaning, of an era of great importance in our national life.

Educators, directors of museums, and other leaders in the cultural orientation of hundreds of communities have used "Eighteenth Century Life" with real success. The audiences have been of all types—elementary school children, high school students, college groups, clubs and other organizations—yet the reaction to the film has been remarkably uniform. For all those people a moment in history has become a living thing—meaningful and understandable.

"Eighteenth Century Life in Williamsburg, Virginia," is a four-reel (44-minute) 16-mm. sound Kodachrome film. It is offered to educational institutions, which are suitably equipped for its projection, without charge for single showings. Borrowers are obligated only to give the film proper care and to return it promptly.

Due to the demand for copies of the film, it is suggested that you make early application for bookings. At least one alternative date should be given.

In case permanent possession of the film is desired, it may be purchased. Price, complete, \$240. Unit I (Reels 1 and 2), \$120; Units II and III, \$60 each.

For an illustrated folder describing the film, or for bookings, write to Eastman Kodak Company, Informational Films Division, Rochester 4, N. Y.

### *They say . . .*

An elementary school girl:

. . . "It showed many tools and cooking utensils in use which I have seen in museums but I didn't know how they worked. . . . It showed people in there [sic] real life and the play was not acted out."

A Collaborator, in  
Educational Film Guide, 1945:

"Best educational film produced thus far in the area of American history."

Dr. Edgar Dale,  
Ohio State University:

". . . the real grass roots of our national life are to be found in this superb record of the routine activity of 18th Century life. Every American should see it."

The Educational Film Guide, 1945, accords "Eighteenth Century Life in Williamsburg, Virginia," its highest rating.

## *Diversitorials*

---

### *Volunteers and Vacancies*

**T**HROUGH the years, EDUCATIONAL SCREEN has received many letters in the following tenor: "I want to get into the visual education field . . . My experience and qualifications are . . . Can you tell me of any opening?" We have replied, perforce, to the general effect that we rarely know of such positions until they are filled by local talent or personal friends of the powers-that-be.

For the past few years, these communications have increased greatly for obvious reasons. The visual field is slated for rapid growth in the immediate future and the whole country is aware of the fact. Growth inevitably means more new positions to be created and more candidates needed to fill them. Our letters are coming more and more from the Armed Services. The immense activity and accomplishment in military training by visual methods have inspired many to seek a share in the great work ahead. Many were teachers before the war. Many more contemplate a start on a teaching career. There will be numerous positions needing those candidates, not only in the school field but with those commercial and industrial companies who are beginning or expanding the use of visual materials for training purposes.

A recent one of these communications stirs us deeply: (from Fort Myer, Virginia)

"You will find enclosed my check (for five dollars and four cents) in payment of your bill for two-year subscription to EDUCATIONAL SCREEN, a copy of '1000 and One', and postage. . . . I am a little disappointed on at least one score: I had understood from several sources that the '1000 and One' was given with subscription, and I had intended an inquiry rather than an order. So long as I am in the army it will be rather difficult to get a dollar's worth of use from it.

"It is also rather disappointing to discover that no one in this field seems remotely concerned with helping the interested soldier return to or enter the field of visual instruction: certainly no publisher is concerned with limitations of a soldier's income and the fact that he is unable by reason of his service to get full value from his subscriptions. This experience, along with several others not connected with publishing, apparently indicate some sort of closed door. I have been hoping to apply both my pre-war experience and my army training to post-war production of instructional films. Is this going to be a difficult or impossible field to enter?"

There are definite signs that the traditional ingratitude of republics to their returning soldiers will not be repeated this time. Excellent placement work is being carried on by commercial concerns. (For reports of two see page 302). The newly organized Photographic Industry Coordinating Committee, according to W. L. Knighton, its secretary, also has ambitious plans for aiding the placement of returning veterans in commercial openings. The plans of the new Information Film Association are described on page 314 of this issue.

But what about a co-ordinated effort on the part of educational organizations to interest the large number of specially trained veterans in manning posts as directors of visual education, supervisors of film distribution and projection services, and heads of repair and tech-

nical services in school visual bureaus? A great social opportunity will be lost if the National Education Association, the U. S. Department of Education, and the American Council on Education do not co-operate on some intelligent, comprehensive plan to interest local veterans boards, school administrators, and returning veterans to the needs and opportunities for service in visual education in the schools and colleges of the land.

### *Introducing*

The appearance of his first column is the occasion for introducing the new Editor of Curriculum Clinic.

The end of the war and the termination of the U. S. Office of Education training film program returns Paul C. Reed to his regular post as Director of Radio and Visual Education for the Rochester Schools, and adds this new editorial service to his already long record of achievement. Readers of EDUCATIONAL SCREEN, as well as his own colleagues will thus be in a position to benefit from his wide experience and notable contribution to the war effort.

### *Cover Picture*

*Wheat Farmers*, an oil painting by Life's war correspondent, Joe Jones, is one of 121 paintings from the Encyclopaedia Britannica Collection of Contemporary American Painting. This collection consists of representative works, from the academic to the abstract, by outstanding American artists who have painted during the 20th Century, selected by artists, museum directors and art dealers throughout the United States.

Mrs. Guy Pagano, author and close friend of many of the artists, wrote new biographical sketches of them for inclusion in Britannica's catalog of the collection and obtained personal statements for the artists about their paintings, to be printed in connection with the biographies. About *Wheat Farmers*, Joe Jones says: "This is one of many paintings I did using wheat farmers as my main interest. Although I have a strong liking for the pictorial excitement of anything to do with wheat, my main aesthetic interest in the theme was the beautiful rhythm these men achieved in their work and their obvious enjoyment in this achievement—this always strikes me as aesthetic fulfillment in any kind of work and adds up to a kind of beauty I believe in—the spiritual motive in painting."

This art collection was exhibited publicly for the first time in the Art Institute of Chicago last spring. It is now on a tour throughout the United States that may extend as long as five years. The paintings have been reproduced on 2x2 kodachrome slides by Encyclopaedia Britannica, for sale to schools.

While Britannica believes that the present collection is admirable in its representation of American artists, it acknowledges the absence of several prominent painters whose works, it is hoped, may be added to the growing collection.

## A Better, Longer Life . . . Through Optical Science

Today, science, using the methods made possible by optical instruments, helps you live a longer, healthier and happier life. Today, your baby, if he is between one and two years of age, can expect to enjoy more than sixty years of life. In 1900, his life expectancy would have been but forty-eight years.

Of the many specialized branches of science which contribute so much to your life, bacteriology is among the most important. It is the basis of modern medicine and the controlling

science in the production of pure foods. Its development was made possible only through the use of the microscope . . . furthered by such far reaching developments as the quantity production of these instruments by Bausch & Lomb.

In the creation, through chemistry, of modern lifesaving drugs, optical instruments of research and control are of vital importance.

Better vision, too, which makes life more enjoyable and safer for millions, is the result of the application of optical science to problems of eye-

sight correction and conservation.

Great as have been the achievements to which optical science has contributed, greater things are yet to come, developments which will be paced by new and better optical instruments from America's leading optical institution . . . Bausch & Lomb Optical Co., Rochester 2, N. Y.

## State Subsidy for Visual Aids in Virginia Schools

The Virginial General Assembly has appropriated more than \$1,112,000 for the purchase of needed audio-visual aid equipment for the public schools of the state, making it possible for the smallest, most isolated school to participate in the program. Only 450 of the 3,980 schools have so far been able to take advantage of the State's' free instructional film service, either because small budgets prevented buying the necessary projectors and screens, or because the school buildings had no electricity. Plans for installing electricity in these buildings are now underway.

The new school appropriation which becomes effective July 1, reads: "for the purchase at \$2.00 per enrolled pupil, of maps, globes, charts, projectors, slides, films, and such other audio-visual teaching aids as shall be determined by the State Board of Education and the Governor." To encourage the growth of local film libraries, the Department of Education has worked out the plan of offering to match \$1,000 with five cities and counties for establishing their own film libraries. Each year approximately \$25,000 worth of films are purchased by the Department through the Bureau of Teaching Materials, of which Martin L. Hogan is Supervisor.

## Changes in the Washington Film Scene

A directive issued recently by President Truman terminates the Office of War Information domestic bureau this month, and the overseas branch by December 30 with some of its activities to be taken over by the State Department. The Office of Inter-American Affairs will also be absorbed by the State Department, the two combined units operating temporarily as the Interim International Information Service. Plans are proceeding for the establishment of a film office in the State Department, the purpose of which will be to produce and use motion pictures as an instrument of foreign policy, and for bringing to the American public a more basic understanding of that policy.

Readers of EDUCATIONAL SCREEN will be reassured to know that all of these important functions will hereafter be consolidated into one Bureau-CIC-Office of International Information and Cultural Affairs which will be administered by the newly appointed Assistant Secretary of State, William Benton, formerly Chairman of the Board of Encyclopaedia Britannica Films.

Prior to the President's action, Taylor Mills, director of the domestic film division of the OWI, had called a meeting in Washington of representatives of Federal agencies engaged in motion picture distribution to survey the possibility of organizing them into one central agency, which would coordinate distribution of all government films, thus eliminating confusion and duplication of effort and facilities. Another central unit was proposed for

bles

assisting the departments in the production of pictures and the making of contracts with commercial producers. The Library of Congress was recommended as a distribution center. Mr. Mills and Mr. Reagan are said to be the sponsors of the plan, which also includes a provision for expansion of National Archives in order to extend handling of record film and unedited footage.

It is reported that the plan has received unofficial approval from the Budget Bureau.

#### End of USOE Production

The visual aid production program of the U. S. Office of Education was concluded on June 30, 1945, after fifty-three months of operation, during which time more than four hundred and fifty visual aid units were produced. More than fifty thousand prints of USOE motion pictures and filmstrips have been distributed and used in the training of workers for war industries during the past four years, according to Mr. Paul C. Reed, Visual Specialist, USOE, writing in the June issue of *Film News*. "The values of this wartime visual program will extend far into the post-war future. It has been a tremendous program—well executed."

He points out that vocational education now has available an extensive and diverse list of training pictures from which intelligent selection can be made in terms of training and curricular needs. Furthermore, these pictures have been thoughtfully prepared in series and sequence so that visual training can be planned and continuous.

#### Army Stops Film Destruction

In response to numerous and indignant protests from educators and non-theatrical film people to the War Department, the Army Pictorial Service has finally stopped the burning of surplus prints of its 16mm. training and orientation films, but not until millions of feet had been destroyed, however—an average of 12,500,000 linear feet weekly over a period of ten weeks.

The Army contended that the films were made expressly for War Department purposes and mostly by enlisted personnel, and that turning them over for civilian use would be unfair to commercial 16mm. producers. The non-theatrical distributors, on the other hand, argued that there is an abundance of films that should be produced after the war without the commercial producers having to duplicate material covered in the Army films. Cited as an unnecessary and expensive example of duplication, is a series of twenty films on auto mechanics—a subject which had to be duplicated by the Office of Education because the Army refused to release prints of these films for the industrial training pro-

gram. Other Army films which would be welcomed by non-theatrical libraries deal with air training, cooking, first aid, swimming, and other sports.

Further, it was maintained, the nation's taxpayers had a right to recover as much as possible of the funds they expended for the production of these films.

**The Surplus Projector Problem**

The disposition of the surplus Army and Navy 16mm. projectors, which has been estimated to be from 40,000 to 50,000 machines, is still in the discussion stage as we go to press. In June, Office of Education officials conferred with members of the Surplus War Property Board to explore the possibility of obtaining surplus equipment. Educators advocated Government contribution of the machines to schools, particularly in rural communities which never before had film projectors. The Board of the Educational Film Library Association voted to support the sale or disposal of surplus materials by government agencies directly to educational institutions and agencies. The manufacturers, on the other hand, wish the machines returned to them for reconditioning and resale.

According to a recent survey conducted by *Film World* among the nation's school and commercial film libraries, 48% favored the return of the projectors to the manufacturers to be placed on the market through regular channels, while 35% believed the equipment should be turned over to the country's schools and other tax supported institutions.

The manufacturers are concerned over the latest report that the Army plans to distribute its projectors free to schools and other educational institutions, and discussed the problem further at their August meeting.

**Educators Advocate Preservation Of Wartime Films**

The following resolution was adopted at the 30th Annual Meeting of the National University Extension Association, Stevens Hotel, Chicago, May 10-11, 1945: I. WHEREAS, many films have been made by the Federal Government to promote the progress of the war, to encourage the purchase of war bonds, to educate and train armed service personnel for their participation in the war; and

WHEREAS, many of these films, if lost or destroyed, can never be reproduced; and

WHEREAS, such films are valuable as educational and instructional aids in many fields of learning:

Therefore be it resolved, that the membership of the 30th Annual Meeting of the National University Extension Association recommend to the several Federal departments and agencies possessing such films, that

1. Such departments and agencies preserve all films to the end that they become a matter of permanent record; and
2. That prints of desirable films no longer needed by the armed forces or government agencies be turned over to the appropriate governmental authority to be re-allocated to properly established educational institutions.
3. Arrangements be made whereby educational agencies may purchase additional prints of government films that are suitable for use in civilian training and educational programs.

The Radiant Screen here illustrated is Model DS—portable, sturdy, compact, easily set up, quickly adjustable.

The Radiant Line includes a complete range of wall, ceiling and table models in sizes 22" x 30" to 20 feet by 20 feet and larger.

**Photographic Industry Coordinating Committee**

At its June meeting in New York, the PICC set up basic rules covering qualifications for participation and organization procedure. It was unanimously agreed that any association, organization or group which has been in existence for a period of two years, operated on a non-profit basis, comprising a national membership of persons, firms, institutions, or corporations, etc., interested in any phase of photography, shall be entitled to participate in PICC.

The initial composition of the PICC was stated to comprise representatives of: Allied Non-Theatrical Film Association, Inc.; Educational Film Library Association; Master Photo Finishers & Dealers Association; National Association of Film Producers for Industry and Education; National Association of Visual Education Dealers; National Microfilm Association; National Photographic Dealers Association, Inc.; Photographic Manufacturers & Distributors Ass'n., Inc.; Visual Equipment Manufacturers Council.

New members may be admitted by a majority vote of the member organizations at any regular meeting.

The Committee unanimously agreed to rotate the office of Committee Chairman among the participating organizations for one-year periods. Joseph G. Dombroff will continue to serve as the Committee Chairman for 1945 and Wilfred L. Knighton will continue as the Committee's Secretary-Treasurer. New officers are to be elected at the October 1945 meeting, which will be held at Chicago, Illinois.

The industry problem of, "Disposal of Government War Surplus Photographic Equipment and Materials" was fully discussed and the delegates agreed that the recommendation of the Photographic Mfgs. & Distributors Ass'n., Inc. submitted to the Office of Surplus Property during April 1944, specifically recommending that all government-owned surplus photographic equipment should first be offered to the original manufacturer for repurchase, should be submitted to the participating associations for consideration and possible ratification. In the event all of the associations are in accord with these recommendations, the PICC should then promptly submit the plan to the Surplus Property Division of the Commerce Department as representative of the wishes of the entire industry.

**Restrictions Lifted on Photographic Equipment**

The War Production Board has revoked General Limitation Order L-267 which means that 8mm. and 16mm. projectors, cameras and photographic accessories now may be ordered without submitting priority ratings. Although restrictions have been removed, it is unlikely that manufacturers will be able to obtain materials needed to increase their production schedule for some months. The backlog of orders with priority rating will be filled first, they state, according to rating and date received.

**Ross Announces 16mm Film Service**

Ross Federal Service, Inc., which has heretofore been concerned with the 35mm. theatrical field, checking percentage pictures for theatres, has announced plans for the national distribution of 16mm. educational and industrial motion pictures through its thirty-one branch offices. The new service will also provide projection equipment and trained operators when requested. Arrangements have been made for the delivery of 500 projectors by the end of the year. Films will be handled on a rental or outright sale basis and will be exhibited wherever a market is found for them, according to Mr. Harry A. Ross, the corporation's president. He emphasized, however, that no programs would be booked for competitive showings with theatre outlets, that a special school and college division will be established to handle showings in classes for adult educational purposes. Negotiations have been proceeding with March of Time for nation-wide distribution of their Forum Edition films in 16mm.

Also contemplated is a service to television stations with complete educational film programs on a rental basis as stations are set up.

Mr. Ross is enthusiastic over the long-term possibilities of the 16mm. field, citing educational production plans being developed by many major motion picture producers, and the heightened attention of religious leaders to the subject.

**Loew's to Supply 16mm Films to Foreign Markets**

Stimulated by the 16mm. film showings to troops overseas, Loew's International Corporation (international organization of Metro-Goldwyn-Mayer), has organized a special division for the foreign distribution of its features and shorts on 16mm. and expects to have every current MGM release reduced to 16mm. and prints available by January 1. A director for the new unit has been secured but will not assume his post until then. In the meantime, Haven Falconer, until recently with the Army's educational film program and formerly director of the film service at Dartmouth College, will head the unit in cooperation with Dr. Ronald Carroll, formerly with the Office of Strategic Services. Mr. Falconer will be in charge of the educational film program and Dr. Carroll of the mobile units.

Educational and documentary films designed for training and classroom use will also be offered by MGM, to be made by producers who are specialists in the educational field. There is a possibility that MGM will release these films in the United States.

The 16mm. distribution overseas is not intended to compete with 35mm., but rather to supplement the existing MGM set-up abroad. 16mm. mobile caravans will travel mainly to outlying provinces in the various countries, where there are no regular theatres. 16mm. shows in cities will be confined to non-theatrical outlets, such as schools, churches, club halls and community centers. Specialists trained in 16mm. operations at New York headquarters will be sent to their individual foreign posts to develop the new market.

### New Motion Picture Project

The appointment of John G. Bradley, Chief of the Division of Motion Pictures and Sound Recordings in the National Archives, as Director of the new Motion Picture Project of the Library of Congress has been announced by Luther Evans, Librarian of Congress.

"The appointment of Mr. Bradley represents an important step in plans that were inaugurated in 1942 when an agreement was entered into with motion picture producers to deposit certain copyrighted films in the Library of Congress", Dr. Evans said. "This project took on added meaning," he continued, "when the Librarian of Congress and the Archivist of the United States received a joint directive from President Roosevelt in 1943 to draw up plans for a film servicing building and vaults for photographic materials in Government custody. The President's directive was based on the pressing need for additional storage and technical facilities to insure against loss of the pictorial evidence covering this important era in our national history."

Legislation to support the Library's plans has been placed before Congress in the Lanham Bill (H.R. 1275). In the formulation of these plans Mr. Bradley acted as consultant, qualified by more than ten years at the Archives, during which he coordinated an original research project on the stability of film, under the auspices of the National Bureau of Standards, assisted many foreign institutions in planning their preservation and storage techniques, and developed a Government-patented film storage cabinet that has received wide approval.

### Classrooms to Experiment with Television

The New York City Board of Education and NBC's television department will join forces this fall in experimenting with the adaptation of television to classroom education. A weekly tele program will be broadcast to determine the type of program most suitable for educational purposes. Pupils and teachers will evaluate these programs at NBC's receiving studios. First ones will be in the field of science, the initial broadcast to deal with the tele itself. John F. Royal, NBC vice-president in charge of television, arranged the experiments in concert with Dr. John E. Wade, Superintendent of Schools. The programs will begin at junior high school level.

▲ ▲

Syracuse University, New York, also plans to conduct various classroom teaching experiments with television equipment, and to teach television programming and other techniques to students as soon as delivery has been made of the General Electric "Intra-Tel" (wired television) system ordered by this institution. Chancellor William Pierson Tolley announced also that the University's experience in the video science would be made available to other educators.

No decision has been reached at this time as to whether the University will broadcast programs to the Syracuse area, he said, but pointed out that as plans

develop a cooperative arrangement might be worked out with local radio interests to accomplish this.

Syracuse University students will be given the opportunity of studying various television operations such as script writing, costume and stage set designing, lighting, camera operation, stage and technical direction, picture and sound control and other transmitter operations.

### J. R. Williams Takes London Post

J. R. Williams, Head of the Non-Theatrical Film Section of British Information Services for the past three years, has left New York to take up a post with the British Ministry of Information in London.

Mr. Williams, who has been on leave from the staff of Leeds University in his native Yorkshire, went to the Ministry of Information in 1941 as regional officer in charge of 16mm. films. In June, 1942, he came to New York City to head the British Information Services' section on non-theatrical films. In London he will direct the Ministry's 150 Mobile Film Units throughout Britain. Attendance at these Mobile Unit shows topped eighteen and a half million last year, with an average number of 1,250 shows a week in 1944.

### Information Film Association Formed

Nearly 100 producers, directors, writers, editors and technicians in the documentary, educational and industrial film field, including men in the Army and Navy and other government film production units, met at the Museum of Modern Art, New York, August 16, to organize the *Information Film Association, A National Organization of Producers, Artists and Technicians*.

Major Kenneth MacKenna, of the Army Signal Corps, was chairman of the meeting which was held with the assistance of the American Film Center.

In view of the rapid development of the field during the war, given impetus by the Army and Navy film training programs and the use of the educational screen by Government and private industry, the new association was organized to stimulate use of factual films in the crucial post-war years and to promote higher standards of production.

Approval was voted at the meeting for the organizing committee to establish nominating, finance and administrative, constitution and steering committees, and to report back to the membership at an early date. A suggested program of objectives for the new association was submitted for discussion and approved.

One of the important aims of the organization is to assist veterans of the photographic services of the armed forces in finding placement. The Information Film Association will publish a registry of names, addresses and brief biographies of all workers, including those now in the armed forces, in the educational, industrial and documentary film fields.

In addition to seeking ways and means to increase film production in the field, the unit proposes to raise standards of production; to carry on research to deter-

mine where and how factual films can more fully serve the public interest; to facilitate interchange of ideas among film-makers in America and abroad; to establish a system of awards for outstanding accomplishments in the field and to protect the freedom of the screen.

Inquiries about the new organization can be addressed to Information Film Association, Room 3870, 45 Rockefeller Plaza, New York 20, New York.

Among those who attended the meeting were: Robert Flaherty, producer of "Nanook of the North" and "Man of Aran", among other films, and known as the father of the documentary film in America; Chester Lindstrom, Film Division, U. S. Department of Agriculture; John Flory of Grant, Flory and Williams; John Bright, Sp. 3/c, U. S. N.; Helen Van Dongen Ivens, documentary producer and wife of Joris Ivens; Pfc. Mark Marvin, U. S. Army Signal Corps Photographic Center; Edwin W. Schultz, Army Medical Center, Washington; Herbert Kerkow, documentary producer; Lt. Clifford D. Ettinger, Navy Training Films, Washington; Mary E. Spear, Bureau of Labor Statistics, U. S. Department of Labor; Howard Tooley, Education Section, Treasury Department, Washington; David Englander, Army-Navy Screen Magazine; Leo Hurwitz, CBS Television; Rosalind Kossoff and Paul Roffman, National Film Board of Canada; Donald Slesinger, director, American Film Center.

### University of Illinois Film Service Report

Illinois schools are learning to make more efficient use of motion pictures, and are requesting more and more sound films, according to statistics recently compiled by Neil F. Garvey, acting director of the Visual Aids Service in the University of Illinois Division of University Extension. The racks of this service on the University campus at Urbana-Champaign now hold 2,220 prints, including 862 silent subjects and 1,397 sound.

Bookings last year numbered 23,711. Excluding a small number of special arrangement films, this represented 16,692 calls for sound prints and 6,785 calls for silent. Two years ago there were 14,273 calls for sound pictures and 10,369 for silent. Even more significant is the fact that the sound pictures were booked an extra 2,896 days on calls as compared to 960 for the silent.

The most popular film in the service's racks was *This Amazing America*, of which the two prints available had a total of 77 bookings. Next most popular was *South of the Border, Mexican Children, American Way, Behind the Shop Drawing, A New World Through Chemistry* and *Songs of Stephen Foster*.

The 439 sound films owned by the University service had an average of 13.5 bookings per print during the year; the 423 sound films loaned or leased from commercial or government sources, 11 bookings per print; 395 silent films owned, 10.2 bookings per print; and 109 silent films on lease or loan an average of 6.5 bookings per print.

Member subscribers to the University of Illinois Visual Aids Service included 315 Illinois schools last year. Beside motion picture films, the University service also provides educational picture slides and disc radio transcriptions.

Above, "Native Dwellings of the Pacific"—one of the Covarrubias mural-map reproductions, available in full color, 25x19-inches.

Write us for further details.

# COVARRUBIAS

## MURAL MAPS

(Series of Six)

The Pacific Area is spotlighted today, more than ever before, and the Covarrubias Mural Maps are increasingly recognized as important visual education material. Pictorial studies of Pacific ethnology, economy, art, botany, native housing and transportation, in brilliant full color. Fine art prints, suitable for framing. Four in size 38x25 inches; two, 25x19 inches.

Set of all six reproductions in special mailing tube, with explanatory text. **\$10.75**

Can also be purchased separately.

**SCHWABACHER-FREY**

*Publishers for Pacific House*

735 Market Street • San Francisco 19, Calif.

## \$10,000 Prize Award for Best Amateur Film Subject

What probably constitutes the most constructive stimulus to the further development of 16mm. production by amateurs is the International Amateur Movie Contest announced during the summer by International Theatrical and Television Corporation. This contest will consist of eleven prizes including a \$10,000 award in cash to the best amateur film production submitted on any subject, and ten additional prizes in the form of a percentage of their picture's earnings from commercial distributions.

In an effort to encourage further experimentation, it is ITT&T's aim to give recognition in a substantial manner to those individuals, schools, or amateur organizations aiming to develop higher standards in 16mm. production. In supporting this contest it is their belief that it will not only aid in developing higher standards for amateurs but also for the professional substandard field.

The contest encompasses the entire field of 16mm. production including entertainment, vocational, educational and religious films, etc. As such it allows for inclusion of any type of film produced by non-professionals.

A board of eleven judges will select the prize winning films. The first six members of this committee are known Hollywood personalities. This committee to date consists of Louella Parsons, Hollywood columnist; Jesse Lasky, producer; Veronica Lake, Paramount Picture star; Hal Mohr, Universal cameraman; Bill Meiklejohn, talent and casting director for Paramount Pictures; Mitchell Leisen, director; Norris Harkness, Photographic Editor of the New York Sun, and Executive Secretary of the National Photographic Dealers Association; Russell Potter, director of the Institute of Arts and Sciences of Columbia University; and Donald Slesinger, director of the American Film Center, leaving one judge yet to be selected. The eleventh judge will be George A. Hirliman, President of I. T. & T.

Out of the hundreds of films that I. T. & T. will receive, approximately one hundred of the best will be selected by the executive board of that company, and it will be this group that will be shown to the judges in both New York City and Hollywood.

## West Coast Educators and Producers Get Together

Organization of a permanent educators' and producer's council of audio-visual education was perfected Saturday, August 4th, at Occidental College, following a meeting of 125 representatives of the schools, the motion picture industry, and kindred groups. James McPherson, president of the Audio-Visual Aids Association of Southern California, was elected chairman. Dean Arthur G. Coons of Occidental welcomed the group to the campus.

Direction of the organization was placed in the hands of a committee. The purpose of the organization is to bring together the producers of educational films with educators and the various technical elements of the educational film industry, to inform producers of the needs of the schools and to inform educators of the problems of the producers.

Lack of such cooperation in the past, it was pointed out, has handicapped producers in creating educational pictures of greatest usefulness. Monthly meetings are planned, with a schedule of specific problems to be considered.

## S.M.P.E. Fall Meeting October 15-17

The Society of Motion Picture Engineers will hold its 58th Semi-Annual Fall Conference, its first postwar session, at the Hotel Pennsylvania, New York City, October 15 to 17. The first meeting since the end of the war, it is anticipated that many motion picture engineers and executives who had been engaged in confidential activities for various branches of the Government will be able to discuss wartime developments in the motion picture field and their possible commercial applications.

# Current Film News

■ **MARCH OF TIME**, 369 Lexington Avenue, New York, announces the following current additions to its Forum Edition (Series B) of 16 mm. sound films, each two reels in length—

**New Ways in Farming**—the story of the great modern agricultural question of big-scale industrialized farming versus the small family-sized farm.

**The New South**—a presentation of present-day Dixie; the story of her dramatic changeover from a cotton economy to the industrial might of today.

**Men of Medicine**—the medical profession presented so that young and old alike may comprehend what it is to be a doctor.

**Sweden**—an account of a great Scandinavian country, in peace and war.

**The Nation's Capital**—a graphic portrayal of Washington, D. C., with glimpses of the President's life and the workings of various departments of Government.

**China**—story of the titanic struggle of that vast and populous nation to modernize and to protect herself against the tyrant, Japan.

**Russia at War**—presents a typical day in the life of our ally during World War II, in authentic shots by 160 Soviet cameramen.

**Ireland**—describes the government, religion, and social life of the Emerald Isle, presenting both her romantic charm and her political problems.

Available also are two special releases:

**Americans All**—a telling presentation and discussion of religious and racial intolerance and organized efforts that are and can be made for its eradication.

**The French Campaign**—the story, in maps and action shots, of Allied strategy which resulted in the liberation of France.

Previously issued Series A and the new series B in the Forum Edition are available on subscription basis, or individual subjects may be rented on a C. O. D. basis only.

■ **ENCYCLOPAEDIA BRITANICA FILMS INC.**, 20 N. Wacker Drive, Chicago, has released a new 16mm. sound classroom film, namely:

**Play in the Snow**—1 reel—produced in collaboration with Lawrence E. Briggs, M. S., Massachusetts State College, Amherst, Mass. Designed for primary grades, the film dramatizes against a snow-covered background, the activities of three children and their friends in building a snow man, playing fox and geese, coasting, and skiing. Shows the healthy, happy relationships of children at play. Appropriate clothing, health habits, and safety during play are depicted.

■ **IDEAL PICTURES CORPORATION**, 28 E. Eighth Street, Chicago 5, announces its exclusive release in 16mm. of three new music subjects, presenting the National Philharmonic Orchestra, conducted by Dr. Fredrick Feher, in:

**First Movement (Allegro)** of Beethoven's Violin Concerto in D Major, with Grisha Goluboff as soloist. 3 reels.

**Second Movement (Andante)** of Schubert's Symphony No. 8 in B Minor. 1 reel.

**Slavinka Tonpoem**, composed by Dr. Feher, in which the orchestra is supported by the National Philharmonic Chorus. This subject is divided into two parts, each 2 reels in length.

The music is excellently recorded, and the camera provides variety of visual interest throughout the musical performance, as it moves over the orchestra and lingers on the different sections, now the strings, now the woodwinds, percussion group, or the entire ensemble; in close-ups of Dr. Feher's directing, and of the violinist soloist in the Beethoven Concerto, revealing his fingering and bowing technique.

For music appreciation courses, or for showing to any group composed of music lovers, these new films will prove a valuable addition to the available supply of music subjects.

Ideal Pictures Corporation is also engaged in the production of a number of short subjects, including a series under the general title of *Hymn-o-Screen*, covering twenty of the best known religious hymns, instrumentally or vocally presented against appropriate pictorial backgrounds in Kodachrome. Also a series of one-reel Kodachrome subjects in the field of human relations, the first of which, titled *Jimmy's Reward* will be released shortly.

■ **DEVRY FILMS & LABORATORIES**, 1111 Armitage Ave., Chicago, is offering for outright sale a 400-foot 16mm. sound motion picture in full color on:

**Death Valley National Monument**—a beautiful filming of the wonders of this fascinating valley. Sequences include 11,045-ft. Telescope Peak, highest mountain in the Panamint Range reflected in Bad Water, lowest point in the western hemisphere; the weird country adjacent to the sink of Death Valley, Scotty's fabulous castle, formations in 20-Mule Team Canyon, petroglyphs on the rocks in Greenwater Canyon, Dante's View and other sights. This film is a Paul Hoefler production.

■ **OFFICIAL FILMS**, 625 Madison Avenue, New York 22, has recorded for posterity a motion picture on the career of Franklin Delano Roosevelt, titled:

**F. D. R.**—2 reels. 16mm. sound—depicting highlights of the unparalleled career of the famous ex-president, from the inception of his political career in 1910 to his untimely death in April, 1945. The film opens with scenes from the funeral cortege, and burial at Hyde Park, then flashes back to Franklin Roosevelt's first important political venture, as New York State

Senator in 1910 and in chronological order presents factual, living scenes of his political progress and increasing fame, emphasizing his influence on the history not only of our nation, but on that of the entire world. There are homely, friendly scenes, too, of the man and the humanitarian, as well as those of a great leader in action. He is seen and heard in excerpts from some of his famous speeches, thus preserving forever his historic words.

"F. D. R." is available for purchase or rental at all leading photographic dealers and film libraries. In addition to the 2-reel sound version, it is avail-

able also in 16mm. silent and in 8mm. condensed into one reel. A free, printed brochure giving complete details on the subject can be had by writing to Official Films.

■ **NATIONAL LIVESTOCK AND MEAT BOARD**, 407 S. Dearborn St., Chicago 5, is distributing a 30-minute 16mm sound motion picture, without cost, titled:

**The Way to a Man's Heart**—which deals with the subject of good nutrition, pointing out the foods essential for an adequate diet, and the proper methods of meat cookery.

■ **INTERNATIONAL THEATRICAL AND TELEVISION CORP.**, 25 West 45th Street, New York 19, has acquired 16mm. and 35mm. world distribution rights to the following motion picture in arrangement with the producer, Alvin Gordon of Contemporary Films:

**My Friend Pollita**—7 reels—produced in Kodachrome in Mexico, with added sequences made in Hollywood, Lupita Tovar doing both the Spanish and English narration for the dual-version picture.

Also obtained from Contemporary Films is a four-reel Kodachrome feature dramatizing the Chamulla Indian tribe, and from Larry Lansburgh, producer, two short subjects in Kodachrome—one on Pavno, the trick horse owned by Mexico's President Avilo Camacho and the other on sheep dogs, made in northern California.

By arrangement with Video Productions, eight Kodachrome outdoor features will be produced for ITTC, featuring Stuart Hamblen and Perry Ward who have obtained some prominence in radio work.

Additional product acquired by ITTC includes nineteen features produced by Mascot Pictures, with Victor Maclaglen, Ralph Morgan, Erich von Stroheim and Victor Jory among the stars presented. The transaction gives ITTC world rights to 16mm. and 35mm. distribution, as well as television rights.

An additional branch office has been opened by International Theatrical and Television Corp. at 3326 Olive Street, St. Louis, Missouri, which will conduct business throughout the states of Missouri, Oklahoma and Kansas.

■ **BELL AND HOWELL COMPANY**, 1801 Larchmont Ave., Chicago, report the addition of a series of six single-reel Australia classroom teaching films to the Filmosound Library. These deal chiefly with marine and bird life of the Great Barrier Reef and its adjacent islands, and include:

**People of the Ponds**—a study of the microscopic life inhabiting a pool in an extinct volcano. Remarkable photography of beating heart of water flea, seen through its almost transparent body. Varied reproductive methods.

**Birds of the Barrier**—terns nest collectively for defense against marauding gulls; gannets as large as geese; mutton birds burrowing underground. Sticky tree seeds kill the unwary.

**Coral and Its Creatures**—excellent closeups of the island-building polyps, with heads like living flowers and bodies like worms; feather starfish; shark embryo; cowfish, with skeleton outside flesh; butterfly carp.

**Secrets of the Sea**—collecting minute specimens. Life cycle of the sea

# FILMS NEW 16mm SOUND from BRITAIN

**AIR PLAN** . . . . . 3 reels — 28 minutes

This film shows how the work of the RAF fitted into the overall air strategy of the European war, and how complex and far-seeing planning turned the "blitzkrieg" against its originator.

**BAILEY BRIDGE** . . . . . 1 reel — 8 minutes

One of the war's most jealously guarded secrets is revealed in this film on the construction and use of a portable pre-fabricated bridge made of interchangeable parts which keeps rivers from being effective lines of enemy defense.

**DAWN OVER CYRENAICA** . . . . . 2 reels — 22 minutes

Cyrenaica, bordering on Egypt and the Mediterranean, was the first section of North Africa to be freed from Italian fascist control. The liberating British armies were followed by British Civil Affairs Officers who introduced modern farming methods in helping the local Arabs raise their standard of living.

**DOMINION STATUS** . . . . . 2 reels — 18 minutes

This film explains and demonstrates the meaning of the "dominion status" enjoyed by Canada, Australia, New Zealand, the Union of South Africa, and Ireland, as defined by the Statute of Westminster enacted in 1931, and shows the part played by the Dominions in the war.

**FALL OF GERMANY (Act & Fact #7)**. 1 reel — 12 minutes

After the Allies crossed the Rhine, they smashed deep into the heart of Germany, winning surrender from army after army. The heavy pounding of the Air Forces and the daring thrusts of the land armies brought Germany to her knees and heralded the proclamation of V-E Day.

**OPERATION FIDO** . . . . . 1 reel — 12 minutes

Fog is the greatest single menace to aircraft. Fog over British airfields became more of a menace than flak over Germany, causing accidents, loss of life, and often the complete cessation of operations. FIDO solved the problem of fog by dispersing it with petroleum burners.

**RHINE LINE (Act & Fact #6)** . . . . . 1 reel — 10 minutes

The Allied line-up on the western bank of the Rhine and how the Allied armies broke from their positions, made their spectacular crossings of the Rhine and struck deep into the heart of Germany.

**ROAD TO RUSSIA** . . . . . 1 reel — 9 minutes

The story of the southern supply line of the Persia Iraq Command over which British, American and Indian soldiers transported millions of tons of war supplies for delivery to the Russian armies.

**SOLDIER SAILOR** . . . . . 6 reels — 52 minutes

Early in the war British merchant ships were armed to defend themselves against aerial and submarine attack. The force of gunners were called D.E.M.S. (Defensively Equipped Merchant Ships) and this film records the kind of work they did.

**STRICKEN PENINSULA** . . . . . 2 reels — 16 minutes

Made before the end of the Italian campaign, this film shows scenes of the devastation in Southern Italy and of the slow painful process of reconstruction started with the help of the Allied organizations.

**TIME AND TIDE** . . . . . 2 reels — 16 minutes

The important and little known work of the men of the Admiralty Salvage Department is shown as they clear a harbour of wrecked enemy vessels and open it once again to Allied shipping.

**UNRELENTING STRUGGLE** . . . . . 2 reels — 18 minutes

Highlights from Churchill's radio speeches to the British people from the beginning of the war to V-E Day against a background of action shots.

## BRITISH INFORMATION SERVICES

An Agency of the British Government

- 39 Rockefeller Plaza, New York 21, N. Y.
- 321 Sutter St., San Francisco 8, Calif.
- 1337 New York Avenue, N.W., Washington 5, D. C.
- 350 North Michigan Avenue, Chicago 1, Ill.
- 1185 Tenth Bldg., 1680 North Vine St., Hollywood 28, Calif.
- 1310 First National Bank Bldg., Atlanta 3, Ga.

slug. A wide variety of rare forms of marine life.

**Catching Crocodiles**—fresh water and salt water types. Considerable difference in size, disposition and methods of combat.

**Strange Sea Shells**—some well-known, others strange and new. Some microscopic in size, others large enough to trap and kill humans. Housing troubles of the hermit crab.

This fostering of the use of teaching films from other lands is in line with Bell & Howell promotion of motion pictures for the betterment of international understanding.

■ **CASTLE FILMS, INC.**, 30 Rockefeller Plaza, New York 20, covers the historic finale of the war with Germany in its release:

**Victory Over Germany**—picturing all the intense drama of the occasion—the storming of Cologne, the

capture of the Remagen Bridge, the mass assault across the Rhine, thousands of parachute troops dropping from the skies, capture of Nuremberg, dramatic meeting of American and Soviet troops on the Elbe, and finally, scenes showing the actual signing of the unconditional surrender.

■ **BRITISH INFORMATION Services**, 30 Rockefeller Plaza, New York 20, has recently added the following films to its 16mm. releases:

**Accident Service**—4 reels—revealing that one in 35 of Britain's population meets with accidents every year, and showing the accident services provided by the community.

**The Air Plan**—3 reels—a record of the master strategy which put the Allies ashore in Normandy and then swept the German armies to utter defeat in their own country.

**Bailey Bridge**—1 reel—revealing one of the War's most guarded secrets, the construction and use of a prefabricated bridge made from interchangeable parts.

**Broad Fourteens**—4 reels—story of the swift, light Motor Torpedo Boat, and its lively battle with an enemy E-boat.

**Dominion Status**—2 reels—explaining the meaning of "dominion status" which is enjoyed by Canada, Australia, New Zealand, the Union of South Af-

rica and Ireland as defined by the State of Westminster, enacted in 1931.

**Fall of Germany**—1 reel—follows action by the British Second Army from April 1945 to May 4, 1945, when, in a tent on Luneberg Heath, Montgomery imposes unconditional surrender.

**Personnel Selection**—7 reels—describing the various tests used by the British Army in its comprehensive system of personnel selection to ensure that every soldier finds his proper place in the war effort.

**Power for the Highlands**—1 reel—describing the post-war scene for a great industrial development, using low-cost power for the rebuilding of Britain—a plan based on the example of the Tennessee Valley Authority in America.

**The Unrelenting Struggle**—2 reels—against background of scenes showing the course of the war, are given excerpts from the speeches of Winston Churchill, from the time he took office as Prime Minister in 1940 until V. E. Day in 1945.

**Road to Russia**—1 reel—tells the little known story of the overland route from the Persian Gulf to Russia by which more than 50% of British and American Supplies for the U. S. S. R. were carried—one of the greatest supply achievements of the war.

**The Star and the Sand**—story of the Yugoslav Partisans evacuated from the Dalmatian Coast to El Shatt in Egypt, revealing their ingenuity, despite great hardships, in establishing a self-sufficient community, with the aid of U. N. R. R. A.

■ **CARL F. MAHNKE PRODUCTIONS**, 2708 Beaver Ave., Des Moines 10, Iowa, recently organized to handle international distribution of the productions of Vocational Guidance Films, Inc., has ready these new subjects in the field of vocations, each 1 reel in length:

**Agriculture**—indicating farm jobs for the unskilled, and those open to men and women with college training.

**Bookkeeping and Accounting**—nature of duties and requirements necessary.

**Brick and Stone Mason**—showing men laying brick, tile and stone; working conditions and opportunities.

**Heating and Air Conditioning**—constructing, assembling and servicing of equipment of many types of installations; working conditions and qualifications.

**Painting and Decorating**—outside and inside painting shown; also decorating, staining and paper hanging, and outlining training required.

**Plumbing**—different jobs performed

by plumbers; use of tools, working conditions and skills required.

**Poultry Raising**—showing different types of poultry raising; problems encountered in this vocation are presented very carefully.

### Entertainment Releases in 16mm

■ **ALLIED 16mm. PICTURES CORP.**, 130 West 46th Street, New York 19, announces the release in 16mm. of:

**Michael Strogoff**—11 reels—the RKO feature based on Jules Verne's stirring and engrossing story, located

in Russia of 1870, concerning the adventures and hardships encountered by a young captain of the Czar's guards in his mission to carry an important dispatch through rebellious Tartar country. Strikingly staged, ably directed and acted, the film stars Anton Wallbrook as the dashing hero, supported by Akim Tamiroff and Elizabeth Allen. The subject is available also for rental from the film libraries of Bell and Howell and Ideal Pictures Corporation, in Chicago.

■ **COMMONWEALTH PICTURES CORPORATION**, 729 Seventh Avenue, New York 19, has exclusive 16mm. release of a revised version of the feature film:

**Pagliacci**—10 reels—a dramatization of the story of the famous opera, with excerpts therefrom sung by the re-

nowned tenor, Richard Tauber. There is also a short 3-reel version available.

Another new exclusive 16mm. release from Commonwealth is

**Puss in Boots**—4 reels—a Columbia Pictures release.

■ PICTORIAL FILMS, INC., 1270 Sixth Avenue, New York 20, announce the acquisition of the 16mm. sound film world distribution rights for the Major feature release:

**So Ends Our Night**, an adaptation of the book "Flotsam" by Erich Maria Remarque. The story, co-starring Fredric March and Margaret Sullivan, with an excellent supporting cast, is the dramatic and suspenseful one of political refugees hunted through several European countries in their flight to escape oppression, with an underlying poignant love story, mixed with the true humor of people who must live intensely.

■ BELL & HOWELL, 1801 Larchmont Ave., Chicago 13, has added several Universal films to its list of entertainment features, such as:

**Top Man**—with Donald O'Connor, Peggy Ryan, Richard Dix, Lillian Gish. When father retreads his way to the wars, teen-age junior becomes "top man" of the family. His growing recognition and execution of his responsibilities is shown, and his leadership takes student body into local war plant for part time work.

**Ladies Courageous**—the saga of our women ferry pilots. Star cast includes

Loretta Young, Geraldine Fitzgerald, Anne Gwynne, Diana Barrymore.

**Chip Off the Old Block**—Another Donald O'Connor-Peggy Ryan uproarious comedy. Teen-age son of Navy man falls in love with youngest member of famed stage dynasty and eventually liberates her.

**Week-end Pass**—in which vacationing shipyard worker gets into mix-up with a girl uncertain of whether to join the WACS or WAVES.

Thirty-one new "Universal" features, becoming available for approved non-theatrical locations during the rest of 1945, are described in detail in the Bell & Howell Filmosound Library catalog supplement No. 37, just off the press. Release dates are specified for the various types of 16mm. use, including "shut-in," armed forces, and general. The supplement lists also 55 majors and independents on which prior location approval is not required, plus several new features in color, and a large number of westerns.

## New Catalogs

### Castle

A new 32-page catalog of 16mm. and 8mm. films with illustrations and descriptions of more than 125 subjects, many recently released, has been issued by Castle Films, 30 Rockefeller Plaza, New York 20. Also included is descriptive information of Castle's new product—2 x 2 film slides of "Epic Pictures of World War II."

### Coronet

A new catalog of approximately fifty 16mm. sound motion pictures for class-

room and other group instruction has been announced by Coronet Instructional Films. The majority of the films listed have been produced in Kodachrome and prints are available either in full natural color or black and white. The catalog is attractively and appropriately illustrated with full color "stills" from the motion pictures. The various groups of motion pictures announced include the Biological Sciences, Civics, Economics, Psychology, Health, Industry, Physical Education, the Physical Sciences, the Social Studies, and Vocational Guidance.

(Concluded on page 322)

## YOUR STORY . . . War Tested!

Our Armed Forces have definitely proven the *speed* and *certainty* of movies as a retentive factor . . . for they make a *permanent impression*, not easily forgotten.

Here at home, many successful business men have utilized this power and effectiveness of informative films for many years, and found that it was the most *economical* medium of telling *their* story with the best results.

Filmcraft is proficient in the making of films tailored to fit your needs. Let us know your problem . . . we will quote you prices, with no obligation on your part.

# AMONG THE PRODUCERS

## Simmel Heads Film Production Department

Under the direction of Edward Simmel, the Simmel-Meservey organization of Beverly Hills, California, is currently embarked on an expanded program of educational film production and distribution. Mr. Simmel has for some time been engaged in the production of educational pictures.

In 1940 the University of Southern California commissioned him to accompany Dr. A. O. Bowden of the School of Anthropology on a scientific expedition to South America to film a series on native tribes. He recently returned from an overseas assignment for the U. S. Office of War Information, serving as Film Officer at Cairo, India, and has traveled extensively throughout the Middle East in charge of OWI Film distribution. Currently he is visiting audio-visual education centers of the United States to ascertain educational film requirements with a view to incorporating them in future Simmel-Meservey productions.

Associated with Mr. Simmel in the organization are: Martha Blair Fox, who is directing the production of transcriptions for kindergarten and primary grades, and is recognized in academic circles for her contribution in perfecting audio-teaching techniques as applied to children; Paul L. Hoefler, F. R. G. S., M. E. C., explorer, world traveler and motion picture producer, currently completing a series of subjects in sound and color on the 48 State Capitols; also Guy D. Haselton, Karl Robinson and Walter W. Bennett, all of recognized ability in film production.

## Industrial Training Slidefilms

The Jam Handy Organization, 2900 E. Grand Blvd., Detroit, Mich., has the following training slidefilms available for general use in industry and business:

**Preparing for the Future:** sound on record slidefilm for use in foreman training. Explains to foremen why it is important to develop qualified under studies, 66 individual teaching pictures.

**New Men at Home:** sound on record slidefilm, showing foreman's obligations to the new man on the job, and how to make him feel at home from the start. 73 pictures.

**Measurements and Measuring—Part I:** for teaching machinists work; discussion of steel scale, work accuracy, standard of measurement. 50 pictures. Part II: micrometer, how it works, how to read it, vernier scale, gauges and gauge blocks. 64 pictures.

**Mixing, Using Casein Glue:** (aircraft) contents, keeping casein mix-

ing, checking consistency, preparing joint clamping, wiping off excess, etc. 61 pictures.

**First Aid:** (color films) sound on record—Part I: The Body. Muscles, tendons, skin, blood, skeleton, head, trunk, upper and lower limbs. 49 pictures. Part II: Heart, arteries, capillaries, veins, breathing, nutrition, nervous system. 54 pictures.

**Electricity and the Storage Battery (Automotive) Part I:** Fundamentals of electricity, principles of primary and secondary cells, Ohm's law, parallel connections. 97 pictures. Part II: Storage battery of secondary cells, general construction, operation.

## New Amprosound Model "Premier-10"

The Ampro Corporation of Chicago is pleased to announce the new Amprosound "Premier-10" Sound-On-Film 16mm. Projector with aluminum castings throughout, equipped for both silent and sound film speeds and reverse operation. This model is light, compact and portable with extremely simplified design. The Amprosound "Premier-10" embodies the results of more than a decade of pre-war experience in building precision 16mm. projectors—plus the knowledge gained from the rigorous tests to which Ampro machines have been subjected on far-spread fighting fronts. Out of all this experience has come a compact, sturdy 16mm. projector—claimed to be capable of providing continuous efficient operation under the most adverse conditions.

Write to Ampro Corporation, 2835 North Western Avenue, Chicago 18, Illinois, for specifications and features of the new model.

Ampro Premier—10

## New Coronet Slidefilm Series

A new series of 35mm. slidefilms or filmstrips to be made from Picture Stories appearing in *Coronet Magazine* has been announced by the Society for Visual Education, Inc., of Chicago. The new series will include eight slidefilms to be released one each month from October, 1945, through May, 1946. Each slidefilm is accompanied by a reprint of the Picture Story in *Coronet* which serves as a teacher's manual. The slidefilms become the permanent property of those who receive them.

The October Picture Story is "The Liberated" . . . a story of people who have been freed all over the world. It will be followed in November by "The Storm" . . . a documentary story of storms. "The German" is the subject for December. It will be an analytical story of the kind of people the Germans were before the war and what we may expect of them in post-war.

Each slidefilm will have continuity titles on the individual frames, and the reprint of the Picture Story in *Coronet* will provide additional information for the use of the teacher or other person using these for group instruction. The slidefilms are primarily intended to serve as a basis for the discussion of problems of the day, and those released during the past two years have been used by thousands with all types of training groups. The principal users have been junior and senior high schools, but they have been used by many churches and community groups, and among hundreds of units in the Armed Forces, at home and overseas.

These slidefilms are provided through the cooperation of *Coronet Magazine* and are offered at a nominal charge to cover a part of the costs of handling. Full information may be obtained by writing to The Society for Visual Education, Inc., 100 East Ohio Street, Chicago 11, Illinois.

## Bausch & Lomb Booklet

Since the summer of 1941, the flags flying from the Bausch & Lomb plant in Rochester testify to the appreciation of the Army and Navy for the Company's achievements in the production of optical glass and military optical instruments. They tell the story of men and women, working as they have never worked before to produce the instruments of modern war.

A 56-page illustrated booklet, entitled *Seeing It Through* just issued by Bausch & Lomb, records their wartime accomplishments and describes the optical equipment which contributed to victory. These included binoculars, height finders, range finders, sighting devices, battery commander's telescopes, mapping equipment, sextants, star projectors, spotting scopes, searchlight reflectors, microscopes and other tools of military science.

## YMCA Program Consultant

Mr. L. Harry Strauss, formerly Librarian and Instructor in Audio-Visual Education, at George Williams College, 5315 Drexel Avenue, Chicago, Illinois, on June 1 joined the Staff of the Y. M. C. A. Motion Picture Bureau as program consultant.

Mr. Strauss has been active in the Audio-Visual Education field for years and brings to his new assignment, outstanding knowledge of the resources and materials available to schools and other community agencies. He will

L. Harry Strauss

have his headquarters at the Bureau's Chicago Exchange at 19 So. LaSalle Street. He will conduct Audio-Visual Education Workshops under the joint auspices of the National Council and local Associations across the country.

## World War II in Film Slides

Castle Films, 30 Rockefeller Plaza, New York, enters the film slide field this month with a product it believes to be especially well adapted to educational uses. This consists of two sets of 2x2 film slides under the title of *Epic Pictures of World War II*, boxed in a set of 96 slides and a set of 48 slides. The slides, numbered and arranged in accurate sequence, deal with outstanding events of the War from the German Invasion of Poland in 1939 down to the latest important event in the war with Japan. They are made from selected news photos, chosen for their qualities of dramatic interest, spectacular effect, and often with regard to the obvious peril the photographer faced to obtain them.

While Castle does not call "Epic Pictures" a history of World War II, a small booklet packed with the slide sets is in effect a tabloid history of the war, explaining the significance of each picture in the set. The slides are available from photographic dealers throughout the country.

## "Young America" Enters Educational Film Production Field

An important recent development in activities concerned with the audio-visual teaching field is the announcement by Stuart Scheftel, founder and publisher of the weekly magazine "Young America", of the organization of Young America Films, Inc. to produce and distribute instructional films and slidefilms geared specifically to basic textbooks now in use. Distribution will be handled on an exclusive basis by the leading school supply house in each state, through an aggregate of some 350 sales representatives regularly calling on the schools. Supplementing these active salesmen, Young America, Inc. has employed eight regional supervisors to promote and coordinate the work of this large national sales staff. Graded teachers' manuals and lesson plans will accompany every subject. A complete line of equipment is also offered, consisting of projectors, screens and other necessary projection accessories. The 16mm sound projector included is the NATCO, manufactured by the National Mineral Company of Chicago.

Assurance of editorial and technical excellence of the films is given in the information that production will be planned and supervised by leading authorities in the subject-fields covered. Among editorial consultants are Dr. William Bristow, Curriculum Consultant, Board of Education, New York City, and Dr. Charles Hoban Jr., Director of Visual Education, Philadel-

phia schools. It is announced that 108 films are scheduled to be produced during 1945-46, including among others, 1st grade Reading, 2nd grade Nature Studies, 3rd grade Social Studies, 4th grade Arithmetic, 5th grade Geography, 6th grade Writing, 7th grade Foreign Languages, 8th grade Home Economics, 9th grade City Government, 10th grade Biology, 11th grade Chemistry, 12th grade Physics.

In speaking of the program, Mr. Scheftel said: "We do not think of ourselves primarily as film producers, but rather as publishers of educational and instructional material in the form of films, which have now become a vitally important medium to supplement text books and the printed page. We can promise, however, we will apply to Young America Films all the knowledge we have gained over the years in helping educators do a better teaching job. We expect to offer schools the finest teaching films it is possible to make."

Although primarily concerned with the production and sale of basic curriculum films and projection equipment, Young America Films, Inc. will also offer carefully selected commercially sponsored films, which meet the test of a genuine contribution to education, and in addition a wide variety of documentaries on scientific and social science progress, the first of which to be released is entitled *We the People of the United Nations*.

## Filmo "GSAP" Camera

The Filmo 16mm. camera, produced "since the early 20's by Bell & Howell Company, and soon to be available again, went to war as the "GSAP" — pronounced "guzap" — which is Air Force diminutive for "gun-sight aiming point camera", or, — "Camera, Gun, Type AN N6." And, as the guzap, it rode in the nose, wings or elsewhere on combat planes, recording the shooting exploits of combat pilots. When the guns start firing, the guzap jumps into action within an eighth of a second, showing where the bullets went, what havoc they wrought, and how the victim reacted. Because it continues taking pictures for a pre-set one to five seconds after the firing has ceased.

The guzap operates at speeds of sixteen, thirty-two or sixty-four frames per second. It is a magazine loader and has an am-

ber filter which screens out much of the objectionable picture-fogging ultra-violet light encountered at high altitudes. The filter also protects the fine lens.

In addition to producing combat records, the guzap has been used extensively in gunnery training. In showing a pilot's mistakes, as well as his accomplishments, it has served to improve marksmanship. Its use by flying branches of the armed services has produced a pictorial record of successful combat tactics never before available.

Filmo Aerial Camera

## McClelland Joins Victor Staff

A. J. McClelland, widely known for his work with schools in developing large visual educational programs, has been appointed director of educational sales for the Victor Animatograph Corporation, Davenport, Iowa, it has been announced by S. G. Rose, vice president of the corporation. Mr. McClelland resigned from his connection with the Encyclopaedia Britannica Films, Inc., recently to join Victor.

In 1937 Mr. McClelland became the first district manager for Erpi Classroom Films. At that time few schools owned teaching films, and his work in the field is credited with making a material contribution to the growth of this medium of education.

Prior to joining Erpi Mr. McClelland was engaged in school work, serving as a teacher, high school principal and superintendent. He had his professional training in State Teachers College and the University of Oklahoma and summer work at the University of Chicago. For the past year he has been a member of the board of the National Association of Visual Equipment Dealers.

With the Victor corporation he will devote his time to the educational field and give assistance to dealers in the Midwestern area. Mr. McClelland is especially known for his planning and consultant services. His headquarters are the Victor offices in Chicago.

### Visual Education, Incorporated Adds Houston Office

Visual Education Incorporated, with headquarters in Austin, Texas, has opened a branch office in the M. & M. Building at Houston, Texas. There is also a branch in Dallas, making a total of three offices through which the services of this long-established dealer organization in the visual equipment field are available.

## New Catalogs

(Concluded from page 319)

Outstanding among the films in color are five on the American Indians of the Southwest, three on life in Mexico, nine on colorful birds of the United States, and an unusual picture showing the growth of flowers. The physical education series includes films on basketball, field events, swimming, tumbling and volleyball.

The new catalog, "Coronet Instructional Films," is available free to 16mm. educational film users. Requests should be addressed to Coronet Instructional Films, Glenview, Illinois.

### British Information

The 156 films listed and described in the new catalog of 16mm. films issued by the Film Division of British Information Services, 30 Rockefeller Plaza, New York 20, cover subjects on farm and garden, fighters on the home and war fronts, glimpses of the final stages of the European war, reconstruction and

rehabilitation, and Britain's efforts toward social betterment in the fields of education, health insurance, housing and other social services. For the first time the BIS film catalog also includes films covering secret war-time achievements such as *Operation Pluto*, revealing the secret method by which gasoline was supplied to the Allied front through pliable steel pipelines laid across the English channel, and *Date with a Tank*, the graphic story of the building of a gun to beat the Nazi Tiger Tanks. Also such specialized subjects as *Chest Surgery*, *Psychiatry in Action* and *Malaria*.

### Erpi Films

The sixth edition of the booklet, *Erpi Classroom Films Correlated with School Programs*, by Dr. H. A. Gray, (as revised by Dr. M. Brodshaug and Miss M. Bittman), to help teachers integrate the classroom film in school programs has just been released, Dr. V. C. Arnsperger of Encyclopaedia Britannica Films, Inc., announced.

"This edition brings up to date the integration of Encyclopaedia Britannica Classroom Films with various subject matter areas at different grade levels," he said.

The second section describes how the classroom film serves as a dynamic teaching medium and relates to many areas of the curriculum. Detailed analyses show how films are integrated with units of instruction and the content of typical textbooks at different grade levels. The booklet is free upon request by educators.

The release of the seventeenth edition of the utilization scope chart of Encyclopaedia Britannica (Erpi) Classroom Films in a new format, was announced by H. R. Lissack, General Sales Manager of Encyclopaedia Britannica Films, Inc. Films are grouped under their area and subject matter. The primary film correlation is easily identified. Film content is brief but adequate to assist the educator in film selection. Additional features of this latest aid to teachers in the selection of films is the listing of the collaborators and their affiliation; identification of films for which visual learning guides are available; and those films available in foreign languages are also indicated.

### National Film Board

The Canadian National Film Board announces the release of a listing of Canadian Government Films available in the United States. These documentary sound films are described under the following classifications: Animation, Agriculture, Consumer Education, Art, Health, History, Human Geography, Industries and Resources, Social Planning, Sports, War Experience.

The film subjects may be obtained on both a purchase and rental basis. Any film may be secured by film libraries or interested organizations, to preview with a view to purchase, di-

rect from the National Film Board offices in Chicago, New York, Washington, D. C., Los Angeles.

In general, the sale of these film subjects is handled by national commercial distributors. Purchase sources for individual titles are indicated throughout the listing. All the film subjects listed in the survey are available on a rental or service fee basis from three commercial film libraries in New York, Chicago and Dallas. The survey also indicates the educational film libraries that carry representative groups of Canadian releases.

Copies of this catalog of 16mm. sound films may be secured without charge on request from The National Film Board of Canada, 84 East Randolph Street, Chicago 1, Illinois.

### Visual Art

"Visual Aids in the Service of the Church" is the title of a new illustrated catalog just released by Visual Art Film Distributors, 422 Empire Building, Pittsburgh 22, Pa. The material is organized under separate groupings of features, short subjects and slides.

### Ideal Pictures

Ideal Pictures Corporation 28 E. Eighth Street, Chicago 5, has just published its 1946 Catalog Supplement (to its 128-page Silver Anniversary Catalog issued last fall), containing scores of new subjects, features and shorts, added to its sale and rental library during recent months. These include features produced by major and independent Hollywood studios, and new films in the fields of religion, music, current events, sports, etc. Also included is a section covering the full line of still and motion picture projection equipment and other photographic accessories carried by Ideal.

### Bell & Howell

A comprehensive description and classification of 2,047 educational motion pictures is provided by the new Bell & Howell guide to its Filmosound Library resources in this field. A handsome 112-page book in 8½x11 size, it embodies many novel cataloging devices intended to streamline the job of finding any film on any subject. Visible index tabs, that run from front cover to last page, provide a "thumbnail film finder" that needs no key. A combined title and subject index at the back gives film numbers, column location, age-level and sale or lease price. Titles are carefully grouped by subject matter, with related areas logically arranged in line with curricular subject areas. Sound, silent and color versions have common listings but are clearly identified. There are 155 films in color; 450 are silent, of which 121 are available also in sound. Descriptions are factual and detailed. Italicized crossreferences lead to related materials under other headings. There are many illustrations.

**Announcing**  
**THE 21st EDITION**  
**"1000 and ONE"**  
**(1945-46)**

***The Blue Book of Non-Theatrical Films***

The largest, most complete edition of this annual film reference yet published — 160 pages of essential information on some 6300 available films and their sources, classified under 175 subject-headings . . . indispensable to Directors of Visual Education, School Administrators, Supervisors and Teachers, Program chairmen, Industrial plants, etc.

**\$1.00 per copy**

# HANDMADE LANTERN SLIDES — and the KEYSTONE OVERHEAD PROJECTOR

make an Excellent  
Combination for presenting your  
Original Ideas QUICKLY  
and ECONOMICALLY

★ THE KEYSTONE LANTERN SLIDE OUTFIT. Complete outfit and instructions for making Handmade Lantern Slides.

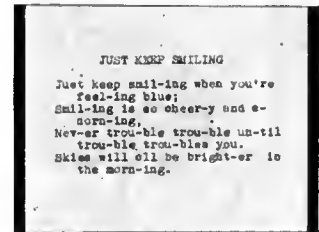

By using the KEYSTONE LANTERN SLIDE OUTFIT, you can quickly and easily make inexpensive, clean-cut, attractive lantern slides that show drawings, charts and diagrams, typewritten outlines, texts, and other material. You gain these advantages:

1. BETTER LOOKING PRESENTATION
2. DIFFICULT SUBJECTS ARE MADE CLEAR
3. YOU SAVE TIME AND MONEY

For fifteen years the Keystone View Company has been developing and perfecting superior materials for the making of Handmade Lantern Slides. Only the most attractive and projectable Handmade Lantern Slides are of real service to the instructor. You will find everything you need in the KEYSTONE LANTERN SLIDE OUTFIT.

The OVERHEAD PROJECTOR is the last step in making the classroom use of handmade lantern slides interesting, practical, and effective.

Write for full details today.

## What This Young America Insignia Means To You!

ON ANY YOUNG AMERICA FILM — whether 16 mm. sound-film or 35 mm. strip — it is your guarantee of the highest educational and production standards. Here are just a few of the 108 films scheduled for 1945-46:

"We, the Peoples" — a definitive documentary

- 1st Grade — Reading
- 2nd Grade — Nature
- 3rd Grade — Social Science
- 4th Grade — Arithmetic
- 5th Grade — Geography
- 6th Grade — Writing
- 7th Grade — Foreign Languages
- 8th Grade — Home Economics
- 9th Grade — City Government
- 10th Grade — Biology
- 11th Grade — Chemistry
- 12th Grade — Physics

ON TEACHERS' GUIDES, student manuals and other supplementary material it is your assurance of the most competent and authoritative supervision possible which means clarity, accuracy and comprehensiveness.

ON EQUIPMENT RECOMMENDATIONS it is a pledge to you by YOUNG AMERICA FILMS of the "best obtainable" after thorough investigation and practical testing.

ON SPONSORED FILMS (i.e. films made for school distribution by leading American companies) the "eagle" is your assurance that the film has been reviewed by the Young America Editorial Board and approved for school distribution.

# YOUNG AMERICA FILMS

32 EAST 57 STREET, NEW YORK 22, N. Y.

"A Complete Service in Visual Instruction Films and Equipment"

# and Complete Service INSTRUCTION

HELP IN THE TEACHING OF ACTUAL CURRICULUM SUBJECTS

*NOW—you can get a completely integrated program of 16 mm. sound-films, discussional strip-films and supplementary printed material to help you teach practically any basic curriculum subject from kindergarten through high school! Every phase of the service perfected by leading authorities —and backed by the publishers of “Young America”!*

HERE, AT LAST, is a complete Visual Instruction Service that not only offers carefully planned films for every grade and practically every basic curriculum subject from kindergarten

through high school, but, more importantly, the films are being made specifically to supplement the best basic text books now in use. All types of films are included: basic curriculum, supplementary, orientation, documentary, and carefully selected commercial films.

**YOUNG AMERICA FILMS SET NEW HIGH STANDARDS!**

Editorially and technically you can be sure that Young America Films are of highest quality. They are planned and supervised by leading authorities on each specific film subject. These men work closely with specialists in curriculum and visual education as well as with outstanding creative and production experts in the educational motion picture field. (Editorial consultants: Dr. William Bristow, Curriculum Consultant, Board of Education, N. Y.—Dr. Charles Hoban, Jr., Director of Visual Education, Board of Education, Philadelphia, Pa.)

The complete Young America Visual Instruction Service includes: 16 mm. sound films — 35 mm. strip films of the discussional type — graded teaching manuals—and carefully organized lesson plans. Manuals include summaries, discussion outlines, activity programs and supplementary projects. Prepared by experienced teachers who have a thorough working knowledge of your teaching problems and needs, they

bring you a wealth of stimulating and practical material. They show how to prepare your students for film showing, how to invite comments, promote discussion, and check results.

**A COMPLETE EQUIPMENT SERVICE, TOO!**

YOUNG AMERICA FILMS also offers you a complete selection of thoroughly tested equipment. Included are: 16 mm. sound projectors, 35 mm. strip-film and slide projectors, viewers, lamps, screens, etc. Equipment offered by YOUNG AMERICA FILMS is already being ordered by many schools—and selected in preference to other leading and long-established makes.

**YOU HAVE AN EXCLUSIVE STATE DISTRIBUTOR!**

**You'll want more details. Here's how you can get them easily:** Check the list at the left. Note carefully your exclusive state distributor for Young America Films and Equipment. One of their representatives is ready and eager to explain to you just how this complete new Service can provide you with the kind of practical help you have long wanted in your work as a teacher.

Contact your representative at once. In the meantime, send for copies of the Young America Films and Equipment Catalogues PLUS a folder telling you “How To Build A Self-Supporting Visual Education Department.” In the Film Catalogue is a list of Young America Films with a brief summary of each, indexed by grades, titles and subject matter, together with a listing of lesson plans and manuals . . . and several articles on Visual Instruction. **Mail Coupon Now!**

**YOUNG AMERICA FILMS, 32 E. 57th St., New York 22, N. Y.**

## DeVRY

### 16 mm. SOUND-ON-FILM PROJECTORS

Protectively housed in its own "blimp," or silencing case, the NEW DeVRY 16mm. sound-on-film projector's performance is quiet . . . steady . . . purposeful . . . like the graceful movement of majestic swans across still waters at eventide.

With the NEW DeVRY film moves smoothly, *safely* from reel to reel . . . no flicker, no weave, no blur, no jump. Two revolving filter rollers assure flutter-free sound by keeping film speed constant and in perfect alignment with the sound lens.

With the NEW DeVRY you get theater-type projection, theater standards of performance. The ultimate of sound—whether it be crisp, clear, intelligible conversation, or the full majesty of symphonic music . . . uniformity of illumination over the screen's entire surface . . . soft, natural brilliance that assures viewing comfort because it is kind to the eyes. Both sound and image, "Nature Real."

Above all, the NEW DeVRY 16mm. Sound-on-Film projector is so simple to thread, to focus and to maintain that a 12-year old student can operate it . . . So sturdily built, you are assured years of continuous, trouble-free service.

The NEW DeVRY is a 3-purpose projector that (1) SAFELY projects both sound and silent films; (2) that shows *both* black-and-white and color film without extra equipment; and (3) whose separately housed 25-watt amplifier and sturdy 12-inch electrodynamic speaker afford portable Public Address facilities, indoors or out. DeVRY CORPORATION, 1111 Armitage Ave., Chicago 14, Illinois.

## **SINCE 1941**

**NOTHING** has been so important as the winning of the war. Now that it is won, it is fitting that we pause to pay tribute to all those Americans who have fought and worked and died to bring Peace to the world.

Like most American manufacturers, Bausch & Lomb has had a vital part in the struggle—a part which you as a peacetime user of Bausch & Lomb Instruments have shared by your willingness to wait for the instruments you have needed. For your consistent patience and splendid co-operation we are sincerely grateful.

Facing the future and the problems of reconstruction, we now dedicate our efforts, our greatly enlarged facilities, and our production skills to the manufacture of the precision optical instruments which are necessary to your efforts in building a better world. Bausch & Lomb Optical Co., Rochester 2, New York.

**DON'T MISS**

**THIS NEW TEXT-FILM FOR ALL TEACHERS!**

## **"USING THE CLASSROOM FILM"**

**Helps New Teachers, Experienced Teachers  
Get More Learning from Classroom Films!**

Available now! The *film* that increases the effectiveness of every teacher using classroom films! The *film* that actually takes you into the classroom and demonstrates accepted techniques for using classroom films to maximum advantage! The *film* that shows how to integrate film content with regular classroom curriculum and with other teaching tools and methods. The *film* that shows how to use the 500 other Encyclopaedia Britannica classroom films.

tested techniques were used in making this film as are used in the production of *all* Encyclopaedia Britannica Classroom Films.

Every educator will find this new text-film an important adjunct to his audio-visual teaching program. Arrangements can be made to have "Using the Classroom Film" shown in your school. For complete information fill out and mail the coupon below. Do it now!

### **WHAT THE FILM DOES:**

Shows steps in typical utilization of classroom film:

1. The Teaching Situation.
2. The Teacher's Preparation
3. Preparing the Class for the Film
4. Showing of Classroom Film
5. Students' Questions and Review of Film Content
6. Individual and Classroom Projects Stimulated by Showing of the Film

"Using the Classroom Film" is a new release of Encyclopaedia Britannica Films. It helps teachers, administrators, superintendents to learn more about teaching with the classroom film. And they'll retain that knowledge longer, too, for the same teacher:

• *There is no Substitute for Experience* •

Among many new school subjects recently added to our Rental Library are such excellent features as:

**SWISS FAMILY ROBINSON**

Thomas Mitchell, Freddie Bartholomew

This film captures all the charm, engaging humor and excitement of the world-loved story about a rebellious family taken by idealistic father from decadent London life to colonies—the shipwreck, escape to an uncharted isle on a raft of barrels, the house in the tree-tops, the hidden treasure, and all the other absorbing adventures.

**MICHAEL STROGHOFF**

Anton Walbrook, Akim Tamiroff

Jules Verne's dramatic and stirring tale of Russia in 1870, comes vividly to life in this RKO feature production. Anton Walbrook portrays the gallant young captain of the Czar's guard, entrusted with the dangerous mission of carrying an important dispatch on army maneuvers through territory held by treacherous Tartar forces.

**TOM BROWN'S SCHOOL DAYS**

Cedric Hardwicke, Freddie Bartholomew

Faithful and absorbing translation of the famous classic picturing school life at Rugby in the 19th Century, spotlighting the career of the renowned Dr. Arnold, headmaster at Rugby, who introduced needed reforms, replacing rowdiness with the honor system. Authentic in atmosphere, finely acted and directed, highly entertaining.

**BEYOND TOMORROW**

Charles Winninger, C. Aubrey Smith, Harry Carey

A thoroughly delightful film, with a warmly human story about three wealthy, lonely bachelors who find great happiness in befriending two fine youngsters—a boy and a girl. After their death in an airplane crash, the spirits of the men return to guide and influence the lives of the two. Rich in character and entertainment values.

**Our 1946 Catalog Supplement listing scores of new school features and short subjects will be mailed free for the asking.**

# HANDICRAFT *Teaching Films*

Produced in Cooperation with the Universal School of Handicrafts  
Endorsed by Editor Pedro J. Lemos of School Arts Magazine

## HOW-TO-DO-IT MOVIES

A series of 9 One-Reel Films suitable for art and trade schools, elementary, junior and high schools, rehabilitation and recreation centers, hospitals, clubs and general program use.

### EVALUATION BY THE TEACHERS REVIEW COMMITTEE

"This series of silent films presents sufficiently detailed and simplified explanations of the techniques of the various crafts depicted. Used individually, the films should be of considerable value in developing interest in the handicraft arts depicted, and in furnishing directions for the pupil's work which, when supplemented by additional supervision and instruction by the teacher, should be of definite assistance in teaching the techniques involved. Two or more showings of each film probably will be found desirable. Suitable for use from elementary through high school levels."

### COMMITTEE ON CLASSROOM FILMS OF DEPARTMENT OF SECONDARY TEACHERS OF THE N. E. A.

Rating: "EXCELLENT." The review in part follows: "Our special committee on vocational high-school material previewed these films and rated the first six which were screened as excellent. These films interpret the new philosophy of industrial arts classes of the junior high school in contrast to the philosophy of prevocational training. Each film is a separate entity and develops its theme quite interestingly. The methods of instruction comply with current pedagogical principles. The producers are to be complimented on this outstanding contribution to the field of industrial arts — a field quite neglected in the past. These films are ideal and are recommended for activity classes, all types of Hobby Clubs, industrial arts shops, adult hobby groups, camps and other similar agencies."

## BRANDON FILMS

1600 BROADWAY, NEW YORK 19, N. Y.

# New Quick Easy Threading System

ONE OF THE IMPORTANT BASIC IMPROVEMENTS IN THE NEW

*Amprosound  
Premier "10"*  
16 MM SOUND PROJECTOR

## Saves Time Eliminates Film Damage Due to Faulty Threading

Here is a welcome innovation for both expert and amateur. With this new improved design of film threading mechanism, both film sprockets open for threading and close automatically as the gate opens and closes. Either sprocket may also be opened individually to adjust film loops if necessary without opening gate. This new feature not only saves time but eliminates possibility of damaging valuable film because of improper threading.

Owing to the still urgent demand for Ampro projectors by the U. S. armed services—all Ampro civilian production for the balance of the year will be allocated to the accumulated orders now on hand. Because of this unusual demand, all new orders are being booked for early 1946 delivery and will be filled in the order in which they were received. If you wish Ampro quality and features—and they are well worth waiting for—we urge you to place your orders now so that delivery can be made at the earliest possible time. Your patience will be rewarded by the superb quality and features of the new Ampro projectors.

Ampro 8 mm.  
Silent Projector

**AMPRO**

The Army-Navy "E" has been awarded to Ampro for excellence in the production of 16 mm. motion picture projectors.

## *Diversitorials*

---

**T**HIS issue of *EDUCATIONAL SCREEN* should stimulate discussion on a number of problems which are of increasing importance to visual education in these postwar days. More information and less prejudice will aid the consideration of these problems.

### *Films and Teaching Functions*

**T**HE kinds of classroom situations for which films should be prepared are brilliantly analyzed in Dr. Mark May's article in this issue. Extensive research of this sort on pedagogical problems at the leading educational institutions of the country (Yale, Harvard, Columbia, Chicago, Stanford, and many others) is needed to throw more and more light on classroom problems and give all educational film producers of the future the guidance which they seek in making films. Only when schools know their needs can they expect producers to take seriously their urgent pleas for certain kinds of films.

### *Sponsored Pictures*

**M**R. Francisco's able presentation of the case for the sponsored picture describes clearly some of the problems which their producers face, and why they solve them as they do. L. C. Larson outlines some of their deficiencies in the report of the meeting of Educational Film Producers with textbook publishers. (See p. 349.)

So long as the great gaps in film materials for classroom needs exist, it is hoped that more producers will follow the lines developed in this article. Schools will continue to grumble about half-hearted efforts. We predict that many firms will volunteer in the near future to produce content films for science, social science and technology that will be directly useful in classroom situations.

The usefulness, rather than the auspices, should determine the attitude of the school world toward all educational films. Classroom teachers and classroom results will, and should, render the final judgment on these offerings. The importance of educating teachers to critical standards in making such evaluations is apparent. *EDUCATIONAL SCREEN* hopes that it may soon revive its national cooperative evaluation service which was interrupted by the war. Only when classroom teachers score sponsored films as favorably as they did "Alaska's Silver Millions" under this objective scoring plan, will it be apparent that industrial producers have proceeded on sound educational lines.

### *Textbook Publishers*

**T**HE organizations that produce textbooks for the country's classrooms are beginning to evidence more interest in visual materials. They have been surprisingly slow about doing so, for it has long been apparent that they would eventually do this.

Publishers are in close touch with classroom needs.

The first stages in the production of visual aids are identical for textbook and visuals. The textbook should be assigned its place, and the slide and the movie their special roles in the teaching materials unit developed for the teachers' use. Reading material and pictorial treatment should be carefully correlated each with the other, and with the workbook and text material for all teaching units.

There are gratifying signs that textbook publishers are at last aware of these obvious truths and beginning to do something which may produce the classroom materials which are so badly needed. The conference of textbook publishers and educational film producers reported by John Flory on page 349 has not, as yet, produced the desired formal cooperation between the two groups, but subsequent developments indicate that both groups are stirring themselves along these sound lines.

Six major textbook publishers—Houghton Mifflin, MacMillan, Harcourt Brace, Scott Foresman, Henry Holt and Harpers—have joined together to make a survey of the need for visual materials and the publisher's role in producing and distributing them. D. C. Heath & Company has announced a close cooperation and collaboration with Encyclopaedia Britannica. The announcement indicates the belief of both organizations that the most effective development of teaching materials can be obtained by "collaboration between textbook publishers and classroom film producers, each carrying out his special function with due regard to the problems and functions of the other." The announcement goes on to outline at some length the interchange of information and experience which will be encouraged in the layout and design of textbooks, the development of illustrative materials to be jointly created for texts or films, and collaboration in studies of teaching techniques pointing to an optimum integration of text and audio-visual materials. Several publishers are reputed to have ambitious film production plans. Several specialized film producers have announced plans to produce correlated school materials—Young America, Coronet, and Herb Lamb Productions, to mention only a few. School administrators and teachers await eagerly for the products of such collaboration and an opportunity to test and evaluate the final results. Once again they are hopeful that their greatest needs may be answered first.

### *Much Ado About Little*

**T**HE Surplus Property Board has finally moved to allay the hopes aroused by the fantastic figures of surplus visual equipment and materials that schools expect from military sources. According to this report "only a small percentage of the equipments produced for the armed services is ever expected to become surplus. Many have been lost in action, captured by the enemy, damaged in use and transit. Similarly many of the prints of war subjects have been worn

out in showings to G. I.'s all over the world, others have been damaged by enemy action, unfavorable weather conditions and similar factors. Both projectors and film prints will be declared surplus in small, continuous dribbles, rather than in large lots and as far as possible to schools unable to afford them at retail prices, but having facilities and personnel to use them effectively. No distribution of movie equipment to educational institutions, whose financial resources would permit them to buy from regular suppliers, is contemplated."

All of which will sound familiar to EDUCATIONAL SCREEN readers.

### Cover Picture

The painting *Autumn Wind*, by Russell Cowles, is the second of our cover pictures selected from the Encyclopaedia Britannica Collection of Contemporary American Painting. It is one of the artist's favorite works in which "while showing the physical world of our senses to be a glorious thing, as indeed it is," he tried "to suggest something more that cannot be stated directly, of which the wind may perhaps be a symbol."

Russell Cowles was born at Algona, Iowa, in 1887. After studying art in New York, he won the Prix de Rome and the Fellowship of the American Academy of Rome, remaining five years in Italy. Later, he spent a year in China, Japan, Egypt and Greece. When he returned to America, he settled in Santa Fe where he began to have an increasingly clear idea of what he wanted his painting to be. In her biographical note on him, Mrs. Guy Pagano states: "Cowles is that rare exception to the rule—an artist who waited for his art to reach maturity before permitting it to be widely shown."

### Government Film Unit

A MEETING of the National OWI 16mm. Advisory Committee was called September 10 in Washington by Taylor Mills, director of the now defunct motion picture bureau of the domestic branch of the OWI, to discuss further the plan of setting up a central agency, to handle the distribution of all Government pictures, and thus retain the efficient system which OWI has built up for its war pictures. Certain facilities of the Non-Theatrical Division of the Bureau of Motion Pictures, including needed personnel, films, offices, and shipping room equipment, have been transferred on an interim basis through December 31, 1945, to Treasury Department for use during the Victory Loan.

The 16mm. Advisory Committee, organized as the National 16mm. War Film Committee in Chicago on July 27, 1943, has served in an independent capacity as the wartime advisory committee to the Government of the United States since November 16, 1943. It is composed of the heads of the following national organizations: National University Extension Association, Department of Visual Instruction of the N. E. A., Educational Film Library Association, Audio-Visual Aids Committee of the American Library Association, Allied

Non-Theatrical Film Association, National Association of Visual Education Dealers, and Visual Equipment Manufacturers' Council.

In the opinion of this group, the Library of Congress is the logical agency to provide a service on motion pictures similar to the centralized service already provided for printed materials and still pictures. They, therefore, recommend that the Library of Congress establish the following government film facilities and services as a supplement to the administrative or specialized services of the various agencies of origin:

1. Set up and maintain a film information service, including the following: (a) A listing of film sources and conditions under which films may be obtained; (b) A periodical release of a catalog, and/or supplements thereto, of all films under custody of government agencies; (c) Gathering and disseminating information on films in production and new releases.

2. Set up and coordinate arrangements for the sale to the public of positive prints of complete subjects and footage of films available for public use.

3. Provide facilities for general distribution through qualified film libraries of available films as a service to the general public.

4. To eliminate possible and potential duplication, provide for government agencies only a monthly list of all government films in production, with synopses, from the planning through the distribution stages.

5. To exchange information, to strengthen cooperation and to improve the technical quality of government film productions:

- (a.) Set up and arrange regular meetings of government film production, distribution and utilization advisory committees composed of representatives with alternates from each of the government agencies interested in film production, distribution and utilization, to be designated by the heads of the respective agencies;

- (b.) Set up a technical consultation service on film production, distribution and utilization.

6. Provide in Washington area screening room facilities and for government agencies, film loan facilities.

7. Maintain close contact with distributors and users of government films throughout the country in order to better serve the general public.

The recommendations have been approved by all of the above, after being submitted for the Committee by L. C. Larson, Indiana University, Bloomington; F. C. Lowry, University of Tennessee, Knoxville; and Mrs. Aubry Lee Graham, Public Library, Washington, D. C.

The following authorized representatives of the co-operating organizations participated in the final formulation of the above proposed plan: Dr. George F. Zook, President, and Miss Helen Hardt Seaton, Consultant in Audio-Visual Education, American Council on Education; Mr. Vernon Dameron, Director, Audio-Visual Instruction Services, National Education Association; Mrs. Louis Renfrow, General Federation of Women's Clubs; Dr. Edgar Dale, Chairman of Motion Picture Committee, and Walter S. Bell, National Congress of Parents and Teachers; and John R. Berry, American Legion.

Among the agencies whose films would be distributed by the proposed center are the Bureau of Mines, Department of Agriculture, Office of Education and Public Health Service. Also interested in the project are the Treasury and State Departments.

# Films and Teaching Functions

*Practical suggestions for producers asking "what kinds of films do schools need?"*

MARK A. MAY, Director\*

Institute of Human Relations  
Yale University, New Haven, Conn.

A WELL-KNOWN textbook division of the functions of teaching is: (1) motivating and inspiring the pupils, (2) instructing or imparting knowledge to them, (3) guiding them in the achievement of skills. This division is based on the common tripartite analysis of attitudes, knowledge, and skill. It is understood, of course, that the three are interwoven into organized wholes. An individual's education is not a mere arithmetical or algebraic sum of its component parts. Nevertheless some educators like to stress the integrative function by adding a fourth division which has been variously named but perhaps best described as "appreciation." The task of the teacher extends beyond motivating, instructing, and guiding to include aiding the pupil in developing a sense of values or achieving a fair idea of the relative worth of life's varied activities and opportunities.

In applying this fourfold division to the teaching of a subject such as arithmetic it may be said that the teacher's task is first, to create an interest in the subject and, if possible, a liking for it or at least a favorable attitude toward it; second, to explain its principles and to aid the pupils in understanding its processes and problems; third, to guide, drill, and practice so that the pupil will acquire the necessary skills in arithmetical operations; fourth, to help the pupil develop a sense of the worth or importance of arithmetic in relation to other values. These functions are carried along simultaneously and are woven together into a teaching method.

In the production and use of teaching films it is well to keep in mind these four teaching functions. Some films may serve only one of them; others may serve two or more. In any case the usefulness of the film in the classroom may be judged on the basis of how well it serves one or more of these functions. As the volume of production of classroom films increases more films will appear which are specialized in respect to these functions.

When applied to the production of films each of the four functions may again be subdivided into more special types of films each of which is designed to have a particular educational effect or to aid in a particular teaching problem. The following is a tentative outline of the types and subtypes of films needed in the future to aid in these various teaching functions.

\*Mr. May is also Chairman of the Commission on Motion Pictures in Education of the American Council on Education.

**I. The Motivational Function.**<sup>1</sup> The motivational film should be used to arouse interest, to initiate activity, to create a desire, to disturb the complacency and indifference of the learner. Three subtypes may be recognized.

1. *The incentive film* should be designed to create a desire or a felt need for engaging in some activity, learning a new skill, breaking a bad habit, etc. An example is the film "Invasion" produced by Walt Disney and designed to motivate people in Latin-American countries to submit to vaccination against smallpox.

2. *The provocative film.* A concrete problem, usually a moral or social issue, is presented in a challenging manner without giving an answer. The film ends with "What do you think?" Its purpose is to initiate a lively discussion.

3. *Indoctrination or propaganda* films are designed to change attitudes or to create new attitudes. An example is a film called "Work Pays America" produced by the U. S. Government before the war to change attitudes toward the WPA.

**II. The Informative Function.** The traditional conception of teaching is that of passing out information or expanding the child's fund of knowledge. While this conception has been greatly modified in recent times and replaced with the notion of enriching experience or "reconstruction of experience" or that of acquiring wisdom along with knowledge, yet the informative function remains one of the main tasks of teaching. It is the function by which the child's cultural heritage is made available to him and by which he can profit best by the experiences of others. The subtypes of informative films are numerous. Four will be mentioned briefly here.

1. *Information about our environment.* In school this information is found mainly in science courses. The physical environment is described in geography and geology, physics and chemistry, and other sciences of inanimate things. The biology sciences deal mainly with the animate aspects of the environment—particularly, plants and animals. The social sciences give information on social environments. The motion pictures used in teaching these sciences are designed mainly to show how things "look, work, and happen."<sup>2</sup> They also show how men have utilized their environment to meet their needs, how they have changed it into shapes more satisfying to themselves. Buildings, bridges, roads, ships, automobiles, air-

<sup>1</sup>Discussions of the motivational function are found in Hoban, Charles F. *Focus on Learning*. Washington: American Council on Education, 1942, and in Hamilton, John L. "The Factor of Motivation in Learning as Applied to the Meaning of Teaching Films," *J. Ed. Psychol.*, 1944, 35, 423-431.

<sup>2</sup>Hoban, Charles F. *Op. Cit.*, p. 28.

planes, power plants, etc. are all parts of the physical environment with which the child must learn to interact. His successes and failures in making satisfactory adjustments to his environment or in further improving it for human satisfaction will depend in no small part on how well he understands how it looks, how it works, and what happens when you do things to it. The movies help him to interiorize his environment—to label it—and to solve many of his problems in advance by proper manipulation of the labels.

2. *Information about how others have succeeded or failed in their efforts to cope with their environments.* This type of information is taught in history and the social studies. Some of it may be included in geography and in literature. Films that serve this educational function show people faced with problems and how they solved them or failed to solve them. Such films not only show sections of the environment and how they work but also show people interacting with those sections in efforts to meet needs or satisfy wants. A film on yellow fever, for example, shows how people suffered and died from the disease until they discovered the one crucial aspect of the environment to be controlled—the mosquito. An ideal pattern for such a film would be to show first the *need* or *want*; second, the potentialities of the environment for meeting the need; third, how the environment was manipulated or how people changed in order to meet the need. The educational importance of such films lies precisely in the fact that most modern problems are old problems—recurring problems—with which men have had to cope generation after generation. A vivid record of past successes and failures saves modern men much labor and suffering if they will only read these records and profit by them. The educational value of such films depends on the degree to which they succeed in presenting past experiences in ways that make it most available and useful as guides to the solution of similar modern problems.

3. *Information about modern ways of solving some problems.* Such information is usually found in high school courses in modern living. In the lower grades are social studies courses that deal with such topics as “How city people get their food,” “How we get out fuel,” “How cloth is made,” and “The sources of cotton and wool,” etc. These are lessons on how society is organized to meet the daily needs of its members. Informative films of this variety are numerous. They show the complex processes of food growing, processing, shipping and marketing; the same for coal, oil, clothing, and other articles in daily use. What the child learns is how group problems are solved by the organizational and cooperative efforts of many people.

4. *Information about unsolved problems and suggested solutions.* One is the problem of crime and delinquency; another housing; another illiteracy and ignorance; and so on. Courses in modern problems or problems of democracy take up these topics for discussion. The films should show essential facts

which are data for solution. Also they might show the possible consequences of alternative plans of solution. Just now the number one problem is permanent world peace.

**III. The Demonstrative Function.** The teaching methods best suited to the development of skills are coaching and demonstration. Skills are acquired only by practice of the correct sequence of acts. The value of a demonstration is that it sets a model to be imitated. It shows how the skill should be performed. The type of demonstration depends on the nature of the skill. Skills commonly taught in schools may be put into three main classes with several sub-divisions under each.

1. *Manual skills.* Here we include (1) athletic abilities, (2) manual training (now called “industrial arts”), (3) certain manual vocational skills—painting, auto mechanics, etc., (4) parts of home economics—including skills in sewing, cooking, etc., (5) handwriting and drawing, (6) playing a musical instrument, (7) certain practical skills of everyday life, i. e., first aid.

2. *Social skills.* Here we encounter an almost endless variety of habits—personal appearance, dress, cleanliness, good manners, etiquette, conversation, courtesies, correspondence, social conventions and rituals, etc. All may be summed up in the term “skilful social interaction.”

3. *Mental skills.* A mental skill is illustrated by *mental arithmetic*. Numbers are manipulated in one’s head according to rules. The numbers may be represented in the mind by visual images of how the problem looks at each step if done on paper, or the representation may be imageless and the operation carried on by inner speech or it may be done in other ways. But a mental skill is the ability to manipulate symbols, usually conventional symbols—words and numbers—according to rules. Such skill is acquired (1) by learning the meanings of the symbols, i. e., what they represent or could represent, (2) by learning the rules by which they are manipulated to get a desired result.

The mental skills taught in the elementary schools are the familiar three R’s—reading, writing (including spelling) and arithmetic. In the upper grades schools attempt to bring these skills to higher levels by courses in mathematics, English composition and literature, foreign languages, history. The ultimate goal is the improvement of the ability to think and reason. Mental skills are hard to achieve for several reasons. One is that it is difficult to give demonstrations of correct procedures. The teacher cannot say to the pupil “now watch me add in my head.” Mental responses are invisible. The teacher has no sure way of knowing when the mind of the pupil is trying. Second, wrong responses are hard to correct. I know of no teaching films on how to perform mental feats. We need films on “how-to-do-it-in-your-head.”

**IV. The Appreciative Functions.** Since this is a general integrative function it is assumed that it will appear in each of the above types of films. There are,

(Concluded on page 345)

# Audio-Visual Education in the Post War Period

(Concluded)

ALVIN B. ROBERTS, Principal  
Haw Creek Township High School, Gilson, Illinois

UNDER instruction (Chart VIII) the large majority of teachers are attempting to correlate the film with a specific topic. However, many reported the film not on hand when needed. This does not mean the film was not delivered when scheduled, but the schedule was prepared so far in advance that exact timing is difficult. If one waits until the film is needed, then it is probably booked by some other school.

More of the films are being shown to a given class than was indicated on the Illinois study of 1939, but the greater number still show the film in a special room. This will probably be corrected when more projectors are available. The fact that teachers are showing the

*This Audio-Visual Survey of the nation covered Illinois schools in the May and June issues. This issue, with September, presents results from the other forty-seven States.*

films to the same class more than once, indicates some progress in teaching with films. Since the large majority of schools, however, are depending on rental libraries or other centralized sources for their films, the film is not in possession of the teacher long enough for her to use it as she would like for repeat showings.

Over 60% feel that short strips of 35mm. film presenting 20 to 50 or more scenes from the film would be helpful in preparing the student to view the film, or in rounding out the follow up work.

Of the 525 schools reporting, 386 feel their teachers are not getting the maximum value from the films. In way of explanation 37 report, "the teachers just show the films"; 16 report, "the teachers let the director show the film and lead the discussions"; 29 say, "their teachers are not interested"; while 14 indicate, "their teachers do not understand the function of the film as a teaching aid."

Do the teachers use the plans sent out with the film? Approximately 50% do. However, on Chart XII only 17 central libraries report that teachers are using these materials, while 27 say they are not.

Only 46% of the teachers are previewing films before using them. However, many qualified their answers by saying, that more teachers would do so if projectors were available and more convenient.

Judging from the preference as indicated on Chart VIII the sound film ranks first at all grade levels. In schools that are using both silent and sound, more teachers prefer the silent film for use in the first four grades. This preference is also indicated on Chart XII. Three, of the seven libraries reporting, stated there is a definite need for good silent films on the lower grade level.

About 88% of the schools report that the newer industrial films are free from objectionable advertising. This has long been a bone of contention, and it is encouraging to note the long list of industrial films given by the schools as suitable for classroom instruction.

Before installing a centralized sound system the school authorities should consider in detail just how it is to be used. Twenty-three schools in group A, twenty in group B, and one in group C, (Chart IX) do not feel they use the system enough to justify the expense.

The radio is being used rather extensively for classroom instruction. Schools that own machines for making records and recording radio programs feel that they can make better use of radio programs, since

for use in department								
Are records and transcriptions used as a part of class work?	143	28	67	136	7	21	217	185
Do you feel transcriptions will lead to wider use of radio broadcasts?	255	15	125	21	27	5	407	41
If transcriptions or records are made available, will schools be able to buy?	128	26	63	39	11	7	202	72
Do children make use of "simulated" broadcasting?	148	76	90	76	13	11	251	163
Are children taught to evaluate radio programs?	137	149	106	119	10	22	253	290
Are children asked to listen to "out of school hour" programs?	247	38	197	21	26	9	470	68
Do teachers prepare students to listen to special programs?	193	81	131	71	17	18	341	170

they can be presented at the time needed, and as many times as wanted. This is further substantiated by the fact that 91% believe that transcriptions will lead to a wider use of radio broadcasts. However, Chart XII shows seven libraries report a decrease in the circulation of records and transcriptions. This decrease is partially due to the fact that records may be ruined by too heavy a tone arm or a faulty needle. Also records or transcriptions are rather heavy, bulky and easily broken in transportation.

Teacher training is still the major factor that will determine the expansion of the audio-visual program in our schools of tomorrow. Of these reporting (Chart X), 94% feel that the teachers' lack of training hinders the development of their program.

How shall this training be provided? The preference is as follows: First choice, 62% favor the short informal course conducted in their own school. This type of course is best suited for training of teachers in service.

Second choice, 26% favor the formal extension course. An audio-visual instruction course can be handled exceptionally well by extension. It provides the teacher with ample opportunity to experiment with these aids in her own class room.

Third choice, 12% favor the formal course as offered by universities or teacher training institutions.

The following excerpt emphasizes the need for teacher training: "Under the head of Teacher Training I would like to comment that I have seen or heard of very little being done. At the University of California this summer I gave a series of lectures on the subject and found that out of over a hundred teachers from all parts of the state, there were only a few who had any ideas of how to handle a Visual Program." (Francis M. McKinney, Placer County, Auburn, California).

How adequately is this demand being met? On Chart XII, 28 report formal courses being offered by universities or colleges. Nine report audio-visual workshop courses, fourteen extension courses, and only two report non-credit, short informal courses. Therefore, one may state that what is being done varies inversely with the demand. In view of these facts one may ask, "Is teacher training destined to remain an insurmountable obstacle in the path of future development of the audio-visual program?"

From what source or sources will the schools of tomorrow get their audio-visual materials? As nearly as one can interpret Chart XI, probably 40% of the schools in groups A and B will own at least the nucleus of their own library, rounding out their program with films from the larger ones. Still a larger number of schools in Group A and B might meet their needs more adequately, and also help meet the needs of some of the smaller schools by serving as a center of a cooperative library servicing a restricted number

Trends

Questions		Group A	Group B	Group C	Total
Do you believe that, depending upon the large rental libraries for material, you can develop an audio-visual program that will meet needs of your school?	Yes	148	87	13	248
	No	142	132	19	293
Do you believe small libraries servicing from eight to fifteen schools would more adequately meet your needs?	Yes	146	153	16	315
	No	116	60	16	192
Has anything been done in your section of the state in setting up small libraries?	Yes	144	81	9	234
	No	121	119	26	266
Do you expect to build up a library of films in your school?	Yes	131	96	12	239
	No	144	115	20	279

of schools. The following may serve as a pattern. "In 1938 the Nassau Instructional Film Center was organized to serve the schools of Nassau County. This is a non-profit cooperative venture. At the present time we have approximately 175 films and about 80,000 standard slides which were formerly distributed by the State Department. As far as I know this was one of the first, if not the first, cooperative library in the United States working out of a public school for service to other public schools in other school systems. The small library can not meet the entire needs of member schools but it can help them and give them more for their money than the larger commercial libraries." (E. C. Moore, Hempstead High School, Hempstead, N. Y.) Most of the schools in group C will have to depend on small cooperative or upon large rental libraries.

Regarding still picture projection, the schools reporting are contemplating the purchase of 25 standard lantern slide projectors (Chart IV). Eight central libraries (Chart XII) report a decrease in demand for these slides. Further study of Chart XII shows an increasing demand for 16mm. sound films, 2x2 slides, and 35mm. film strip. Seventeen libraries are planning to add 2x2 slides and 35mm. film strip.

For what type of films is there the greatest demand? Several references have already been made to Chart XII, hence, the items referred to in preceding paragraphs will not be summarized in this one. In regard to the types of films that are now in demand, 40 report in favor of the classroom film. The documentary film holds second place, 16 reporting a demand for this type of film. The industrial and the OWI films hold third and fourth place respectively.

Two questions that are frequently asked are. "In what subject fields and in what areas in those specific subject fields are class room films needed?" and "Will these films be produced in black and white or in color?"

The following quotations may partially answer those questions:

"I should like to observe that there is at present a dearth of material produced for specific educational purposes at the elementary and intermediate level. Specifically, I feel that there should be more health films designed for use of this age level. If it were possible for some producer to develop a series of films which

would concern itself with the teaching of the fundamental processes of arithmetic, I feel that it would have an immediate and widespread acceptance" . . . "In the field of literature, there is a crying need for film treatment of some of the more widely used classics, such as 'Ivanhoe', 'Tale of Two Cities', etc. In the foreign languages, there is a need for sound films utilizing as their subject matter some of the basic short stories used as heading material in these classes. The vocabulary of the dialogue should be well suited to the level of those classes in which the stories are usually studied. Care should also be taken that the dialogue does not proceed at too rapid a pace for these students." . . . "There are, of course, some materials available treating the classics

**CHART XII**  
Distribution of Audio-Visual Materials  
(as reported by visual centers and film libraries)

**Part A**

1—HOW FINANCED— Apparently most of these centers do not have a definite rental fee as a method of financing since only 10 report that at least 60% of their funds come from rental fees.

2—SCHOOLS SERVED— Most of the distributing centers are serving from 200 to 500 schools or more. Only three report serving fewer than 150 schools while two reported serving more than 1,000 and one serving more than 20.

**Part B**

MATERIALS CIRCULATED	35 mm. sl.	35 mm. sd.	16 mm. sl.	16 mm. sd.	8 mm. mm.	3/4 x 4	2 x 2	35mm. Film Strips	Stereo-graph	Records	Trans-crip-tions

Grades 9, 10, and 11			4	35		1	1	1			

**Part C**

Concerning the use of the 16mm. motion picture film for which of the following do you find the greatest demand?

- 1—The regular classroom teaching film..... 40
- 2—The industrial film..... 11
- 3—The O. W. I. film..... 5
- 4—Background or Documentary film..... 16

**Part D**

As a general rule do you find that teachers who are now using materials selected by your libraries make use of lesson plans, study guides, or other materials furnished to accompany the aid? YES 17; NO 27.

**Part E**

Centers reporting activity in their areas to promote further use of audio-visual aids, such as:

- 1—Formal courses in teacher colleges or universities 28
- 2—Work shop courses carrying college credit..... 9
- 3—Extension courses carrying college credit..... 14
- 4—Non-credit work shop courses..... 2
- 5—Preparation of hand books suggesting how to use audio-visual materials..... 13

both in English and in the foreign language field; but for the most part, they are feature length pictures renting at rates which are entirely out of the range of the typical school. I find that even university classes make only limited use of such materials when they must pay a rental of from \$20.00 to \$40.00 a day for the use of the films, unless they can rent an auditorium for the shows and charge the pupils admission." . . . "With respect to the use of black and white or color, it would seem to me desirable to operate upon the basic premise that color be used only where color is educationally significant. In the instance of films in the field of history or literature, color may frequently be of general educational significance as a means of authoritatively portraying the costumes, furniture, architecture, and other features of the period under consideration." (Neil F. Garvey, Visual Aids Service, University of Illinois, Champaign, Ill.)

In regard to post war developments 85% of the schools now conducting an audio-visual program are anticipating considerable expansion when materials are available. Of those not now carrying on a program, 67% expect to start when the materials are available.

Teacher training has been and still is the major problem that must be worked out before any great progress can be made. Several universities and colleges have been or are offering formal courses. However, some have dropped this work because of decreased enrollments and other conditions brought about by the war. A few are offering work shop or extension courses. Only a small percentage of the total number of teachers enroll for such work. Hence, this type of training cannot meet the demand.

The University of Chicago has established an elaborate audio-visual center. The functions of the Center for the Study of Audio-Visual Instructional materials as at present contemplated will primarily be:

1. To provide persons interested in undertaking research investigations of the audio-visual media with facilities and guidance.
2. To enable teachers to study critically a large amount of audio-visual instructional materials in order to reach better judgments regarding the use of such materials in classroom situations.
3. To provide consultative service regarding audio-visual instructional materials to school systems and individuals.
4. To make possible, in collaboration with the Department of Education and the University of Chicago Laboratory School, the demonstration of enlightened uses of audio-visual materials in teacher training and in elementary and secondary school situations.

Cornell University at Ithaca, New York has developed a very excellent photographic department. This department should be of considerable value to instructors who are interested in the preparation of school made films. Other universities that have established teaching aid departments are the University of Texas (Director, Dr. Holland) and the Northwestern University (Director, Dr. Joe Park).

The work offered by these universities may well serve as a pattern for other universities, teacher training institutions, and State Departments. The present demand, however, seems to be for an extensive inservice training program supplemented by the formal course.

The Radio Corporation of America is at the present

time preparing a brochure entitled, "A Primer of 16mm. Pictures in the Classroom." This brochure is prepared especially for the classroom teacher. Its purpose is to acquaint the teacher with the function of the motion picture film and to give detailed procedures in the use of the film in the classroom. Producers of audio-visual materials are considering various means of assisting with the teacher training program.

A few schools are conducting an inservice training program. The one prepared by Lorin Ashbacher, Director, Department of Visual Education, Bloomington, Indiana, is the most complete of any that has come to the attention of the author. The teachers are encouraged to attend and those attending a certain number of the twenty sessions are given a certificate.

Briefly the course is organized as follows: four sessions on motion picture films, including one on school made films; nine tours to points of local interest including one trip to the audio-visual Department of the University; one session each on standard slides and how to make them, Kodachrome slides (2x2), flat pictures and opaque materials, models, audio aids, and film strips; one social hour and graduation.

Mr. Kingsley Trenholme, Director of Visual Aids, Portland, Oregon, has also developed a very excellent similar inservice training program. If more schools were to adopt an inservice training program such as the ones mentioned above, teacher training would soon cease to be a problem of major importance.

In view of these and other developments it seems the producers of audio-visual materials and school people are more cognizant of each other's problems, and more cooperation is assured. What remains to be done?

1.—Universities or colleges housing film libraries can provide short courses for training audio-visual directors. It would seem there is a definite trend in that direction. The service offered by the University of Chicago has already been mentioned. Short courses for the training of directors were offered during the summer by Northwestern University, Leland Stanford University, and Denver University.

2.—The film libraries can develop a form or chart that will not only simplify the work of the director and the classroom teacher in selecting audio-visual materials, but insure a better balanced program as well.

3.—There is a demand for short strips of 35mm. films (10 to 50 scenes) to accompany the motion picture film. These strip films can be used for preparation or follow up work.

4.—Likewise, more attention should be given to the organization of county libraries under the supervision of the county superintendent of schools. These libraries to loan projectors as well as films. Libraries of this sort will be conducted on the circuit plan. There is enough uniformity of instruction in the elementary schools of each county to enable the county superintendent to send out several films that will correlate with the units being studied; thus overcoming the chief criticism of the circuit plan. Only through some such plan can audio-visual instruction be made available to many of the smaller school systems. The few returns

in group C, (Chart I) substantiate this need. "In Dade County we have a Cooperative School Library. Schools pay a membership fee of \$25.00 and get unlimited bookings from the library. In four years of operation we have a library of 200 titles. The school board appropriation matches the schools and it is managed by the officers elected by the school representatives. Have one paid person (school board pay this) who handles the operation of library." (Miss Kathryn L. Carlin, Miami Beach Public Schools, Miami Beach, Florida.)

5.—It will be a long time before schools can own all the films needed for an adequate program. Can industry help provide the films needed by producing more films that will fit in with given units of instruction and yet serve the purposes of the industry producing it?

6.—Schools should provide adequate facilities for their instructors to preview films. Such facilities will lead to better classroom instruction. Can not new films be sent to schools having such facilities in much the same manner that books are now sent out on approval? This will insure a more speedy distribution of new films.

7.—Since several libraries report considerable damage to records by too heavy a tone arm, or faulty needles, can not something other than records be used? Metal tape, and wire are being used in play back machines. If either can be used for permanent recording it will eliminate the types of damage mentioned above, will be lighter, less bulky and not breakable.

8.—Many schools express a belief that F. M. broadcasting will enable them to make better use of radio. Few commented on the type of program, but many expressed a desire to have the program better correlated with the curriculum.

9.—What may the schools expect in the field of television? Certainly a definite technique of teaching will be needed. One can record the broadcast and reproduce it as often as necessary. Likewise, one may show the film as many times as desired. The television scene can be viewed once and once only; hence, definite and detailed plans and procedures will be needed.

10.—Producers of audio-visual materials can improve the administration of the audio-visual program, and increase the effectiveness of instruction through the preparation of simplified hand books. These books should be stripped of all theory. They should be detailed, simple, brief, but complete and based upon successful procedures and techniques.

11.—Information should be made available on the organization and administration of small cooperative libraries. These libraries should not include more schools than can be adequately served by the number of films purchased. Location and transportation facilities will be a determining factor. One will have to study the curriculum of each school, and then put the several curriculums together as a whole before one can determine the number of schools that can be adequately served with a given number of films with a given number of prints of each.

12.—Now that the public is aware of, and interested in audio-visual materials, why not keep this interest growing through the preparation of films that will

show the effectiveness of these materials as teaching aids? Scenes from the training program of the Armed Forces, the industrial training program, and from schools should provide an abundance of materials. Why not popularize this movement still further through advertising in magazines that go into the home, and by showing how valuable these aids can be when used as a part of the regular program of instruction.

13.—State Departments of Education should recognize and be prepared to assist the schools with the problems that these devices are bringing into the educational field. The chief function of such a department should be to provide the necessary educational leadership that is so needed in the audio-visual field today.

In conclusion, the public is ready and willing to accept new techniques and procedures in the field of instruction. No aids have ever been developed that can equal those audio-visual aids now available to the schools. Can the producers of these materials and the school people come together, exchange ideas, discuss their problems, and as a result give to the boys and girls of America the broadest, the richest, and the most valuable educational program ever envisioned by the most enthusiastic pioneers in the audio-visual field?

There is the challenge, LET'S MEET IT.

### **Films and Teaching Functions**

(Concluded from page 340)

however, certain areas in the school curriculum in which the teaching problem is mainly that of cultivating taste and appreciation. We refer to literature, art, and music. The type of films used in connection with these subjects depends, of course, on the purposes for which they are taught. If the purpose is to develop skills, then demonstrational films are needed. But if the purpose is to develop tastes and appreciations, then films designed to show why great literature, art, and music provide enduring satisfactions, are needed. Classical music is classical for the simple reason that it is the type of music people have enjoyed generation after generation. Popular jazz music might very well turn out to be classical several generations hence but only in the event that future generations find it satisfying.

The increasing need for a wider variety of teaching films serving different educational functions arises primarily from the fact that most teachers are weak in some one of the teaching functions. The all-round teacher who excels in all of the teaching functions is a rare individual. Some teachers are good at motivating and inspiring pupils but are weak in the impartation of knowledge or in the demonstration of skills. Others may command a mastery of their subjects but lack the qualities of inspiration. Each teacher knows or should know his limitations. These limitations may be supplemented by the selection of the types of pictures that fulfill the functions in which the teacher is weak. Thus the teacher who finds difficulty in motivating his pupils may desire to use mainly motivational films. Therefore the goal of production of teaching films should be an adequate supply of films for all teaching needs.

## Designing the Sponsored Sound Motion Picture

*A producer of industrial films ably presents the case for this type of film product for educational purposes.*

**A**TTITUDES, more than projection problems, have held the schools back in making use of the vast fund of educational subject matter which industry might put at their disposal by way of the commercially sponsored sound motion picture: attitudes held by both educators and industry.

Teachers are extremely wary of the possibility of the commercially sponsored film's indoctrinating their students in behalf of special interests at the sacrifice of complete objectivity. Industry, on the other hand, is indifferent to the need of teachers for integrating the subject matter of its films with the school curriculum. Were they not fighting words, one might say that industry is *ignorant* of the schools' needs and methods and, therefore, does not offer the schools sound films that adequately serve educational purposes; and that teachers are *prejudiced* against the objectives of business and, therefore, neglect to make use of the filmic teaching aids which business could supply them.

Writers and producers of commercial films are repeatedly amazed at the vast amount of subject matter that is of definitely educational character which is put at their disposal for covering in the filmic medium and are puzzled over why this same material should not be of use to schools, or in what form it should be put to make it acceptable to schools and efficiently usable by them. For instance, the Pullman Company has recently produced two films, for showing to ticket agents, porters, and conductors, which contain material that should be of interest to any class in Social Science; a recent picture, made for the animal feeds division of the Quaker Oats Company for showing to farmers, presents certain facts about digestion and nutrition that should be of interest to any student of the Biological Sciences; a film on bananas, recently released for showing to the employes of Kroger stores, contains much that would be of interest to classes in chemistry, physics, and the scientific method; films now in work

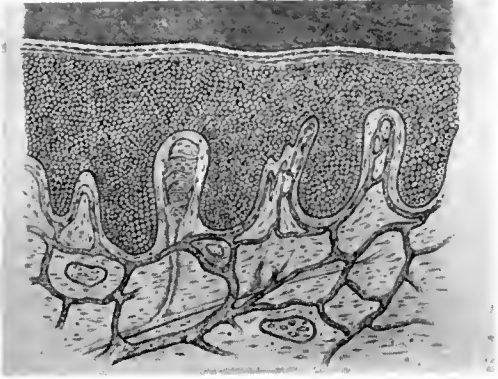

L. MERCER FRANCISCO  
Francisco Films, Chicago

for the Magnavox Corporation, for training department and music store salespeople, contain sequences on music and furniture design which students of the Humanities would find extremely interesting; and most commercial pictures beamed at sales- and trades- people and factory employes would be of direct benefit to classes in business and vocational training.

### The School Audience Must Be Studied

If the pictures just named are of no interest or use to teachers, it is undoubtedly because none of these pictures was expressly designed to fit the school audience. Indeed, the strength of these pictures lies almost entirely in the fact that they were tailored to interest highly specialized audiences and to fit particular audience-situations. If similar films, still commercially sponsored, were designed expressly to fit the school audience and the school audience-situation, they would undoubtedly be most acceptable to the schools; and the attitudes which now hold back the production and use of commercially sponsored films for school use would be instantly corrected.

If one views the average commercial film in the light of the audience whom it was designed to inform, convince, or motivate—which is usually employes, tradespeople, salesmen, or the general public—he must admit that the sponsors and producers of many commercial pictures have done an excellent job of suiting the film to its purpose. Indeed, the "results" which these films have achieved is indisputable proof of their effectiveness. In designing the commercially sponsored film for the school audience, equally careful pains must be taken to fit the special interests of that audience, including the state of mind of the audience at the time the film is shown.

emphasize importance of skin cleanliness, the doctor projects some slides. Above two show sweat glands and papillae.

## Picture for School Use

### "Too Much Subject Matter"

Teachers say, today, that the average commercially sponsored film has three faults which limit its usefulness to the school: First, the film covers far too much subject matter; second, its title often gives no clue to the teacher thumbing through a film catalog as to what the film is about; and, third, the film contains far too many "plugs" for the product discussed. At least the first and third of these criticisms are worth serious attention, and fortunately something can be done about them. The second criticism—of the film's "blind" title—holds less merit, as will be seen. Let us consider these criticisms in the order named and see the reason for them.

First, the commercially sponsored film covers too much subject matter for efficient use in the schools. The validity of that criticism depends upon the point of view. If the film is viewed in the light of the teacher desiring to use it for classroom instruction, the criticism is well taken: the average commercial sound picture does, indeed, contain too much subject matter for classroom use.

But the average commercially sponsored sound motion picture is not meant for classroom use. It is designed principally for the all-school assembly period program! The reason for this is obvious: the sponsor desires to reach as large an audience as possible for the story of his product; he is not especially concerned with the instruction of prospective practitioners in his field in the manufacture of his product. [If he is a producer of a food product, for example, he would hardly expect to provide a sound motion picture for the instruction of only the students in the home economics classes. He would be more apt to provide a slidefilm or filmstrip for that purpose, because that form of the filmic medium is better adapted to classroom work than is the sound motion picture.]

If the commercially sponsored sound motion picture is viewed in the light of the assembly period program, the chances are it does *not* contain too much subject matter for school use—even though it may con-

sume the entire assembly period. On the other hand, the film containing a wide range of subject matter provides, in effect, a "survey" course in its particular topic and in so doing serves to provide two primary essentials to learning: orientation and motivation. If the teacher evaluates the film in that light, the criticism of covering too much subject matter is not a serious one. The alert teacher will be quick to take advantage of the stimulation to further learning which the film arouses and to follow through, in the classroom, with other teaching aids of more specific nature. Invariably the stimulation provided by the assembly-period film is enhanced by the dramatic manner in which its story is, or should be, told, especially if the dramatic treatment plays the film's factual content against a background embodying a "meaningful real life situation." The film on the assembly period program should have its factual content dramatically presented, for the assembly period is a semi-social occasion and a time for relaxation from the tensions of the classroom. If the film's treatment of its subject matter is dramatic, *indirect*, it issues an invitation rather than a command to learning!

### "The Title No Clue to the Content"

This point has a bearing on the second criticism of the commercially sponsored picture: its title often gives no clue to its content. Teachers who advance this criticism of the commercially sponsored film are speaking wholly subjectively. They overlook the point that the film is designed for the semi-social assembly period, and they completely overlook the interest of the audience! They should evaluate the film in terms of their students, not of themselves!

Let us cite a specific example—in Procter & Gamble's "Scrub Game." This is a 3-reel, or 30-minute, sound motion picture especially designed for circulation among grade schools. Naturally, it is about Ivory Soap. But it approaches the subject of Ivory Soap indirectly; first, through a meaningful real life situation—a baseball game in which children get dirty and after which they need to wash up, then a bicycle

race in which the young hero is injured and taken to a doctor's office for the purpose of getting the cut in his skin dressed. This sequence is followed by a very matter-of-fact discussion by the doctor of the histology and function of the skin, including an explanation of the uses of soap, how soap is made, and why its use is important to personal hygiene as well as to appearance. Ivory Soap is not once mentioned by the sound track; product identification is left entirely to the screen, which shows bars of the soap being wrapped in the factory. We realize that even this is still "objectionable" in the minds of many educators.

The working title for this film was "Our First Line of Defense," but that was changed during the shooting to "Scrub Game" for no other reason than to arouse more desire in the audience to see the picture—to whet their curiosity as to what it is about. What if the title "Scrub Game" does have a double meaning, referring both to the baseball game, which heightens the dramatic action of the story, and to the importance of scrubbing hands and face and neck and ears with soap and water? It is a more effective title, from the viewpoint of the school-child audience, than that first proposed and, of far more interest and significance than such a prosaic title as "The Skin and Its Care," which might have been used and which would have perfectly fitted both the picture and the subjective viewpoint of the teacher scanning a film catalog for the purpose of selecting a film that would suit his or her classroom teaching needs. What child would want to see a film, "The Skin and Its Care"? Such a title would immediately condition the youngster against the picture as promising nothing more than another lecture, in film form, such as he is subjected to in the classroom all day long.

The answer to the criticism that the title of the commercially sponsored sound motion picture gives no clue to its content lies, not in retitling the film, but in listing in the film catalog a description of its content so that teachers may choose it to fit their purposes. There is far too much experience proving the greater acceptability of indirect, even "clever," titles for films over matter-of-fact titles to lend any support whatever to the contention that film titles should always be descriptive of their content. If teachers evaluate films in terms of the close relationship between their titles and their subject matter, they are running counter to sound educational psychology. On the contrary, many teachers would do well to study the technique of the film writer and learn the methods he uses for gaining attention and arousing interest for the subject matter he has to cover and for gaining the objectives of instruction, belief, or action, which he sets out to attain!

#### "Too Many Advertising Plugs"

The defense of the commercially sponsored sound motion picture against the criticism of its excessive advertising plug is on far less substantial ground than that offered in behalf of its extensive coverage of subject matter and its intriguing but obscure title. The average commercial film must plead guilty on this count! It contains far too many sales plugs—film content which not only wastes footage but also the time of the students and teachers when viewing the film.

But this situation is fast improving. Sponsors are beginning to realize that when they overdo their plugs in their films, they are violating good taste and cutting down the sales-making effectiveness of their films. As time goes on and more and more commercially sponsored films are produced with fewer and fewer plugs, these films will not only find increasing use among schools but also prove their greater selling power. There is an irreducible minimum, however, below which not even the schools would have the sponsor go in suppressing his advertising. For instance, take the case of Procter & Gamble's "Scrub Game" again. A number of educational authorities were asked to indicate their choice between the name titles, "Francisco Films presents . . ." and "Procter & Gamble presents . . ." and they voted unanimously in favor of the latter. The reason for their choice lay in the authenticity which the Procter & Gamble name gave to the picture. Nearly all commercial film sponsors have names that have considerable prestige with teachers and scientists as well as with the general public! When the screen doctor says, ". . . because I use only sterile water, pure soap, and sterile gauze," and an insert closeup of a bar of Ivory Soap floating in the doctor's basin of water cuts in to visualize what he is talking about, unquestioned authority, rather than a mere advertising claim, is lent to the statement.

#### Films Must Be Especially Designed for School Use

Now, what is the upshot of this discussion of the place and character of the commercially sponsored sound motion picture in the schools? Is there some common ground on which schools who would like to make use of the wide range of educational subject matter which commercial concerns can make available, and manufacturers who would like to get the stories of their products and institutions over to the school audience, can get together on mutually profitable terms?

The answer to that question is so obvious that it is amazing that it has been overlooked for so long. It lies in designing the commercially sponsored film specifically for the school audience, just as other commercial films are designed specifically for other special audiences! Film writers and producers and film sponsors must become better acquainted with both the school audience and the school audience-situation. Just as they study the attitude of any other particular audience whom they seek to instruct, to inspire with confidence, or to move to action, they must study the attitude of the school child, en masse in the assembly period, and tailor their subject matter and its filmic treatment to fit it.

But in designing the film for school use, the sponsor must go further; he must study the needs and character of the school *curriculum* so as to integrate his filmic material with the courses of study which it establishes. An explanation of the steps taken in the preparation of the scenario for "Scrub Game" will make clear the procedure that should be followed.

Procter & Gamble advised the film producer that they were contemplating the production of a sound

(Continued on page 366)

# Who Should Produce Visual Materials?

*A meeting of textbook publishers and educational film producers*

THE joint meeting of the Educational Film Producers Association with members of the American Textbook Publishers Institute, held in New York last spring, holds great promise for future developments in the production of educational materials. In opening the meeting Chairman Fletcher Smith, President of the Educational Film Producers Association, sketched the background of that organization which was formed nine months ago in an effort to try to solve mutual problems arising from planning for postwar visual education. For some years to come, he pointed out, efforts will be wasted if producers duplicate each other's efforts by producing titles in the same fields while many films, so badly needed, are overlooked. "The growing interest on the part of textbook publishers in this new field made apparent the need of collaboration with the textbook publishers in planning a long range program into which individual efforts could be coordinated."

Mrs. Adelaide Brewster, an associate of Producer Frank Donovan, read a paper prepared by Mr. Donovan on the functions of the producer of a motion picture. First, he must think objectively. . . . Secondly he must think visually and must see that the picture is properly paced both visually and orally.

"Next, a producer must set and maintain certain standards of technical quality. . . . Finally, it is the producer's duty to supervise and coordinate. The discharge of this duty involves the exercise of judgment in at least three arts—writing, acting and photography."

Producer Emerson Yorke spoke on the function of the teaching film, first making it clear that the teaching film should not be confused with the training film which is "a demonstration of how to perform a specific operation. The teaching film, on the other hand, adds to the printed word of the textbook a human relationship through the visual and audible representation of ideas and facts. With a teaching film as an aid, the teacher's work of extending the walls of the schoolroom becomes appreciably easier: Teaching films will never replace textbooks, but textbooks with well coordinated films will do a teaching job that neither alone could ever approach."

Producer John Flory sketched the background of the educational film field, some of the obstacles that retarded its development, others that are still before it, and its possibilities in the future. "The war experience with training films is bound to influence American education. Ex-servicemen who have seen the value of visual aids demonstrated in their own case are going to insist that their children are taught by the latest methods, and this means extensive use of classroom pictures. Besides this, a whole new non-theatrical film industry has grown up to handle war needs. To a large extent this will be available for the peacetime production of school films.

JOHN FLORY  
Documentary Film Producer  
Grant, Flory & Williams  
New York, N. Y.

"What is the school market? It's a fast growing one. For example, in 1936 a government survey revealed only 458 16mm. sound projectors in schools. Today schools are said to own at least 15,000 sound equipments. And unfilled orders on the books of manufacturers indicate that within two years after the war, U. S. schools will own at least twice that number of machines. EDUCATIONAL SCREEN estimates that within a postwar decade schools will be equipped with nearly 100,000 16mm. sound projectors . . . and that within the first postwar decade the sale of prints of film subjects which deal with the more important concepts will reach 3,200 prints for elementary films, and 2,500 prints for secondary films, or a ratio of one print for each 25 classes."

Professor L. C. Larson of the School of Education and Consultant for the Bureau of Audio Visual Aids at Indiana University, spoke informally and at some length on educators' problems and plans in connection with motion pictures in education. The use of films, based on the experience of over 200 film libraries, has shown large and steady growth during the past six years, and 15,000 or more sound projectors have been purchased by schools during that period, representing an investment of over six million dollars.

These film libraries need more films. A number of the libraries now have budgets in excess of available films. They can't spend their money to buy films, simply because they aren't available. Schools themselves also need more films. Assuming six major courses in each school grade, and one film per week in each course, there is need for approximately 4,000 different film subjects, dealing with the more important concepts covered in these courses.

Mr. Larson then appraised the various film sources.

(1) First, there are the sponsored films which, although widely used and frequently of excellent educational quality, none the less are frowned upon because of the inescapable bias in their content. Another problem about sponsored films is the obvious difficulty which producers face of competing with a \$40 film against a free film. We who are in this area are somewhat concerned as to whether or not we are going to be able to preserve freedom of expression by the film medium, freedom of inquiry, freedom of access to learn. Sponsored films present another problem to schools in that three or four competing sponsors may have films on the same subject. Each brings pressure on the school board to have its picture used.

*(Continued on page 362)*

# The Curriculum Clinic

## "There Isn't Time for Visual Materials"

PAUL C. REED, Editor  
Director, Visual and Radio Education  
Rochester Public Schools, New York

I HAVE been talking with a number of teachers and school administrators during the past month just to find out what they are thinking about the use of visual materials. Are we ready to profit by the experiences of the armed forces training programs? Are we making best use in our classrooms of the materials already available? Do teachers really understand and appreciate the potentialities of the newer media of communication? These were the kind of questions I was exploring.

What was to me a rather startling point of view was expressed by one teacher when he said, "There isn't time for visual aids." He thought that many teachers believed that motion pictures and other visual materials were interesting and worthwhile and that they would like to use them; but with a full course of study, limited periods, final examinations, and all, there just wasn't time to use visual materials and get the "teaching" done too. That was the gist of the argument he advanced. It wasn't his point of view of course, but rather what he thought some other teachers thought. And I don't doubt that they do. But there's something wrong somewhere. What is it?

It is possible that using visual materials can be a waste of time, especially if they are just shown and not used in a way to achieve curricular objectives. But some materials that are used are not suited to the objectives sought. Film titles and film descriptions can be misleading. They may seem to be related in content to a unit of teaching; but, when they're seen and heard, it's a different story. Sometimes teachers show pictures to their classes just because the film happens to be in the building or because it is readily available. In either case I can understand that there isn't time to use pictures that way. Pictures used should be closely related to teaching objectives. That statement holds important implications for users, distributors, and producers of audio-visual materials.

Producers are going to make the most usable educational materials when they are creating to serve specific teaching objectives. Regardless of the medium with which they are working, the finished production is not good or poor in terms of itself, but in terms of its effectiveness in communicating educational experiences that will lead to learner attainment of objectives.

Distributors have a responsibility for knowing well the materials they distribute and the teaching needs of the users they serve. Knowing these things, however,

is not enough. They have a responsibility for telling potential users as completely and accurately as possible which materials are most likely to meet their needs. Descriptions that actually tell what is to be seen or heard and that also include information about how other teachers have used the materials are far more valuable than an adjective-filled blurb for the product.

Classroom teaching time is valuable time; it cannot be wasted. Teachers must be sure that the materials they use will provide the experiences their learners need to achieve their objectives. Even when producers and distributors have done their best to serve his needs, the final decision of what to do and when and how must be the responsibility of the classroom teacher. He must select carefully in terms of his teaching purposes and the needs of his class. He should double check his material by preview if at all possible. He must, if he is to use the materials most effectively, plan and plan carefully the learning activities that precede and follow the use of the materials. Audio-visual materials selected well and used well can be a most effective and most efficient way of teaching. Classroom teaching time is so valuable that the most effective and most efficient ways of communication should be used.

It seems entirely possible that excuses for not using visual materials are not based upon trial and lack of success. There are teachers who have taught and taught successfully for many years without using visual materials. There are people—and this may be an understatement of fact—who resist change. Using filmstrips, 2x2 Kodachromes, and motion pictures, with the necessary projection equipment and the related mechanical and administrative problems does represent a change from the more traditional textbook, lecture, assignment methods. So does the use of electrical transcriptions and radio programs. There are teachers who prefer to keep on teaching the way they always have taught.

I think that when my friend brought up the point about some teachers thinking there wasn't time to use visual materials, he was thinking of teachers like that. He said they thought there wasn't time to use visual materials and get the "teaching" done too. Teachers who think that way can only conceive of teaching as a highly formalized verbal procedure. Teaching to them consists principally of verbal lectures, verbal reading, verbal tests, and verbal responses. This kind of teaching too often leads inevitably to the kind of verbalized learning so ably discussed in Hoban's "Visualizing the Curriculum." But those teachers haven't read Hoban's book, and they probably will not be reading this because the EDUCATIONAL SCREEN is concerned with the use of newer means of communication and instruction. They may go right on teaching the way they always have taught.

Maybe a way to convince those teachers and all

**Are you a teacher who has had specific experience and success with the use of audio-visual materials in achieving curricular objectives? Do you know of teachers whose experience should be shared with others through this page?**

**If so, write to Paul C. Reed, Editor of Curriculum Clinic, c/o Educational Screen.**

teachers that there is time to use audio-visual materials is the audio-visual way. Demonstration of what can be accomplished in the classroom with audio-visual means of communication is one of the most convincing and effective ways. If every teacher using audio-visual materials in his classroom teaching makes sure that

his teaching objectives are clear, that his materials are well selected in terms of his objectives, and that he uses the materials well, the effectiveness of the teaching will be well demonstrated. Demonstrations of that kind can influence even the most verbal teachers, for they will hear about them even if they don't see them.

## Motion Picture Demonstrates How to Teach With Films

A new teacher-training sound film giving a step-by-step visual demonstration of *Using the Classroom Film* has been produced by Encyclopaedia Britannica Films to show teachers the approved procedure for classroom utilization of instructional films, based upon fifteen years of research and experimentation. The film used for the demonstration in this film is "The Wheat Farmer"; the class is a seventh grade social studies group studying how the world is fed.

In succeeding sequences, the following steps in typical film utilization are shown: (1) The class discusses interests and problems which indicate that a motion picture would help; (2) The teacher prepares for the next day's lesson by previewing the film and studying the handbook which accompanies it; (3) Immediately prior to the screening, the purposes for seeing the film are clarified in the minds of the pupils; (4) "The Wheat Farmer" is shown; (5) Pupils discuss their understandings of questions previously outlined and plan further studies. These five essential steps are next briefly reviewed for emphasis.

The final sequence indicates individual and classroom projects that are stimulated by the film showing, how integration with other subjects of the curriculum is achieved, how growth in learning skills and in critical thinking is fostered, and how creative effort is stimulated.

*Using the Classroom Film* was photographed in collaboration with the Laboratory School, University of Chicago. Scheduled for release this month, it is recommended for teacher training courses; teachers' meetings, conferences, and workshops; for supervisors and

administrators; for extension department film libraries; for Parent-Teacher Association meetings. For more information, consult the producers, Encyclopaedia Britannica Films, 20 N. Wacker Drive, Chicago 6.

(Above) The class views the classroom film, "The Wheat Farmer".  
(Below) Pupils are eager to discuss what they have learned.

Types of activities and products which grow out of interests aroused by properly seeing a classroom film.

## Films for Victory War Loan Showings

**O**CTOBER 29 will mark the opening of the Drive to secure Victory Bond sales of \$11,000,000,000, at least \$4,000,000,000 of which must be in sales to individuals. Although the official closing date will be December 8, sales made through December 31 will count on the national quota. That means that school participation up until the Christmas vacation will help in the grand total.

More than ever before the Treasury Department, along with its volunteer workers in every community, must rely upon the schools of the Nation to carry out the campaign of information and direct sales necessary to the success of the Victory Loan. In an effort to remind people of all the investment advantages of buying Savings Bonds, every school child in the country will "play teacher" to the home folks with a special full-color cartoon leaflet entitled "Exam for Grown-ups." With this as a textbook, the youngsters will be able to explain the investment features of Victory Bonds and to answer queries regarding the safety of Government Bonds and the effect of saving on price stabilization.

Since Pearl Harbor, \$1,767,000,000 in bonds were sold by schools with the use of 16mm. films as one of the stimulating media. Regular and continuing pupil savings should be stressed in all schools, whatever extra participation they plan for the Victory Loan. Thus, the Minute Man Victory flag should be the first objective of every school. Aid in mobilizing thousands of projectors located in the schools for use during the coming drive, as well as more extensive showings both to students and parents, was promised by Daniel Melcher, Education Director.

Audiences totalling 50,000,000 are anticipated during the six-week campaign, because of the cooperation being given by the U. S. Office of Education and Department of Agriculture. Working through the State 16mm. Chairmen, they are obtaining the use of extra 16mm. sound projectors for Victory bond showings. These new projectors should account for a substantial increase over the 33,500,000 figure achieved during the 7th War Loan.

The Treasury 16mm. Motion Picture program for the Victory Loan represents the finest group of his-

torical documents yet compiled for any bond drive, according to J. Edward Shugrue, War Finance Director of Motion Pictures and Special Events. Announcing the complete schedule for the campaign, he stated that, despite the end of the war, not one foot of film would be obsolete, and that each picture would present powerful reasons for the necessity of the Victory Loan.

Nine short features and five three to four minute impact bulletins have been prepared for the drive by the Army, Navy, Army Air Forces and Marine Corps, and War Finance has produced a special film, "Peace Comes to America." The pictures are geared to the transition from war to peace, highlighting the theme that "Care Is Costly" and war bond money is needed to finance our vast hospitalization and recovery program. Following is the list of 16mm. sound films which can be obtained free through state 16mm. film chairmen or 16mm. distributors.

### From the Army Pictorial Service, Signal Corps.

**Diary of A Sergeant** (22 min.)—A real-life story of the rehabilitation of an American soldier who sacrificed both his hands for his country. Modern surgical skill and a wise psychological program have given him a new chance for normal, happy living. It is stirring, actual drama that follows him up to the moment of his return to civilian life, and his meeting with the girl.

**Stilwell Road** (50 min.)—This is the scaring drama of the United Nations bitterest campaign—in Southeast Asia—and its bravest soldiers and most heroic leaders. It is the story of the "forgotten front", where faith in Victory was the only force that saved us from overwhelming defeat.

**It's Your America** (35 min.)—Freedom . . . Democracy . . . Liberty . . . Equality! Jeff thought they were just a lot of empty words, and then his turn came to fight for them. In the raging crucible of a World War, cynical Jeff found a new ideal to fight for—free America. This is the adventure of a soldier who had plenty to learn, and of the Lincoln penny that helped him to learn that plenty!

### From the Army Air Forces

**Target Invisible** (15 min.)—The picture that takes the wraps off the most "hush-hush" secret of the war, and reveals the uncanny role played by the eleventh man in each B-29 crew, the radar operator. Shows how radar finds targets with unflinching accuracy, and then, guides the precious ship and its human cargo back to their Pacific base.

Official U. S. Signal Corps photos

General Joseph P. Stilwell and the Chinese laborers who helped to forge victory out of defeat in Southeast Asia.

Official U. S. Marine Corps photos

**Functioning of American Relief on Okinawa—("Objective Security"). Young Native and Pharmacist's Mate Doug Edwards.**

**Army Air Forces—Pacific (18 min.)**—Review of the part played by our Army Air Forces in the march to Pacific Victory. The picture covers the triumphant sweep of the skies, from the shambles of Pearl Harbor to the atomic annihilation of Nagasaki and demonstrates how air power will help us preserve the Peace.

**From the Navy**

**Voyage to Recovery (10 min.)**—Wounded Americans, back from the battlefields and task forces all over the world, are members of the Navy's most important postwar mission. Objective, to get them well and send them home. This picture shows how science, skill, and the world's best equipment are doing the job, with the backing of Victory Loan Dollars.

**The Fleet That Came To Stay (22 min.)**—Red-sashed pilots, in Kamikaze crates, tumbled out of the Okinawa skies by the thousands; all intent on suicide, and each sworn to take an American ship with him. Here is the story of the fleet that stayed, even when the terror of the heavens was unleashed against them.

**Conquest of the Night (10 min.)**—Picturing night action at sea aboard a destroyer equipped with the newest and most amazing radar devices. Electrical fingers probing the sea and sky, turn night into day with the aid of a radar screen, the brain of the machine. Torpedoes are unerringly sent to sink an invisible enemy; guns hurl their salvos of steel against a fleet we cannot see.

**Navy Impact Bulletins**

**To Win The Peace**—There's still a battle to be fought to help the maimed and scarred of the war. The battlefields now are the hospitals and rehabilitation centers of the nation; the ammunition is the millions of Victory Loan dollars!

**Secrets**—Science hunted for secrets of the electron and atom to win the war! For a lasting peace, American science must keep apace of the rest of the world. The picture shows that scientific preparedness is worth the price!

**Our Children**—Pictures of war-ravaged Europe tell America why we must help feed the babies of our Allies to protect our children from a new holocaust.

**Condition Black**—Mental casualties have a fighting chance with the Navy's vast, modern program for the cure of psychoneurotic illness.

**Bonds of Victory**—The Navy meets an emergency situation in the Pacific, and provides clothing, food, shelter for our war-ravaged allies.

**From the Marine Corps**

**Objective Security (18 min.)**—Story of a momentous experiment behind the battle lines showing how thousands of Okinawa civilians found out about American government from the members of the Army-Navy-Marine civil affairs team that hit the Okinawa beach on D-Day.

**From the War Finance Division**

**Peace Comes to America (10 min.)**—President Truman, Secretary of the Treasury Vinson, and Ted Gamble, National War Finance Director, tell Americans how they can help America in her giant peace-time program. There are soldiers to be brought home; others to be healed; still others to be assisted with GI loans and educational aid. There are vast new bases to be built and maintained.

Distribution of the Victory Loan films is handled by more than 450 16mm. depositories located throughout the country. Directing the distribution phase of

# The Film and International Understanding

DR. JOHN E. DUGAN, Editor  
Hadden Heights, New Jersey

## Films for Post-War Understanding

THE use of films at the San Francisco Conference climaxed the phenomenal development in the production and use of films for international understanding. This development demonstrated how nations could use films to bind themselves together in understanding and cooperation to win a war.

Can films for international understanding be used as effectively to preserve the peace?

Many factors are involved, but one clue to the answer may be found in the following words from the Foreword to the United Nations Film Catalogue, issued shortly before the end of the war by the United Nations' Information Office: "It is evident from a glance at this year's issue of the catalogue that many nations are paying a great deal more attention than heretofore to the problems they will have to face collectively and individually at the war's end. . . . we ask all those who are interested in the films listed in this catalogue, when arranging showings, to bear in mind whenever possible the need for having programs which will assist our common task, the promotion of the concept of the United Nations as the only solid basis upon which a lasting peace can be built".

The United Nations Conference on Educational and Cultural Cooperation, to open in London on November 1, 1945 lists as one of its purposes the promotion of the use of motion pictures for international understanding.

Certainly the San Francisco Charter is the great hope of permanent peace in our time. The great task before us is to establish understanding of the Charter and proper attitudes toward it. In this task the film for international understanding can play a part as important and effective as its role in winning the war.

Inquiries received by the editor of this department indicate that some school systems already are organizing definite and extensive film programs to promote school and community understanding of the San Francisco Charter and the United Nations behind it.

The development of the post-war use of films for international understanding depends upon two chief factors: 1. Intelligent utilization of films available. 2. Production and distribution of new films as they are needed. Many wartime films still can be used effectively in their entirety. Some, because of certain slants or emphasis which were necessary to meet immediate wartime needs, now are usable only in part, or perhaps not at all. The intelligent educator must wisely decide how he can use the materials available. Now, more than ever, he should know his film before he uses it.

There is reason to believe that the post-war use of films for international understanding may be even greater than the war-time use. Many developments point in this direction.

In five years the staff of the National Film Board

of Canada has grown from 11 to almost 600; its production from 13 films a year to over 300. In addition to all parts of Canada, it now has offices in Washington, New York and Chicago, and overseas in London and Sydney. Its 16mm. non-theatrical distribution network has spread all over the world. In addition to English-speaking films, it has some sixteen titles in Spanish and Portuguese, and an extensive program of foreign language versions of Canadian films is in production in German and other Central European languages, in Russian and in Chinese.

Samuel G. Rose, of the Victor Animatograph Corporation, says: "Education by film is taking hold all over the world. Our company alone has orders for 150 projectors from Iceland and 250 from Turkey. Buying representatives have arrived in the U. S. from Iraq, Iran and Egypt, to mention only a few—all a direct result of Army showing of educational films in their part of the globe."

Loew's International will pioneer in creating a new 16mm. division within its present international framework, launching the most comprehensive program yet tried in 16mm. films. After January 1, all Metro-Goldwyn-Mayer features and shorts will have their 16mm. counterpart for distribution overseas; and a new department of visual education will be simultaneously launched to distribute educational and documentary films for regular classroom and adult education use abroad.

An educational film program including both 16mm. and 35mm. has been launched in Sweden, according to the director of photography for Europa Films of Sweden. After a five-month survey of United States military and educational films, he feels convinced that Swedish and Americans share the same outlook on educational pictures as promoters of international understanding.

In early August it was announced that France had initiated an extensive documentary program for the purpose of cementing Franco-American good will through motion pictures. The program is being developed through cooperation with the United States Office of War Information's Paris branch. The first series of pictures will be on the theme "What We Don't Like About Americans—and What Americans Don't Like About Us", setting forth many misconceptions existing in each country which need interpretation to bring about better understanding between the two nations.

The reports presented above indicate that the tide is running strongly in the direction of even greater use of films for international understanding. The possibilities and potentialities are there. Their realization depends upon the intelligent foresight, cooperation and imagination of all who are interested in films in this field.

# Time Machine

*providing a new approach to the teaching of history in living terms of action, sound, and color*

“Eighteenth Century Life in Williamsburg, Virginia,” is a good deal more than a fine movie.

It is a time machine, in that it carries its audiences back two centuries into the intimate, everyday, unpretentious living of colonial Americans. It is history—history of the way people like ourselves lived. It establishes a totally new background against which textual history is revealed with new clarity and meaning.

“Eighteenth Century Life in Williamsburg, Virginia,” is a four-reel (44-minute) 16-mm. sound Kodachrome film. It is offered to educational institutions, which are suitably equipped for its projection, without charge for single showings. Borrowers are obligated only to give the film proper care and to return it promptly.

Due to the demand for copies of the film, it is suggested that you make early application for bookings. At least one alternative date should be given.

In case permanent possession of the film is desired, it may be purchased. Price, complete, \$240. Unit I (Reels 1 and 2), \$120; Units II and III, \$60 each.

For an illustrated folder describing the film, or for bookings, write to Eastman Kodak Company, Informational Films Division, Rochester 4, N. Y.

ETTA SCHNEIDER RESS, Editor

### EVALUATION

- Tailor-Made Scripts—Bruce A. Findlay—*National Board of Review Magazine* 20:8 May, 1945.

In this critical analysis of the educational film field, the author makes an appeal for creative film production that will not be subjected to Hollywood standards. The production of educational pictures has fallen too largely into the hands of, first those whose training and background have been entirely in the entertainment field; or second, those whose experience and training have been strictly academic. There is a middle ground into which the educational picture is rapidly moving. They are pictures tailored exclusively to a specific problem. They do not aim to cover the entire subject, nor deal with every phase under the sun. "Concentrated" pictures may do great damage, that is those that try to condense a large field of knowledge into a one-reel film.

Many educational films are too crowded, too fast and therefore too confusing. They should be geared to the intellectual speed limit of the average or a little below.

The script writers hold the greatest responsibility. Proper teaching techniques and educational values should be built into the script itself. The practice of consulting a subject matter specialist is not always a good one, because an expert is not necessarily a good educator. The business of writing an educational script cannot be taught—it involves ability that only experience, background and training can give.

Until the ultimate consumer, the classroom teacher, demands a better grade of picture, one that includes good teaching techniques, little improvement can be expected.

- What Are Classroom Pictures?—Stephen M. Corey, University of Chicago and Varney C. Arnsperger, *Encyclopedia Britannica Films—Library Journal* 70:516 June 1, 1945.

The long list of titles available in 16mm. as educational films was produced by many people, under different sponsorship, and for different purposes. There are three general types: films to entertain, to propagandize and to instruct. Each may have its place in the school, but the purpose should be clearly recognized.

Sound films must be carefully selected, possibly with the following criteria in mind: 1) Is the picture authentic, true? 2) Is the content related obviously and definitely to the purpose of the learning situation? 3) Are the levels of difficulty and the psychological approach and development of the picture appropriate for the maturity level of the group? 4) Does the picture adequately exploit the medium? and 5) Is the film technically and aesthetically satisfactory?

- Can Our Schools Teach the G. I. Way?—Olson Anderson—*NAVED News*, July, 1945 p. 13.

An address given at regional meetings of the Department of Elementary School Principals of the Michigan Education Association. The author defends the American education system that has been subject to criticism during the war. He points out, with respect to the creative use of audio-visual materials, that the personnel in the armed services that did outstanding work in audio-visual instruction are former teachers. As for the methods used, they were arrived at because they were considered to teach the most in the shortest possible time with large groups. Would you want to use the same methods of teaching in your school?

Audio-visual materials have a definite part to play in the education of young minds as they did with adults, but they must be of a different type and must be used differently.

Our job as teachers and audio-visual education specialists is to determine what audio-visual materials and what instructional methods and procedures are best adapted to the kind of students and courses we have to teach.

Schools, unlike the Army, have not done much about incorporating audio-visual aids in the curriculum. Of more than 30 schools visited by the author, only one had funds in its budget ear-marked for film rental or purchase. The GI schools didn't have to worry about convincing their public that audio-visual materials were worth their cost; they had a job to do, and quickly set about to do it. School people must still blaze the trail of selling the idea to the community, and to the school administrators.

### METHODOLOGY

- How It's Done at Oakland—Bernice Baxter, administrative assistant, Oakland Public Schools, Calif.—*Nation's Schools*, 36:52 September, 1945.

The Oakland Visual Aids Service has more than 350,000 articles classified under 18 different headings, as art prints, charts, exhibits, electrical transcriptions, models, tool kits, musical instruments and so on. Selection may be made from the catalog and telephoned, or at the department headquarters where teachers may either take the material with them or have it sent by truck. The period of loan is one week or more, if desired. Photographs and the floor plan of the headquarters illustrate the article.

### RADIO AND RECORDINGS

- Serving Education on a Platter—William G. Hart, director of audio-visual education, Dearborn—*Michigan Education Journal* 22:432 May, 1945.

The case for educational recordings as a means of overcoming the limitations of radio programs. Recordings are inexpensive (average price \$4.00). They are light and easily transported; the playback machine is not expensive, and the number of titles available is increasing rapidly.

From the experience of the teachers in Dearborn, the following conclusions have been drawn: 1. The records that did good teaching were those that were dramatic in quality. These included dramatized historical incidents, science milestones, and biography. 2. Story records were effective in the lower and middle grades. 3. Speeches and interviews were a dead loss.

Records were obtained from the three basic sources (Evaluation of School Broadcasts Catalog, Transcriptions for Victory Catalog of U. S. Office of Education, and the Catalog of N. Y. U. Film Library Recording Division).

- Radio's Challenge to Education—John Studebaker—*Education for Victory* Vol. 3 No. 24 p. 1 June 20, 1945.

Digest of an address at the Third Annual Conference on Radio in Education of the Northeastern Radio Council in Schenectady, N. Y. on May 26, 1945. Although radio for education is now widely recognized, we cannot escape the facts that first a majority of the classrooms are still not equipped for radio program reception, and second that many of the schools that do, use a relatively small number of available programs.

The reasons for this are that teachers do not have access to a convenient source of information about educational programs; then the difficulty of adjusting classroom schedules, and last, the lack of adequate program-reception facilities.

When schools begin to operate their own stations, over

## YOU CAN LEND STUDENTS

# *Your Eyes!*

How often youthful eyes overlook the wonders of nature; the products of man that surround them on every side!

With a Spencer Delineascope you can let them see what you have seen . . . re-captured in full beauty and brilliance by color photography. Making your own 2" x 2" slides with a 35mm. camera is simple and inexpensive—for the price of colorfilm includes processing and slide mounting.

Designed to give finest results from

2" x 2" slides, whether in home, classroom, or auditorium, Spencer Model MK Delineascopes are available in 100, 150, 200, and 300 watts; Model GK, in 750 watts.

For help in selecting an instrument to meet your projection needs, write Dept. X12.

American  Optical  
COMPANY  
Scientific Instrument Division  
Buffalo 11, New York

*Manufacturers of* **SPENCER** *Scientific Instruments*

FM, these difficulties will be greatly overcome. There is already great interest in this medium. Some 29 different states are known to be seriously considering FM and at least 14 have organized planning committees.

FM, as an educational-type station, will supplement the commercial broadcasting stations and relieve them of the educational function. As for education, the use of FM will be especially useful because it will be geared to local needs and can broaden educational offerings to adults and shut-ins; excellent for public relations and a progressive elevator of the classroom teacher's professional status.

#### UTILIZATION

- **A Method for Using Educational Films**—Louise Clark, R.N.—*American Journal of Nursing*, 45:479 June, 1945.

Careful preparation in the use of biology and health films is necessary in nursing education. The author illustrates this by a sample outline used in connection with one film. The "observation outline" is mimeographed and given to the students in advance. The film is then shown without comment or interruption. Then the students make notes on their outline. The second showing is followed by discussion and further use of the outline. Questions on tests usually include some on the films seen.

- **Methods and Materials for the Teaching of U. S. History: A Symposium**—*California Journal of Secondary Education*, 20: 191-208 April, 1945.

Three articles by classroom teachers describing newer techniques in teaching American history take into account the place of audio-visual aids. For 5th grade history, Ethel Eckert mentions that visual aids, though helpful, must be used carefully. The article on 8th grade history, and the one on high school history tell how visual aids fitted into the units of work. The author of the latter article states that good films for her purposes are still scarce.

- **The Use of Commercial Films in Schools of Nursing**—Ruth T. McGrory, R.N.—*American Journal of Nursing*, 45:480 June, 1945.

Where industrially-sponsored films are used, it is recommended that a file card index be kept so that instructors will know which films have been found most useful. A sample form is included.

#### BOOK REVIEWS

- **Multi-Sensory Aids in the Teaching of Mathematics**—18th Yearbook, National Council of Teachers of Mathematics, 1945. Bureau of Publications, Teachers College, Columbia University, N. Y. 455p.

The Committee on Multi-Sensory Aids responsible for organizing and compiling the material in this volume have done a splendid job. It is a book that will be used again and again for several years to come by classroom teachers because it is practical in every possible respect. There are articles on ways in which primary, intermediate and junior high arithmetic as well as the higher mathematics can be enriched; there are descriptions by teachers of sensory aids of every type, including drawings, exhibits, models, instruments, construction models as well as the usual types of visual aids (slides, films and three-dimensional materials). Photographs are an integral part of the book, providing excellent examples of interesting activities in mathematical instruction.

In one section, teachers describe ways of producing mathematics motion pictures. For example, Henry W. Syer tells his criteria for selecting subjects to be produced on film. One of his projects resulted in color slides, because the material did not lend itself to motion. Moreover, he believes that movies should teach, not merely illustrate. He would prefer a visit to a bank to a film about a bank. What, then, to photograph in movies? Those subjects that need change of position (motion), change of shape (transformation), or where correspondence or limit is implied.

To summarize the section on visual aids there is an article

by M. Richard Diekter describing the various types of projected materials, their methods of use and limitations. He concludes with some principles of teaching with these devices.

An outstanding contribution to the book is the Appendix. The first section has numerous "thumbnail" descriptions of individual models and devices for each phase of mathematics; then follows a well-annotated bibliography with sources of films and filmstrips.

- **Teaching Through Radio**—William B. Levenson, Cleveland Board of Education—Farrar and Rinehart, N. Y. 1945 474p. \$3.00.

Here is the first good textbook on the educational uses of radio since Margaret Harrison's book, "Radio in the Classroom" published in 1937. The earlier book was filled with practical suggestions for using commercial and sustaining programs, based on a national study in rural classrooms. The current book is much more comprehensive, written from the point of view of an educational broadcaster as well as an educator. The two books should be required reading in every teacher-training institution.

William B. Levenson uses his experience as directing supervisor of radio for the Cleveland schools as a background, but his book treats of educational programs generally. There are three definite sections into which the 12 chapters may be divided: educational principles underlying the preparation and use of school broadcasts; creative broadcasting within a school or school system; and out-of-school radio listening as an educational force. For those who may be engaged in planning FM educational broadcasting stations, there is a concise but detailed chapter on the administration of a station.

Well illustrated, both by photographs and by simple scripts, the author has succeeded in carefully organizing a great deal of useful information to serve a variety of needs. The discussion of the educational values of radio would be of interest not only to teachers but also to professional radio personnel; whereas the sections dealing with script preparation and production techniques are valuable for the classroom teacher.

"An excellent handbook and text," would sum up this evaluation of the book.

#### SOURCES OF INFORMATION

- **Educators Guide to Free Films: Fifth Annual Edition**—compiled by Mary Foley Horkheimer and John W. Difer—Educators Progress Service, Randolph, Wis. 254 pp. mimeo. \$4.00.

This 1945 revised edition, which replaces all volumes and supplements which have preceded it, is an annotated listing of films and slidefilms that are free from sources listed in the Guide, although many of these same materials are rented to schools by other agencies.

New features of this edition include: a Subject Index, 356 new titles starred in the Title Index, a section on "World War Problems," and a program for the use of "Free Films in Schools," by Dr. John Guy Fowlkes, Professor of Education, University of Wisconsin.

Following the Subject Index, the films are grouped under five main heads: Applied Arts, Fine Arts, Health Education, Science, and Social Studies. This Fifth Edition lists 2,571 films, of which most are in 16mm. sound, and 114 sound and silent filmstrips, with sources indicated. Many annotations are revised or new.

- **Bibliography of Economic and Social Study Material**—12th edition—National Association of Manufacturers, 14 West 49th St., New York 20. 1945.

A 24-page listing of NAM free reference booklets and motion pictures designed for use as literary reference material. A new feature of this twelfth edition is the inclusion of publications dealing with reconversion and postwar problems. Also included are those booklets on subjects which past demand has indicated are of greatest value to teachers. Alphabetical and topical indices make for quick reference.

SIMMEL

MESERVEY

**CURRENT RELEASES**

**EDUCATIONAL (16MM) FILM SUBJECTS**

**PAUL HOEFLER PRODUCTIONS:**

- ... **AFRICAN FAUNA**.....one reel, 12 minutes, color & sound  
Wild animals of the veldts, forests and rivers in their native habitat.
- ... **AFRICAN TRIBES**.....one reel, 12 minutes, color & sound  
Four of Africa's strangest tribes . . . in the Belgian Congo to the great Keisut Desert. The Rendille, with their "ships of the desert" never before photographed.
- ... **THE CAPITAL CITIES Series**....200-ft., 6 minutes, color & sound  
One for each capital of the 48 States plus "The National Capitol" . . . each treated with educational technique covering the essential elements of history, geography and other important facts. Now ready: California, New Mexico, Utah, Colorado.
- ... **HISTORIC DEATH VALLEY** two reels, 20 minutes, color & sound  
An unique presentation of the history and development of this unusual region with emphasis on educational aspects.

**GUY D. HASELTON TRAVELETES & PANORAMAS:**

- ... **BLOOMING DESERT**.....one reel, 12 minutes, color, silent  
Brilliant blossoms of the cacti and other flowers fill the desert and semi-desert regions of California with glorious color. Seven of the most brilliant species, and the mysterious Joshua Trees.
- ... **BREAD FROM ACORNS**.....one reel, black & white, silent  
A smiling old squaw demonstrates the process of preparing acorn flour in the days before wheat was introduced into California by the white man; interesting and educational.
- ... **CANADIAN ROCKIES**.....one reel, 12 minutes, color & sound  
The colorful, great Northwest with its snow-capped, shimmering mountains and deep blue lakes . . . its jagged peaks.
- ... **HUMMINGBIRD HOMELIFE**.....one reel, 12 minutes, black & white, sound  
From the eggs through where the fledglings are ready to leave the nest. Closeups of the mother bird feeding her babies.
- ... **MEN OF FIRE**.....one reel, 12 minutes, black & white, sound  
A fascinating history of man's traditional fight against fire . . . from early to present-day scientific methods . . . of interest to all age groups . . . whimsically humorous.

- ... **MORE DANGEROUS THAN DYNAMITE**... one reel, 12 minutes, black & white, sound  
Simple explanations of the more common causes of fires and accidents from fire in the home. Examples selected from National Fire Protection Association records.
- ... **ONE MATCH CAN DO IT**.....one reel, 12 minutes, black & white, sound  
Demonstrates how to avoid the little careless acts which often lead to great destruction of life, property and natural beauty.
- ... **REDWOOD SAGA**.....one reel, 12 minutes, black & white, silent  
The scenic grandeur of the California Redwoods . . . their breath-taking splendor and high commercial value for long-lasting structural use.
- ... **SAN FRANCISCO**.....one reel, 12 minutes, black & white, silent  
City of the Golden Gate . . . best natural harbor in the world  
man-made Treasure Island . . . the world's largest bridges and every phase of life in this metropolis.
- ... **TAME WILDLIFE OF YOSEMITE**.....one reel, 12 minutes, black & white, silent  
A variety of small, friendly creatures from the ground squirrel to the larger animals such as deer, elk and bears at play.

**SIMMEL-MESERVEY PRODUCTIONS:**

- ... **DINNER PARTY**..... two reels, 20 minutes, color & sound  
An outstanding production of high educational value on table manners and etiquette, presented in a manner to sustain interest throughout.
- ... **SKI THRILLS**.....one reel, 12 minutes, color & sound  
Join the rugged skiers for an exhilarating day speeding through the broad expanse of snow-covered slopes in the High Sierras.

**KARL ROBINSON PRODUCTION:**

- ... **FRONTIER FAMILY**.....color & sound  
Depicting the life of the frontier family in that Alaskan "last frontier" . . . produced and directed by the internationally-famed authority on Alaska, Karl Robinson. Available in November.

**EDUCATIONAL TRANSCRIPTIONS**

"TUNEFUL SALES" Series . . . written, adapted and directed by MARTHA BLAIR FOX . . . recognized specialist in psychology and listening interests of the young child. Unbreakable, highest quality flex records . . . acclaimed by teachers everywhere for their easy utilization, class participation features and perfect direction.

**SERIES NO. 1**

- ... **JOHNNY CAKE** . . . who escapes from the oven.
- ... **THE LITTLE ENGINE THAT COULD** . . . helps deliver a trainload of Christmas Toys.
- ... **THE SHOEMAKER AND THE ELVES** . . . how the elves aided the poor shoemaker and his wife.
- ... **THE THREE LITTLE PIGS** . . . the ever popular story of how one of them outwits the old Wolf.
- ... **THE LAUGHING JACK O' LANTERN** . . . the little orange pumpkin who wanted to be a Jack O'Lantern.

**SERIES NO. 2: (In Production)**

- ... **THE LITTLE GREY PONY** . . . and his adventures in finding his lost shoe.
- ... **PETER RABBIT** . . . and how he barely escapes from Mr. McGregor's Garden.
- ... **LITTLE BLACK SAMBO** . . . and his experiences with the tigers in the jungle.
- ... **THE WHITE EASTER RABBIT** . . . who so wanted to be an Easter Rabbit. (Now Ready).

**POETRY RECORDINGS**

by Lowell Cartwright, nationally famous radio artist, who has keyed these recordings so as to provide exceptional educational literary and artistic values.

- ... 101 (A) Annabelle Lee (Edgar Allan Poe)  
(B) Dover Beach (Matthew Arnold)
- ... 102 (A) Evelyn Hope (Robert Browning)  
(B) Sonnets from the Portuguese (Elizabeth Barrett Browning)
- ... 103 (A) The Day is Done (Henry Wadsworth Longfellow)  
(B) A Denial (Elizabeth Barrett Browning)

# The Second Annual International Workshop in Visual Education

MARY LEIGH PALMER

International Council of Religious Education

A TOTAL of 253 persons from all parts of the United States and from Canada attended the second International Workshop in Visual Education at the Conference Point Camp, Williams Bay, Wisconsin. This included representatives from 27 denominations and was the second such school to be held under the auspices of the International Council of Religious Education.

Dr. Paul H. Vieth, Horace Bushnell, professor at Yale Divinity School, New Haven, Connecticut, led the general sessions opening the Workshop with an address, "The New Day in Visual Education".

The morning seminars were workshop groups working in sub-committees. The group on "Regional Programs of Visual Education" included men and women who had been sent by their state or city councils of churches or of religious education. Many of them are or will become chairmen of visual education committees for their respective areas. They developed an outline of a suggested total program of visual education for an area and also drew up findings regarding area distribution centers.

The group on "Using Films and Slides with Young People and Adults" worked out suggested services of worship and script to use with available films and slides. The seminar on "Visual Method with Children" worked on all the different kinds of visual materials that may be used with children and principles of use. Practical problems of sources of materials, equipment, housing, leadership, and "how to begin" were dealt with in the group on "Administering the Program in the Local Church".

The afternoon groups were devoted largely to exploration into needs for new films and slide sets and to actually developing skills in photography for motion pictures and for 2 x 2 slides. A dark room was arranged so that results could be tested.

In the evenings "visual vespers" were followed by simultaneous reviews of old and new films and slide sets.

Various agencies cooperated in supplying materials for the film and slide libraries and in supplying projection equipment for use by the groups as well as for exhibit and demonstration.

The faculty included the very finest leadership available for each responsibility. In addition to Dr. Vieth there were Mrs. August A. Beck, Specialist in activity programs, faculty member of Faribault and other Christian education summer schools, Minneapolis, Minn.; Dr. H. H. Casselman, Manager, Bureau of Visual Aids, Department of United Promotion, Evangelical and Reformed Church, Tiffin, Ohio; Rev. Alexander B. Ferguson, Director of Visual Aids of the Missions Council

Class in "How to Make 2x2 Slides" at the Workshop, demonstrating copy work with the 35mm. camera.

of the Congregational-Christian Church, Boston, Mass.; Rev. William S. Hockman, Director of Religious Education, Lakewood Presbyterian Church, Lakewood, Ohio; Rev. Ernest G. Hoff, Editor, Board of Education, Church of the Brethren, Elgin, Ill.; Rev. Frank A. Lindhorst, Director of Department of Christian Community Administration, College of the Pacific, Stockton, Calif.; Miss Elsie Miller, Department of Children's Work, The Methodist Church, Nashville, Tenn.; Miss Ruth Elizabeth Murphy, Director of Vacation Religious Education, International Council of Religious Education, Chicago, Ill.; Rev. William L. Rogers, General Secretary of the Religious Film Association and Director of Visual Education, International Council of Religious Education, New York, New York; Rev. Howard E. Tower, Director of Audio-Visual Education, Board of Education, The Methodist Church, Nashville, Tenn.; Dr. John C. Trever, Associate Professor of Old Testament, College of the Bible, Drake University, Des Moines, Iowa. Dr. Mary Leigh Palmer of the International Council was Director of the Workshop.

## Visual Education Fellowship

One of the high lights was the announcement of the Visual Education Fellowship which is an outgrowth of the demands from the field and, especially, from those who attended the 1945 Workshop. The purpose of the Visual Education Fellowship is to help local, regional and national leaders who are interested in using visual materials. The objectives have been stated as follows: (1) Exchange experiences—provide a means for encouraging and exchanging experiences in the use of visual method and materials in all aspects of the church's work. (2) Share information—make available to members of the Fellowship information about developments in the visual field and guidance materials from agencies of the International Council and other organizations. (3) Discover and encourage leaders—discover available and potential leaders in the visual field who can render service within denomina-

## IN AUDITORIUM VISUAL EDUCATION

The educational and cultural possibilities of showing selected motion pictures in school auditoriums are recognized by leaders in the field of Visual Instruction. Films, properly chosen, exert a powerful force on the entire school body, shaping attitudes, enlarging understanding, and clarifying important concepts frequently untouched by the school curriculum.

An increasing number of schools are finding feature length productions of the SCHOOL LIST not only a source of generalized education but an effective tool for correlation with study of specific courses. One auditorium program, of general value and interest to the entire school body, normally proves an element for student discussion in innumerable classrooms, both before and after the showing.

To assist teachers in making full use of this unique opportunity, Study Guides, suggesting discussion topics in related courses, are prepared for many SCHOOL LIST programs.

Suitability and high educational content are unvarying requirements of all motion pictures shown in schools. The SCHOOL LIST meets this exacting stipulation, offering a host of world-renowned productions, including many acclaimed "one of ten best of the year," and winners of the Parents' Institute Award, and the Academy Award.

The finest motion pictures in 16mm sound are found in the SCHOOL LIST.

**Ask your Visual Education Dealer or write for your school list today.**

tions and through state and city councils of churches. (4) Broaden horizons and develop a bond of fellowship—develop awareness of the place of visual method and materials in the church's program, and develop fellowship among those who are using visual means for Christian education.

The Visual Education Fellowship will issue a newsletter five times a year. The membership year will begin with the first issue in October or November. In addition, "regular" and "sponsoring" members will receive packets of helpful materials. Other services will be rendered as the movement develops. Membership is open to all who are interested in visual method in the church. An announcement describing the various types of memberships and services rendered is available upon request to Dr. Mary Leigh Palmer, 203 N. Wabash Ave., Chicago 1, Ill.

Another development from the 1945 Workshop is the "Correlating Conference on Audio-Visual Materials", held October 17-18 in Chicago. Persons invited to this policy defining conference were executives of Christian education boards, editors-in-chief, executives of denominational publishing houses, and denominational directors of visual education. Rev. William L. Rodgers is chairman of the planning committee and Dr. Paul H. Vieth is chairman of the Conference.

Plans include holding a third International Workshop in 1946. In the meantime, help may be secured through the local and regional conferences and institutes which are being held throughout the country and through membership in the Visual Education Fellowship.

### Who Should Produce Visual Materials?

(Continued from page 349)

(2) A second source of films is Hollywood. To offset their high production costs, a sizable proportion of subsidy is necessary. As is the case with sponsored film, if the market is surfeited with subsidized films, then, again, independent producers cannot go into production. And again we who are trying to select those kinds of films which will provide the kinds of learning experience we need for our youngsters are going to be stymied and frustrated. We welcome the production of films by all groups who expect to recover through the sale of films, thereby meeting educational criteria, but we are apprehensive with respect to subsidization.

(3) Somewhat the same can be said in terms of government production, but we would, in terms of the three alternatives, prefer that to either the sponsored film by business or the subsidized film by Hollywood, since we can through our Congressmen exercise some control. We would, however, greatly prefer (4) the production of educational film by independent producers.

"Now, what the the interests of the textbook publishers? A few years ago we were talking of films to *supplement* the textbook. Now we are thinking of films to *implement* print. In other words, you can through the film medium bring in both the kind and quality of experience to the classroom that can't be provided by print. . . . The use of these new mass-media

with which we can tap the fields of knowledge and bring in experiences that couldn't be covered by print, will make possible a reorganization of the curriculum. There are several reasons why textbook publishers and film producers should cooperate. In the case of films, as well as textbooks, a heavy proportion of the cost is the original research. The publisher, either through members of his staff or through his authors, is already carrying on that research. Without extending the scope of that research materially, it should be possible to include a rather complete analysis of the fields of knowledge and the concepts which could be presented, not only through print but through other media as well. If both the producer and the publisher carry on this expensive research independently, the cost of both textbook and film will be increased.

"The second point has to do with selection, organization sequence and treatment of content. Publishers have subject matter specialists and, for the organization of content, curriculum specialists. Sequence requires psychologists, and when it comes to treatment, the producer steps in.

"A third point is marketing. Marketing is costly. Publishers of textbooks, either in direct mail marketing or in the use of personal representatives, already have large marketing organizations.

"Another point, of course, is capital. We fear over-venturesome capital. We hear about a billion-dollar business in education. This capital would come into the field expecting to recover 10, 15 or 20 percent in a year. That would mean either one of two things: very cheaply produced film with unwise exploitation, or much money lost. Neither is good for the field. The publisher is in the habit of investing \$50,000 or \$75,000 in a series of readers or arithmetics, and amortizing that cost over a period of years. The film represents a comparable problem and it needs capital behind it of a conservative nature, with confidence in the field.

"In summary, publishers have had many years of experience in the preparation of teaching materials. Their staffs or authors represent extensive research resources and facilities. Publishers are experienced in marketing. They are accustomed to the kind of financing which films require. On the other hand, producers have had during the last three to five years an extraordinary opportunity to develop experience in working with the government agencies or with sponsors under somewhat the same kind of arrangement that would have to be effected with the publishers. These men know how to use the film as a means to an end, rather than as an end in itself.

"I represent consumers. We feel a great need for films produced according to educational specifications, and we are going to provide as much support as we can to the independent producer. We are going on the offensive to get the films we want, rather than having to go on the defensive against sponsored film by big business, or subsidized films produced either by Hollywood or government film production units."

Mr. Larson acted as moderator for a general discussion period.

**Publisher:** "Could you tell us how much the equipment costs and how much it will cost after the war?"

**Moderator Larson:** "Well, there are at least two companies, I understand, that are coming out with a self-contained film projector, containing within one cabinet a translucent screen, a projector mechanism, amplifier and speaker. I understand that equipment will be designed for the use of sound and silent films, and perhaps also Kodachrome transparencies. With that kind of equipment a teacher in developing a unit on Australia, for example, can roll the equipment up in front of the class and use a general film for the entire class. Then the class may break up into committees and the projector turned around to one corner, with the sound cut down; one committee working on one source of information getting a film from the library and using it, and another group over here with source books, and so forth. Equipment design thus makes possible both classroom instruction and individual research work. Anticipating such equipment, we are planning a new audio-visual aids center at the University of Indiana with facilities for from 60 to 100 viewing rooms. We feel that on the college level only a limited number of films will be used in the classrooms. The instructor will make assignments to films as he does to texts, and students will come over and check out a film and go either to a view-table where there will be a small screen and headphone, or to a small viewing room."

**Publisher:** "What is going on in the thinking of school people? Are they moving in the direction of the use of films for real instructional purposes? That is, to what extent are they getting over the habit or the handicap of thinking of films primarily as entertainment, even though they be non-entertainment films?"

"Also, to what extent do you think schools are actually going to go in the direction of purchasing their own films and establishing their own film libraries within the individual school systems, rather than getting them through the various rental agencies?"

**Moderator Larson:** "I can answer that with three statements: We have noticed over the past four years a change from auditorium to classroom use, teachers wanting to use films in their own classrooms where they can give in a personal and intimate fashion the purposes for seeing the films."

"To re-emphasize that a bit more: We had a series of three meetings during the last two months, at the suggestion of the State Department of Education, on the licensing of teachers. We are setting up in addition to the general license, a concentration of 12 to 14 hours in music, art, physical education, audio-visual aids and library science service areas; the idea being

# FILMS NEW 16mm SOUND from BRITAIN

**AIR PLAN . . . . . 3 reels — 28 minutes**

This film shows how the work of the RAF fitted into the overall air strategy of the European war, and how complex and far-seeing planning turned the "blitzkrieg" against its originator.

**BAILEY BRIDGE . . . . . 1 reel — 8 minutes**

One of the war's most jealously guarded secrets is revealed in this film on the construction and use of a portable pre-fabricated bridge made of interchangeable parts which keeps rivers from being effective lines of enemy defense.

**DAWN OVER CYRENAICA . . . . . 2 reels — 22 minutes**

Cyrenaica, bordering on Egypt and the Mediterranean, was the first section of North Africa to be freed from Italian fascist control. The liberating British armies were followed by British Civil Affairs Officers who introduced modern farming methods in helping the local Arabs raise their standard of living.

**DOMINION STATUS . . . . . 2 reels — 18 minutes**

This film explains and demonstrates the meaning of the "dominion status" enjoyed by Canada, Australia, New Zealand, the Union of South Africa, and Ireland, as defined by the Statute of Westminster enacted in 1931, and shows the part played by the Dominions in the war.

**FALL OF GERMANY (Act & Fact #7) . . . . . 1 reel — 12 minutes**

After the Allies crossed the Rhine, they smashed deep into the heart of Germany, winning surrender from army after army. The heavy pounding of the Air Forces and the daring thrusts of the land armies brought Germany to her knees and heralded the proclamation of V-E Day.

**OPERATION FIDO . . . . . 1 reel — 12 minutes**

Fog is the greatest single menace to aircraft. Fog over British airfields became more of a menace than flak over Germany, causing accidents, loss of life, and often the complete cessation of operations. FIDO solved the problem of fog by dispersing it with petroleum burners.

**RHINE LINE (Act & Fact #6) . . . . . 1 reel — 10 minutes**

The Allied line-up on the western bank of the Rhine and how the Allied armies broke from their positions, made their spectacular crossings of the Rhine and struck deep into the heart of Germany.

**ROAD TO RUSSIA . . . . . 1 reel — 9 minutes**

The story of the southern supply line of the Persia Iraq Command over which British, American and Indian soldiers transported millions of tons of war supplies for delivery to the Russian armies.

**SOLDIER SAILOR . . . . . 6 reels — 52 minutes**

Early in the war British merchant ships were armed to defend themselves against aerial and submarine attack. The force of gunners were called D.E.M.S. (Defensively Equipped Merchant Ships) and this film records the kind of work they did.

**STRICKEN PENINSULA . . . . . 2 reels — 16 minutes**

Made before the end of the Italian campaign, this film shows scenes of the devastation in Southern Italy and of the slow painful process of reconstruction started with the help of the Allied organizations.

**TIME AND TIDE . . . . . 2 reels — 16 minutes**

The important and little known work of the men of the Admiralty Salvage Department is shown as they clear a harbour of wrecked enemy vessels and open it once again to Allied shipping.

**UNRELENTING STRUGGLE . . . . . 2 reels — 18 minutes**

Highlights from Churchill's radio speeches to the British people from the beginning of the war to V-E Day against a background of action shots.

## BRITISH INFORMATION SERVICES

An Agency of the British Government

39 Rockefeller Plaza, New York 20, N. Y.      380 North Michigan Avenue, Chicago 1, Ill.  
 321 Sutter St., San Francisco 8, Calif.      1145 Tait Bldg., 1881 North Vine St., Hollywood 28, Calif.  
 1336 New York Avenue, N.W., Washington 5, D. C.      1309 First National Bank Bldg., Atlanta 3, Ga.

that in the case of elementary teachers working toward the four-year license, some of them will take 12 to 15 hours of work in this field, in order that they can go out into a school and serve as a teacher-director. They will still handle a class but will also consult with and advise the principal and other teachers on visual education matters. Other teachers will concentrate on art, music or physical education. We hope to duplicate this program in the five-year program for a secondary license, providing teacher-directors in secondary schools and coordinators who devote one or two periods a day to coordinating the use of materials in individual schools.

"As to the second question, we suggest that at any time rental and transportation costs exceed one-fifth to one-seventh the cost of the film, it should be bought instead of rented. I would predict that approximately one-half of the schools in cities of over 25,000 will have their own film libraries within the first postwar decade, running from 15 to 20 subjects, or up to 2,000 or 3,000 in the case of the larger school."

**Publisher:** "I have two more questions: Have you any data on how many times a film can be shown without needing repairs, in the schools where the schools own the films? The other question is this: How many prints do you think have to be sold to make it commercially possible for the producer to produce the film?"

**Moderator Larson:** "On the first question, we average around 60 bookings of a film at the University before we have to replace it. In the case of our bookings, however, many schools use them for a period of a month, and they show the film six or eight times each day of that month. So we aren't sure as to the number of actual projections.

"Mr. Waggoner, the Director of Visual Education at the Elgin Public Schools, Elgin, Illinois, has rather specific information on this point. He has several films that have been projected over a thousand times and are still in good shape. However, he has taken excellent care of the equipment and of the films.

"The second question was the number of prints that had to be sold. If one is thinking in terms of a \$50,000 to \$60,000 gross, to net around \$15,000, then even at \$30 a reel you have to sell between 1,700 and 2,000 prints on the average. I don't think that can be done at the present time. To begin with, marketing costs are going to have to be reduced."

**Publisher:** "Would you mind expanding a little your statement on the \$60,000 gross and \$15,000 net? What does that mean?"

**Moderator Larson:** "If one sold 2,000 reels at \$30 net, less discount, the gross would be \$60,000. Just roughly it seems to me the marketing costs might run half of that, thus leaving

\$30,000 above your marketing costs. Then you have 2,000 prints in reel and can at about \$8 each, which would run another \$16,000 which leaves a net to the producer to cover production costs of around \$12,000 or \$14,000 only. There are a lot of "ifs" there. Possibly marketing can be achieved at much less. Perhaps films will stay at \$40 to \$45 a reel, rather than \$30.

"Now, I am just wondering what are some of the specific problems confronting the publishers. I know this is a new area."

**Publisher:** "I think all of us here are very much interested in films. I know that at this point my people are not very much interested in cooperative agreements, any more than we would be interested if a competitor were to publish a new engineering book. If we are going to bring out a film we want to bring it out on our own. We don't quite understand the idea of the cooperative arrangement. We can see sense to bringing out a first-class film to sell a book or a series of books or a certain type of book, published by us, as we think any other publisher would. But maybe in doing that we would be doing the thing you want to avoid, that is, promoting something that has a biased story to tell. Would you care to comment further on that?"

**Moderator Larson:** "Frankly, educators hesitate to see the film tied to a book. We feel that there ought to be an analysis in terms of what is needed in the way of experience to build up certain understandings and concepts, and the book, the film, the dramatization, each used in terms of their greatest effectiveness.

"There will be publishers who will undertake film production to enhance the sale of books. Some producers will buy out publishers, and they will then publish materials keyed to films they wish to sell. Both will be to the disadvantage of education, I think. We would like to see each media stand on its own feet.

"As to cooperation, film costs are heavy. One film dealing with a particular concept is needed. But the minute you begin getting three to five films dealing with the same concept you reduce the sufficiency of the annual film budget. You can have ten or twelve general science books, but I don't think you can have ten or twelve films dealing with a certain type of pump, for example, and recover investment in 10 to 15 years."

**Chairman Smith:** "Cooperation need not submerge individual identity. Our organization was formed because of a mutual problem that interested all of us. None of us plans to go out of business. There are many bases of mutual cooperation in the overall aspects of the field. A great many individual films are needed. It will take a number of years to get such a thing done, no matter how much money is

put behind it. Thousands of individual film titles are needed to properly round out education. We can't do that overnight, and competition in the early years of this development will be unnecessary."

**Publisher:** "One thought occurs to me in that connection. If you segregate each subject for treatment by individuals within your organization, mustn't there be some board of censors who will approve a subject before it is offered for sale? I mean, the chain is no stronger than the weakest link. In a series of topics on which films were available, what if some two or three of those films failed to do justice to the topic? Everybody then would be in difficulty. I should think some thought would be given to that. When it is a competitive industry then of course you don't have that problem."

**Producer:** "Our Constitution, Article I, states very emphatically that we have to set up such a board, and that any film that will bear the endorsement must be reviewed for approval. Is it only a question of whether that review will be confined to a committee of our organization, or include members of visual education groups throughout the country?"

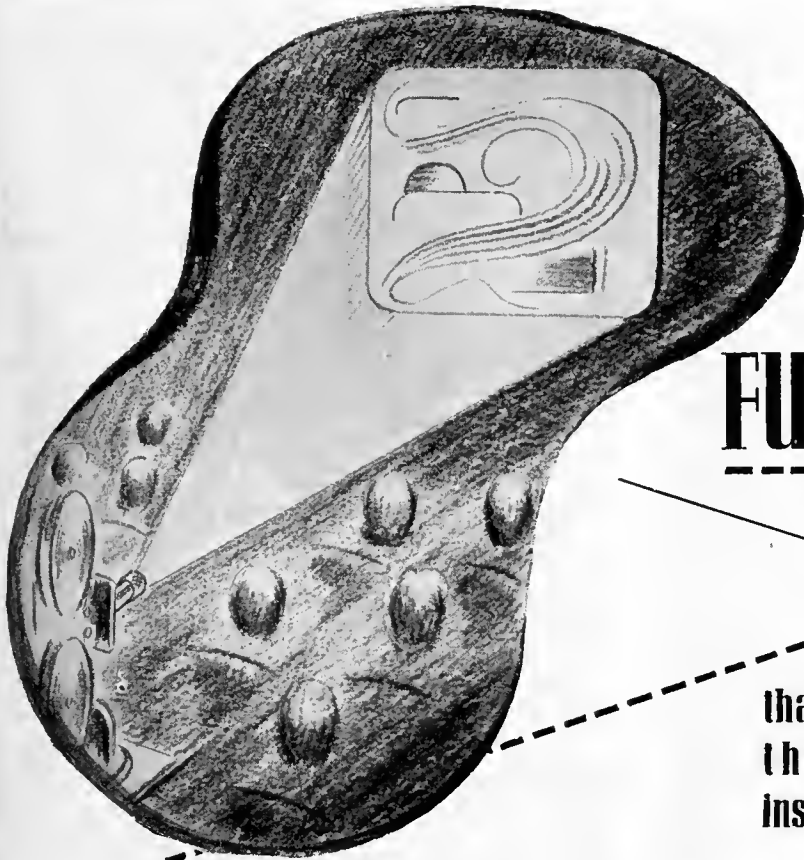

**Publisher:** "You speak of, let's say, a standard price for film at \$30 to \$40 net to the purchaser. Isn't it quite possible that it would be more sound to think in terms of some films costing a great deal more to produce, and having a more limited market, and therefore, having to sell at a higher price?"

"In the textbook business, if we put a low price on a series of books or an individual book it is largely because we expect quantity sales. We think we can count on that, and therefore that justifies a low price. But if a book is a very expensive book to produce and the market is limited, it is a little dangerous to price it low and assume that other publications will take up the slack."

**Moderator Larson:** "I would think from a consumer's point of view that the film producers are going to be compelled to make a price based on the cost of each film.

"Beginning next year, the University of Indiana will charge a rental of 35 cents plus 1/30 of the cost of the film, which means our rental prices will vary from 60 cents up to several dollars, depending on the cost of the film. Lower cost film will carry a lower charge and will have wider use. It is a thing of the past to speak of every film costing just \$30. They may average \$30, just as textbooks average \$2, but individual films and books will, and should, vary."

With general agreement that publisher-producer committees should be formed, for purposes of further discussion, the meeting adjourned.

# 6 FUNDAMENTALS

that help you get  
the most from  
instructional films!

- 1 Preview the instructional film!** To insure thorough familiarity with the contents and proper integration with your curriculum! This helps you organize your units of instructional film material and enables you to check in advance any point not completely clear to you.
- 2 Set the proper classroom atmosphere!** In order that your students (a) realize the difference between education and entertainment, (b) recognize their responsibility in learning from the film, and (c) are prepared for the particular instructional film to be shown!  
Such proper preparation arouses your students' interest and increases their anticipation.
- 3 Show instructional films at least twice!** The first presentation should be run without interruption. During this introductory showing questions that arise in your students' minds should not be permitted to be expressed or answered. But upon completion of the

presentation your students should be given ample opportunity to state their reactions, ask questions and discuss freely.

- 4 Encourage students to ask questions!** On repeated presentations, all your students' questions should be answered or discussed immediately. This serves to clarify meanings and correct misunderstandings when it is most timely and easiest to do so.
- 5 Use follow-up activities to capitalize on interest aroused by film!** Follow-up activities should include teacher and student questions and explanations, discussions, dramatization, written reports and supplementary readings—that capitalize the points made by the film.
- 6 Evaluate the worth of each film in terms of pupil growth!** Through both subjective and objective tests, determine the film's contribution to your students' knowledge, ideals and habits.

**CATALOGUE NOW AVAILABLE, SENT YOU WITHOUT CHARGE OR OBLIGATION**

To get the most from instructional films, you must select films to integrate into the framework of your curriculum which you've created with full realization of the needs of your students.

The Instructional Films Division's catalogue describes many subjects from which you may make selections that will help you enrich the quality of your pupils' experience and expedite their learning.

Write for your copy today. In addition to this descriptive catalogue of instructional films now available, we will keep you advised of new films as they are produced. Fill out and mail coupon now.

### Designing the Sponsored Motion Picture

(Continued from page 348)

motion picture for Ivory Soap to be distributed among grade schools and asked for suggestions as to its content and treatment as well as the procedure for action and a cost estimate. The scenario writer immediately sought the aid of a psychiatrist—not for himself but for an insight into child psychology insofar as the use of soap and water was concerned. He met with an abrupt answer. "Tell your client," the psychiatrist explained, "to save his money, for there is nothing on earth that will induce a pre-pubescent youngster to form habits of cleanliness by way of soap and water. The child is naturally a dirty animal; he learns to keep himself clean only when he reaches adolescence and begins to take an interest in the opposite sex. Oh, a picture might scare a youngster into washing up once or twice, but its effects won't last long. Parents and teachers who admire clean-faced youngsters will have to wait until their boys and girls reach puberty before they can hope to see them as a regular thing."

This was discouraging advice; nevertheless, it was passed on to Procter & Gamble. It did not dismay the sponsor, however. They really wanted the picture and advised the film writer to use his own ingenuity in working out a story for it that would do two things: influence school children favorably toward the use of Ivory Soap and aid teachers in their instructional program.

Having been a youngster once himself and the father of two others, the writer evolved a story of interest to both girls and boys, playing upon the sex antagonism that so often is observed among pre-adolescent children; that is, the argument over who is smarter or more capable, boys or girls? The appeal of this story was checked with the principals of four grade schools: a Chicago public school, a parochial school, a boarding school for girls, and a suburban school. Their reactions to it indicated that no little measure of success was achieved in creating a meaningful real life situation against which to project the solid factual subject matter of the film.

To integrate this subject matter with the courses of study of the average grade school, the content of several score grade school textbooks was studied for what they had to say and show relative to the skin, personal hygiene, and the use and nature of soap. These textbooks were made available for consultation in the Graduate Education Library of the University of Chicago and are representative of the texts used in almost every school or school system in the country.

For facts about the histology of the skin, a large number of books on anatomy were consulted. Procter & Gamble's own chemists provided a bibliography in

# RADIANT

BETTER SCREENS FOR BETTER PROJECTION

the field of soap chemistry. Medical journals and monographs provided data on micro-organisms of the skin and skin diseases. Naturally, the soap-making process in a Procter & Gamble plant was studied for both verbal and visual material. After all the research work was completed, the scenario was prepared.

### Checking the Scenario for Acceptability

This scenario then was submitted to the four grade school principals previously consulted for criticism of the story, the characterization of the screen personalities, the vocabulary of the spoken and titled words, and the appropriateness of the factual content to the school's curricula. Their criticisms were duly noted. At the same time the script was submitted to Dr. W. W. Bauer, Chairman of the Bureau of Health Education of the American Medical Association, for his criticisms from the viewpoint of the medical profession. Finally, Ralph W. Tyler, Chairman of the Department of Education of the University of Chicago, and J. M. Hughes, Acting Dean of the School of Education of Northwestern University, were asked to read and criticize the scenario from the standpoint of educators responsible for the training of teachers.

All of this took a great deal of time, but when the scenario finally went before the camera—in Hollywood—it was the blueprint for a commercially sponsored film that held a great deal of promise for both its sponsors and the school audience for whom it was designed. The resulting picture is one that is authentic in every detail and that cannot help but be of considerable use to those

schools that screen it on their assembly period programs. A Teacher's Manual has been prepared to go with the film for the guidance of those teachers who desire to use the picture in their classroom work. The picture contains sequences of direct interest to teachers for use in classes in biology, general and social science, chemistry, hygiene and health education, school assembly programs, and science clubs.

The procedure followed in the designing of the Ivory Soap film defines a pattern that should be followed in the production of every commercially sponsored sound motion picture for school use. The schools as well as the sponsor should be consulted and the picture tailored to suit the interests of both! When commercially sponsored films are produced in keeping with this formula, the library of audio-visual teaching aids available to the schools will be greatly increased, and the schools and business institutions will have a better understanding of each other and a better appreciation of their common interests.

When commercially sponsored sound motion pictures of the kind defined are used by schools for their assembly periods to provide orientation and motivation and are followed by slidefilms\* sponsored by the same institutions, for use in classroom instruction, then the teaching program is complete and industry has, indeed, made a contribution to education and education has enlarged the scope of its facilities and made the most of its opportunities.

\*Slidefilms and Teacher's Manuals for classroom instruction work is the subject for a future discussion.

## Hopi Indians

(Coronet Productions, Glenview, Illinois) 11 minutes, 16mm. sound and color. Sale price \$75. Apply to producer for rental sources.

In homes that rise out of the desert in Arizona live the Hopi Indians. Their pueblos, which appear at first to be part of the cliffs, prove on closer examination to be so arranged on the irregular plateau as to form a carefully worked-out system of streets.

The simple but well-planned irrigation system of the Hopis, shown in the film, illustrates the degree to which these people have adjusted to their difficult environment. Scenes of barrenness make clear why there is little wild game to eat. Even the most important food, corn, must be planted in a way to gain maximum protection from the desert winds. Fruit trees which provide some of the food are shown in their full color, but do not compare either in interest or expanse to the huge fields of corn seen in the film.

It is from corn baked on a stone that the Hopi bride-to-be makes the piki or paper bread which must be sampled and approved by the men in the household of her prospective husband. This offering of bread is but the first ceremony in the long ritual of betrothal and marriage and is followed by a head-washing rite in which the bride and groom with their mothers-in-law participate. Then the groom and his clan set about making the bride's wedding robe, sash, and deerskin moccasins. When completed they are examined with great satisfaction by the bride's father and mother as their papoose looks on disinterestedly.

As a final token of marriage, the bride's father-in-law places a black tie on the shoulder of her wedding robe, and the film moves to a swift close with a view of a Grand Canyon ledge on which, as the commentator explains, the robe will be spread upon the bride's death so that her soul may descend from it to the Home of all Hopi souls—the Grand Canyon Gorge.

### Committee Appraisal:

The film is recommended for use in intermediate and high school grades, at the college level, and among adults interested in cultural life of southwest Indians. While it is less comprehensive in treatment than the "Navajo Indians," another film in this same series, it deals to some extent with all of the social processes. The committee felt that the addition of some interior views of the pueblos would have been helpful in this connection.

There is some indigenous sound in the film, but it relies heavily on the commentary which is replete with many references to historical backgrounds and tribal customs.

This monthly page of reviews is conducted for the benefit of educational film producers and users alike. The comments and criticisms of both are cordially invited.

Producers wishing to have new films reviewed on this page should write L. C. Larson, Indiana University, Bloomington, Indiana, giving details as to length, content, date on which the film was issued, basis of availability, prices, producer and distributor. They will be informed of the first open date when the Teacher Committee will review the films. The only cost to producers for the service is the cost of transporting the prints to and from Bloomington. *This Cost Must Be Borne By The Producers.*

Even in intermediate grades the aid may be used to demonstrate adherence to customs developed over a long period of time, the division of labor among members of the family characteristic of certain Indian tribes, and the importance of village life among the Hopi.

## Alexis Tremblay

(National Film Board of Canada, 84 East Randolph Street, Chicago) 35 minutes, 16mm. sound and color. Produced by National Film Board of Canada, Ottawa, Canada. Sale price \$175. Apply to distributor for rental sources.

The family life of Alexis Tremblay and the village life of Les Eboulements cannot be described one without the other. Given its setting first on a pictorial map of Quebec and then by a historical commentary with beautiful panoramas of color, Les Eboulements is presented as a home of people steeped in the tradition of glory to God and the dignity of mankind. Alexis Tremblay, who inherited his land from his father, trains his four children so that he too might pass on this inheritance from the earth—a common sense inheritance of strength and work. Accordingly, the entire family arises with the ringing of the Angelus one August morning and each member sets about his duties of the day. As Marie Tremblay, mother of the household, happily kneads dough for bread, she explains to her youngest son the miracle of wheat. The oldest son joins his father and uncle to work with machine and sickle on the 40 acres of land, but they pause long enough that afternoon for Alexis to supervise the arrangement of coals prepared in the outdoor oven for the baking of bread.

As this busy month of August nears its end, the city cousins of the Tremblays, spending the summer among the habitants, prepare to return to their home. September brings plowing by horse and ox. October sees the geese flying south and later the sheep wandering restlessly over the land, but prevented from jumping fences and getting lost in the mountains by yokes around their necks.

A month of waiting brings the December snow to Quebec, and it is then that Marie puts up in the kitchen her warp rack, winding it with wool from last year's spring shearing and with a skill learned from her mother. The New Year season brings a party to the Tremblays' house with the word of invitation spreading throughout the entire valley. Dancing by couples and in groups, the younger guests revel in the tunes played by neighboring musicians, while the older folks gossip over their games of cards.

But the very next morning finds the Tremblay family again hard at work on the winter household tasks. Marie and her sister, a permanent guest in the Tremblay home, transfer a warp rack to the loom and spend the following weeks spinning and weaving, shortening the long winter months by bits of gossip now and then. In the meanwhile the oldest son, often called from his sledding with his younger brothers, helps his father cut and haul for three miles from the family timber lot in the mountains the fifteen cords of wood needed each year.

But the long winter seems to break with the coming of Lent even though families from all over the valley come to the Easter service in deep snow. Alexis and his family tarry awhile after Mass to visit with their neighbors. But soon the jingling bells begin to sound over the hills as the many families in their varied-type sleighs return to their Easter dinners and their family hearths, there to await the spring thaw.

The thaw comes in April, promised first by the returning birds and then made real by the rushing waters from

the mountains. The young sons of the Tremblays are not long in starting out to fish and to make willow whistles. For the older folks, however, April is soap making time and "Grandpere," proud of his skill in knowing just how long grease, salt, and rosin should boil to make good soap, comes across the fields to preside at this family event. As his special contribution to shaking off the shackles of winter, Alexis applies to the house a bright red coat of paint properly admired by Marie, who, like her children and sister, find it hard to remain indoors during the early spring days. Next comes the plowing with the middle-aged son learning to guide the team, while Marie and her youngest son plant from a cup blessed by the priest one of each of the kinds of seeds soon to be broadcast over the waiting land.

After the crops are planted the Tremblays join their neighbors in an impressive service of blessing, concluded by a procession of men, women and children, many wearing garments and insignia of the church, to the growing fields where a final blessing is given by the priest. The sound of the *Sanctus* and the triumphal theme of the commentary brings the film to a close on a note of faith in and thankfulness to God for land and family.

#### Committee Appraisal:

With an unusually fine use of the medium this film provides an aesthetic as well as a learning experience. Therefore no mere description of the scenes of the film can indicate its unity and strength of pictorial treatment as well as that contributed by the commentary, which is replete with observations of historical and sociological interest. It is recommended for intermediate, high school, and college classes in social studies and English, and especially for adult groups concerned with the values of family and spiritual life. Music teachers also will find this film helpful because of the artistic use of music to convey the tempo and spirit of life among these people.

#### Your Driving Habits

(Castle Films, Inc., 30 Rockefeller Plaza, New York City 20) 15 minutes. 16mm. sound. Sale price \$22.11; accompanying filmstrip, \$1. Produced by U. S. Office of Education. Apply to distributor for rental sources.

The film includes such elements of good driving as how to start the engine; how to use the clutch and shift gears; how to use brakes; how to drive on curves, pavements, and in mountainous country; how to drive through ice, snow, water, and mud; and how to park a car.

The introductory sequence points out that good driving habits depend upon learning them and developing them by practice. The film proceeds to demonstrate through picture and commentary the fundamental principles of careful driving.

It shows that correct starting depends upon checking the gear, adjusting the rear vision mirror, correctly using the throttle and choke, and turning on the ignition, disengaging the clutch and pushing in the starter. The commentator points out that hurry is a fault with most drivers and that some time should be taken to warm up the car before actually driving.

The next sequence points out that the hand brake is used for an emergency stop and that in making high-speed stops the foot brake should be pumped several times before being engaged. Advice is also given concerning the advisability of leaving on the brakes when parking the car.

In the following sequence the driver is cautioned to slow down on curves by letting the engine break the speed and not by applying the brakes. It is also indicated that one should use second gear when going down steep grades and that it is well here also to let the speed of the motor decrease. To start on an incline, it is shown that it is necessary to hold the car with the parking brake.

The next part of the film is devoted to driving in unfavorable weather conditions. It points out that when one is driving on ice he should start smoothly, drive slowly,

## *Home* AT LAST

*The war is over . . . and  
millions of servicemen and  
women are coming home!*

As the nation waits to welcome them, we humbly give thanks for the splendid job which they have done. America is also grateful for the unstinting support of those who made the guns, ammunition and other supplies with which the Victory was won.

The greatest indebtedness of all, however, is due to those who will not return—to the unselfish and courageous air men, soldiers, sailors, and marines who gave their lives that the principles of democracy should triumph. In memory of their sacrifice, we must make the Peace a lasting one.

And for those who are coming home, we must provide the opportunities that assure prosperity and happiness.

Reg. U. S. Pat. Off.

stop gently, never apply the brakes, and if he skids turn the wheels in the direction of the skidding. When water is on the road, it is cautioned that one should drive slowly; and if the brakes get wet, they may be dried by driving in second gear and slightly dragging the brakes.

Parking is next discussed. The film shows how to park a car. It cautions against hitting the curb and shows how to cut the wheels. In conclusion it points out that good driving habits are profitable and that the driver will get the most from his car when he employs them.

#### Committee Appraisal:

This film, the second of fourteen in a series on automotive operation and maintenance, is a well-organized informational film which will be useful even after the present emphasis on car conservation. It is recommended for classes in driving, safety, automotive mechanics on the secondary level and for adult groups who wish to learn more about the operations of an automobile.

#### The Tell-Tale Heart

(Teaching Film Custodians, 25 West 43rd Street, New York City 18) 22 minutes, 16mm. sound. Produced by Metro-Goldwyn-Maycr. Three-year lease \$60. Apply to distributor for rental sources.

A dramatization of Edgar Allan Poe's short story, "The Tell-Tale Heart", which illustrates the potency of the Scripture, Romans: 11:13, to the effect that the law is written in their hearts and their consciences bear witness. The fact that the weaver's apprentice is caused by his conscience and the imaginary haunting sound of the murdered man's heartbeat to confess the murder, evidences the truth of the Biblical passage.

The film opens by showing a sordid room in which a young man very wretched and dejected is working at a loom. A man who is easily recognized as the owner of the house and the master of the young man returns and peremptorily summons the youth to him. Like lightning his hand flashes out and

strikes the youth across the face and then in a haughty and insolent manner he advises the boy that he should never complain to others about the treatment which he is receiving. When the boy threatens to quit, his cruel benefactor in a very nasty way tells him that he is afraid to quit, is a coward, would starve, and will depend upon him as long as he lives.

As the old man goes to bed, he seems to fear death and to suspect the loyalty of his underling. He orders the youth to go to bed. Instead, however, the boy only covers his light by a clever device which he has perfected and by which he can direct the beam of the lantern wherever he desires. When he is sure that the old man is in bed he enters his bedroom and fixes the strong beam of light from the lantern on the eyes of the old man. Then he rather falteringly yet steadily approaches the bed in the face of the old man's taunt that even though he might have murder in his heart, he is not strong enough to commit it. The boy does choke to death the old man and does secret his corpse under the floor of the main room.

The next morning two men call at the house and inquire for the boy's master. They are surprised to learn that even though he had promised to be at an auction sale that very day, he had left town unexpectedly. Their surprise and amazement increase when they recall the terrible storm of the night before and when they become conscious of the uneasiness of the boy. During their conversation, with increasing volume, one hears a sound such as that which might be caused by a beating heart. It almost deafens the ears of the boy while the two visitors are apparently unconscious of the noise. When one man inadvertently taps on the table, the boy breaks and screams, "Stop it!" and falls to the floor and beats the place whence it seems to him the sound emanates. The two men look questioningly at each other and then they nod knowingly and remove some loose planks from the floor. They are stunned by the sight which they behold. Then they approach the boy and each takes an arm to lead him away. He leaves willingly and with a peaceful look on his face, saying, "It is quiet now."

#### Committee Appraisal:

This film catches in full the spirit of Poe's short story and within the original narrative creates for its entire audience an impression of horror with a vividness which only the most experienced readers of Poe enjoy. Students will enjoy comparing their experiences gained through the medium of the film with those of the printed page. Highly recommended for use by classes in literature, speech, and drama and for school assemblies and adult programs.

## Tennessee Visual Education Conferences

A series of conferences on Visual Education will be held on five consecutive days, November 5-9, at the following institutions in Tennessee: Memphis State College, Austin Peay State College (Clarksville), U. T. Junior College (Martin), Polytechnic Institute (Cookeville), and the University of Chattanooga. The meetings are being sponsored by The Division of University Extension, University of Tennessee, to assist teachers and school administrators to a better understanding of the proper use and availability of educational films.

Participating in all of the sessions will be Major Dennis Williams, U. S. Signal Corps, Photographic Center, New York; Mr. C. R. Crakes, Educational Consultant, DeVry Corporation, Chicago; Dr. Frank L. Rouser, Field Representative for Encyclopaedia Britannica Films, Knoxville; Mr. R. L. Thomas, Elementary School Supervisor, State Department of Education, Nashville; Dr. Orin B. Graff and J. E. Arnold, The University of Tennessee.

## Promotion for Bruce Findlay

Mr. Bruce A. Findlay, former Supervisor of the Audio-Visual Education Section of the Los Angeles City Schools, has been promoted to the position of Head Supervisor of the Instructional Aids and Services Branch of the Los Angeles City Schools, which includes three sections: Library and Textbook Section, Audio-Visual Aids Section, and Guidance and Counseling Section. This new position affords an opportunity for the printed page and the screen to supplement each other.

## Second Season for Chicago Film Forums

The Chicago Film Workshop began its second season of film forums October 10 at the International Relations Center, 84 E. Randolph Street, with a showing of two films, *Diary of a Sergeant* (one of the films selected for the Eighth Victory Loan Drive), and *Don't Be a Sucker*.

The purpose of these Forums is to provide program directors and group leaders with the opportunity to preview films on problems of current international and social significance, and to observe techniques for utilizing this medium to stimulate discussion.

The Film Workshop is sponsored by the International Relations Center and the Adult Education Council of Chicago. The former organization is represented on the Workshop Committee by Mrs. John Alden Carpenter and the latter by Ralph McCallister. Chairman of the Committee is L. Harry Strauss of the National Council of Y. M. C. A.s. Chairman of the sub-committee on film forums is J. Margaret Carter, National Film Board of Canada. Other members of the Committee are Mildred L. Batchelder, American Library Association; Alice M. Farquhar, Chicago Public Library Adult Education Department; Mrs. M. L. Weinstein who heads up the community utilization program; Stephen M. Corey and Cyril O. Houle of the University of

# Notes

Chicago who serve in an advisory capacity. Walter R. Sassaman will represent labor organizations and assist the Committee in reaching those groups. For additional information or to be placed on the Workshop mailing list write June M. Hamilton, at Film Workshop headquarters.

## New Appointment for Esther Berg

Esther L. Berg of the New York City Schools has been assigned to the Curriculum Council of that city on a project to prepare materials keying audio-visual aids to the Curriculum. Its purpose is to acquaint classroom teachers with all sources of audio-visual aids—those available both within and without the school system, and to direct teachers into more thoughtful selection and more effective use of visual aids at appropriate grade levels. The outcome will be a comprehensive catalog on the "Where", and bulletins on the "Why" the "When" and the "How", indicating in such bulletins specific audio-visual materials related to each topic in the curriculum. A school administrator, as well as instructor, Miss Berg has long been identified with the visual teaching field. Her work as consultant on visual education and her courses on "The Use of Audio-Visual Aids to Better Human Relations" to in-service teachers are widely-known. She also compiles for classroom curriculum study of articles in "Coronet" magazine, a monthly bulletin of visual aids keyed to such articles.

## Elect EFLA Officers

The Educational Film Library Association, Inc., announces a re-alignment of its Board of Directors. With the election of Directors in May and June, Miss Marguerite Kirk was replaced by Joseph E. Dickman, of the Chicago Public Schools, to represent members from "Public or Private Schools of Elementary or Secondary Grade". I. C. Boerlin of The Pennsylvania State College was re-elected to represent "State Supported and Controlled Universities and Land-Grant Colleges"; and Edward B. Rogel, Central Washington College of Education, was re-elected to represent "Other Universities and Colleges".

At the annual meeting of the Board on September 8, 1945 the following officers were elected: Chairman, I. C. Boerlin, The Pennsylvania State College; Vice-Chairman, Edgar Dale, Ohio State University, and Secretary, Mrs. Patricia O. Blair, Cleveland Public Library.

## Changes in Film News Staff

Thomas Baird, of British Information Services, New York, is the new editor--in chief of *Film News*, succeeding John McDonald who resigned several months ago. Jeannette Samuelson has left *Motion Picture Herald*, where she had been a reporter for more than four years, to become managing editor of *Film News*. This periodical is published by the American Film Center, an organization supported by the Rockefeller Foundation for the promotion of educational and documentary film production and distribution.

# EDUCATION OR ENTERTAINMENT

**A BELL & HOWELL**  
**FILMOSOUND LIBRARY**  
 Release

■ **OFFICE OF WAR INFORMATION**, Bureau of Motion Pictures, Washington, D. C., has acquired 16mm. prints of:

**Something You Didn't Eat**—a 9-minute color cartoon produced by Walt Disney Productions for the U. S. Department of Agriculture, stressing the importance of a well-rounded diet to maintain health and efficiency. It explains how one may learn to use the basic seven groups of foods essential to good nutrition, and shows the housewife in simple terms how to make use of this important knowledge. Prints will be shipped to libraries during November.

■ **BUREAU OF MINES**, U. S. Department of the Interior, 4800 Forbes Street, Pittsburgh 13, Pa., has released two new 16mm. sound films for free showing to vocational and educational institutions, the armed forces and organizations;

**A Story of Copper**—33 minutes—depicting every phase of the mining, milling, smelting and refining of this metal. Both surface mining and underground mining operations are pictured in detail, followed by progressive scenes in one of the nation's largest concentrating plants.

**A Story of Arc Welding**—25 minutes—the first Bureau of Mines picture produced in full color. It tells of the progress of manufacture made possible through this relatively new technology and gives complete description of arc welding technique. The advantages offered by this welding method, and some of the applications of it, are covered in the film.

## Current Film News

■ **INTERNATIONAL THEATRICAL AND TELEVISION CORP.**, 25 West 45th Street, New York 19, will be national 16mm. distributors of a new film on Holland, titled:

**Holland Carries On**—a two-reel sound subject produced by the Netherlands Information Bureau, New York City. The film stresses the fact that Holland's post-war problem is not merely reconversion, but a gigantic task of actual reconstruction. Undernourishment, privation and dislocation of population have had a particularly bad effect on Holland's youth, as depicted in the film sequences. How the Nazis breached the dykes, flooding the rich lowlands and almost irreparably sterilizing the soil, shows how vulnerable Holland was to typical Nazi brigandage.

International Theatrical and Television Corporation has just acquired No. 5 in the *Let's All Sing* series for 16mm. release, produced under the auspices of the National Film Board of Canada. Featured in this reel are "All Through the Night," "Row, Row, Row Your Boat," and "Waltzing Matilda." Twelve pictures in this series, of which ITTC is exclusive distributor in the United States, ultimately will be completed by the Canadian organization.

■ **CASTLE FILMS, INC.**, 30 Rockefeller Plaza, New York 20, announces two new sound motion pictures for free distribution to schools:

**The Balanced Way**—2 reels—dealing with the subject of proper nutrition for young people and emphasizing the importance of the right foods in the diet for strong teeth, healthy hair, normal growth and resistance to disease. The directress of an experimental diet kitchen, in which combinations of dairy foods are tried and tested, speaks of diets and foods as her talk is visualized.

**Good Grooming**—3 reels—present-Mary Stuyvesant, beauty advisor, in scenes at home and on the lecture platform in which she points out the way to achieve poise, charm and natural beauty. Stressed is the importance of good health through proper diet and intelligent physical care plus cleanliness, proper rest and good posture.

■ **FRITH FILMS**, Box 565, Hollywood, California, have completed the production of the 16mm. color film:

**Tina, Girl of Mexico**—(600 feet, sound)—an intimate study of the personal daily activities of an average Mexican family who live in the beautiful mining town of Taxco. The film is not a portrayal of life as seen through the eyes of a tourist, but of the Mexican people as they joke together, enjoy life, and go about their

tasks with a quiet dignity and graciousness that is the Mexican.

A Continuity and Narration Sheet, in booklet form, shows the definite organization of the film material and provides a valuable Study Guide.

■ **OFFICIAL FILMS**, 625 Madison Ave., New York 22, have incorporated three major news events in their latest News Thrill release:

**Japan Surrenders**—complete details of Jap acceptance of Allied surrender terms and a visual record of the ceremonies.

**Atomic Bomb Test**—actual films of the atomic bomb in action; as tested before it was put into use.

**Empire State Disaster**—filmed just a few moments following the actual crash by Edward Lippman, who "scooped" exclusive shots before other photographers arrived on the scene. These scenes of the first moments of the catastrophe will be the only complete footage available for 16mm. and 8mm. projectors and is released exclusively by Official Films.

■ **PICTORIAL FILMS, INC.**, 1270 Sixth Avenue, New York 20, presented a special preview of Pictoreel fall releases at a cocktail party for the metropolitan photographic dealers and the trade press. Groups from which these representative new subjects were selected for projection, include:

**Musical Miniatures**—18 films offering a wide selection of soloists, dancers, hillbilly musicians, name bands. The film shown from this group features the well-known band leader Johnny Long in a reel called, "The Long and the Short of It."

**Harmon-Ising Cartoons**—combining music and humor in six new releases for the fall season. "Alias St. Nick," in which Cheezer and his pals find out the truth about Santa Claus, is a feature of particular interest for the Christmas holiday season.

**Sportsopes**—represented by "Flying Feathers", a play-by-play action film featuring two of the world's ace badminton players—Ken Davidson and Hugh Fergie.

■ **GENERAL MILLS, INC.**, Department of Public Services, Minneapolis 15, Minn., has just completed a new kodachrome sound motion picture depicting the Betty Crocker method of cake making. The 16mm. film which runs 22 minutes, is titled:

**400 Years in 4 Minutes**—briefly tracing the history of cake making for the last 400 years. A graduate home economist then gives an actual cake making demonstration and describes the how and why of each step as she proceeds.

The motion picture is followed by a 35mm. film strip containing signifi-

cant stills from the picture. This film strip provides a review of highlights of the presentation, and forms a basis for classroom discussion. A literature kit is also provided which includes a teacher's source book for the assistance of group leaders in conducting student discussion.

The picture will be shown principally to home economics classes in universities, colleges and high schools, home economics departments of public utilities, to womens' clubs and similar organizations. It is being distributed free of charge by Harvey & Howe, Inc., 919 North Michigan Blvd., Chicago.

■ **DEVRY FILMS & LABORATORIES**, 1111 Armitage Ave., Chicago 14, is the exclusive distributor for a film on:

**Gardening—the Modern Easy Way**, a 16mm. sound subject in full color, running 20 minutes. Produced for Garden, Inc., Michigan City, Indiana, to make house gardening projects more enjoyable, more efficient and more productive. There is no rental charge for the film, the patron paying shipping costs both ways.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, announce the 16mm. release of many new films, including:

**Chinese in Britain**—1 reel—which opens with a reminder that Sun Yat Sen was once a refugee in England. Many aspects of the training given to Chinese refugees and their children are shown.

**Cornish Valley**—2 reels—study of a typical family in this most westerly county of Britain, telling how they develop their farming each year in spite of the difficult soil. Scenes of Market Day at Coombehampton, held once a fortnight.

**Dawn Over Cyrenaica**—2 reels—post-war picture of this section of North Africa liberated by the British Eighth Army, showing the aid given the Arabs by the British Administration after their liberation from Mussolini's rule. Experimental modern farms are contrasted with earlier primitive farming on small holdings.

**A Mamprusi Vallage**—2 reels—showing the life of the simple, friendly natives in this district of the African Gold Coast. Mainly concerned with farming, the Mamprusi have achieved a measure of self-government along tribal lines.

**New Builders**—1 reel—how the boys of Britain are being trained to become builders. Every step in the construction of a house is practiced by the students. From England's ruined cities better homes will rise.

**Operation Fido**—1 reel—explains the Fog Investigation and Dispersal Operation system which was worked out to solve the problem of fog over

British airfields, the greatest single menace to aircraft.

**Time and Tide**—2 reels—describes the work of the Salvage Department of the British Admiralty in clearing harbors of wrecked ships.

**Two Way Street**—1 reel—celebrating the fourth anniversary of Lend Lease. Cartoons and cutouts recount the history of direct and reverse Lend Lease, showing the contribution made by each of the Allies.

**Report from Burma**—1 reel—presenting the war in Burma, where the jungle and rain offered as much resistance as the Japs. How supplies were transported through all kinds of terrain.

### Entertainment Releases in 16mm

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, report the acquisition of the following feature films by its Filmosound Library:

**Swiss Family Robinson**—8 reels—a faithful adaptation of the well-known story about family shipwrecked on a tropic isle. In the cast are Thomas Mitchell, Edna Best and Freddie Bartholomew.

**Hat Check Honey**—7 reels—in which the junior member of "father

(Concluded on page 378)

Eastern Office: 2828 Decatur Ave., Bronx, N. Y.—FORDHAM 7-9300

## AMONG THE PRODUCERS

### New Booklet Gives Hints on Projection

"Secrets of Good Projection" is the title of a 32-page booklet recently published by Radiant Manufacturing Corp., Chicago, manufacturers of projection screens with the "Hy-Flect" beaded screen surface.

The booklet is illustrated and treats a technical subject in non-technical language. It discusses types of projection screens and which types are recommended for various room capacities. Chapters are devoted to the care of the projector, the advantages of a beaded screen surface, the principles of reflection, pertinent facts related to sound movies, and other subjects.

The booklet points out that proper selection of a screen is important. The selection should be determined by such factors as the size and shape of the room, position of projector, power of projector's light source, size of audience, etc. The booklet discusses the relative importance of these influencing factors and makes recommendations for the types of screens to be used under varying conditions.

### Screen Adette Is RCA Distributor

The Screen Adette Equipment Corporation, 314 S. W. 9th Avenue, Portland 5, Oregon, recently organized by Merriman H. Holtz to operate in the Western States, has been appointed by the Radio Corporation of America as its distributor for the RCA 16mm. sound projectors and accessories. Mr. Holtz states that "It is a proud occasion indeed to become associated with the Radio Corporation of America, a company with more than forty years of research, engineering and manufacturing background." Mr. Holtz will

Merriman H. Holtz

shortly conclude his services with the Treasury Department in Washington and return to the West Coast.

### Educational Recordings Added to Simmel-Meservey Services

In addition to its educational film production and distribution activities, the Simmel-Meservey organization, 9538 Brighton Way, Beverly Hills, California, has in production, and partially completed, a number of recordings under the title of *Tuneful Tales*, designed for use by teachers of children at kindergarten and first and second-grade levels. They are prepared and directed by Martha Blair Fox, a recognized specialist in child psychology.

Series No. 1 of *Tuneful Tales* consists of five subjects: "Johnny Cake," "The Little Engine That Could", "The Shoemaker and the Elves", "The Three Little Pigs" and "The Laughing Jack O'Lantern." Series No. 2 consists of "The White Easter Rabbit" which is completed and now available, with "Little Gray Pony", "Peter Rabbit" and "Little Black Sambo" in production.

Louis C. Simmel, General Manager and co-founder of the firm, states that the recordings have been produced with painstaking endeavor to provide recordings of genuine educational value and interest to small children, through careful story treatment, sound effects and synchronized music that will stimulate maximum pupil response and participation.

Also on the Simmel-Meservey release schedule is a series of poetry recordings for classroom use on the secondary and college levels. These are by Lowell Cartwright whose readings are well-known to radio listeners.

### Plus-Lite White "Blackboards"

Plus-Lite White Boards are a new development in drawing and writing boards, originated and marketed by Chatfield Clarke Company, Woodbury, Conn. Made from Masonite Presswood, they are light in weight and coated with a special, durable, washable finish that withstands temperature and atmospheric changes. Boards up to 4 ft. by 8 ft. can be provided for permanent installation, and there are appropriate sizes for table, desk or lap use. Boards in colors other than white can be provided. The standard frame is 1½ inches wide, made of wood in red lacquer finish, but other finishes than red may be had. The Plus-Lite Crayons of eight different colors are made of a special composition. They do not crumble, nor break when dropped, can be easily erased and do not stain. The advantages of the Plus-Lite Boards and crayons are their versatility of use, elimination of dust, and the greater

### New "Whiteboard" Development

visibility of "dark" writing or drawing against light background. Chatfield-Clarke will send samples without charge to any school authority interested.

### Official Films Changes Hands

In line with a plan for enlarging and increasing the sales powers of Official Films, Inc., that company has announced their purchase by a syndicate headed by George A. Hirliman, Harry J. Rothman and Aaron Katz. Leslie Wink, who was President of Official up to the time of purchase, will leave that company and enter the producing field, specializing in the production of musicals and entertainment films.

Phineas T. Bluerock, who has been sales manager for Official for the past six years, will remain in that capacity with the new organization. Mr. Bluerock will continue his program of establishing offices in all key cities throughout the United States. Towards that end offices in Los Angeles, at 3123 West 8th Street, and in Chicago at 100 West Monroe Street will be established in the near future. There will be approximately thirty branch offices when the expansion plans are completed.

The basic sales policy of Official Films, Inc., will be to better the service to dealers and retailers throughout the nation. Service will be given within 24 hours, due to the branch office set-up which is underway, and both the dealer and the customer will have a wider selection of film product to choose from.

In line with this expansion policy, Official Films will purchase and produce cartoons, sports, documentaries, travelogues, musicals, and the like in ever-increasing quantities.

Still retaining the title of Official Films, Inc., the company will remain in its New York offices at 625 Madison

Avenue until such time as new quarters can be found to accommodate the increase of personnel. In order to take care of the growth in film library and the concurrent sales increase, complete sales, merchandising, shipping and inquiry departments will be formed.

### Improved GoldE Spotlight

New improvements for greater utility, convenience and safety have been added to the GoldE "Bantam Super-Spot," a 500-watt spotlight made by GoldE Manufacturing Co., 1214 W. Madison Street, Chicago 7. The "Bantam" is a full-size high-efficiency professional-type spotlight, throwing a powerful beam of clear, brilliant, shadowless white light, free from striation, color fringe or filament image. It spots down for punchy highlighting or diffuses to even flood with easy push-pull control. It is easy and safe to use, and will not transmit heat.

Other features are a directional control handle of new design, rigid and unbreakable rear housing, 4½-inch Fresnel heat-proof pre-focus socket, fluted ventilation permitting more rapid heat dissipation, special wire heat guard to protect the hands, full Universal mounting.

The modern, streamlined design gives the spotlight a trim, attractive appearance. It has a black-baked wrinkle finish and a heavy cast iron base, weighing eight pounds.

### Fairchild Radar Camera

Details of a special camera of advanced design for use in photographing radar images, has been announced by Fairchild Camera & Instrument Corporation, New York, which declares radar-plus-photography will be one of the most effective military and commercial tools of the coming years. The camera which can be used with every type of airborne and shipboard radar, and which is expected to be adapted for use with all ground types, is being produced for the Army and Navy.

The Fairchild product is known as the automatic radar recording camera, and consists of five units: camera, magazine, beamsplitter, adapter casting, and control box. The complete camera installation is tied in with the radar circuit, and the camera itself is mounted atop the radar's oscilloscope. The unit is so arranged that the operator sitting in front of the radar scope can observe the luminous picture of the terrain, while simultaneously the camera photographs it for continuous, permanent record.

While the original purpose of the radar camera was and is largely military in intent, it is far from limited to that field. Commercially, the unit will be used mainly as a purely recording camera. Radar-record photography can be applied to give radar maps of worldwide airline routes and as an aid in determining safe navigational paths. It can

be a supplement to the training of radar operators. Further, the camera and the magazine proper can be used in conjunction with various specialized adaptations for installation in a plane to photograph a group of instruments' performance in flight. Additionally, it can be used on board ships or in industrial plants, to provide an irrefutable record of the performance of some object or instrument. In laboratories, the camera can photograph all the minute phenomena illustrated on oscillographs and other instruments, eliminating dependence on visual examination alone. Many speculations can be made of the radar camera's post-war role, but photography has definitely taken another step forward with this camera's development.

### Cartoon Producer Enters Educational Field

Walter Lantz, "Cartunes" producer, has made arrangements with Universal for use of its studio facilities in connection with "live action" educational pictures he is making. All educational cartoons will be produced at the Lantz studio at Universal City. Lantz is planning to enlarge his present building or construct an additional structure to be devoted to educational pictures' production as soon as material is available.

Production of *Reddy Kilowatt*, first Lantz educational picture, has been completed for the Ashton B. Collins advertising agency, New York City.

## Larger Quarters for D. T. Davis Co.

The D. T. Davis Company is celebrating its 21st anniversary by announcing the establishment of their own new, larger and more convenient office building at 178 Walnut Street, Lexington 34, Kentucky. The new facilities and increased personnel will now give school, church and industrial users of audio-visual instructional materials in Kentucky more efficient and complete service than ever before.

D. T. Davis offers the services of capable visual education specialists, always ready to help schools apply motion pictures to their teaching needs. Each member of the organization is prepared to advise all about films available for school use, how other schools are successfully using motion pictures to meet their teaching problems, about school motion picture equipment, its selection, its operation, its maintenance, and the various means of financing its purchase.

## DeVry Consultants Serve Schools

At Northwestern University, at Leeland Stanford University, at Mount St. Mary's College, Los Angeles, and at similar centers of education, Charles L. Crakes, DeVry's educational consultant, has recently completed courses in the effective utilization of audio-visual teaching materials. Norma A. Barts, DeVry's audio-visual aids counselor, has also conducted courses and workshops at Portland University, Portland, Oregon; Northwest Christian College, Eugene, Oregon; Southern Normal School, Ashland, Oregon; Mount St. Mary's college for Washington, Oregon, and California instructors; New Mexico Highlands University; at the Louisville,

## A Publication for Industrial Firms

"Movies Go to Work," a booklet giving industry the reasons for adopting motion pictures as a management tool and telling what steps to take to "get going—and keep going—right," has just been announced by Bell & Howell Company, Chicago pioneer producer of motion picture equipment. It is ready for distribution, at no charge, to industrial plants, sales organizations or others.

The publication is divided into five chapter headings: "Training Salesmen;" "Selling Your Product;" "Increasing Production;" "Improving Personnel Relations;" and "Interpreting Your Material." Under the latter heading, the assistance of Bell & Howell's factory-trained special representatives in selecting commercial production facilities for script-writing assistance, technical aid in actual shooting and other film production work is offered.

Kentucky Catholic Educators' Conference and at Hazel Park, Michigan.

DeVry aid to universities and schools in the planning and organization of their audio-visual aids program is without cost or obligation. Both Mr. Crakes and Miss Barts have backgrounds of many years' experience in audio-visual teaching practice and these classes and workshops under their direction are given an unbiased, now commercial review of audio-visual teaching developments and their effective adaptation to the school program. Schools planning a workshop, clinic or conference devoted to audio-visual teaching aids, and desiring the services of DeVry's educational consultant, may write the Educational Department, DeVry Corporation, 1111 Armitage Ave., Chicago 14, Illinois.

C. R. Crakes and typical post-graduate class in audio-visual aids

## Current Film News

(Concluded from page 375)

and son" vaudeville team has to make good on his own in Hollywood.

**Hi, Good Lookin'**—6 reels—giving a new twist to the Pygmalion theme. Radio big shot aids little country girl, only to find himself almost eclipsed by his romantic generosity. Features Harriet Hilliard and various radio bands and stars.

■ **INTERNATIONAL THEATRICAL & TELEVISION CORPORATION**, 25 West 45th Street, New York 19, has just obtained from Warner Brothers, 16mm. distribution rights on the Frank Capra feature picture titled:

**Meet John Doe**—which was one of Warner's super-specials with an all-star cast consisting of Gary Cooper, Barbara Stanwyck, Edward Arnold, Walter Brennan, Spring Byington and James Gleason. The screen play by Robert Riskin is in the "Mr. Smith Goes to Washington" tradition and style.

Six new one-reel entertainment shorts will also be released by International, under the title of "Tom Terriss Thrillers." For years Terriss was known as "The Vagabond Director", producing travel shorts on many countries. First picture to be completed in the new series is:

**The Vengeance of Ali Singh**—a story with the Far East as its locale, involving action between an Oriental servant and an English master of the pre-war type.

International Theatrical & Television has opened another branch exchange office in New Orleans to handle all their bookings for the State of Louisiana, with a possible extension of activities to adjoining territory later. The address of this new office is 815 Poydros Street.

## Catalog

### Brandon

The "1945 Blue List" catalog of Selected Motion Pictures, issued by Brandon Films, Inc., 1600 Broadway, New York 19, offers 16mm. sound and silent films on practically every subject, as indicated by the main group-headings. Forty of the 128 pages are devoted to Feature Length Films, including foreign language and British as well as American features. This listing is followed by films on the United Nations, News-reel History of the War, Our Enemies, Our Armed Forces, The Home Front, and Vital Areas. Educational Shorts are further classified as dealing with History, Citizenship, Social Problems, Health, Home Economics, Literature, Aviation, Sciences, etc. There are films on such timely topics as Public Affairs, and Building the Peace. This latter section is based on the pattern of the four Foreign Affairs Outlines published by the Department of State and is intended for use with these Outlines.

# THE INSPIRING SCREEN STORY OF THE UNITED NATIONS PLANS FOR PEACE

*The Challenge of  
the Atomic Age!*

**A POWERFUL NEW FILM  
OF HIGH PRIORITY INTEREST  
FOR EVERY AMERICAN**

The challenge to build a peace, is the crucial challenge for all of us today. 'NOW—THE PEACE' is a constructive, timely aid, of lasting value. Its supremely important purpose is to stimulate discussion and understanding of the problems, and the evolving patterns for building the peace.

'NOW—THE PEACE' is a factual summary of the basic United Nations Organization program for world security. It clarifies the structure; and it analyzes the plans. Most important, it shows how, by joint action to solve Relief, Food, Money problems we are helping to rid the world of conditions that breed war. For, the lesson of the past is that great deeds, not words alone, are needed to meet the great challenge!

### UTILIZATION

For all youth and adult groups in and out of school; and for classroom use in current history, international relations, economic geography, and social studies.

*Of specific interest for  
world friendship assemblies*

*Written and  
Directed by*  
**STUART LEGG**

For the National Film  
Board of Canada

*Released by*  
Brandon Films Inc.

## IF THE SCREEN WERE ALSO A MIRROR

... you could watch students' eyes sparkle, see how their interest is aroused, when you show them *projected* pictures. They learn much faster and better—visually.

With the brilliant, lifelike, colorful pictures projected by the Spencer Model GK Delineascope, student interest reaches its peak. This 750 watt instrument for 2" x 2" or 3¼" x 4" color slides

provides greater brilliance than most 1000 watt projectors. Complete slide protection is assured by an efficient cooling system.

For literature describing the Model GK in detail, write Dept. Y12 today.

# QUIET...

—that's the kind of projection  
you get from

## DeVRY

### 16 mm. SOUND-ON-FILM PROJECTORS

Protectively housed in its own "blimp," or silencing case, the NEW DeVRY 16mm. sound-on-film projector's performance is quiet . . . steady . . . purposeful . . . like the graceful movement of majestic swans across still waters at eventide.

With the NEW DeVRY film moves smoothly, *safely* from reel to reel . . . no flicker, no weave, no blurr, no jump. Two revolving filter rollers assure flutter-free sound by keeping film speed constant and in perfect alignment with the sound lens.

With the NEW DeVRY you get theater-type projection, theater standards of performance. The ultimate of sound—whether it be crisp, clear, intelligible conversation, or the full majesty of symphonic music . . . uniformity of illumination over the screen's entire surface . . . soft, natural brilliance that assures viewing comfort because it is kind to the eyes. Both sound and image, "Nature Real."

Above all, the NEW DeVRY 16mm. Sound-on-Film projector is so simple to thread, to focus and to maintain that a 12-year old student can operate it . . . So sturdily built, you are assured years of continuous, trouble-free service.

The NEW DeVRY is a 3-purpose projector that (1) SAFELY projects both sound and silent films; (2) that shows *both* black-and-white and color film without extra equipment; and (3) whose separately housed 25-watt amplifier and sturdy 12-inch electrodynamic speaker afford portable Public Address facilities, indoors or out. DeVRY CORPORATION, 1111 Armitage Ave., Chicago 14, Illinois.

# New Quick Easy Threading System

ONE OF THE IMPORTANT BASIC IMPROVEMENTS IN THE NEW

*Amprosound*  
*Premier "10"*  
 16 MM SOUND PROJECTOR

**Saves Time**  
**Eliminates Film Damage**  
**Due to Faulty Threading**

Here is a welcome innovation for both expert and amateur. With this new improved design of film threading mechanism, both film sprockets open for threading and close automatically as the gate opens and closes. Either sprocket may also be opened individually to adjust film loops if necessary without opening gate. This new feature not only saves time but eliminates possibility of damaging valuable film because of improper threading.

Owing to the still urgent demand for Ampro projectors by the U. S. armed services—all Ampro civilian production for the balance of the year will be allocated to the accumulated orders now on hand. Because of this unusual demand, all new orders are being booked for early 1946 delivery and will be filled in the order in which they were received. If you wish Ampro quality and features—and they are well worth waiting for—we urge you to place your orders now so that delivery can be made at the earliest possible time. Your patience will be rewarded by the superb quality and features of the new Ampro projectors.

*Ampro 8 mm. Silent Projector*

**AMPRO**  
 8 mm. silent... 16 mm. silent... 16 mm. sound-on-film... 16 mm. arc projectors... accessories

*The Army-Navy "E" has been awarded to Ampro for excellence in the production of 16 mm. motion picture projectors.*

# 6 FUNDAMENTALS

that help you get  
the most from  
instructional films!

- 1 Preview the instructional film! To insure thorough familiarity with the contents and proper integration with your curriculum! This helps you organize your units of instructional film material and enables you to check in advance any point not completely clear to you.
- 2 Set the proper classroom atmosphere! In order that your students (a) realize the difference between education and entertainment, (b) recognize their responsibility in learning from the film, and (c) are prepared for the particular instructional film to be shown!  
Such proper preparation arouses your students' interest and increases their anticipation.
- 3 Show instructional films at least twice! The first presentation should be run without interruption. During this introductory showing questions that arise in your students' minds should not be permitted to be expressed or answered. But upon completion of the

presentation your students should be given ample opportunity to state their reactions, ask questions and discuss freely.

- 4 Encourage students to ask questions! On repeated presentations, all your students' questions should be answered or discussed immediately. This serves to clarify meanings and correct misunderstandings when it is most timely and easiest to do so.
- 5 Use follow-up activities to capitalize on interest aroused by film! Follow-up activities should include teacher and student questions and explanations, discussions, dramatization, written reports and supplementary readings — that capitalize the points made by the film.
- 6 Evaluate the worth of each film in terms of pupil growth! Through both subjective and objective tests, determine the film's contribution to your students' knowledge, ideals and habits.

**CATALOGUE NOW AVAILABLE, SENT YOU WITHOUT CHARGE OR OBLIGATION**

To get the most from instructional films, you must select films to integrate into the framework of your curriculum which you've created with full realization of the needs of your students.

The Instructional Films Division's catalogue describes many subjects from which you may make selections that will help you enrich the quality of your pupils' experience and expedite their learning.

Write for your copy today. In addition to this descriptive catalogue of instructional films now available, we will keep you advised of new films as they are produced. Fill out and mail coupon now.

**WIN \$10,000 FIRST PRIZE!**  
**10 Big Additional Prizes!**

For Best Amateur Motion Picture on any subject. Write contest director, International Theatrical & Television Corp., for complete details.

The method of exposing targets with the  
**KEYSTONE** *Overhead Projector*  
 has *Several Distinct Advantages*  
 over the method used with other projectors

1. As many as *twelve* exposures may be made from a single slide—as against one.
2. The twelve successive exposures are projected at the same spot on the screen.
3. The cost of each exposure is reduced to the minimum.
4. The projection is greatly facilitated because of the number of exposures available on a single slide

and by the way in which the slide is manipulated. YES, in Economy, in Ease of Operation, in Flexibility to Classroom Requirements, in Adaptability to Present-Day Demands and to Coming Developments in Projection Material—the Keystone Overhead Projector *stands first*.

Just try a Keystone Overhead Projector—*its superiority will be evident*.

**KEYSTONE VIEW COMPANY**  
 Meadville, Penna.

SINCE 1892—PRODUCERS OF SUPERIOR VISUAL AIDS

## **HEY FELLERS, it's from Films Incorporated!**

Enthusiastic? Of course, they're enthusiastic about motion pictures shown in school auditoriums.

And when "it's from Films Incorporated", they're sure of the best from the world of entertainment films.

But that's not all.

Teachers know each film (selected for educational content) is especially entertaining to students because it is informative, in most cases

related to some phase of History, Literature, Science or the Arts they are studying in classroom. Seeing the picture broadens understanding, stimulates awakened interest, and encourages further study.

The SCHOOL LIST of Films Incorporated offers a wealth of world-famous productions students appreciate—and remember.

**Ask your Visual Education Dealer or write for your school list today.**

Why audio-visual  
education authorities  
so enthusiastically acclaim  
the subject matter and manner of  
treatment of

# "DINNER PARTY"

the latest Simmel-Meservey, 16mm color and sound film in two reels, now ready for distribution for training in table etiquette at the high school age level:

1. **METHOD OF PRESENTATION** . . . is such as to make the audience feel that it is a part of the "Dinner Party" . . . and by associating the idea of correct etiquette with sociability and having a good time, student interest is aroused in learning the rules of proper table manners.
2. **TEACHING GUIDE** . . . each print of "Dinner Party" is provided with a comprehensive 25-page, neatly-bound booklet of inestimable value to the teacher for getting full instructional value from the picture during and after its presentation to the class.
3. **RULES OF ETIQUETTE** . . . PRESENTED IN "DINNER PARTY" are based on widely recognized authorities on table manners.
4. **SUPPLEMENTARY REEL** . . . portrays, in easily assimilated fashion, the accepted rules of table manners and etiquette.

*Your request for prices and preview reservation orders for  
"DINNER PARTY" will receive prompt attention.*

# NEW-WORLD SPANISH

on

# RCA VICTOR RECORDS

## THE AUTHORS

**HENRY GRATTAN DOYLE**  
 Professor of Romance Languages  
 and  
 Dean of Columbian College,  
 The George Washington University;  
 formerly Director, Washington Inter-American Training  
 Center; Editor, *Hispania*

**FRANCISCO AGUILERA**  
 Assistant Director, Hispanic Foundation,  
 The Library of Congress;  
 sometime Instructor in Spanish, Yale University;  
 formerly Assistant Chief, Division of  
 Intellectual Cooperation, Pan-American Union;  
 former Director General of Secondary Education,  
 Republic of Chile

† † †

**JUST RELEASED**—A comprehensive course in New-World Spanish, prepared by eminent authorities on the language, is now available, at a remarkably low price. It consists of a complete text book and two albums containing twenty double-faced ten-inch records. The lessons were carefully prepared by Henry Grattan Doyle and Francisco Aguilera, who planned the course for self-instruction, for classroom teaching, and for home preparation and practice.

**CLEAR, NATIVE SPEECH ON RECORDS**—Native speakers, with excellent voices, made the recordings. One woman and two men are heard, to ensure variety and to demonstrate the conversational use of the language fully. All the playing time of the records is devoted to Spanish, while the simplified directions and interpretations are printed in the manual. The natural characteristics of the language are stressed, giving the listener an understanding of the personal qualities of Spanish speech. Vocabulary, enunciation and intonation may be learned with ease because the initial lessons are presented at a slow pace, and without staccato effects. The remaining records are spoken at normal speed, with particular attention to clearness.

**TEXT SIMPLE TO FOLLOW**—The textbook has an introductory section devoted to English grammar, followed by a discussion of the accenting of Spanish verbs. The first two lessons, dealing with Spanish pronunciation, supplement the first two record sides, and the texts of lessons three to forty are also printed in the book, as recorded, with the benefit of additional notes. The concluding sections of the book contain Exercises, Outline of Spanish Grammar, English Translations of Lessons, and a Vocabulary.

A complete and  
 authoritative Spanish  
 Language Course  
 for only  
**\$23<sup>95</sup>\***

**IDEAL FOR HOME OR CLASSROOM USE**—Instructors will find the course invaluable for improving pronunciation, intonation and conversational fluency. Students will learn the language easily because the teaching approach is simple, and the delivery of the spoken words provides perfect ear-training. At home, the lessons can be used successfully without any supervision whatever. In the classroom, the records can be repeated over and over as models of correct enunciation, thus relieving the strain of teaching for the instructor.

**AVAILABLE TO ALL**—The New-World Spanish on RCA Victor Records is made by the company that brings you many other fine recordings.

The low cost is made possible because of the wide distribution facilities of the RCA Victor Division. This low cost will satisfy the extensive demand for an authoritative Spanish course at a reasonable price. For further details, see your local RCA Victor Record Dealer.

Victor Albums E68 and E69

Ten 10" records each album, complete with text....\$23.95\*

## Another Magazine in the Field

IT has been a long wait—twenty-four years—before EDUCATIONAL SCREEN could greet the appearance of a second magazine of similar character and purpose in the same field. It now does so most heartily, for such a phenomenon is the best possible evidence that the visual field is growing as never before. Two magazines, like “heads”, should be better than one, and the living field will keep both of them amply busy.

See and Hear, Vol. 1, No. 1, in the popular small size of Reader's Digest and many others, made its bow in September last at Madison, Wisconsin. The moving spirits behind it, the three editors, are Walter A. Wittich, C. J. Anderson, and John Guy Fowlkes, all of the University of Wisconsin. The Advisory Editorial Board is an imposing and very cosmopolitan full-page list of fifty names “of the foremost authorities on the educational use of audio-visualization.”

The first issue offers forthright editorial pronouncements as to aims and policies which stamp *See and Hear* as unmistakably an educational journal “for professional educators”, not for the “public”. It disclaims being a “magazine” or “promotional idea to further the sales of any kind of equipment or supplies. It aims to be a “meeting place for people in the educational field” . . . “a chronicle of progress, experience and inspiration”. We can feel nothing but approval for intentions matching so closely with our own. They indicate a harmony of effort which should augur well for greater service to a greater field. What we like most of all is the range of subject-matter in its articles, the broad emphasis on all forms of visual aids and the pressing need for discriminating selection of aids for use singly or in right combination. We shall follow succeeding issues of *See and Hear* with keenest interest.

One discrepancy between the September issues of the two publications we must mention, regretfully but necessarily, to avoid any possible misapprehension in our own readers' minds. Under the Ten Objectives for the D. V. I. as put out by its President, Point 5 appears differently in the two magazines: In *See and Hear* (page 59) it reads, “To encourage existing periodicals as a voice for the Division of Visual Instruction”; in EDUCATIONAL SCREEN (page 282) it reads, “development of The Educational Screen as the pub-

lication of the Department of Visual Instruction.” The latter quotation gives President Rakestraw's exact words.

## Cover Picture

FOR the third consecutive month we are pleased to present on our cover a selection from the Encyclopaedia Britannica Collection of Contemporary American Painting, “Lumbering”, by David Stone Martin.

The artist was inspired to put this subject on canvas after he had become acquainted with these men and their work while doing murals in the TVA dams during his years with the Tennessee Valley Authority by whom he was commissioned to record pictorially this development. Previous to this appointment Mr. Martin did some murals and designs for display at the Century of Progress Exposition of 1933 and 1934 in Chicago, his home town. Following that he was made supervisor of an ambitious mural project sponsored by the Federal Arts Project which, for a young man of twenty-one years whose only formal training was a high school art course, was no small honor. After December 7, 1941, he became one of the key men in the Graphics Division in the OWI. Later, he was selected as one of forty-two leading American Artists assigned as war correspondents to travel to active war theatres to create official pictorial records of World War II.

## A Change in Departmental Editors

BECAUSE of increased demands upon him in the Visual Education Department of the Chicago Public Schools, Mr. Joseph E. Dickman has been forced to relinquish his departmental editorship of “The A B C's of Visual Equipment” in the EDUCATIONAL SCREEN. We have no course but to accept his decision, but with keen regret at the loss of so able a collaborator.

As Mr. Dickman's successor we are happy to announce the name of Robert E. Schreiber, Consultant on Visual Aids, Stephens College, Columbia, Mo., and also Assistant to the Director, Center for the Study of Audio-Visual Instructional Materials, at the University of Chicago. Readers of Mr. Schreiber's excellent article in our last September issue will welcome this announcement. The name of the Department, at Mr. Schreiber's request, will be slightly changed to “The A B C's of Audio-Visual Equipment”, beginning with the December issue.

# The Importance of Perceptual Learning\*

*A careful and scholarly discussion of the fundamental truth underlying all visual teaching—the interdependence of the concrete and the abstract.*

STEPHEN M. COREY  
Professor Psychology  
University of Chicago

ALL teachers, irrespective of the level on which they teach, make decisions and act in three important areas. First, they must have clearly in mind the kinds of pupil-behavior their instruction should bring about. The effective teacher of secondary school social studies, for example, works consciously toward certain definite ends. His teaching is controlled by some concept of the kind of social maturity he wants his pupils to achieve. The second area in which decisions are made by every teacher involves choosing and devising learning experiences that will bring about this maturity. Boys and girls learn by being active. Some activities are very educative. Others teach little that is lasting or pertinent. The teacher's third responsibility is to develop techniques for finding out whether or not the desired learnings have occurred. This is the evaluational or testing aspect of the teaching-learning process.

In this article I shall concentrate on the second of these three problems. Assuming that the teacher knows the kinds of behavior he wants to develop, which psychological considerations should govern his selection of learning activities? Pupils may be asked to read textbooks; to talk to one another; to participate in debates; to work in the laboratory handling apparatus and equipment; to take a field trip; to produce a play; to write an essay; to visit with an expert; to answer questions the teacher asks; to study a motion picture, or a map, or a graph, or a globe. Teachers from time to time may request boys and girls to do all of these things. The reason for the request or the assignment of a certain activity is that the teacher believes it is the kind of learning experience that will bring about the achievement of desirable objectives.

From the point of view of a psychologist interested in concept formation, these varied activities children engage in in school can be described in terms of the degree to which symbolism is involved. It will help clarify what I mean if the reader will imagine a long scale or continuum on which we can place all the different kinds of instructional materials that teachers use to direct the learning experience of school children. At the extreme left of this scale, will be placed those materials or those learning activities that involve a great deal of seeing, feeling, hearing, and active participation on the part of the pupils. Learning about a grocery store by actually working in one with a skilled teacher present to help identify the important lessons, is the kind of learning situation that would be placed near the left-hand extreme of the scale.

Then as we move gradually to the right the instructional materials imply learning experiences involving more and more abstraction and symbolism. They increasingly involve vicarious learning,—experiences not with the "real thing" but with some kind of substitute for it,—a picture, a model, a diagram, a map, or, and here we school teachers bear down hard, printed or spoken words. Learning situations or instructional materials that are exclusively verbal belong at the extreme right-hand end of this scale. Here everything that the boys and girls meet is symbolic and abstract.

To illustrate further the nature of these different kinds of learning experiences, consider the teacher of social studies in an urban school who wants his eleventh-grade boys and girls to learn as much as they can, during a limited period, about rural life. He wants them to learn how farmers live. What is the nature of the work farmers do? What do children do on the farm? How many farmers' children eventually move to the city? What is their school like? What kind of jobs do they look forward to? How is the farm community organized? What do the adults do for recreation? How active are they in politics? How do they feel about city people? How are the crops harvested? What becomes of these crops?

This high-school teacher, would think of many different kinds of experiences that would help students learn these important lessons about rural life. The boys and girls, for instance, might spend several weeks actually living and working in a rural area,—doing the work the farm people do, spending time in farm homes, serving as members of rural community groups. They would leave their own high school and homes, and, for a time, actually do the things that rural people do, with the teacher doing his best to see to it that this first-hand participation in rural-life activity was maximally educative.

Or, if an arrangement of this sort could not be made, these young people might spend some time visiting rural communities. They would observe what went on. They would ask questions. They would see and hear farm animals, and farm activities and farm equipment and farm people. Eventually they would formulate some generalizations about rural life. They would organize their knowledge and reach certain "value judgments." This learning would be based upon watching rather than participating. Their teacher would again, of course, help in this whole process and do his best to see to it that important lessons were learned.

Or these young people going to high school in a large city might try to learn about the ways of farmers by looking at many good motion and still pictures that

\*Address given at the Iowa-Nebraska Institute on Audio-Visual Aids, University of Omaha, October 4-6.

The accompanying illustrations are indicative of audio-visual materials available for some of the areas discussed by the author.

deal in an authentic way with farm activities and operations. There could be well-made sound pictures on farm animals, plowing and harvesting, the farm home, the work of the county agent, rural community activities, farm equipment, canning, butchering, the farm dairy, and so on. There might also be made available a number of objects and models and exhibits including maps and charts and tables and samples of produce that illustrate the activities that go on in a rural community. Instructional materials of this sort would make it possible for the boys and girls to stay in the classroom almost all of the time that they are learning about farm life.

Or finally, and this kind of learning experience would be far over at the right-hand end of the scale I have described, the pupils might spend all of their time in the classroom talking and listening and reading about rural life. They would use texts and encyclopaedias and bulletins and mimeographed materials. Farmers and rural social workers, implement dealers, and other people who know a great deal about farm life might come to the classroom to give talks and to answer questions. The boys and girls themselves

would organize panel discussions, and have debates, and write reports. Again their teacher would help them in all of this activity.

Now admittedly an excellent instructor would try to provide his pupils with learning experiences which fall at different points on this scale so far as their degree of symbolism or abstractness is concerned. Most of us school teachers tend, however,—it is almost an occupational disease,—to stay too far over toward

Scenes from motion pictures on farm life.  
 Above: "The Corn Farmer", and "The Truck Farmer" (Encyclopaedia Britannica Films); Left: "The Dairy Farm" (Coronet Films);  
 Below: "Women's Farm", "Making Good Hay" (British Information)

the right. We know how to use verbal materials best. Books and words are convenient and accessible. We feel at home with them. We like to read and talk and to have our pupils read and talk. Schools make everyone think of textbooks and lessons to be recited.

No serious student of the learning process fails to see the great merit in verbal instruction, on one condition. Words, assuming that this important condition obtains, save a tremendous amount of time. To be able to read and to understand the statement, "People in farm communities know one another more intimately than people in urban communities," is a much more economical way to acquire that generalization than to spend days living in rural and urban communities.

The condition that makes the extensive use of words in teaching and learning an economy is an obvious one but it is constantly overlooked. The condition is that the words must communicate adequate meanings. Merely because a pupil is able to repeat or paraphrase words he has read from a book or has heard his teacher speak is no assurance whatsoever of meaningful learning. This is apparent to everyone who has listened to children "recite" or who has read large numbers of their test papers. Words can be repeated with a glibness that is completely deceiving to an amateur observer. A pupil who, to the direction, "State an important distinction between rural and urban life," answers, "People in farm communities know one another more intimately than people in urban communities," may have learned nothing more than an interesting series of lip, tongue, and throat movements, or, even worse, the meanings he associates with these words may be entirely erroneous.

A number of scientific studies have been made of the meaninglessness of sheer verbal learning even when terms can be defined glibly and instantly. One of the more recent ones has been reported by Horn of the University of Iowa in the Forty-first Yearbook of the National Society for the Study of Education (404 f.). Horn reported the interpretation that fourteen seventh-grade pupils gave for this sentence which one of them had used and which had appeared in a textbook, "The Missouri Compromise of 1820 estab-

lished the parallel of thirty-six thirty between slave and free territory." The question that was asked these boys and girls was, "What is meant by the parallel of thirty-six thirty?" Here are some of the answers: (1.) "That the slave and free states were evenly populated and were the same in strength." (2.) "Boundary line between slave and free states was thirty-six degrees north latitude and thirty degrees north latitude." (3.) "The two lines of the year 36." (4.) "The line drawn between the slave and free states." (5.) "Well, they kept it even—the same amount of territory for slave and free." (6.) "The year 336." (9.) "The slave and free territories were equal." (10.) "It was on the 36th year and on the 30th day." (11.) "I think the parallel of thirty-six thirty means half and half." (12.) "That's why they,—Mr. Lincoln and Congress,—made the parallel line on the map.— All of them sat around a big table and Mr. Lincoln drew the line and read the Emancipation Proclamation." (13.) "About this many slaves in all north, south, west and east." (14.) "I haven't the slightest idea."

A great contribution to adequate learning might have been made in this instance by the use of instructional materials that lie farther to the left on the scale which I have described. Had these seventh-grade boys and girls, fumbling around with concepts of the globe and the various lines that have conventionally come to represent longitude and latitude, been taught the meaning of these lines through a rich variety of visual aids—maps, globes, motion and still pictures—the words would have derived their meaning from realistic perceptual experience and would have had less ridiculous implications. This, I know you will recognize, is no argument against using words in instruction but rather an argument that words instruct only if and when they derive their meaning ultimately from common experiences that involve seeing, hearing, feeling, hefting, smelling, and other varieties of "first-hand" perception. In the degree that these common perceptual experiences are lacking or inadequate, words are little more than noises or interesting black marks on a piece of paper.

Scenes showing slum conditions. Left: from the S. V. E. Picturol on "Housing"; Right: from "A Place to Live" (Brandon Films)

The fact that all words do derive their meaning ultimately from perceptual experience is a fundamental generalization now taken for granted by students of the psychology of learning. It makes no difference how abstract a word is, its value as a tool, as a means of interpreting or controlling experience, depends upon the percepts from which it is derived. Common observation proves this to be the case when young children are heard defining terms. To the child the pencil is to write with, the chair to sit on, the table to eat from, a window to look through, a bed to sleep on.

In such cases it is clear that words mean whatever a child's perceptual experience with the objects or operations symbolized by the words has taught him. To one child a dog is "a bad animal that bites," while to another the word dog means, "I pet him." The meaning in each case depends primarily upon the child's perceptual experience with the animal someone else called a dog. In the degree that this experience has been varied and extensive the meaning which is attached to a word is realistic and useful. In the degree the opposite is true, words are relatively meaningless and useless. For the child who has seen a cow, milked one, fed one, tried to drive one out of a corn field, been chased by one, seen a cow's calf born and raised, helped with dehorning, and has been in the stall when the veterinarian tried to relieve a suffering cow,—for such a child the word "cow" has rich meaning. It "stands for" a great deal. Contrast this with the youngster from Brooklyn who thought a cow was "a little blue animal" because the only one he had seen was on a Pet Milk can. He, incidentally, was attempting the impossible task of peopling certain of the fairy tales he read with men and women who were small enough to milk a cow of that size.

In exactly the same way, but involving a somewhat more complex concept the word "city slums" may have rich meaning for the young man or woman who has lived there, observed carefully what went on, talked with slum dwellers, smelled the smells and been a party to the unbelievable amount of human misery that exists in blighted city areas. The same word, however, would have relatively little meaning for the upper-class child who had never gone hungry, or been filthy, and whose parents had consistently been kind and understanding, and whose home and neighborhood life had been excellent, both economically and psychologically.

Not only is it true that all of the verbal symbols we use to communicate ideas are rooted in common first-hand perceptual experiences, but it is also true that to the extent a specific concept must be taught by reference to perceptual experiences remotely related to the concept the meaning will be erroneous or unrealistic. This was illustrated in my presence some time ago when I observed one third-grade child trying to teach another third-grade child what a zebra was. The young teacher first said to his pupil, "Have you seen a donkey?" This question was psychologically interesting. It meant that the young teacher realized that he had to start with some experience that both he and his pupil had had in common. Now the concept of a zebra that would have been taught by using a donkey and putting stripes on him (both children of course having

Looking Glass Gallery in the Palais de Versailles  
(from the S. V. E. Picturol on "France")

"experienced" stripes) would have been a fairly adequate concept. The teacher would have been forced to go just one short step away from the real object in order to employ a common concrete perceptual experience. But in this case the youngster actually had not seen a donkey. The next question was, "Have you seen a horse?" Now to describe a zebra in terms of a horse would result in a less adequate understanding of a zebra. It so happened that the youngster had seen a horse and so his teacher went on to describe a zebra in terms of a horse by adding the stripes and saying a zebra was somewhat smaller, built a little bit differently, and so on.

Personally, I wished that the child had not seen a horse. I would like to have observed what the young teacher did next. Let's say that he went to a cow, and then to a dog. If none of these common starting points proved useful it would have been interesting to have heard the third-grader attempt to describe a zebra in abstract terms, as an animal with a torso something like a barrel (which both children had seen) "and from each of the corners,—no a barrel cannot have corners,—anyway there would be two legs in front and two in back which just reached the ground." The sort of idea the third-grade pupil would have learned about the zebra from this type of instruction would not have enabled him to recognize the animal were he later to have seen it in the flesh.

This futility of trying to teach the concept of a zebra in terms of abstraction, when the learner obviously had had an inadequate perceptual background, needs no elaboration. The paradox is that we constantly try to teach about other concepts, or objects, or operations infinitely more complex than zebras without giving more than superficial consideration to the necessity of appropriate percepts. Social science teachers try to have children understand the meaning or words like "referendum," "international relations," "war," "peace," "primitive culture," "urban civilization," "the law of diminishing returns," "citizenship," "reciprocal trade," and "patriotism" by piling words upon words.

It should be repeated at this point that words are marvelous things, but only marvelous if they convey adequate meanings. And they convey adequate meanings.

(Concluded on page 404)

# Art and the Small Color Slide

*Unique value of small color slides to Art Departments with concrete program for developing and handling slide collections.*

A. REID WINSEY  
Art Department  
DePauw University

THE experience of an active role with our armed forces in training personnel through the use of visual aids, particularly the film strip, has only served to intensify my already firm conviction that education will eventually recognize fully the value of teaching through sight. With carefully illustrated and edited film strips the ordinary professor of Art or Music has been teaching Theory of Flight, Aerology, Engines and even more highly technical subjects. And I hasten to add that they, because of the fine teaching visual aids, have been doing a first rate job. The Army and the Navy training programs have demonstrated the value of these aids and educators can well afford to benefit by this nation-wide demonstration. Students from all corners of America and from all walks of life, whether they are garage mechanics, law students, or farm boys, were molded into aviators, navigators, or deck officers by the use of pictures, or "visual education." In one class in the theory of flight, the following boys occupied the front row, a graduate from Moody Bible Institute, a law student from Indiana University, a lumberjack from Oregon, a farm boy from Wisconsin, and a young Marine who had seen a year of active duty in the South Pacific. Yet each one of these boys received the same training, saw the same film strips, and learned with the same enthusiasm. One of the boys in this class had over 300 hours of actual flying and had a plane of his own, yet the film strips were, so basically instructive that he never lost interest.

As we start upon our post-war education, there are evidences all through our colleges, high schools, and elementary programs of an increased interest in teaching by use of pictures. In the field of Art the film strip and the small colored slide have unlimited possibilities. Art by its very nature lends itself perfectly to visual education.

In the past two years more and more slide companies in this country have turned their facilities toward the small 35mm. film. Many of them are arranging these slides in film strips carrying the printed material along with the illustrative frames. For the smaller schools this method of visual education offers many possibilities in fields otherwise impossible. It offers an opportunity for the elementary school teacher, whose background in specialized areas such as Art and Music is limited, to present visual training prepared and edited by specialists. This change over to the small 2x2 slide by visual education companies has been done at a terrific expense and despite heavy loss of the stock of large black and white and color equipment which they have been years building. Many progressive museums in the country gradually are turning to the small color slide. This alone would convince me if I had never seen a small slide.

With regard to the accuracy of the color and the distortions in the color process slide, so often mentioned, let me state that I have never seen a black and white slide which was accurate in light and shade values. The finest color prints made in this country and Europe are not as fine as the originals even when 14 or 15 color plates are used. Would we throw these color prints away? In talking to the Eastman Kodak Company during a special interview in Rochester, they specifically stated that the color was not one hundred percent perfect. But I have conducted color tests using color-filters, and I defy the trained eye to detect the difference between the colors in the small color slide and the original painting when made under the proper lighting conditions. I have ordered the same pictures from several of the good slide companies and I cannot tell them apart. I have seen graduate students in art history walk right past paintings in an art gallery which they had seen dozens of times in large black and white projection but failed to recognize in the original. I have seen classes in art history slumped down in their seats more than half asleep suddenly straighten up and eyes open wide at the sight of a full-color slide. It's a revelation to watch class response when those colored slides are shown for the first time.

As regards the permanency of the small colored slide we must remember that breakage, an old problem in the large black and white, is practically non-existent. Copies can be made of your collection of colored slides so easily that whether they are permanent or not they can be easily reproduced with little effort. I have left a small colored slide on my 750 watt projector for one full hour with no visible deterioration and my oldest slides, taken over six years ago, have lost none of their brilliance.

## The Advantages of the Small Slide

1. *Less expensive.* The old black and white slide cost between 50 cents and a dollar and the breakage is an expensive disadvantage, plus the embarrassing delays in getting replacements. The small colored slide can be made for less than half of that and since they are not made on glass they will not break. One of the outstanding advantages of strip film or the small 2x2 slide are the hours of labor-story time and expense which it does away with. For example, in the field of Art, let us say I am giving a lecture on the muscles and bones of the human figure. For years we have collected elaborate charts, diagrams, and a great deal of illustrative material mounted on cardboard. Then I requisitioned the university truck to get the skeleton from the zoology department. Our budget was small and we couldn't afford a skeleton for the art department. Today it is a different story. All the charts, diagrams, and illustrative material have been photographed on

2x2 film strips. Dozens of photographs of the skeleton were made including detail shots otherwise impossible for an entire class to observe. In 5 minutes now I can turn to our files of film strips and tell the whole story in pictures more completely, to a much larger group, and in a shorter space of time.

The very next hour I was giving a demonstration in egg tempera painting. This used to mean a trip to the grocery store for eggs, a trip to the drug store for gelatine and whiting, in addition to hours spent in preparing a gesso panel, digging out the powdered paint, the glass palette, and dozens of brushes, a pail of water, and other necessary equipment impossible for many small institutional budgets. Now I simply pick out the film strip on egg tempera painting and in large full-color pictures I can tell the story to a much larger group than could ever gather around the easel in former demonstrations.

2. *Easier to handle.* The tape had to be replaced every few years on the old black and white slide. The small slide weighs less than  $\frac{1}{4}$  as much as the old black and white. The small slide will not break in falling, can be filed in much smaller space, and be carried easier and in greater numbers. This is especially valuable when outside lectures or traveling demonstrations are given.

3. *Variety and color.* A greater variety of subjects can be photographed. The equipment is compact and easily carried with you. The color is the greatest advantage for it more nearly approaches the subject photographed, gives increased realism, depth and pleasure.

### How to Make Your Own Collection

An amateur with a small amount of practice and inexpensive equipment can readily build up a valuable library of small slides. However, I would advise you to purchase only limited equipment which will enable you to take the pictures you want taken in a particular way. For most subjects you can easily afford to buy the commercial 2x2 colored slide or film strips from visual aid companies. The film strips and slides taken and edited by experts are an easy and desirable basis for your collection, which can be supplemented by occasional slides taken by yourself for your own particular personal needs.

#### Necessary Equipment for Making Your Own Slides

A 35 mm. camera with 3.5 lense or better	Photoflood reflectors and No. 2 photoflood bulbs	A tripod with a tilt top
A light meter		A 2x2 projector
		A screen not beaded

Bring this list to any camera dealer, or write to large houses for prices.

#### Optional Equipment

Slide files	Lighted lecture note board	Music stand
Copying stand	Stereopticon equipment	Colored lights
Carrying case and accessory lamps	Second projector	Room with controlled lights
Ground glass table	Lighted pointer	Electric fan
Foot switch	Projector stand and carrying case	Enlarger and equipment
Framer		

#### Supplies

Binding tape	Cardboard	Kodachrome A indoor
Film masks	Chamois skin	daylight 8 western
2x2 slide cover glass	Cleaning agent	meter reading
Camel's hair brush	India ink and pen	
Scissors	An ear syringe	50 foot rolls of direct
Oil paint and brush	Kodachrome A indoor	positive or 50 foot
3x4 1/2" file cards with alphabet index in colors	12 western meter reading	rolls black and white panatomic X

These rules I should like to suggest for the making of your pictures.

1. Always use a light meter. Hold it close to object being photographed and test both the dark and light areas.
2. Always use a tripod. Whenever possible do not attempt to hold the camera. The best photographs are made with the smaller lens openings and longer exposure, so a tripod will be necessary.
3. Measure your distance accurately. If possible focus on a ground glass attachment on camera. Don't always depend on range finder.
4. Frame your pictures carefully. Test your camera; know exactly where the edges of the picture will come.
5. Get as close to the object as possible.
6. Always carry your camera with you. Keep your eyes open for pictures which you can use.

In copy work or in slides made from photographs, prints, books, etc., the process may be worked out to fit your individual needs and equipment. If you have an enlarger it can be used for your copy work. Illustration No. 11 shows how an ordinary dark room enlarger can be converted to a copying stand for your camera. The goose-neck light is used for focusing when the photoflood bulbs are not being used or before the picture is taken. This may be attached to the foot switch so when the photofloods are turned on and the picture is taken the goose-neck light will automatically be turned off and it will not affect your exposure. The goose-neck light comes on again after the picture is taken and the foot switch released and photofloods turned off. This enlarger will enable you to raise and lower the camera easily for different sized pictures and still keep the camera parallel to the copy material on board A.

Two different types of framers are illustrated and either can be used depending on the needs. The rulers are used alongside of some pictures both to hold the copy down flat and to illustrate the size in inches on the copy material on your finished slide. The small compact mirror is used to read the exposure or shutter opening on the camera if they are turned away from the eye. The pencil and recording paper are handy to record every picture as you take it by number so you will remember when the developed film is returned. This material can then be transferred to your slide card file. Before you take your pictures, arrange the copy material according to sizes as far as possible so you will not have to keep changing the height of the camera constantly. Take a meter reading before each picture (each one may differ). After the picture is taken, record it, and put the copy material in a place marked "already taken".

### What To Take

This list is made up from the type of pictures we have in our collection. You may add to it.

#### A. "Before and after" pictures

Remodelling houses or buildings	Paving road	Make-up
Hair styles	Covering furniture	Painting car
Landscaping	Redecorating house	Framing pictures
	Clothes	Pictures in process

#### B. Ugly objects around town

Garbage	Bill boards	Fringe inside automobile
Alleys	Flowers in tires	Overdone movie house
Tin pans on tree trunk with flowers	Flowers in boilers	Over-decoration in local buildings
Poor architecture	Lack of functionalism	

**C. Beautiful objects around town**

  - C. Americans in Europe
  - D. Europeans in America
- Artists and their teachers
- American and European art
- Foreign influences in United States

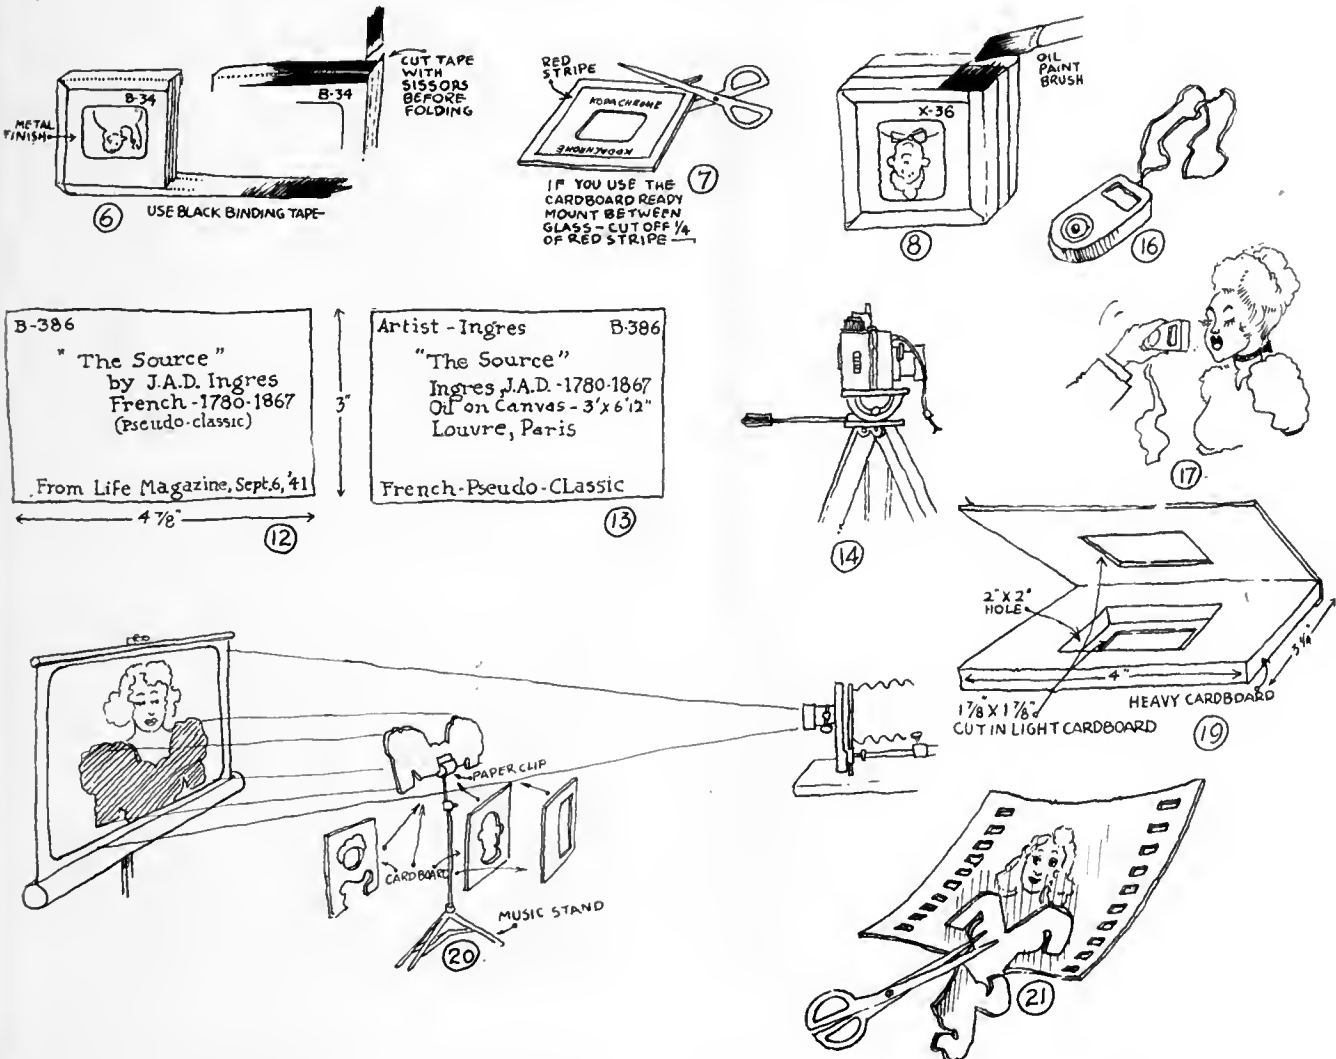

**Mounting and Handling Slides**

After the roll of film has been taken, placed in the tin container and then in turn put in the cloth bag and addressed, cut the corner off the tag with a scissors. This indicates that you would like to have the processed film returned to you in a roll instead of mounted in cardboard. (Illustration 1).

Be careful in handling the roll of film not to allow your fingers to touch either side of the film. Handle it on the edge, cutting each frame marked with a dark strip, as in Illustration 2. Put the cut film in the kodaslide mask with the metal treated side of the mask on the same side of the film so that the picture will read from left to right correctly when held up to the light with the metal surface facing you. (see Illustration 3). If certain sections of the film need to be blocked out this can be done with kodaslide tape (black) (see Illustration 4). Ordinarily this will not be necessary.

Then letter the number on the white side of the slide so that it may be written easily and seen clearly. Be sure the number is placed upside down on the bottom of the slide. This will enable you to put the slide into the projector correctly by simply turning it around. Then to file it, simply turn the used slide

**ILLUSTRATIVE DRAWINGS BY THE AUTHOR**

around and file it upside down and backward so that the number reads correctly in the filing cabinet. When mounting the slide between the 2x2 cover glass be sure the glass is cleaned with a chamois and then dusted with a small camel's hair brush. Brush the lint off the film itself before putting it between the glass (Illustration 5). A small rubber bulb will blow out last vestige. Pull out about 2 feet of tape, sticky side up, and holding the slide tightly between your fingers force it down hard with one corner at the end of tape. Then holding the roll of tape in one hand and the slide in the other stick down the second slide by turning the slide  $\frac{1}{4}$  turn. Pull the tape tightly and be sure your slide is exactly in the center of the tape. Now holding the slide in your left hand with the second slide against the table run your finger against the tape sticking to the first side and then fold over each side of the tape on this first side. Run the fold of the first side completely to the bottom corner with your finger nail in both sides so that when the second side is folded the corner will look like Illustration 6. Continue this process until you reach the last side and then cut off tape with scissors. This sounds like a complicated process but becomes very simple with practice.

If you prefer to mount the slides with the cardboard mounts you will have to cut off two corners of the cardboard and mount very tightly so that it will not be too thick for slide projector. (See 7).

Illustration 8 demonstrates how the color should be put on the edge of the slide to promote facility in filing and projecting the slide. This color can be put on with ordinary oil paint or with water color (poster paint). If poster paint is used, a little shellac will be necessary to keep the color from rubbing off. This shellac can be used on the oil paint after it is dry. Use a variety of colors, breaking them down either by subject matter or by a sequence of numbers for cross-reference. For example, as the slides under architecture may have red for a basic color, then for gothic archi-

ecture the red paint may be put on the right side of the edge, for Baroque in the middle, and for Renaissance on the left edge. By adding a little white to the red you may get further subdivision. Or if you file your cards by number, which is the method illustrated, then the slides will be color red on right side from 1 to 10, red on the middle from 10 to 20 and red on the left side from 20 to 30, etc. Such color is as great an aid in putting slides back in the file as it is in putting the slide into the projector so it will be projected correctly right side up and reading from left to right.

It is highly desirable to make two card files; one with a card for each slide in numerical order, another with a card for each slide under subject matter. Many times a slide will require a number of cards for it may fit under several subjects. Break down alphabetically. Then, when your lecture is planned, it is a simple matter just to record the numbers of the slides you will use for a lecture and have your assistant get them from the file and return them after the lecture is over. This filing system is illustrated in 9, 10, 11, 12 and 13. Show the material and arrangement on each card. No. 12 is the card to go in the numerical file, No. 13 in the subject file. You will notice the source of the material from which the slide was made. In this case it was made from a picture in Life magazine. This will be valuable if the slide is ever lost or damaged.

The ground glass table in Illustration 23 is a great help in preparing lectures and in studying slides and arranging them in proper sequence. Use this constantly. It can be made from an old table. The illustration is just one type. You may construct a type to suit your needs but do not make the light underneath too bright and allow for expansion of water under heat of bulbs underneath. Then arrange the slides in order with the numbers and colored edges up. If you are using two projectors arrange the slides into two groups.

Illustration 27 shows an aerial view of our arrange-

(Concluded on page 407)

# Visual Education in the Smaller Central School

*Some concrete, stimulating evidence that the small community of moderate resources can do effective audio-visual teaching.*

MEADER G. PATTINGTON  
Assistant Supervisor of Education  
East Schodack Schools, New York

THE faculty in a small central school often find themselves handicapped in carrying out a planned visual education program due to lack of equipment and difficulties in securing material suitable to their needs.

The following list of objectives served effectively in introducing a planned program in a central school of five hundred pupils:

1. to stimulate and arouse interest
2. to increase pupils' keenness of observation
3. to make subject matter live
4. to aid and promote retention
5. to enlarge vocabulary of pupils
6. to improve reading ability
7. to further mental growth
8. to promote and improve social attitude
9. to smooth out the achievement curve

Our armed forces in World War II have found that through visual aids and the expenditure of less time, they can obtain the mastery of a skill that before could only be developed through long months of trial-and-error experimentation. A leading bus company, for example, in training new mechanics has found that complicated assembly problems can be shown by the use of motion pictures and slide films, resulting in a saving of one-half the time formerly required. The mechanics so trained are able to duplicate the work of experts.

We, in our public schools, are not pumping a mass of information to meet a "deadline" as is necessary in our armed forces and shorthanded factories. Further, as any good teacher realizes, the more completely all five senses are made to function in learning, the more easily a new task is learned, fixed and remembered. Thus, for a pupil to hear a story, read about it himself, see the story portrayed, and then write about it or with his hands duplicate some part of its contents, forever fixes it in his mind.

In one small central school, it was found impossible, due to war shortages, to provide a darkened auditorium for the showing of films and slides. It was finally decided to make a dark room in the lower basement hall by providing opaque shades for only two windows. A roll screen at one end and movable seats were installed. A packing box, braced and painted, provided a suitable stand for the machine. It was quiet in the basement and no other group was inconvenienced during the showing of the pictures.

Slides were available in all subjects. Lists of material were secured from most of the regular school

supply and equipment houses. The making of models by pupils was also a definite part of the visual education program. Among such models were: water wheels and pin hole cameras by science classes; theater models by the English and dramatic classes; soap models of Roman buildings by history and Latin classes. These activities illustrated the principle laid down, that by using their hands and later demonstrating their work, the learning process of the students was greatly stimulated.

The teachers learned to see the film in advance of the class showing. Previously there had been all too little follow-up. Pupils were made to realize that they were to be held responsible for what they saw and heard in future class discussions. Class discussion, a short test and a review of observed material fixed the main points, enlarged the grasp of comprehension and assured better retained knowledge.

A film program was made out in advance. State departments of education and universities provided lists of carefully selected films and slides. Many commercial films and slides were excellent teaching material.

An inventory of visual education material already at hand in one central school produced surprising results. Commercial exhibits, charts, maps, and models formerly prepared by pupils were uncovered that the majority of the teachers had not realized were available. Time was finally taken to list this material, mimeographed copies were given to all teachers at the start of school, and 100% greater use was derived from materials on hand.

The school librarian furnished the names of books listing hundreds of free commercial exhibits, posters, charts, and samples which were borrowed or in many cases given permanently to the school. From the librarian also the name of a company selling a practical index file of free material for all classes, including charts, maps, slides, samples and commercial exhibits, was secured. This card system proved its worth in flexibility of use.

Among the material received through such a plan the following is illustrative: Pamphlets on French customs, maps showing locations of National Parks, drawing class exhibits (pictures, tools and materials), milk charts and posters, pamphlets on canning and charts on same, charts showing proper methods of meat cutting and carving, facts and fads of bread, tropical fruits and produce charts, cycles of fashion and patterns for clothes, a miniature skein of silk and history

of same, fuel exhibits, fire prevention week posters, posture charts, charts on care of teeth, tooth paste samples, booklets on business short cuts, Mother Goose charts, sections of storage and dry cells, exhibit of reproductions of famous paintings, and many others.

Material was thus made available to all classes where it would be of value, and the wide variety of subjects covered provided continuous use throughout the year. The science class, as one example, was provided in this way with the cut-away storage and dry cells, aluminum exhibit, Washington Collection of Minerals, a telephone instrument and aeronautical kits. These all contributed to the pupils' interest and practical knowledge of modern science.

Outside trips were made, even though in a small community. The post office, dairy farm, local railroad signal tower, newspaper plant, department stores in nearby city, etc. were utilized in bringing first hand information to the pupil who would soon be out in the field himself.

Before the war, a Washington trip, properly planned was an outstanding feature in the pupil's school experience. Seniors were encouraged to read books on Washington, a film showing interesting places in our National Capitol and a carefully planned itinerary to be followed by the group contributed interest and led to real educational experiences. A follow-up after the trip with a chapel presentation, souvenir exhibits and news articles in school and local paper brought out and fixed interesting points. Teachers in the social sciences and other classes stressed features to be observed. English class themes were presented on various phases of the trip.

The field of visual education is on the eve of growth unknown hitherto. In our post-war years students as never before will need and demand more visual materials. Our world will be a smaller world, moving at a faster pace. Time and distance will be cut down. Television and FM Radio will be available and in general use. We must not merely wait until these things happen. We must anticipate, prepare and have our school systems in shape to accept and utilize these achievements as they come.

## The Importance of Perceptual Learning

(Concluded from page 397)

ings only if they are rooted rather immediately in a rich mattress of perceptual experience. This is no argument that everything has to be learned first-hand, but rather that there must be a constant effort to see to it that pupils have had perceptual experiences adequate to warrant the use of particular words. I listened to a bright thirteen-year-old youngster from an upper middle-class home the other day say very glibly, "There are certain residential areas in Chicago where the percentage of common-law marriages runs as high as 80." This youngster had an IQ of about 175 and he not only expressed this view but many others like it. I was tempted for the moment to believe he knew

something. As I asked additional questions, however, it was clear that the chief thing he had learned was how to string words together in a sentence such as he had read in a book. He had no understanding of what went on in those residential areas where the common-law marriages exceed 80 percent. He knew nothing about the squalor, the unhappiness, and the consequences of lower-class morality. In other words, his idea of "80 per cent common-law marriages" was an exceedingly limited one.

Merely having first-hand experiences does not, of course, necessarily mean that learning is appreciable. Percepts are a necessary but not a sufficient condition for effective learning. Learning takes place most rapidly when the learner is alert for generalizations based upon his experiences. Everyone has met traveling salesmen who have visited each state and major city in America, have seen everything and learned nothing, ---at least nothing that will bear repeating. They would find it impossible to answer one-half dozen of the simplest questions regarding American culture. Most of us recently have talked to returning servicemen. Some of them have learned a great deal from their first-hand experiences while others have learned little.

It is true, too, that bright people learn more from limited perceptual experiences than do dull people. Boys or girls who have fine minds need fewer perceptual experiences as a basis for their generalization. Every study that has been made of the utilization of audio-visual instructional materials implies, if it does not indicate clearly, that such materials are relatively more educative for pupils of low IQ's.

Providing first-hand perceptual experiences for school pupils is apt to be an expensive process. While it might be true that the best way to learn about life in France would be to spend six months living there in association with an excellent teacher, this, because of expense and the time factor, is completely out of the question for most Americans. Such a conclusion, however, does not preclude the utilization of instructional materials that involve relatively a great deal of perceptual experience. We can compromise with going to France by resorting to dramatics, models, graphs, charts, flat pictures, motion pictures, and recordings. The difficulty with most of us is that we compromise completely and resort exclusively to the use of words, when we want to communicate ideas about French culture.

In conclusion,—the practical question teachers face should be noted. The question is, "How can we know when meanings can be adequately communicated by the use of words? What can we look for in order to know when additional first-hand perceptual experiences are needed?" The answers to these questions certainly are not simple. My observations lead me to conclude, however, that there is relatively little practical danger of going too far in the direction of saturating our instructional materials with large quantities of audio-visual aids. It is conceivable that the time may come in the future when inadequate utilization of verbal materials interferes with effective instruction, but our immediate problem is of quite a different nature.

# The Curriculum Clinic

## "No Objectionable Advertising"

PAUL C. REED, Editor

Director, Visual and Radio Education  
Rochester Public Schools, New York

THE other day I was talking with the principal of an out-of-town school about the audio-visual program he was developing. We talked through the full range of problems from what was the most satisfactory make of projector to how to get teachers to make most effective use of films. In due course we discussed sources for renting and borrowing films, and the question came up about the use of sponsored films.

"Yes, we make use of sponsored films," he said. "But I always preview them first to make sure there's no objectionable advertising in them." I pushed this discussion a bit further because this question of sponsored films has bothered me for some time; and, if there were an easy answer, I wanted to know about it. But I found that "no objectionable advertising" was really not a very accurate measuring instrument in this principal's hands.

A few days later I ran across the same phrase in the catalog of one of the better known university film libraries. The statement explained that some sponsored films had been included in the library's list, but only ones that contained "no objectionable advertising." (Incidentally, I noted that some government films were included under the sponsored films, while others were listed under subject matter headings.) Within the next few days I'm going to write the Director to see if he has found a good workable formula for evaluating sponsored films. Meanwhile, let's speculate.

This question wouldn't be so important if it weren't for the fact that during the next few years schools are going to be deluged with an unprecedented quantity of sponsored films—unprecedented even during the war years with its hundreds of O.W.I. and C.I.A.A. films. With no shortages of raw stock, with dozens of commercial film producing companies better established than ever before as a result of their war business, with an abundance of personnel skilled in the writing and directing and editing of information films, with industrial sponsors more convinced of the efficiency of the motion picture medium, and with schools acquiring projectors at an ever increasing rate it seems a foregone conclusion that the months ahead will bring more lists of "free" films to teacher desks than ever before. What are they going to do with those lists? How can they decide which films to use and which not to use? Will some of these pictures include objectionable advertising? What is objectionable advertising?

Certainly the film should be previewed before it is shown. That is a sound utilization procedure preceding the use of any audio-visual material, sponsored or unsponsored. Should you count the number of times the sponsor's product or name is mentioned? That possibly is the key to what some people mean by objectionable advertising. They presume that if the sponsor's name appears too many times, the film

This discussion about sponsored films and their use in schools raises important questions and suggests answers. There may be other views and opinions that should be expressed. If so, write to Curriculum Clinic Editor, EDUCATIONAL SCREEN.

is objectionable; if it's seen or heard only two or three times they approve the picture. They rationalize that after all the sponsor ought to be entitled to something for producing the picture, and they are willing to grant him the casual mention of his name a few times—but no more than a few.

This little game of "finding the sponsor's name" has been too frequently played in the past. It is unrealistic. It is futile. It is superficial and does not come to grips with the issue. It is unrealistic because advertising as such is an integral part of our economic world. We use magazines and newspapers in our classrooms, and their columns are filled with advertising that is clearly labeled and understood as such. It is futile because some sponsors have purposes other than the publicizing of a name or product. It is superficial because the sponsor's name or product is far less important than the relationship of the film to curriculum objectives. And the principal issue seems to me to be where the responsibility rests for supplying needed curriculum materials for public schools.

Some teachers and school administrators who recognize the inadequacy of trying to determine whether or not there is objectionable advertising in a sponsored film, may still be uncertain about a basis for evaluation. For them I venture to suggest an evaluation procedure:

1. **Attempt to determine the sponsor's purposes.** A sponsor has reasons for paying for the production and distribution of motion pictures. How does the sponsor want the viewer to think, feel, and act as a result of this particular film experience? Will the viewer benefit from this changed behavior? Be wary of the film when sponsor purposes are least discernible.
2. **Re-examine teaching purposes.** Make sure that you have clearly in mind the reason why you want to use a motion picture or other visual material. In other words look to the curriculum to make sure what you are teaching and why. Never use a film just because it happens to be "free" and readily available.
3. **Consider all available materials.** In previewing sponsored materials give careful thought to all available methods and teaching materials for achieving curricular objectives. For

your particular purposes, with your particular group, some other audio-visual or printed experience, may be more valuable.

4. **Equate sponsor and teaching purposes.** When the sponsored material seems to be the best available for achieving well defined teaching objectives, there is one more important step. This question should be answered: Are teaching purposes and sponsor purposes in harmony, or are they in conflict? And in finding the answer for that question, the objectives of other courses and classes must be given full consideration.

This procedure seems to be simple, practical, and sound. It neither favors sponsored films *per se*, nor does it oppose them. Its application would preclude the possibility of a school using any and all "free" materials available and at the same time would prevent a school from taking an educationally unsound position of never using sponsored films. This procedure places greatest emphasis upon curriculum and teaching objectives.

Left unanswered and hardly mentioned is the most important question and the most significant issue: *Who should be responsible for furnishing curriculum materials for school instruction?*

## EFLA Has An Answer

### *A Concrete Proposal for A Streamlined Film Evaluation Service*

“**I**S it a good film?” The teachers ask it, the distributors ask it, the producers ask it. “Evaluation” is one of the most overworked words in the educational film vocabulary.

Reliable evaluations of new films are as desperately needed as any one thing in the field of audio-visual education. We see occasional reviews of some of the new films and multitudinous advertising blurbs written by promotion experts, but on what can we rely for valid estimates of these new films? Valid, in the sense of value to the ultimate consumer of the product. Film librarians and directors of audio-visual programs are plagued by endless hours of screenings in order to test for themselves the worth of unknown titles.

A number of attempts have been made to evaluate existing films. EDUCATIONAL SCREEN'S "Film Evaluation Cards"—those that appeared before the war—continue to be of help. But much has come into the market since the last of those cards appeared. *Selected Motion Pictures* was published by the American Council on Education back in 1942. The Association of

ELIZABETH H. FLORY  
Executive Secretary

School Film Libraries, with its catalog of evaluations, went out of existence at the outset of the war. Individual film libraries or special-interest groups have compiled lists of the films they considered successful or usable. But more and more new films are appearing, and sound evaluations of them are non-existent or found wanting.

The Educational Film Library Association (familiarly known as EFLA), since its inception early in 1943, has been faced with this problem among many others. Is there something in this evaluation bug-a-boo that EFLA can handle for its members? EFLA's going to try it. It will be a very simple, unpretentious system at first but the program has vast potentialities. As things are at present, EFLA's members—some two hundred film libraries in educational institutions and agencies across the country—are having to plow through producers' and distributors' catalogs, lists and advertisements in various publications to find likely titles

#### Officers of Educational Film Library Association

Patricia O. Blair  
Secretary

to fill their needs. For the new ones, there is no other method, to find out whether or not films are *right*, than to preview them.

Previewing is an endless chore. Surely a minimum of twenty minutes is devoted to the setting up, running off and re-winding of a single reel of film. Multiply that by the hundreds of new titles we expect to come on the market, and we find ourselves utterly swamped by the thought of the hours to be spent in this simple preliminary to audio-visual work. The best expedient is to find someone whose judgment we trust to do it for us, so that we may be at least partially relieved of this chore. Inter-membership cooperation is the keynote of EFLA's plan. The Association is basing its system on the fact of gradual progression from the present method of "everyone for himself" to a method of delegation of these chores to specialists geared for the work. Here's what this means:

At the present time, Dr. Edgar Dale, Vice-Chairman of the EFLA Board of Directors and head of the Bureau of Educational Research of Ohio State University, is working out a simple, one-page, clear-cut evaluation-sheet form. This will be sent to all institutional members of EFLA with a call for volunteers.

Since members are already previewing new films as they come along, it will be a very simple matter for them to fill out these EFLA evaluation sheets and send them to the New York office. These sheets will then be combined, compiled, duplicated and distributed to the entire EFLA institutional and service membership month by month. If conflicting evaluations come in on a single title, special requests will be sent out to other member libraries for reviews; and, if the evaluation is still *pro and con*, it will be published just that way. It is expected that evaluations will be signed in all cases and will be the result of committee viewings in the various member libraries. Thus they will be evaluations *by educators for educators*.

In time it is anticipated that several things will become apparent. First, there will have to be some sort of simplification of the *timing* of the process of review. The more up-to-the-minute these evaluations are, the more valuable they will become to the buyers and users of films. Secondly, considerable weeding out will be done, in two ways. We will soon see which of the participating libraries are turning in evaluations at a high level of quality (and quantity). There may also be groups that are peculiarly qualified to handle certain types of material rather more easily than others, such as films on science at the junior high school level, guidance for high school or college students, or films for the primary grades.

In the course of time, with these factors becoming more and more apparent, it may be possible for EFLA to incorporate this evaluation service into a pre-release listing and evaluation program whereby all producers will make an effort to channel their films through these special reviewers as early as possible in order to expedite distribution.

Results of EFLA's evaluation service will be many. One of the simplest is that of a progressively-growing

series of selected *lists*, in subject areas and in age groups. There will be indications of what films in what areas and for what group are most successful, from the utilization, distribution or production point of view. Lists of the best "basics" may be compiled for new film libraries as they begin to purchase. And all the while there will be the fact of this constant flow of evaluations of new films, for teachers, supervisors, film librarians, directors of visual education, for all of us.

No iron-clad guarantees, no rosy promises of the millenium, mind you! But EFLA is going to try to help solve this evaluation problem. And perhaps instead of having *an* answer, we'll have *the* answer!

## Art and the Small Color Slide

(Concluded from page 402)

ment in our visual education lecture-room. Between the two slide machines we have a stand for an opaque projector or the movie projector. The slide machines are equipped for single slides or film strips. The lights in the room may be directed toward the student's notebook by the simple method shown in Illustration 25. The equipment we use as shown in Illustration 26 is just a suggestion.

File your slides under the following subjects: (Film strips and movie film offer no problems in filing).

Advertising	Drapery	Models
Animals	Emphasis	Murals
Architecture	Emotional effects	Mediums
Art in General	Form	Museums
Artists	Fashion illustration	Ornaments
Balance	Figure	Perspective
Boats	Flowers	Photography
Campus	Footwear	Plastics
Cartoons	Frames	Poster
Ceramics	Functionalism	Posture
Churches	Furniture	Proportion
City planning	Gardens	Rhythm
Cities	Genre	Rugs
Countries	Headdress	Sculpture
Color	House planning	Sports
Commercial art	Industrial design	Stage design
Composition	Interior decoration	Stained glass windows
Cosmetics	Landscape	States
Crafts	Lettering	Still life
Design	Light and shade	Surrealism
Distortions	Line	Table appointments
Dramatics	Masks	Techniques
		Uses of slides

Prepare carefully your own list of subjects and sub-heads needed for teaching your entire course, and similar smaller lists for specific lectures. Check these against your present slide files and take the pictures needed to complete the lists. Keep your eyes open; ask students to bring in copy and photography. I suggest you write to some of the recognized slide and film strip companies and find out what pictures and film strips are available in Art and Art appreciation. Because the visual education field is a comparatively new one, especially in the technical side of Art, a list of film strips which you could use might be made up from the following suggestions. You might also suggest the type of film strips you would like to order for your files because the production of new illustrated lectures depends largely on the demand.

# The Atomic Bomb—In Hand-Made Lantern Slides

By ANN GALE

Roosevelt High School, Chicago

THE atomic bomb which marked the beginning of a new era is the culmination of a series of experiments which began back in 1896. The slides sketched below trace a few of the high points of these experiments.

1.) That matter is not stable was demonstrated by Marie and Pierre Curie in 1900 when they isolated radium which was spontaneously going to pieces throwing off alpha and beta particles and gamma rays.

2.) In 1932 James Chadwick of England discovered the neutron while shooting alpha particles at beryllium.

3.) In 1934 Jean-Frederic and Irene Curie-Joliot bombarded aluminum and other elements with the neutron and

succeeded in making them radio-active and unstable, but they found only a small amount of energy released.

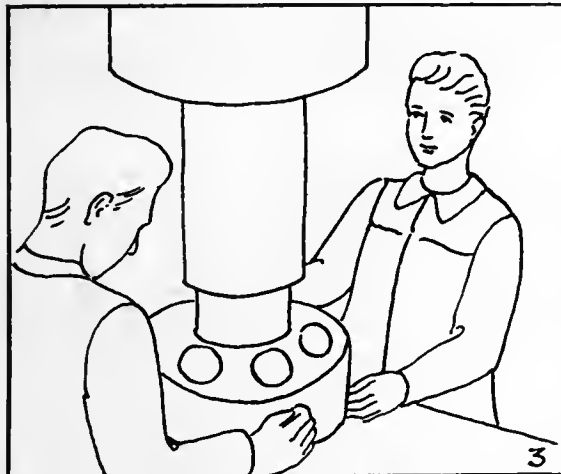

4.) Then Enrico Fermi in Italy shot the neutron at the unstable element uranium. He found the radio activity and the instability of the element were increased. Other workers repeating his experiment found that he had split the atom, releasing immense amounts of energy.

5.) Out of a conference between President Roosevelt and a group of scientists grew the great cooperative venture which was called the Manhattan project.

6.) July 16 this year the first test of the atomic bomb was made in the desert in New Mexico.

The simplest type of hand-made slide is made by drawing or tracing on finely finished etched glass with ordinary medium lead pencil. Color, by special crayons or inks, enhances the slides greatly. Fine effects are obtained by blending with crayons. About one-third inch margin should be left all around the slide. The slide is readily cleaned with soap or washing powder to receive a new picture.

# The Film and International Understanding

## Let's Teach For Peace As We Taught For War

DR. JOHN E. DUGAN, Editor  
Hadden Heights, New Jersey

ONE of the leading commercial companies in the visual field used a full-page advertisement in a recent issue of the *Saturday Evening Post* to point out the very heart of the problem of teaching for peace in a post-war world. The President of the company is quoted on the page.

"Shall we educate our children as well as we do our servicemen" he asks. This question is a challenge to all who are interested in the use of films for international understanding. Films were most effectively used in training to win the war and establish the peace. They should be used just as effectively in training our children and our citizenry to organize, to understand, and to maintain that peace through international understanding.

The speaker goes on to say "The speed and thoroughness with which our armed forces have trained millions of young men for war are amazing. How was it done? With intensive applications of methods previously used and proved in this nation's schools." The military procedure included far wider use of all forms of still picture as well as of sound motion pictures.

Regarding our schools' failure to provide just as intensive a program, he says "Most educators lacked neither appreciation nor readiness. But they did lack, and *still* lack, the necessary funds." He says further "A relatively modest appropriation per school per year can provide for an excellent audio-visual program. Shall we make the necessary funds available to educate our children as well as we do our servicemen?"

The issue is clear. Shall we be just as practical about education for peace as we have been about education for war? The company deserves great credit for stating the issue in such a practical way and using a full page in a magazine of nation-wide circulation to bring that message to the whole country.

We agree heartily with these ideas. War experience gives very practical proof of all the statements. The importance of films and filmstrips in the war program was recognized, and funds were generously provided for the production and distribution of films and for the provision of adequate projection equipment and trained personnel for their use. This experience was not limited to our own nation. The film work of the United Nations Information Office and the British Information Service are illustrations in point. They also show what an important part films for international understanding played in the war program.

The work of the above organizations also illustrates the importance of cooperation in putting over an audio-visual program. This cooperation is not limited to international scope. Community cooperation is necessary. No film program for international understanding can reach its full potential of success unless there is community cooperation.

### Projectors

The provision of a projector is fundamental to any film program. Community cooperation can be of the greatest assistance here. The provision of a school projector should be a project of prime priority for any community large enough to maintain a school. The projector may be purchased with school funds, through P. T. A. projects, through the efforts of public spirited organizations or individuals, or by other means; but its procurement is essential.

If the school or some other organization in a community has a projector, there is every reason to believe that some cooperative plan can be worked out for making its use available to all. Many such plans, involving numbers of projectors, are in operation in larger cities. Fundamentally, however, the provision of a projector for each school is the basic foundation for the solution of the problem.

### Projectionists

Successful use of a projector is dependent upon its intelligent operation. Cooperation in providing this service is essential. Several trained projectionists should be available for each machine. Thus someone always is available, and no one is overburdened. These people may be trained by the school, by extension services, or by the distributor of the projector involved.

### Programs

In most communities the schools will conduct the basic film program. But there is every reason to expect that this should be done in full cooperation with other groups in the community. Racial and nationality groups would be particularly interested in films on international understanding, as would be civic and social study groups.

If a school wishes to promote international understanding in a community, it must seek to reach more than its student body. Powerful though films may be, the attitudes of parents and citizens in the community can either counteract or reinforce what the school seeks to do.

The school should seek to make these outside forces favorable. Thus, if possible, the school should invite adults to some of its film showings and should seek to make some of its films available to interested adult groups. In the same manner adult groups might reciprocate with films which would work into the program satisfactorily. The school or public library should cooperate in maintaining an up-to-date file of film catalogues and reviews which would help both schools and citizens to choose films wisely.

Both school and community groups could cooperate in building public interest and good will for the film work which each is doing. This would eventuate not only in improved results, but it also would tend to make the average citizen more likely to favor the necessary audio-visual education funds.

# Can you explain

**DEMOCRACY**

**DESOTISM**

**Two New Encyclopaedia Britannica Classroom Films Vividly Present These Conflicting Ways of Life**

Now—more than ever before—it's vital for young people to know and understand the basic philosophies upon which systems of governments are built. The course of world events may well depend on how thoroughly the coming generations understand their own nation's government—and that of other nations.

Encyclopaedia Britannica Films will shortly release two new sound films designed to make these difficult concepts easier for students to understand. In "Democracy" and "Despotism" teachers will find authentic definition and description of these divergent political theories—in a simple and graphic manner thoroughly comprehensible on the high school level.

Produced in collaboration with Dr.

Harold D. Lasswell of Yale University, and others, "Democracy" and "Despotism" will be notable additions to the social studies section of your school's film library. For additional new film releases see list at right.

Even with a small audio-visual budget, your school can acquire these important new socio-political films. For a complete description, fill out the coupon below.

**TEACHERS HANDBOOK** with every film

## The Coordination of Information and Service on Government Films By The Library of Congress

L. C. LARSON

Assistant Professor in  
Audio-Visual Education  
Indiana University

ON September 14, 1945, representatives of seven national organizations comprising the National 16mm. Film Committee submitted to heads of appropriate federal agencies detailed recommendations\* on the coordination of information and service on Government films by the Library of Congress. It was suggested that since "the Library of Congress provides a centralized service on printed materials and still pictures and serves as a bureau of information to the general public in all matters involving the serious use of such materials, it is the logical agency to provide a service on motion pictures similar to the centralized service already provided for printed materials and still pictures." Here are some of the reasons for the recommendations.

Workers in the field of audio-visual materials and library service are becoming increasingly aware of the close relationship between print and films as media for recording and disseminating information. The student with an assignment, a scholar with a problem, or the layman seeking information goes to all sources of knowledge in order to get the information he desires. He wants to use all materials to the best advantage regardless of whether they be books, manuscripts, films, photographs, transparencies, recordings, or maps.

Students, teachers, and research workers would prefer to have all this information about a given topic included in the same catalog. A bibliography—for example, on the strategy involved in the battle of Midway—can be prepared more expeditiously if all available records—printed, photographic, or recorded—are listed alphabetically by title under a subject heading such as "Battle of Midway." Also, he wants to be able to go from printed materials to films, films to manuscripts, manuscripts to maps, etc. This means that for most effective utilization all materials should be brought together in one center; and reading, listening, and viewing rooms should be a unit.

From the standpoint of effective and economical administration of library materials it is desirable to bring together all types of media. In the case of reference service, most individuals want assistance in obtaining information from all types of media on a particular problem. In the case of circulation, films and recordings can be handled under the same charging procedures. Tables are becoming available which are equipped with phonographic and projection equipment, both of which employ head phones. Consequently, the general reading room can be equipped with such tables, to permit not only the reading of print, but listening to recordings and viewing motion pictures and transparencies.

The processing of films likewise follows closely the processing of books. Descriptive cataloguing is necessary together with the assignment of subject headings.

---

**EDITOR'S NOTE:** Professor Larson was Chairman of the National O. W. I. 16mm. Advisory Committee from the time of its formation in November, 1943, until January, 1945. He is Chairman of the Sub-Committee which drafted the September 14th Library of Congress report and is, therefore, qualified to discuss reasons for the committee's recommendations.

---

classification, labeling, and mechanical preparation of materials for the shelves. Also, the acquisition of films is analogous to the acquisition of books. The processes of selection, ordering, and accessioning are comparable. Furthermore, the preservation of books and films requires similar conditions and practices to meet the hazards of chemical deterioration, misuse, weather, fire and theft.

Since the procedures are so similar the Library of Congress, a service agency in Government, would seem the logical agency to serve as a center of information and service on Government films. Government motion pictures could be lent through the Library of Congress's established inter-library and individual loan service as is the case with its collection of books, photographs, recordings, and maps. Moreover, the Library of Congress maintains recordings and photo-duplication laboratories, with the most advanced equipment, in order to supply on a cost basis photocopies and phonocopies of its materials. This service could easily be expanded to provide either full prints or selected footage of motion pictures.

If the Library of Congress becomes a center of information and service on Government films, it might well follow that the Library should provide to other Government agencies information and service on both Government and non-government films. Furthermore, through a strict enforcement of the Copyright Act, the Library of Congress would receive automatically two prints of most non-government produced films. Therefore, the Library of Congress will undoubtedly undertake the processing of both Government and non-government films. In this event we anticipate that the Library of Congress's Union Catalog would be extended to include the location of unusual films in the film libraries of the United States and that the Library of Congress would provide a card catalog distribution and sale service for films comparable to the service now provided for books.

Even though the Library of Congress becomes the center of information and service on both Governmental and non-governmental films, it is anticipated under our recommendations that any Government agency with specified functions and a defined clientele, such as the Department of Agriculture, will continue to distribute its films through film libraries or other distribution arrangements of its choice to state and county agricultural workers. It is hoped, however, that the Library of Con-

(Concluded on page 425)

---

\*The text of the recommendations was published in the October, 1945, issue of EDUCATIONAL SCREEN, page 338.

# NOW READY FOR YOU!

## First 16mm School Sound-Films To Be Released As Part of Young America Films' Complete Visual Instruction Service\*

### 1. We, the Peoples: (A documentary film)

A thoughtful exposition of the struggle of man for peace and an explanation of the United Nations Charter and the organization which it forms. The film discusses the chief points of the Charter and the functions of the various committees and administrative offices.

### 2. Our Shrinking World: (A documentary film)

A challenging discussion of how time and distance have been circumvented through modern methods of transportation and communication.

### 3. Johnny's Day: (Primary Grades)

—Follows an average American boy through a typical day's activity, showing when he rises, how he dresses himself, eats his breakfast and follows his daily routine until he goes to bed. Designed to help orient the primary grade child to his childhood environment.

### 4. Federal Government: (Junior High)

—Analyzes the three branches of our national government and shows how they function separately and as an integrated unit.

### 5. State Government: (Junior High)

—Describes the component parts of the State government and explains their major functions and operations.

### 6. Techniques of Typing: (Junior High)

—A beginning film which shows the student how the proper approach and basic techniques will help achieve speed and accuracy in typing.

### 7. Typing Techniques: (Senior High)

—An advanced film to demonstrate to students how they may achieve maximum efficiency in the use of the typewriter.

### 8. Map Study: (Elementary Grades)

Prepared to help the Elementary school student understand what a map is and what meanings are behind the conventional symbols he must learn to understand.

### 9. Everyday Health Habits: (Primary Grades)

—Demonstrates and discusses the fundamental principles of personal hygiene and the fun of following health rules.

### 10. What Numbers Mean: (Primary Grades)

—A film which develops the concept and meaning of a number, using actual experiences, concrete objects and relationships shown by animation.

### 11. Keeping Fit: (Senior High)

—A demonstration of simple exercises

and sports that will develop and maintain proper physique and good health.

and sports that will develop and maintain proper physique and good health.

### 12. Keeping Fit: (Senior High)

—Demonstrates and explains recreational exercises and sports which develop posture and poise as aids to good health.

### 13. Safety at School: (Primary Grades)

—A film that shows the actual safety experiences of a primary grade child on his way to and from school. Primarily designed for the purpose of teaching street safety.

### 14. Safety at Home: (Elementary Grades)

—Points out the fun of living safely by showing how safe living in the home is a matter for all members of the family.

### 15. Safety at Play: (Primary Grades)

—Designed to promote safe conduct of play activity and demonstrating the necessity of safe conduct among children in group activities.

## A Monthly Digest

ETTA SCHNEIDER RESS, Editor

### UTILIZATION

- **Use of Training Aids in the Armed Services**—Report of the Committee on Military Training Aids and Instructional Materials—Bulletin 1945, No. 9, U. S. Office of Education, 10c. 34p.

Some implications for civilian education of the use of aids and devices in the training programs of the armed services. In the introduction, Commissioner Studebaker gives four chief reasons why such a study is important: a) the scope and extent of the use of training aids exceeds any previous use of such materials in the solution of educational problems; b) many of the training aids produced by the armed services are applicable to subject matter found in school and college curricula, and should be made available to schools; c) the knowledge, understanding and skills developed by the armed services in production, distribution and utilization of training aids are directly applicable to civilian education; and d) the personnel in the armed services who have pioneered, developed and carried through the programs of training aids are educators, many of whom will return to education in civilian life.

The 34-page report is an excellent summary of the subject, and should be read carefully by all teachers and supervisors. The Committee found that, in scope of materials, the armed services were using the types commonly recommended in civilian education; viz. textbooks, bulletins, films, filmstrips, pictures and graphic portfolios, posters and illustrations, maps, charts, auditory aids, realia and models, and sand tables. In organizing their training programs, the Army and Navy have chosen to place great reliance upon the extensive use of training aids and devices coupled with rigidly dictated training methods. Thus their use is established as an educational method, although always regarded in civilian education as an auxiliary one.

The set-up of the Army and Navy Training Aids Divisions is described to illustrate the care and thoroughness with which materials are planned and produced.

There follows an analysis of the implications for civilian education which is highly significant. Briefly, these are:

1. The use of films, filmstrips, slides, etc. to assist in the creation of desired attitudes.
2. The use of humor, 'eye appeal' and naturalness to stimulate an interest in the immediate learning situation.
3. Creation of materials highly suitable to the level of ability of the learner.
4. Variety and flexibility of aids and devices.
5. The use of aids and devices to create training conditions which are as nearly as possible like real conditions of action.
6. Sensory learning, using the maximum of senses.
7. Service aids, devices and materials are highly functional.
8. Emphasis upon integrated programs of 'learning by doing'.

### RESEARCH

- **Fallacious Arguments from Experiments on Methods of Teaching**—S. J. F. Philpott—*British Journal of Educational Psychology*, 15:57 June, 1945. A publication of the British Psychological Society, 42 Hill St., Birmingham 5.

A stimulating and provocative, though scholarly criticism of the way in which false conclusions may be drawn from existing data to achieve a desired effect. The sound film experiment to which the author refers is not identified, though it is probably the one by Consitt (1931.) Researchers in this field will want to examine the article in the original.

### TRENDS

- **Films at San Francisco**—Mary Losey—*New Movies*, 20:8 September, 1945. Published by National Board of Review of Motion Pictures, 70 Fifth Ave., New York.

There were three ways in which motion pictures played significant part in the San Francisco conference. First, some half million feet of film and 2,000 stills were taken of all phases of the Conference. These are a record to be used by generations to come.

Then there were the film classics offered by individual nations, such as "Colonel Blimp", "The Way Ahead" and "Lili Marlene" from England; "The Marseillaise" from France; the "Dutch Tradition" and "Silver Fleet" from the Netherlands, etc. Among the Hollywood films shown were serious ones as, "Wilson", "The Fighting Lady" and the OWI overseas shorts on the American Scene, but the popular features drew the crowds, as for example, "Wonder Man", "Rhapsody in Blue," "Gone with the Wind," and the like.

A third service rendered at the Conference was the documentary theater, a kind of reference library. Films from some 15 countries were organized into programs. In this, its first official recognition in the halls of diplomacy, the documentary motion picture showed that it can and does straddle distances of mind and matter which none of the other media of communication can achieve.

### ADMINISTRATION

- **16mm. Exchange Practices**—B. A. Aughinbaugh—*Film and Radio Guide*, monthly January, 1944 thru October, 1945. (to be continued)

The director of the Ohio State Film Exchange reveals some problems and practices in this amusing and enlightening series. Subjects already treated are—film inspection procedures, shipping, cataloguing, patron inquiries, patrons' complaints, etc. The November article is to deal with "Suggestions to teachers on how to select educational motion pictures."

- **Movies in the Classroom**—Sabra T. Harris, Rochester, N. Y. Dept., of Visual and Radio Education—*Film and Radio Discussion Guide*, 11:14 June, 1945.
- **Audio-Visual Aids in the Montgomery Public Schools**—W. T. McKee, Montgomery, Ala.—*Film and Radio Discussion Guide*, 11:23 June, 1945.

### THEATRICAL FILMS

- **Movie Missionary**—*Fortune*, October, 1945. p. 149.

This is an interesting account of the activities of J. Arthur Rank, British movie magnate, who is out to give Hollywood some "healthy competition."

Wealthy heir to a milling fortune, Rank began his movie career as producer of a few religious shorts and then a documentary "Turn of the Tide." The British Board of Trade then selected Rank as the person to enlarge the British movie industry.

Today Rank is the outstanding figure of the British movie industry, with control over studios and theaters. His aim is to make British films that will earn profits from American and European theaters. This is a threat to the strong hand that Hollywood has wielded both in the kinds of films shown throughout the world and in the kinds imported to the United States.

In a recent visit to this country, Rank consummated important deals with American movie figures which will greatly strengthen British production by the use of American talent and will increase British film circulation in the United States.

"EXCEPTIONALLY INTERESTING TO ANY AGE GROUP"

**OFFICIAL  
FILMS'**

**CONCERT  
SERIES**  
16mm sound

Musical masterpieces of great composers . . . interpreted by outstanding artists . . . presented with imaginative beauty in exquisite blending of music and cinema.

These outstanding films are of unprecedented value for classes in music appreciation . . . voice . . . ballet . . . and techniques of piano, cello and violin. Each of these films is professionally perfect. And all of them have proved to be, *Exceptionally interesting to any age group.*"

**Gounod's FAUST**

Hugo Riesenfeld, noted conductor, directs this true operatic presentation selected from the first act of Gounod's beloved opera. Faust, finding himself aging and nearing death, sells his soul to Mephistopheles for renewed youth. (12 minutes)

**Schubert's AVE MARIA**

Elisabeth Schumann, renowned opera-lieder singer, exalts in the Ave Maria, filmed against a background of symbolic beauty. (5 minutes)

**Monpou's YOUNG GIRL  
IN A GARDEN**

Magda Tagliafero's brilliant choreography and the magic of the camera lend a new charm to this fantasy for the piano. (5 minutes)

**Debussy's THE CHILDREN'S  
CORNER—Reel 1 and Reel 2**

Alfred Cortot, famous pianist, plays new inspiration and tenderness into Debussy. Two reels—may be used together or singly. (9 minutes each)

**Weber's ANDANTE ET RONDO**

Gregor Piatigorsky, concert cellist, presents tonal magnificence of rare quality in this brilliant rendition. (5 minutes)

**Chopin's VALSE BRILLANTE**

Alexander Brailowsky, one of our greatest pianists, offers an unprecedented opportunity to study virtuosity from every angle. (5 minutes)

**Faure's THE CRADLE SONG**

Ninon Vallin, contralto, lends new significance to the nautical "Les Berceaux" in an outstanding vocal performance. (5 minutes)

**Albeniz's MALAGUENA**

Jacques Thibaud, fingers magic from his violin, in this interpretation of a universal favorite. (5 minutes)

**CORPS DE BALLET &  
ORCHESTRA of PARIS OPERA**

Serge Lifar, Master of the ballet, gives an enchanting performance, following an intimate glimpse into the ballet school. (6 minutes)

*(Footage based on original theatrical release)*

(Concluded from page 414)

One of the most heartening features of Mr. Rank's "threat" to Hollywood is that he is committed to the production of good films, of the type that American audiences will like. There is much room for good films, regardless of the country of origin.

- **Movies As an Influence in the Life of the Modern Adolescent**—Brother Urban H. Fleege, S.M.—*Catholic Educational Review* 43:336-52 June, 1945.

This article is to be used in a book on the adolescent boy. It evaluates the effect of movie-going as one of the experiences of the modern adolescent. A study was made of 2,000 Catholic high school boys in 20 parochial high schools throughout the East and Middle West. The data sought were similar to those of the Payne Fund and other Studies, and interestingly enough, the findings were also similar.

This study would serve to document further any argument on the potency of movies in influencing the attitudes and behavior, especially of adolescence. It must be remembered, however, that a large percentage of young people take movie behavior in their stride and a comparatively small number confess that their conduct is influenced by what they see at the movies.

### RADIO

- **Script-of-the-Month**—by Gretta Baker, instructor in radio techniques at New York University—*The American Mercury*, 570 Lexington Avenue, New York 22.

A monthly service for radio-minded teachers, club advisors, and discussion leaders, "Script-of-the-Month" is a complete 15-minute radio program that can be used on or off the air as the basis for group discussion. The scripts will be based on current news articles appearing in *The American Mercury*, and will take the form of a round-table discussion with dialogue for four participants.

These scripts have a variety of uses. They may be presented as an actual broadcast, on a P. A. system as a school broadcast, in the auditorium as an assembly program, in club meetings as a panel discussion, in classrooms as part of the lesson material. Free copies may be obtained by writing to the Radio Department of *The American Mercury*.

- **Teacher Education by Radio**—*School and Society*, 62:181 Sept. 22, 1945.

Courses for teachers are being offered on WBZ (Boston) and WBZA (Springfield) in cooperation with the University of the Air of the National Broadcasting Co. The course is based on the program, "Our Foreign Policy," broadcast Saturdays 7-7:30 P. M. and is supplemented by a Saturday morning local program, 9:15-9:30. The Massachusetts Plan, as this in-service program is called, requires teachers to register with the Division of University Extension. Copies of the script and a bibliography are mailed. The student will write four reports on the reading, and summarize two broadcasts. A final examination will be given to complete the requirements for 2 credits.

### TEACHER TRAINING

- **Teaching Microphotography to Librarians**—D. H. Litchfield and M. A. Bennett—*Library Journal*, 70:734-7 September 1, 1945.

This is the first published account of the pioneering work done at the Columbia University School of Library Service by the authors. Librarians learn the skills involved in photographing printed materials to produce microfilm and the special cataloguing techniques for keeping microfilm libraries in order. The course described in detail in this article, is what has been evolved over a number of years. The original article is recommended to instructors in audio-visual education and photography.

### PERIODICALS

- **Film News**.—vol. 1, no. 1—Published by the American Film Center, 45 Rockefeller Plaza, New York 20. Thomas Baird, editor-in-chief. \$2.00 year. October, 1945.

In its expanded form *Film News* will continue to provide information about producers of documentary films and national or international trends.

- **See and Hear**.—vol. 1, no. 1—Published by E. M. Hale Co., Eau Claire, Wis. \$3.00 year. September, 1945.

In format and size this new publication resembles the various *Digests* although the editor hastens to assure us that each article is complete and especially written for the magazine. This 'request' publication will be useful for classroom teachers and other consumers of educational films.

- **Sight and Sound**.—vol. 14, no. 54 July, 1945—British Film Institute, 4 Great Russell St., London WCI.

A world perspective on the status of the educational and theatrical film is provided in the section, "Post War Survey" (p.43-50). It includes 4 articles on the film industry of Egypt, Palestine, India and Greece. Other countries will be treated in subsequent issues.

Roger Manvell, in writing of Egypt, tells that the cinemas of that nation and the rest of the Middle East are dominated, . . . by the American film product. Although the native government is rather indifferent to it, an Egyptian film industry is growing. There are now about 5 companies, producing about 60 features a year. Some educational and documentary films are being made, chiefly by two French producers.

In Palestine the non-commercial film activities are the most interesting, according to Keith Bean. Two mobile trucks give more than 70 shows a month in Palestine and Transjordan. These are 35mm., consisting mainly of short subjects for Arab audiences. The British films officer has himself made several films with a special technique suited to this particular type of audience. For Jewish audiences, the films are shown on their own projectors with ambulant projectionists. The 16mm. film situation is very slim, as there are practically no films for the 3 projectors.

India is potentially one of the richest of all film markets, reports Ernest Whitehall. The number of theaters and road show units is at present small (1,700) but 10,000 are planned. In 1944 her 162 feature film productions made her second only to the U.S. world market. There are 25 film companies, as well as some independent producers.

• *There is no Substitute for Experience* •

Among many new school subjects recently added to our Rental Library are such excellent features as:

**SWISS FAMILY ROBINSON**

Thomas Mitchell, Freddie Bartholomew

This film captures all the charm, engaging humor and excitement of the world-loved story about a rebellious family taken by idealistic father from decadent London life to colonies—the shipwreck, escape to an uncharted isle on a raft of barrels, the house in the tree-tops, the hidden treasure, and all the other absorbing adventures.

**MICHAEL STROGHOFF**

Anton Walbrook, Akim Tamiroff

Jules Verne's dramatic and stirring tale of Russia in 1870, comes vividly to life in this RKO feature production. Anton Walbrook portrays the gallant young captain of the Czar's guard, entrusted with the dangerous mission of carrying an important dispatch on army maneuvers through territory held by treacherous Tartar forces.

**TOM BROWN'S SCHOOL DAYS**

Cedric Hardwicke, Freddie Bartholomew

Faithful and absorbing translation of the famous classic picturing school life at Rugby in the 19th Century, spotlighting the career of the renowned Dr. Arnold, headmaster at Rugby, who introduced needed reforms, replacing rowdiness with the honor system, Authentic in atmosphere, finely acted and directed, highly entertaining.

# School Made Motion Pictures

**QUESTION:** I need your help badly. I have been asked to put on a show of films taken by the school's cinema club. As the new sponsor, I was handed several small reels of unrelated shots, with the simple instruction, "Your program goes on in four weeks."

Do you have any suggestions as to how to organize all this material? Can you recommend a few sources of ready-made scenarios that would help me out in my predicament?

**ANSWER:** Your best procedure is to run through each of the reels of film, and on a sheet of paper jot down a brief description of the contents of each scene. Be sure to discard any poorly exposed footage or any scenes not in sharp focus. The next step is to try to organize each of the film sequences under some classification, such as athletic, scholastic, club work, community relations, etc. All these should then be respliced to form some semblance of continuity. Without much further ado, this can become a kind of newsreel of school events. If you are planning to add titles to make it an all silent film, be sure that your titles do not point out the obvious, that is, information which the pictures themselves will reveal. It will prove more interesting to your audience, however, if you just make the main title, plus one or two credit subtitles, and have one or two students narrate a prepared commentary on the film. Background music from the school

DAVID SCHNEIDER, Editor  
Evander Childs High School  
New York City

organ, or from carefully selected phonograph recordings to match the moods of the pictures, will give your show that added lift to get it across.

As for ready-made scenarios, I'm sorry to report that as far as I know, no publisher has as yet come forward with a book of scenarios to fit the various kinds of film needs of particular schools. Hints in that direction may be found in many of the books and magazines devoted to amateur motion picture photography. It may be worth your while to look up the back numbers of EDUCATIONAL SCREEN, especially the articles on "School-Made Motion Pictures."

Last year, with the acute film shortage, we were confronted with a similar problem. We solved the question of continuity by adding a running gag (about 100 feet of additional film) to tie the narrative together. A running gag may be defined as an act repeated over and over again by some wag, until the wag gets a dose of his own medicine. Our commentary was built around the theme that the motion picture photographer has an important job to do, and the pictures that follow prove that he is always around to do it. The commentary gave us an opportunity to put in a plug for motion picture club work, as well as for the school G. O. which finances the club.

It may interest you to know that this film proved so popular, that teachers and students of the third and fourth assembly groups protested vehemently when their turn to see the film had to be postponed for a later period in the term. When they finally got to see it, many teachers reported the unanimous opinions of their classes as "the best program ever seen in the auditorium."

You are free to use the subjoined scenario in any way you may see fit.

## SOUVENIRS OF EVANDER

Scene	Commentary (narrated by Jean)
Jean threading the projector, pushes Larry away.	Just a minute. Will you stop annoying me and let me get through threading this machine. I have to get this film ready for projection.
Jean turns around, notes audience of seniors looking on. Audience comes in, takes seats.	Why, hello. I didn't know we had an audience. Come on in. It will take a few more seconds to check the equipment and we'll be ready to roll. Won't you please join us? We are just having our annual film review.
Titles: The Motion Picture Club gives you "Souvenirs of Evander"—A 20th Century Evander Production. Cumulus clouds moving across the sky.	These films have been taken during the past few years by the members of the Motion Picture Club. Now we're going to show you some of the high lights.
Snow falling.	Your continued support of your G. O. makes it possible for the Motion Picture Club to produce these films for your enjoyment. Membership in the club is open to all students who are interested in any phase of film production, photography, script writing, editing and screening. The cameraman, like the proverbial postman, for whom the elements hold no fear, is on beck and call regardless of impending storms, snow, sleet or hail.
Brooks cascading down gullies.	He studies the brook in all its moods.

Holmes machines have given dependable, maintenance-free service on a global basis under strenuous wartime conditions and severe usage. Service operators have continually marveled at the durability and exceptional performance under exacting conditions of the Holmes Projector . . . soon to be available again for schools and normal peacetime use.

He catches a glimpse of the ever devastating forest fire.

He must be up to greet the new day.  
And cradle it to rest when day is done.

The cameraman is always present to usher in every important event. When Evander was just a name to us, the entire student body took over Flushing Meadows for a day. When the world was at peace, each of the nations contributed material representing their cultures to the Fair. Students scattered in all directions trying to explore every nook and corner of Flushing Meadows. Some visited arts and garden displays, some observed the girations of the mechanical robots, while others tried out the newer devices engineered by tomorrow's scientists.

This may look like an ancient sport to many of you, freshmen; but to us, seniors, it's real football. Many of the boys you see here are now in the United States armed forces. It was on Evander's own field where these boys first learned their commando tactics.

Next week seniors will again get an opportunity to show how far they can outshine previous frolic days. Each term the senior class chooses a theme. This term it's "personalities from fact or fiction." Every printer has his devil, and every club has its gremlin. We have our own private gremlin, who is always up to some stick-up job. Do not think for a moment that our club work is ever dull. We always have fun, especially when our gremlin is around.

Our club accompanies many students on their outings to the zoo. These are some of the specimens that performed for us at our last trip. Did you ever hear a swan song? Even swans don't believe that. Swans do not sing.

The Bronx Zoo isn't the only place that boasts of swans. We know a place where the swans are far more beautiful.

This Evander Aquacade was held here a few terms ago for the benefit of the National War Fund.

The pelicans are our annual visitors to the zoo. They are from four to six feet in length. They have immense pouches below their large hooded bills. The wings are very large, reaching an expanse of ten feet. Pelicans are awkward on the ground—but are stately and majestic as they move slowly over the surface of the water.

President Wilson had a favorite limerick about the pelican:

"A wondrous bird is the pelican,  
His mouth holds more than his hellican,  
He takes in his beakEnough food for a week  
But I'm damned if I see how the hellican."

We also have our own pelicans. Of course they don't grow bumps on their noses, like the park varieties. We serve good food in our cafeteria. There goes that gremlin again, and there goes another book.

One of our biology classes has undertaken a study of twins, triplets, quadruplets and quintuplets. So far, only the twins have shown up. But we're not giving up. Here you see identical and common twins.

Meet Evander's senior class of June 1961. I told you we wouldn't give up. All we need now are quadruplets and quintuplets.

Another big event that occurs annually in our school is Arbor Day. This one is a peace time celebration. At this particular one, in 1941, students dressed in costumes of various nationalities, and sang appropriate Arbor Day songs. Finally, each group planted an evergreen tree to the greater glory of Evander. Some danced to the joyous occasion when the earth once more began to show signs of life.

And the famous band played on. There is Mr. Fund, who was the leader of the band. He is now a lieutenant in the United States Air Force.

## Overcoming Poor Sound in the 16mm Film Projector

Edited by  
JOSEPH E. DICKMAN  
and PHILIP MANNINO

**G**OOD sound quality in the 16mm. Sound-on-Film Projector can be obtained only when careful attention is given to all parts of the projector's sound system and to the setting up of the projector and speaker to take full advantage of the room's acoustics.

First, let us see what makes up the projector's sound system. It consists of the amplifier, tubes, photo-cell, exciter lamp, sound optics, sound mirror, sound drum, sound drum assembly, and speaker. Because it is also dependent upon the motor speed, the motor is also involved.

When any one of these elements is not functioning correctly you will have sound difficulties. Of course, if the film has a poor sound track, as is often the case, you will not get good quality from the projector. When attempting to cure sound difficulties in the projector make sure that they are not in the film. Always use a film that you know is good.

Here are some causes of poor sound and how to cure them:

*Low line Voltage*—have power line checked to see if voltage is 110-120 Volts. If less than 110 Volts sound distortion will be had.

*Tubes*—weak tubes will cause low sound, distortion, and cracking. Tubes wear out from usage, transportation, and failure of amplifier parts. Tubes should be checked periodically on a good tube tester. The tubes should be watched carefully for shorts when on the tube tester. Any tube with a shorted element should be discarded. New tubes that are used to replace old tubes should be matched to conform to the characteristics of the other tubes in the set. Matched tubes increase sound efficiency. Never replace steel tubes with glass tubes unless provisions are made to shield them, and never replace one style of tube with another style. The numbers on the tubes must be the same.

Sometimes tubes will work loose from the amplifier during transportation. It is a good policy to check these first and if they are loose they should be pushed back into place.

Good sound quality is dependent upon projector speed. The film must go over the sound drum 24 frames per second, as faster speed will cause a "Donald Duck" sound—high pitched and fast. A speed of fewer than 24 frames per second will cause a warbling, drawling sound.

A simple way to check film speeds is to make a loop containing 240 frames. Punch a hole in one of the frames. Thread the film in the projector and start the projector. The hole should show every 10 seconds. Use a stop watch for accurate timing. If projector speed is too fast the gap on the governor points should be lessened. If the speed is too slow the gap should be opened more. A set screw is provided for opening and closing the gaps. The gap, if pitted, should be filed smooth

with a tungsten file and reset. Always check the speed after adjustment.

*Photo-Electric cells* rarely need to be replaced. They will last for years unless broken or abused in transportation. The tube should be free from finger marks and dirt when inserted.

*Sound mirror and optics* will often get dirty. Clean the mirror and the optics before every showing.

*Exciter lamp* filaments become sagged from long usage and will cause low sound. Replace the exciter lamp if you suspect its condition.

*The Sound Optical Unit* comprises the lenses that concentrate the light of the exciter lamp on the film and Photo-electric cell. This may work loose. If this is out of adjustment, low volume and sound distortion will result. The light beam of this unit must hit the film sound track at a right angle and at the light's brightest point. This adjustment is hard to make. Have your dealer do it.

*Sticking rollers, idlers or sound drums* will often cause a warble in the sound. Sticking rollers and idler must be oiled so that they run freely.

*The Sound Drum* must run freely at all times. Sometimes a foreign object may show up the flywheel attached to the sound drum. A bearing may break or freeze. A broken piece of belt may work itself onto the shaft. Check for these and if you find a bearing is broken you should have your dealer repair it. If the bearing is frozen, a shot of penetrating oil will loosen it. Then oil it with the oil supplied with the projector.

*Speaker cords* are sometimes sources of poor sound. The cords should be tested by inserting them into the speaker and projector, then turning on the amplifier and wiggling the cords. If rasping sounds are heard there is a loose connection. This should be soldered with resin core solder. Make sure the wires are placed on the same terminal as they were before.

*The amplifier*, of course, can cause poor sound quality, but as most projectors' amplifiers are built of the best parts obtainable, it is best to check all the things described above before going to the amplifier. If necessary to have the amplifier worked on, let only an expert radiotrician work on it. He has the proper meters, tools and parts.

The proper use of the *Volume Control* will aid greatly in better sound quality. Sound reproduction is affected by too low volume. Operate your projector at a slightly higher level in order to get the best reproduction and tone quality of the film. The tone control will adjust to a wide range of frequencies and it should be adjusted for every film so that sound quality will always be at its best.

To take full advantage of room acoustics, *Speaker*

*Where* **PORTABILITY** *Is Essential—*

*Choose a DA-LITE*

**CHALLENGER or VERSATOL SCREEN**

These popular Da-Lite models are the only tripod screens that can be adjusted in height without separate adjustments of fabric or case. The elevating rod in each, when extended, locks automatically in place when it reaches the correct picture proportion. This and other exclusive features make these Da-Lite tripod screens preferred by visual education instructors for their simplicity, fabric protection and ease of operation.

**DA-LITE VERSATOL**  
Moderately priced tripod screen locks automatically at correct picture proportions. Three sizes: 30" x 40"; 40" x 40" (adjusts to 30" x 40") and 37" x 50".

**DA-LITE SCREEN COMPANY, INC.**  
Dept. 11E5, 2723 No. Crawford Avenue  
CHICAGO 39, ILLINOIS

**DA-LITE CHALLENGER**  
For severe service requirements, specify the more ruggedly built Challenger. Its time-proved stamina minimizes replacements. 9 sizes: 30" x 40" to 52" x 72" inclusive.

**This Name** **Has Identified** **QUALITY SCREENS FOR 36 YEARS**

placement is important. The speaker should be placed about 12 inches above the heads of the audience and near the screen. If two speakers are used place one on each side of the screen. Drapes on the walls will improve acoustics of the room. P.M.

**A Square Film Can**

YOU can't put a square peg in a round hole but wouldn't a round reel in a square can offer a lot of advantages to film libraries? Present round cans, especially the 400 foot size, have the following disadvantages:  
You can't stack them flat because they do not nest securely.  
To stack them on end requires relatively complicated and expensive partitioned shelving.  
Labeling the thin split edges is difficult and unsatisfactory.

The author's idea of what a can should be.

Alignment of the labeled edge is time consuming. They are elusive to handle and difficult to package. Film manuals and study guides do not fit in them.

In common practice a square container of cardboard or fibre is added to the round can to make the package manageable. The added expense and labor involved in this double packaging job could be eliminated by the use of a flat, square film can with fully overlapping sides for easy labeling and nesting corners for unlimited stacking. Square cans of this type could be stored on edge like books or stacked in piles where duplicate copies are owned. The can should have sufficient depth for the reel of film as well as accompanying text material.

*Let's hear your reaction to the idea of a square film can!*  
J.E.D.

**Y. M. C. A. Service Bulletin**

- **Association Film News**—a bi-monthly publication issued by The Y.M.C.A. Motion Picture Bureau, 347 Madison Ave., New York 17.
- This four-page News Letter will be sent to the churches, schools, clubs, industries, Y.M.C.A.'s and other community organizations who comprise the Bureau's exhibitors, and will furnish information on new developments in audio-visual education. It will also contain a complete list and description of all new films added to the Motion Picture Bureau's library.
- Reports of significant and successful projects in the use of films and other audio-visual aids are solicited for publication.

## Dinner Party

(Simmel-Meservey, 9538 Brighton Way, Beverly Hills, California) 22 minutes, 16 mm sound-color. Purchase price \$150. Apply to producer for rental sources. Discussion guide available.

Treats the problems of etiquette which arise at a semi-formal dinner party given by Betty, a teen-age girl, in honor of the birthday of her friend Bob.

As Betty is shown critically appraising the table which she has just finished setting for six, the commentator states that Betty has frequently been a guest at parties such as this one she is giving but that this is the first time she has been responsible for arranging one. The housekeeper points out that she has incorrectly placed the napkin and butter knife and failed to include water glasses.

The guests soon arrive. Bernie and Floyd correctly help Helen and Dorothea with their chairs. Bob, who acts as host, forgets to help Betty until he observes the other two boys and then it is too late. As the party begins it is apparent that Betty and Bob are uncertain of their manners but that the other four guests have the poise and self-confidence which result from a knowledge and use of socially correct and accepted etiquette.

As the meal begins Betty completely unfolds her napkin; Bob does likewise and tucks one corner into his belt; the other four guests unfold theirs only half-way and lay them across their laps. When the soup is served, Bob begins eating immediately. The others wait until Betty has passed the crackers and has begun eating. When Bob observes that the others move their spoons away from them and do not fill them to overflowing, he does likewise. He also removes his olives and celery from his service plate to his bread-and-butter plate when he notices that to be the place where the others put theirs.

The main course of the dinner presents new problems to Betty and Bob because each has a responsibility in serving the food. The guests try not to notice Bob's embarrassment and blunders as he serves the meat and vegetables. Betty finds it difficult to decide just how to manage the salad implements, to determine the size of servings, to manage the correct assortment of vegetables, and to decide whether or not she should say for whom each plate is intended. During this course attention is directed to such points as gesturing with silver in one's hands, talking with food in the mouth, taking meat to mouth with left or right hand, and buttering vegetable with knife or fork.

The housekeeper now clears the table for the dessert; and as Betty brings in a beautiful birthday cake she has made for Bob, she wonders whether or not she should have had the housekeeper serve it. She and Bob have

their doubts about the proper way of cutting and serving it, but when the cake has been served Bob helps Betty to her chair and all enjoy the feeling of friendship and complete relaxation which comes from everyone's being at ease. The film recommends that one should detect his wrong habits, then break them and form correct ones. It ends with the note that correct manners are the way that polite people show their consideration for others.

### Committee Appraisal:

By depicting a semi-formal dinner party where correct and incorrect table manners are used, the film poses in a provocative and stimulating manner questions concerning the socially correct and acceptable etiquette for teen-age boys and girls. This film presents through a functional approach a skillful use of the medium in providing students with an opportunity to learn correct table manners which teachers generally attempt to develop by other means. Moreover, the film will also be useful to those teachers and pupils who wish to project themselves into a practical situation wherein they may test their learnings acquired from other sources. Through the use of three couples possessing varying degrees of confidence and skill, each student will be able to identify himself with the character possessing a corresponding amount of poise and knowledge.

Highly recommended for use by junior high and high school home economics classes, home rooms, and other groups concerned with table etiquette and its relation to social poise. Teachers may or may not wish to accompany the use of this film with a half-reel summarization or review film which sets forth each proper phase of table etiquette and table service.

## Problems of Housing

(Encyclopedia Britannica Films, 20 North Wacker Drive, Chicago, Illinois). 11 minutes 16mm. sound. Purchase price \$50 less 10% educational discount. Apply to producer for rental purposes. Discussion guide available.

Opening with scenes of present-day American homes typifying housing standards of one hundred years ago, this film approaches the problem of modern housing in terms of specific improvements which might make any house more livable. Following diagrammatic and illustrative shots on the percentages of houses in different age brackets as occupied by families of the several income groups, protection against weather is first developed. Home occupants are shown installing storm sash, using calking cement on the inside around the windows, insulating the attic, and replacing wooden shingles on the roof. In this same connection, the effects of improper humidity readings in the home are illustrated with some simple counter measures suggested.

As a first step in securing better natural light a light meter is used to check conditions in a family livingroom, with the result that heavy draperies are replaced with lighter hangings. Shrubbery which had grown over windows is also removed from around the house. A similar test in a family kitchen results in the installation of a fluorescent fixture.

Protection from pests is pointed up by two scenes—one of flies swarming over food and another of screens being painted. Safety receives a somewhat fuller treatment in scenes which illustrate the importance of installing lights at the bottom of dark stairs and of repairing bad stairways. At this point, the film leaves the house itself to refer briefly to the value of dead-end streets as a safety factor in living

This monthly page of reviews is conducted for the benefit of educational film producers and users alike. The comments and criticisms of both are cordially invited.

Producers wishing to have new films reviewed on this page should write L. C. Larson, Indiana University, Bloomington, Indiana, giving details as to length, content, date on which the film was issued, basis of availability, prices, producer and distributor. They will be informed of the first open date when the Teacher Committee will review the films. The only cost to producers for the service is the cost of transporting the prints to and from Bloomington. *This Cost Must Be Borne By The Producers.*

## "Your Hy-Flect Glass-Beaded Screen Made an Astonishing Difference..."

The Radiant "Hy-Flect" Screen surface is comprised of thousands of tiny optical glass beads that REFLECT light with astonishing brilliance.

A user of motion picture equipment writes us: "Today we tested some of our colored stills and movies simultaneously on an old screen and a new Radiant Screen moving the image back and forth from one screen to another. The improvement in depth of colors and clarity of detail on the Radiant Hy-Flect Glass Beaded Screen was so noticeable—that we all agreed that to see our pictures at their best, we simply had to use a Radiant Screen . . ."

Letters of appreciation of the many new and exclusive features of Radiant Screens reach us daily . . . and explain why the swing is to Radiant Screens everywhere!

Send for FREE Book on Projection

The Radiant Screen here illustrated is Model DS—portable, sturdy, compact, easily set up, quickly adjustable.

The Radiant Line includes a complete range of wall, ceiling and table models in sizes 22" x 30" to 20 feet by 20 feet and larger.

Mail coupon today for FREE copy of 32 page illustrated book, "Secrets of Good Projection." Gives complete information on getting best projection results—including important information on screen sizes, lens sizes, projection distances and many other useful facts. Also for free circular giving specifications, prices, etc. of Radiant Screens for all purposes.

**Convertible from Square to Oblong**  
 Radiant's "automatic clutch" permits you to convert screens from square to oblong by merely raising or lowering to desired position without manipulating set screws or plungers. This is only one of the many advantages Radiant Screens offer you.

**Radiant Manufacturing Corporation**

# RADIANT

BETTER SCREENS FOR BETTER PROJECTION

and continues its exterior shots in developing its fifth main requirement for a house—fire protection. Well-spaced houses of brick, stone, and asbestos construction are pictured as the best preventatives of the fire hazard. To conclude its list of services given by a house, the film shows how fresh paint and new wallpaper can contribute to a pleasing appearance of the family home.

Then there is a resume of the six services of a house, each indicated with a flashback along with some new shots devoted to community planning and to recreation in a family home.

### Committee Appraisal:

Although this film might be used to introduce the study of housing standards in a social studies class, it is chiefly for elementary science and for home-making courses at the high school and college levels. Because the film encompasses far more content than can be covered adequately in an eleven-minute subject it should not be used as a single source of suggestion or information on home planning. But its graphic and specific presentation of several elements, often taken for granted in housing studies, recommend it as a highly useful film.

### Children of the City

(British Information Services, 30 Rockefeller Plaza, New York City) 30 minutes, 16 mm sound. Purchase price \$33 less 25% educational discount. Produced by British Information Services, London, England, for Scottish Education Dept. and Scottish Home Office. Discussion guide available. Apply to distributor for rental sources.

Shows how in Scotland new social legislation helps to solve the problems of three boys whose escapade in a pawnshop, beginning as mere mischief, ends in theft and crime.

Robbie, Duncan, and Alec force the window of the pawnshop and disarrange the shop generally. By the time the police surprise the three boys they have gotten into the money till. Thus they are caught in a crime.

The next sequence shows Robbie, age ten and cross-eyed, starting out with his parents to appear before the Juvenile Court. They soon come to the home of Alec whose father, unemployed and sullen, refuses to accompany his wife and son to the hearing. So the five proceed without him to Duncan's home where he and his mother join them.

Reaching the court room the three boys, accompanied by their parents hear the charges read by the Clerk of the Court. Robbie, whose case is considered first, is freed by the Court to go with his parents who are charged, however, with taking him regularly to a Child Guidance Clinic in the city. Duncan, aged thirteen whose father is in military service, is also allowed by the Court to remain at home but under the supervision of a Probation Officer. The appearance of Alec, the oldest of the three, is not his first in court, and after testimony by the Probation Officer that Alec's case is beyond him, the Court decides to send Alec to an approved boarding school, thus separating him from his parents.

As he is taken a few days later to a school some distance from his home, the long ride and the induction process at the school make him realize Alec has lost his freedom. But it is a school where freedom can be regained gradually and according to merit, and the film shows the many and varied constructive activities through which self-discipline is developed.

At about the same time that Alec is being inducted into the school, Robbie responds in a gratifying manner to the tests given and genuine interest shown by the social psychiatrist, the educational psychologist and the doctor at the Child Guidance Clinic.

But the Probation Officer who meanwhile makes his first contact with Duncan does not find his case so easy to analyze. After a long walk and talk with the boy, the officer arranges as the first step in his rehabilitation for him to join a youth club.

# COVARRUBIAS

★ MURAL MAPS

Endlessly fascinating . . . scientifically accurate studies of the vital Pacific area in nine brilliant colors. Detailed and decorative visual aids to understanding current world events. Third edition now on press, for delivery in December . . . 10.75 the set (series of six).

**SCHWABACHER-FREY**  
735 MARKET STREET - SAN FRANCISCO

With the three case studies thus completed, the film comes to a close as it shows children at play in the milling streets and then in contrast children gathered in play centers, boys' club, at bike races, and at puppet shows, there engaging in activities which, as the commentator says, "make it as exciting for our children to build their own world as is the present temptation to destroy the world of their parents."

### Committee Appraisal:

The forthrightness and honesty with which this film depicts the social and economic conditions which create the juvenile delinquent make it highly useful in junior and senior high school social studies classes, in college sociology courses, and in study groups composed of professional and lay people and of officials concerned with problems of housing, delinquency, education, court procedures, and social psychology. Without the use of any forced dramatic situations, the film achieves an appeal which goes deeper than the war conditions briefly referred to therein. It presents a thorough and well directed analysis of treatment techniques and stresses the importance and some of the means of prevention. The excellently developed and integrated treatment of juvenile delinquency in Scotland as presented by this film suggests a challenge to many American practices but at the same time parallels our own conditions closely enough as to make the film useful not only as an introduction to but even as a basic case study in problems of American juvenile delinquency.

### Brick and Stone Mason

(Vocational Guidance Films, 2708 Beaver Avenue, Des Chicago, Illinois.) 11 minutes 16mm. sound. Purchase \$45. Apply to producer for rental sources. Discussion guide available.

"Brick and Stone Mason," one of the Life Work Series for vocational guidance, shows various phases of structural masonry and presents some of the techniques of the trade as the commentary discusses the qualifications of one who wishes to become a mason.

The first sequence depicts the structures commonly built by the mason of today. Public buildings, structures built for businesses, and homes are shown as illustrative of the various types of work to be done and of the various materials to be used. Closely following scenes show the tools of the trade; and the American, English, and Flemish bonds are differentiated.

Technical terms—headers, stretchers, arches, keystone, cutstone, and rubble—are defined by the commentator and are illustrated on the screen. Patterns of laying masonry are discussed and shown as they relate to strength and beauty of the handiwork of the mason.

Much of the closing sequence of the picture deals with the qualifications of the mason such as his liking for the outdoors, his need of good health, his willingness to learn, his respect for manual labor, and his love of artistry and pride in craftsmanship. The apprentice is seen doing the rough work of learning the trade. A discussion of fields of learning includes the study of bond patterns, blueprints, mortar mixing, and new materials. Masonry needed in steel mills, locomotive boiler boxes, and form structures is discussed and illustrated.

The final words of the commentator point out that the field is not over-crowded and the pay is good for those who learn the trade.

### Committee Appraisal:

This film should prove valuable in suggesting vocational opportunities in the trade, showing actual steps in brick and stone masonry, and indicating the variety of materials used in construction. As one of the series of films dealing with vocations that do not require a college training, teachers of guidance on the secondary level should find this subject helpful in developing an appreciation of the skill required in laying brick and stone. It is well organized for use as a broad orientation to the subject of masonry as a vocation.

## The Coordination of Information and Service on Government Films

(Concluded from page 412)

gress would still provide both information and service on agricultural films, for the national field. Furthermore, our recommendations do not preclude at some later time the creation of another agency which would concern itself primarily with problems of production and the study of the unique contribution of the film in the shaping of our culture.

It is gratifying that organizations whose members are vitally interested in the production, distribution, and use of films could agree unanimously to recommendations which would give the Library of Congress the coordination of information and service on Governmental films directly and non-governmental films indirectly. The workers in the field of the film are a youthful and aggressive group, and it is likely that we could make much progress in organizing autonomous centers of audio-visual materials. It follows, therefore, that representatives of the seven national organizations devoted a great deal of study to the recommendations before they were willing to recommend unanimously that, in order to make the optimum use of the informational film as a medium for the dissemination of ideas, it was to our advantage and to the advantage of the medium to recommend the coordination of information and service on Government films by the Library of Congress.

### STATEMENT OF OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912 Of The Educational Screen, published monthly except July and August, at Pontiac, Ill., for October 1, 1945, State of Illinois, County of Cook, ss

Before me, a notary public in and for the State and county aforesaid, personally appeared Donald P. Bean, who, having been duly sworn according to law, depose and says that he is the publisher of The Educational Screen, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in above caption, required by the Act of August 24, 1912, as amended by act of March 3, 1933, embodied in section 537, Postal Laws and Regulations, printed on the reverse of this form, to-wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are: Publisher, Donald P. Bean, 64 East Lake St., Chicago, Ill.; Editor, Nelson L. Greene, 64 East Lake St., Chicago, Ill.; Managing Editor, Nelson L. Greene; Business Manager, Donald P. Bean.

2. That the owner is: The Educational Screen, Inc., 64 E. Lake Street, Chicago, Ill.; Donald P. Bean, 10 West Elm St., Chicago, Ill.; Nelson L. Greene, 5836 Stony Island Ave., Chicago; Marguerite Orndorff, 7022 Warwick Rd., Indianapolis, Ind.; Marie Craig, Bangor, Me.; Estate of J. J. Weber, Bay City, Texas.

3. That the known bondholders, mortgagees, and other security holding owning or holding 1 per cent or more of total amounts of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest, direct or indirect, in the said stock, bonds, or other securities than as so stated by him.

DONALD P. BEAN, Publisher.

Sworn to and subscribed before me this 30th day of September, 1945.

JOSEPHINE HOFFMAN,

Notary Public.

(My commission expires June 21, 1948.)

## Chemistry Comes to Life ...

Studio Production Shot from "Sulfur and Its Compounds"

### in Coronet Instructional Films

In "Sulfur and Its Compounds," a current Coronet release in sound and color, an important unit of chemistry is brought to life for the student by combining laboratory experiments and observations with practical industrial, medical and agricultural uses of the element.

"Pickling" steel in sulfuric acid.

Produced with the cooperation of the Technological Institute, Northwestern University, the film is designed primarily for high school chemistry classes.

Dramatic color photography is used to demonstrate the physical and chemical properties of sulfur, sulfur dioxide, and sulfuric acid and to acquaint the student with the many practical uses of these chemicals. Full color animations are used to explain the Frasch mining process and to visualize chemical reactions in the production of sulfur dioxide and sulfuric acid.

This film is an excellent means of arousing interest in the study of sulfur and of providing a background for further study and experiments in the laboratory.

"Sulfur and Its Compounds" is one of a series of curriculum-integrated Coronet Instructional Films scheduled for 1945-1946 release. Watch for further announcements.

Sulfur drugs is an important use for sulfur

Coronet Instructional films are produced exclusively for classroom use and sold only to schools and school libraries. Most subjects are available in a choice of black and white or full color Kodachrome. A request on your school letterhead will bring you a copy of our latest catalog.

## State Department Information Service

Representatives of the State Department are meeting weekly with representatives of the Office of War Information and Office of Inter-American Affairs to draft plans for the new Interim International Information Service in the State Department. It is understood that William Benton, Assistant Secretary of State, will use the wartime operations of the OWI and the OIAA as a basis for the development of a program for the State Department, in regard to the press, radio and film. 16mm. films from these and other Federal agencies have been acquired by the Department.

Motion picture activities of the new organization will be directed by John M. Begg, chief of the motion picture and radio division of the State Department. That division has serviced as liaison between the department and other Federal agencies in matters involved in the dissemination of information abroad, and has headed the development and execution of cultural programs using films. John Hay Whitney, recently released from the Army, has been appointed temporary film consultant to Mr. Benton. Colonel Whitney was director of the motion picture division of the Office of Coordinator of Inter-American Affairs from 1940 to 1942, when he was succeeded by Francis Alstock.

No definite plans have been drawn yet for the Department's relationship with Hollywood producers but Mr. Benton expects to meet with industry leaders to discuss the theatrical picture's role in the new information service. The Department, however, will exercise control over the content of feature films that are to be shown abroad.

A draft of the program is being prepared for presentation to Secretary of State Byrnes.

## Changes in National Film Board

John Grierson has resigned as Film Commissioner of the National Film Board of Canada to enter private enterprise and has gone to England to study foreign film production and distribution methods. Ross McLean is the new acting Commissioner.

The National Film Board has been made a part of a new Government peacetime bureau called the Canadian Information Service, which succeeds the War-time Information Board, the director of which will be Geoffrey C. Andrew. This Service will operate under a Government interdepartmental committee which will be responsible for the production and distribution of all forms of propaganda.

## School Broadcast Conference

The Ninth Annual School Broadcast, held in Chicago on October 22 and 23, attracted a fine attendance by school administrators throughout the country, as well as radio executives.

The first day's session featured sample broadcasts of an in-school series produced by student members of the Central Radio Workshop of Station WBEZ, fol-

bles

lowed by utilization demonstrations with local elementary school groups, and panel discussions. The next morning's program opened with a demonstration on high school utilization of an American School of the Air program—"The Air Age"—produced by CBS. In the afternoon the participants attended Work Shop Groups on Equipment for the Classroom, Workshops for Elementary and High and High School. Classroom Use of Radio, and Problems of Television. In his talk on "Educational Implications in Television," George Jennings (Acting Director of the Radio Council, Chicago Public Schools) discussed television's place in the schools as a supplementary teaching device, particularly in science, social studies and art. He said, "television as an educational medium combines all the good points of radio with those of motion pictures, plus an immediacy which in itself is a powerful educational force."

Summaries of the coming year in the various areas of radio were presented at the closing session.

**Filmstrips on U. S. Geography**

The American Council on Education, 744 Jackson Place, Washington 6; D. C., has released for distribution in this country thirty-three filmstrips which were originally produced by the Council in cooperation with the CIAA for Latin American distribution. Seven of the subjects cover the regional geography of the United States, bringing out regional characteristics. Other subjects deal with a "Day on the Farm," "Suburban Family," "Small Town," national parks and forests, important aspects of flood control, irrigation, harnessing water power, rural electrification, soil conservation, urban and rural health, private and public housing, and schools.

Each filmstrip is accompanied by a script which may be read as a running commentary or used as a teacher's guide. The filmstrips sell for \$1.50 each, or \$45.00 for the complete set of 33. Prices include English scripts. Spanish scripts are 10 cents each.

**New Director for Dartmouth College Films**

The appointment of John Blair Watson Jr. of Hartford, Conn., a veteran of the 12th Army Air Force, as Director of Dartmouth College Films has been announced by the college. He assumed his new post on November 1.

Mr. Watson comes to Hanover following three and a half year's service as a pilot of fighter-bomber aircraft. He holds the Air Medal with three clusters and the Distinguished Flying Cross and was a Captain at the time of his honorable discharge. A graduate of the University of New Hampshire, with the Class of 1943, Mr. Watson specialized there in the educational use of motion pictures and was a student assistant in its visual aids library and photographic laboratory. At Dartmouth he will supervise production and use of motion pictures on the campus and will help direct the photographic activities of the students.

**Eric A. Johnston Becomes MPPDA President**

After nearly twenty-four years of service, Will H. Hays will retire as president of the Motion Picture Producers and Distributors Association but will continue as consultant under a new five-year contract, starting in March, 1946. The new president of the association is Eric A. Johnston, president of the U. S. Chamber of Commerce. He will continue in that office until the end of his term, May 1, 1946, and will maintain his headquarters largely in Washington. Francis S. Harmon, elected to a vice-presidency along with Joseph I. Breen, will be in charge of New York headquarters of the MPPDA.

**Audio-Visual Course for Community Leaders**

Ray Bingham, Director of the Audio-Visual Education Services (Y. M. C. A. Motion Picture Bureau) of the National Council of Y. M. C. A.'s, is conducting this fall a special course in audio-visual education for staff members and other leaders of community organizations.

Mr. Bingham has designed the course, co-sponsored by the N. Y. Adult Education Council, to provide program supervisors and leaders in community organizations with (1) a working knowledge of the equipment required; (2) the available material in films, slide films, recordings, etc.; and (3) suggestions for the effective utilization of these program aids.

The first of the eight weekly sessions was held October 16.

**E. W. Hammons Elected President of Ross Federal**

Ross Federal Service has announced its new president to be Mr. E. W. Hammons, former president of Educational Pictures Corporation and a veteran of the motion picture industry. He will serve also as advisor to the new division of the company which will specialize in the distribution of 16mm. films, a duty for which his experience as a producer of 16mm. pictures, qualifies him. (This service was announced in our September issue.)

Mr. Harry Ross was elected chairman of the Board, and plans to spend most of his time in the field with the 31 branch managers.

**McGraw-Hill Appoints Visual Aids Editor**

Albert J. Rosenberg has joined the staff of the McGraw-Hill Book Company as Visual Aids Editor. His main job will be to coordinate training films and other audio visual material with McGraw-Hill textbooks. He will also assist with the technical editorial programs of the education departments.

Mr. Rosenberg came from the U. S. Office of Education where for the past two years he was Aviation Technical Specialist, responsible for the production of over 65 manufacturing and maintenance sound motion pictures and a like number of film strips and coordinated instructors' manuals.

Mr. Rosenberg has had twelve years prior experience in aviation and technical education. More recently,

he was Special Aviation Consultant for the U. S. Armed Forces Institute and Aviation Educational Consultant for the Maryland State Aviation Commission. Earlier, he was Chief of the Special Services Section of the Air Line War Training Program, Coordinator of the Aviation Training Program for the Baltimore School System and instructor at John Hopkins University and the University of Baltimore.

### School Made Motion Pictures

(Concluded from page 419)

#### Scene

Dark storm clouds move across sky. Rain. War Time Arbor Day. Parents of fallen heroes plant trees. Nature scenes; fields of flowers, trees, insects, birds, etc.

Woodpecker climbing. Gibbons swinging from tree to tree. Boys' Gym Leaders on parallel bars and in Judo demonstration.

Hostess Club members at tea.

Larry adds another book to his pile. Personality Training: Proper dress, greeting friends, dance etiquette, etc.

Alice discovers that one of her books is missing. She sees it on pile made by Larry. She takes glue, applies it to one side of paper, places it, glueside up, on Larry's seat, while he is busy looking around for more books.

Larry returns with another book, which he adds to his pile. Larry quickly slips into his seat.

Jean talking. Evelyn at the piano. Close-up of music notes. Evelyn plays the piano. Students in costume perform Russian Folk Dances.

Jean talking. Larry rises from chair, hands over to adjust projector; reveals attached printed sign "The End".

#### Commentary

Peace time clouds drift away, and in their place come huge, ominous clouds; clouds of war.

This Arbor Day we planted trees in memory of the first two Evander heroes to make the supreme sacrifice.

When you feel sad and blue, a great poet once said, "seek consolation in nature". So, like that man, we turn to the outdoors. On one of the outings of the Nature Study Group, composed of students of our Biology and Zoology classes, who prefer to study the live specimens, rather than the canned and preserved types, we came across these living forms you see here.

Watch this acrobat. The woodpecker climbs his tree up and down, and vice-versa.

Meet the greatest acrobat of all. This fellow is a gibbon, Johnny Weismuller's double.

Presenting Evander's acrobats. They also climb from tree to tree, but their trees are horizontal. As you may know, these are the leaders in the Boys' gym. They are carefully trained acrobats as well as Judo experts. Occasionally they demonstrate their techniques for the enjoyment of the entire school.

Balancing a cup of hot tea in a saucer may not be an acrobatic feat, but it adds to the charms of being good hostesses. These girls learn that social graces acquired in school bring dividends.

There goes a monument to education.

The personality leaders would like to show you the right and wrong methods in developing such qualities and habits as poise, good manners, and proper dress. While the wrong methods may look funny, real fun and enjoyment are gained by those who know and practice the correct social forms.

Alice makes a discovery. "So, Larry thinks he can get away with this". She is applying her lesson in physics on the principle of adhesion.

Larry, you certainly stuck it right this time.

We'd like to show you one of our recent pictures. This Russian Dance was given at Evander, and repeated at Montefiore Hospital and other centers, under Mrs. Allan's direction. I guess you've heard enough from me. So, we'll let Evelyn tell you about it on her piano. (Evelyn plays piano as in film).

Larry, we warned you—there's always a means to the end.

# EDUCATION OR ENTERTAINMENT

*--The Visual Way  
is the Best Way*

Historic world events or home front news . . . peace conferences or political campaigns . . . scenic sights of America or Ancient Egypt . . . discoveries and inventions by the world's great men . . . or thrilling entertainment by Hollywood's greatest stars; the motion picture is the great medium of expression.

# Current Film News

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, have added the following current 16mm sound film releases to its library:

**American Antiquities**—a silent, color reel produced by Joe Ott. Beginning briefly at Mesa Verde, and passing through the Navajo National Monument, the greater part of the subject is devoted to the Monument Valley, Rainbow Bridge and the Navajo shepherds living in this area.

**Navajo Sand Painting**—another color film on the same interesting locale, produced in sound by Lt. Jack Breed, who contributed the color feature story on Monument Valley in the October issue of National Geographic Magazine.

**Hometown, U.S.A.**—a two-reel subject produced by Look Magazine, tell-

ing the human story of everyday life in a typical American town—as it is and as we want it to be. This docu-

mentary film provides a thought-provoking basis for discussion in groups of any age. It is available in both color and monochrome.

■ **CASTLE FILMS, INC.**, 30 Rockefeller Plaza, New York 20, is releasing currently the ninth annual single reel motion picture entitled:

**News Parade of the Year 1945**—which, like its predecessors, will present the historic highlights of the past twelve months. This year the News Parade covers the final stirring episodes leading up to the victory in Germany and the unconditional surrender of the Japanese with particular emphasis upon post-war developments since the ending of hostilities. The top-most axis war criminals are seen in the hands of their captors and one of the more dramatic sequences shows an amazing top-secret of the war in the destruction of a great battleship that explodes

with a shattering blast. An added spectacle is a scene of the actual explosion of the atomic bomb over Nagasaki, taken from the B-29 that dropped the missile. The passing of President Roosevelt just prior to the climax of the war in Europe is covered and historic scenes incident to the occupation of Japan are included.

"News Parade of the Year" is a comprehensive review of the most outstanding events of the year compressed into a single reel so that schools and collectors will have a small unit for convenience and economy in maintaining libraries. The reel is available from all leading photographic dealers in three 16mm editions, including a sound edition.

■ **PICTORIAL FILMS, INC.**, RKO Building, 1270 Sixth Ave., New York 20, have undertaken the release of a News Digest series, thus establishing a new form of informative and topical entertainment. This series, produced by the Newsreel Distributors and Telenews Theatres, comprised of 1-reel, 16mm sound only, black-and-white films, is distributed exclusively by Pictorial Films in their well-known *Pictoreel* line.

Although primarily of a topical nature, they are not "newsreels" in the accepted sense, but rather a type of discussion forum on subjects of lasting interest, presented by well-known commentators and personalities. The three films now available are:

**I Live for Tomorrow**—with Capt. Eddie Rickenbacker as commentator.

**Freedom of Speech**—presenting W. G. Chandler, President of the American Newspaper Publishers Association and Mr. Wilbur Forrest, Vice-President of the American Society of News Editors, in a discussion of the meaning of Free Press and other related topics.

**Headlines in Celluloid**—a graphic history of the development of the newsreel, showing major events of past and present years, based upon a story which appeared in the Saturday Evening Post.

These subjects are obtainable through local Pictoreel distributors.

■ **ARMOUR AND COMPANY**, Chicago 9, recently presented to the interested public its new 16mm home economics film made by Marie Gifford, director of Armour's Consumer Service Department, and bearing the title:

**Quicker Than You Think**—a series of demonstrations by Miss Gifford of the preparation of quick, easy menus and Armour meat recipes. Emphasizing the importance of the time factor in planning and preparing meals, the film shows how these cookery suggestions can assist the office girl, the busy club woman and the harassed mother. Although primarily designed for women's clubs and adult groups, the picture can be shown also to home economics classes in universities, colleges and high schools.

■ **LEWIS FILM SERVICE.** 1145 Market Street, Wichita, Kansas, which suspended business in 1942 when its owner J. E. Lewis, entered the Army, is again in operation with return of Mr. Lewis to this country. Now holding the rank of Captain, Mr. Lewis served with the 8th Air Force in England, in Control, Intelligence and Public Relations. He is on terminal leave until Christmas Day, when his separation from the Service becomes final.

He announces that his firm is releasing for the first time a series of one, two and three-reel 16mm educational films on English life, as follows: *Country Town*, *Market Town*, and *Lowland Village*, dealing with rural areas; *Local Government* which depicts the council system in an average size city; *Sheep Dog* and *Workmates* (ponies) which

From "Lowland Village"

show these animals at work; and a number of subjects are available on London during the war years; also is a 2-reel presentation of the Funeral Oration scene from *Julius Caesar*.

■ **ASTOR PICTURES CORP.** 130 West 46th Street, New York 19, has released in 16mm. size, the Goldwyn feature production:

**The North Star**—acclaimed by critics throughout the country as an eloquent and inspiring portrayal of life in a simple Russian village before the

war, and of the spiritual courage and great valor of its people when the Nazis came. Life Magazine hailed it as "the Movie of the Year." It is also offered for rental by Ideal Pictures Corporation, 28 E. Eighth Street, Chicago, and by Bell & Howell Co., 1813 Larchmont Ave., Chicago.

■ **BRITISH INFORMATION SERVICES,** 30 Rockefeller Plaza, New York 20, latest releases include:

**The Story of D.D.T.**—25 min.—telling how British and American experts undertook large-scale experiments to learn the effects of D.D.T.—originally discovered by a German scientist during the Franco-Prussian War—on insects that plague the soldier and spread disease in the Armies and among peoples of war-devastated areas. The successful spraying of the insecticide by aircraft over large mosquito-infested areas led to its use in clearing jungle areas in Burma of insects dangerous to the soldier's health. A spectacular demonstration of the value of D.D.T. is shown in

its use by the Allies in Naples in 1944, where a growing typhus epidemic was stamped out in six weeks. Scientific peacetime experimentation with D.D.T. is under way, and should bring about a better and cleaner world for everyone.

**The Eighth Plague**—13 minutes—describes some of the work done by the International Anti-Locusts Organization to eliminate the famine and destruction caused by locusts. In a desert part of East Africa, a main locust breeding ground, African tribesmen are organized to search out and kill by fire and flail, the young locust "hoppers" before they grow large enough to migrate and destroy valuable crops. These primitive methods

(Concluded on page 434)

## Your Story on Film . . . is a Surer, More Economical Method

Leading industrialists have used informative movies for many years . . . for pictures make a permanent impression not quickly forgotten. This speed and certainty of film as a retentive factor in the dissemination of facts, is your assurance of a *greater audience*.

Here is the most *economical* medium of telling *your story* with the best results. The time to tell it, is **NOW!**

# AMONG THE PRODUCERS

## S. V. E. Opens New Plant To Increase Production Facilities

The Society for Visual Education, Inc., 26-year old Chicago manufacturer and producer of slide and slide-film projection equipment and accessories, recently acquired the modern daylight factory building at 1345 Diversey Parkway in Chicago and on July 1 consolidated all manufacturing facilities in their new quarters. The entire building is exclusively devoted to the manufacture of SVE slide and slidefilm projectors. Plans for enlarging the present building are going forward and construction of a modern air-conditioned studio and laboratory are planned for the adjacent vacant property which has also been purchased by the corporation, of which Miss Marie Witham is President, Miss Witham and Bertel J. Kleerup, Vice-President, own all of the stock

Above: New factory home of S.V.E.

Mr. Kleerup in his new office.

Right: One day's shipment of S.V.E. projectors.

in this corporation. Mr. Kleerup has created more than 35 SVE models during the 21 years that he has been with the Society, as well as special units and adaptations of these for other concerns. He also designed numerous special equipment for the Army and Navy during the war.

Miss Witham states that with current business on the books and delivery at its highest peak in SVE history, including top war production periods, the new factory consolidation assures distributors and dealers of immediate and regular deliveries. Currently, SVE is manufacturing large numbers of single frame projectors, which form a component part of sound slidefilm units made by the outstanding manufacturers of sound equipment, as well as three-dimensional projectors and microfilm readers. SVE has already resumed the delivery to their Photographic Distributors of models of projectors for showing 2" x2" kodachromes, and are rapidly meeting the backlog of orders for their famous Tri-Purpose models.

According to Mr. Kleerup, who is in charge of the factory and under whose direction the move into the new quarters was accomplished almost without a moment's loss in operation, the modern production lines now set up are largely staffed by veteran employees. Typical of the men who make SVE products are George Dickman, Plant Superintendent, who has eighteen years experience directing assembly of SVE projectors, together with Chief Inspector James Carrigan, who has held this position on SVE equipment since 1924. On the assembly lines are many employees who have had years of training and experience on SVE projectors.

To distributors and dealers, as well as consumers, SVE gave promise that projectors and accessories are again

becoming available in quantities, and this is borne out by substantially increased deliveries of all projector models.

The General Office and Editorial Department, and the Kodachrome and Strip Film Libraries of the Society for Visual Education, Inc., remain at 100 East Ohio Street, Chicago.

## Study Guides for 2 x 2 Slide Series

Study guides prepared by teachers, are now provided to accompany the 2x2 color slide series distributed by Munday and Collins, 814 West Eighth Street, Los Angeles. The format of the guides provides ample space for instructors to make notes and comments helpful in adapting the slides to a particular class subject and level. The slides in these series are the productions of Dr. Block, a recognized specialist in color photography, and duplicates are made through Dr. Block's special process.

A new slide container with space for 100 slides and the study guide, has also been designed by Munday and Collins. It is sturdily constructed to withstand hard usage.

## New Britannica Films Officers

Dr. V. C. Arnsperger was named executive vice-president of Encyclopaedia Britannica Films Inc., at the recent meeting of the Board of Directors in New York, E. H. Powell, president, announced. Other new officers named were H. R. Lissack, vice-president in charge of sales; Dr. Melvin Brodshaug, vice-president in charge of research; J. A. Brill, vice-president in charge of production; and Dr. Theodore M. Switz, vice-president in charge of overseas sales.

All are former executives of the film company with exception of Dr. Switz, who until recently was director of the export division of Hercules Powder Company, Wilmington, Delaware. Dr. Switz is now attending visual education conferences in European countries including England, Switzerland, and Sweden.

William Benton, now Assistant Secretary of State, has resigned as chairman of the board.

Major Dennis R. Williams, Field Service Officer, Army Pictorial Service Signal Corps, has rejoined Encyclopaedia Britannica Films Inc., as Educational Field Supervisor after serving four years in the Army in Film Utilization work in the United States and later throughout the world in Army Combat Training Centers.

Prior to entering the Army, Major Williams was District Manager for Erpi Classroom Films Inc., which has been absorbed by Encyclopaedia Britannica Films Inc. Major Williams will headquarter in Chicago at the film company's home office.

**Godfrey Elliott and David Goodman Join Young America Films, Inc.**

**Godfrey M. Elliott**

Two men, well known to the visual teaching field, have joined Young America Films, Inc., as film editors. Both men have recently been discharged from the U. S. Army Air Forces. Godfrey M. Elliott, who will serve as editor-in-chief of the new film production concern, has had thirteen years of experience as teacher, elementary, and high school principal, assistant to county superintendent and director of visual instruction in Mercer County Schools, Princeton, West Virginia. He has been active in local, state and national work in the audio-visual aids field, a frequent participant in visual aids conferences, and a regular contributor to educational journals. Articles by him frequently appeared in EDUCATIONAL

**David J. Goodman**

SCREEN, where for a period of time he also conducted the department on the "School-Made Motion Picture." For the past three years he has been with the Army Air Forces, Training Aids Division, where he held the rank of a Major, and planned and supervised the AAF training film and filmstrip program.

David J. Goodman, who holds his Ph.D. degree from New York University in Administration and Supervision of Audio-Visual Education, served as Educational Specialist for the Army Air Forces, in which capacity he worked on the evaluation and utilization of motion pictures, filmstrips and instructors' guides, and in developing new techniques for film and filmstrip presentation. His well-

rounded background in all aspects of the visual field include writing, production, teaching, supervision, utilization, evaluation and research. He spent six years as Educational Supervisor for the New York City Board of Education, where he was in charge of the planning and development of various types of visual teaching aids; he also taught a course in Audio-Visual Instruction to New York City teachers. He is also a regular contributor to educational journals and a Department Editor for EDUCATIONAL SCREEN.

**Davis Opens Cincinnati Branch**

D. T. Davis Company of Lexington, Kentucky, has announced the establishment of their new office, preview studio and authorized Bell & Howell Service Station at 911 Main Street, Cincinnati 2, Ohio. Mr. Gordon C. Godbey, who has

**Gordon C. Godbey**

been with the company for a year and previous to that with the Signal Depot in Lexington, is to manage the Cincinnati office and carry on sales work from there.

**Improved RCA 16mm. Projector**

A new and improved 16mm. sound film projector, incorporating many wartime technical advances, is announced by the 16mm. Equipment Section of the RCA Victor Division, Radio Corporation of America. In its design and construction, RCA engineers have incorporated many features developed during the war for the military predecessor of Model 201, which was designed to U. S. Army Signal Corps specifications and widely used by the armed forces.

The RCA Sound Stabilizer is an oil-driven flywheel that smooths out film speed variations for sound scanning, making it possible to maintain true-pitch sound reproduction. The take-up is belt-driven. The friction-drive consists of two concentric cylinders, the outer cylinder driving the inner one through friction on a layer of felt. As the film winds on the take-up reel, the increasing weight causes

proportionately increasing pressure on the felt. Thus, even tension is maintained automatically, eliminating jerks and tugs, pulled splices, film damage, and broken belts.

The removable film gate makes instant cleaning possible in four easy steps. The gate can be lifted and slipped out of the projector with one hand, film pressure shoes and the aperture plate may then be wiped clean, and pilot pin construction assures correct alignment when the gate is replaced. This short operation is accomplished without disturbing the initial

**RCA 16mm. Sound Projector**

focus.

Large, slow-speed sprockets are said to be gentle on the film; the

free-swinging gate permits easy adjustment of film in the aperture; and an embossed threading line provides a guide for the exact length of the loops which can be followed even in the dark. The new projector is equipped with a 20-watt audio amplifier.

### Industrial Films Expands under New Name

Industrial Films celebrated its second anniversary as a production organization with an announcement of a change of name and an enlargement of staff and facilities. The group, which was organized in 1943 with Stephen Bosustow, Dave Hilberman and Zachary Schwartz, all former Disney men, as co-partners, has just taken over the entire top floor of the Olesen Lighting Building in Hollywood, California, and is now functioning under the new name of United Film Productions.

The Industrial firm was organized originally to turn out the animated color cartoon for the Roosevelt campaign called "Hell Bent for Election." This was shown non-theatrically to approximately ten million people. Thereafter, the firm continued to turn out pictures for the Army, the Navy, the OWI and for various industrial firms. United Film Productions is now producing animation films for both the theatrical and non-theatrical fields and live-action films for the non-theatrical field. At present, they are engaged in turning out a 1,000 foot animated cartoon in color on "Races of Mankind," and a series of films on "Flight Safety" which are being produced for the Navy.

### DeVry 35mm Projector Data

A special eight-page supplement in two colors, covering DeVry's new 35mm. theater projector and large auditorium model with built-in precision sound head is available without cost from DeVry Corporation, 1111 Armitage Ave., Chicago 14, Illinois. "Not merely a new projector, but a new and improved type of motion picture sound projector," epitomizes the supplement's content. The current release contains a page of illustrations and descriptive data covering DeVry's low distortion amplifiers, now available.

### New Chicago Production Firm

Mr. H. A. Spanuth, formerly manager of Bell & Howell's film library division and more recently connected with Ideal Pictures Company, has formed a new motion picture producing company called Film Studios of Chicago with offices in the Field Building. Mr. G. L. Reasor will also be associated with Mr. Spanuth in the operation of the firm.

First production of the new organization will be a bi-weekly release entitled *Woman Speaks*, devoted to the cultural and intellectual advancement of women.

## Current Film News

(Concluded from page 431)

are soon supplemented by Army lorries bringing bait made from arsenic and molasses, mixed with coffee husks, which is laid across the track of the advancing horde of locusts. The pests eat greedily—and die, and the tribesmen dance in triumph. But it is only the end of one locust swarm. International cooperation is necessary in a vigorous program to fully defeat the menace.

**Operation Fougasse**—7 min.—is another in the B I S series of now-it-can-be-told films, and reveals that defense by fire was England's prime coastal weapon after Dunkirk. Pipelines laid out into the sea beyond low tide, carried oil mixed with a chemical which ignited immediately on contact with the water, heat from these shore jetties reaching an intensity of over 1,000 degrees Fahrenheit. "Fougasse" is the French word for booby trap.

**V. E. Day**—10 min.—shows details of first signing by the Germans of the terms of unconditional surrender at a school house in Reims, France; the ratification of the document in Berlin the following day; scenes of worldwide rejoicing, and of Prime Minister Churchill, Marshall Stalin and President Truman addressing their respective citizenry.

**Mac Ships**—14 min.—how oil tankers were converted to aircraft carriers, or Mac Ships, when the beginning of the war found fighting nations with insufficient numbers of aircraft carriers to bridge the Atlantic with floating airdromes to protect convoys from U-Boats.

## Catalogs

### DeVry

DeVry's 1945-46 catalog of 16mm. sound and silent classroom teaching films is available for mailing. The new catalog comprises 76 pages of titles and data, plus a 20-page supplement of films newly added to the DeVry Film Library. Ten pages of the catalog are devoted to now available audio-visual teaching aids, including DeVry's new 16mm. 3 purpose sound-on-film projector that projects both sound and silent films without extra equipment, and that has a separate 25 watt amplifier and 12 inch speaker that can be used as a public address system, indoors and out, with microphone and turntable. Write DeVry Film & Laboratories, 1111 Armitage Ave., Chicago 14, Illinois.

### Nu-Art Films

A wide variety of 16mm films, both sound and silent, released for sale, lease and rental by Nu-Art Films, 145 West 45th Street, New York 19, are listed in this company's newly-issued "Non-Theatrical Price List No. 12." Educational, Religious and Entertainment

subjects are represented, including Foreign Language Films in French and Spanish. Also included are 8mm films and "Cathedral" 2x2 color slides illustrating Bible stories.

### Official Films

The 16mm films listed and illustrated in the new catalog issued by Official Films, 625 Madison Ave., New York 22, cover subjects for educational and school entertainment use. Included are the "News Thrill" series depicting the history of World War II, "Sportbeams" series, covering the world of sports; Musicals, presenting internationally known instrumentalists, singers and dancers such as Alfred Cortot, Alexander Brailowsky, Jacques Thibaud, Gregor Piatigorsky, Elizabeth Schumann, and Serge Lifar, in their interpretations of the compositions of the masters Debussy, Chopin, Schubert and others—a series of short subjects which have achieved wide recognition for their outstanding contribution to classes in music appreciation; films such as "F. D. R.", "The Star-Spangled Banner" and others, offering supplementary material in the study of history. For auditorium entertainment, the catalog lists some 40 animated cartoons, including the "Merry-toon" color subjects; "Amos 'n Andy" and "Little King" series, and many musical comedy and specialties subjects.

### Swank Motion Pictures

Entertainment features released by Major and Independent studios, religious films, and many short subjects of educational value in the fields of current history, geography, industrial training, health, music safety, sports, etc., are described in the 1946 Catalog just issued in new, enlarged format by Swank Motion Pictures, 614 N. Skinker Blvd., St. Louis 5, Mo. An alphabetical title index adds to the catalog's practical service. Many pages are devoted to description and information on motion picture and still projection equipment and accessories also handled by this company.

### Y.M.C.A. Motion Picture Bureau

The enlarged format and increased number of pages in the Y.M.C.A. Motion Picture Bureau's new 1945-46 "Selected Motion Pictures" Catalog gives emphasis to the increasing scope of service provided by this pioneer non-theatrical film library which was established 34 years ago. The several hundred educational subjects offered are described under some 45 different subject classifications. In addition there is a large section covering selected entertainment subjects, a separate listing of free industrial films, and the final pages are devoted to an alphabetical index of all titles included in the catalog.

**TO RECORD AGAIN...**  
Turn Dial and Talk.

## THE "MODERN MIRACLE" IN VOICE RECORDING

This magnetic recorder is ideal for SPEECH, DRAMATIC, VOCAL and LANGUAGE training. This machine uses NO DISC or FILM. This steel tape recorder is the result of 5 years of war research and experience and now produces high fidelity recordings with amazing simplicity of operation with no operating costs. The unit is complete with microphone, recording equipment (with no future purchases necessary) and loud speaker.. all made to conform to strict educational requirements. The termination of war contracts allows steel tape recorders to be sold to the public. This limited stock of NEW machines is now available to the public at less than ceiling price.

# CLEAR

— that's the kind of sound  
you get from  
**DEVRY**

## 16 mm. SOUND-ON-FILM PROJECTORS

Clarion-clear reproduction of every wave in the wide range of 16 mm. -recorded sound frequencies—whether it be speech, song, instrumental music, or sound effect—this you get with your new DEVRY 16 mm. sound-on-film projector... The ultimate of sound, whether it be crisp, clear, intelligible conversation . . . a bird call at sunset, roar of a tempest . . . or a symphony's full majesty from the highest notes of the violin to the deepest tones of the bassoon.

DEVRY high-fidelity sound is no accident! DEVRY sound-on-film projectors are designed and built for SOUND—not silent projectors to which sound is adapted.

Those DEVRY master craftsmen who produce 35mm. equipment for the world's finer theaters assure you sound amplification that is as kind to the ears as DEVRY projection is on the eyes—and as DEVRY mechanisms are easy on your film.

Your DEVRY 16 mm. sound-on-film projector is a 3-purpose unit that SAFELY projects both sound and silent films; (2) that shows both black and white and color film without extra equipment; and (3) whose separately housed 25-watt amplifier and sturdy 12-inch electro-dynamic speaker afford portable Public Address Facilities—indoors or out.

REMEMBER—your best buy is a DEVRY! And your Authorized DEVRY Distributor is an authority on audio-visual teaching and training equipment. Write him . . . or DEVRY CORP., 1111 Armitage Ave., Chicago 14, Illinois.

**MAKE DEVRY YOUR SOURCE of 16mm. sound and silent films for sale or rent.**

# 16 mm. films carry Victory Loan message to these millions

**INDUSTRY**

**SCHOOLS**

**CHURCHES**

**RETAIL STORES**

**FARM GROUPS**

**CLUB MEETINGS**

**LABOR GROUPS**

**PUBLIC FORUMS**

16 mm. sound films and projectors have been powerful aids to our government in assuring the success of previous War Loans. According to Treasury Department statistics 33,402,950 people saw 16 mm. 7th War Loan films. Now the 16 mm. industry has been mobilized once again to bring inspiring Victory Loan messages to millions. Owners of 16 mm. sound equipment have been urged to enlist their projectors and services in this final Victory Loan drive. Please contact immediately your State or County War Finance Committee — and advise them of your willingness to help in the showing of 16 mm. bond selling films.

Many of the new Amprosound "Premier 10" 16 mm. sound projectors will aid in this Victory Loan drive. In increasing numbers Ampro projectors are becoming available for bringing sales, educational and training messages to millions in every field of endeavor. Write today for special folder on Amprosound "Premier 10."

The Army-Navy "E" has been awarded to Ampro for excellence in the production of 16 mm. motion picture projectors.

A PROJECTOR *To Keep Pace*  
*with a World at War or Peace*

Today's fast-moving events can make the finest visual teaching material obsolete overnight. To keep pace with slides and films is costly . . . very often impossible.

The Spencer VA Delineascope will keep your screen alive with up-to-the-minute pictures from the latest newspapers and magazines. Anything that can be placed on the projection platform: photographs, maps, stamps, coins, even biological specimens—as well as standard lantern slides,

slidefilms and micro-slides—all are within the range of this versatile instrument.

More than 50,000 teachers have requested our free manual: "Opaque Projection—A New Frontier in Teaching." Write Dept. Z12 today for your copy.

# Films and Textbooks

CHARLES F. HOBAN, JR.  
Division of Visual Education  
School District of Philadelphia

*An analysis of the distinctive characteristics of textbooks  
and films points way to proper coordination of the two media.*

THE growing interest of textbook publishers in the production of educational motion pictures, film strips, and other pictorial materials brings into focus the general problem of the relationships among various kinds of instructional materials, and particularly between textbooks and films. For many years, educational administrators have been trying to interest textbook publishers in the production of films which correlate with their books. The late Ben G. Graham, superintendent of the Pittsburgh schools, was particularly active in stressing the desirability of the close relationship between films and textbooks. Representatives of textbook publishing houses left his office on many occasions with this message ringing in their ears.

"If a representative of a textbook company should come into my office," he would say, "and tell me that he had not only a set or sets of textbooks that fit into the Pittsburgh curriculum, but also sets of films that correlated with these books, I would immediately give him a serious hearing, and his offerings serious consideration. In considering textbook adoption, preference would be given to the combination of correlated films and books."

Investigations currently being made by textbook publishers, both individually and collectively, indicate that the correlation of textbook and film is approaching the stage where something will be done about it. This, in turn, thrusts upon us the imperative necessity of serious consideration of the relationship between the two and the functions of each. It is not inconceivable that more harm than good may eventually develop out of the close combination of the two, if this combination is affected on a narrow interpretation of the assumption that educational motion pictures are purely supplementary aids.

In the sense in which it is used here, the word "supplementary" means that which completes or adds to something already organized or arranged. Danger lies in the possibility that educational motion pictures will be produced not only within the present organization and arrangement of the textbook, but also within its psychological framework. In this event, the film becomes a celluloid addenda to the textbook, simply adding the element of moving or still pictures to a preconceived and prearranged learning context.

There are at least four psychological characteristics of the textbook as it has grown up in America. The term "psychological" is used because it is assumed that these characteristics influence the reactions of the reader, and therefore, condition the learning experiences resulting from textbook reading and study. They are not necessary to textbooks as such, nor are they equally evident in all textbooks, but these characteristics are more universal in their presence than in their absence.

First, the textbook is impersonal. It is written in

the third person, passive voice. Things and events are presented in a cold, factual sort of way. Seldom can the reader identify himself as an individual with the subject matter presented in the textbook. In its impersonal factual presentation, the subject matter remains apart from the reader—a thing, an event, a name, a fact, a procedure outside himself, not a part of him. There is no warmth to a textbook, no feeling, no emotion—just cold, objective, intellectual facts.

Second, the textbook is a distillation of subject matter abstracted from the wealth of detail and supporting meaning of its original or present context. It deals only with the bare essence of the subject. As the Harvard Committee says of textbooks in its report on *General Education in a Free Society*. "They sum up too soon. It is right to let a student know roughly where he is going, but wrong to save him the journey. Too many courses tell him throughout what he is seeing, so that he memorizes the account of the trip he never took. His head was buried in the guidebook."

Third, the textbook is intended for individual rather than group study, and the reader is expected to adjust his abilities to the textbook by repeating reading of difficult, obscure, and condensed passages, or by unhurried contemplation of the painted subjectmatter or by plain "digging." Only with the brilliant reader is the textbook safe for a "once over light." The textbook is designed for repeated reading of short, condensed passages, by the individual student at his own rate of reading and comprehension. The lower the reading and comprehension ability, the more times the textbook passages are to be read.

Fourth, the textbook is generally written by someone who is known as an authority on the subject, or by someone who is known as an authority on teaching the subject, but seldom by a person who is known for his ability to write clearly, fluently. Occasionally, the ability to write clearly, fluently, and interestingly is found in a person of pronounced scholarship or teaching craftsmanship, but somehow such a person escapes writing a textbook. As a result, textbooks are poor reading.

It is to be understood that these four psychological characteristics of American textbooks are not judged good or bad here. The point is that they are so. The further point is that educational motion pictures should have exactly the opposite characteristics.

In analyzing the functions of motion pictures in education we have made the serious mistake of analyzing the camera and thinking we have analyzed the motion picture. We have failed to analyze the kinds of things that should be recorded by the camera. We have, with our usual academic manner, thought of the functions of motion pictures in terms of (1) motion, (2) slow motion, (3) fast motion, and (4) animation. We have said that motion pictures should be used in

education to do only those things peculiar to the motion picture, and we have said that motion, slow motion, fast motion, and animation, are peculiar to the motion picture. We were wrong. They are peculiar to the motion picture camera. We can employ every one of the enumerated functions of the motion picture camera and come out with a motion picture that differs from a textbook only in the form of communication. In character, this motion picture can be exactly the same as a textbook. It can be coldly factual, it can be highly condensed, it can be scholarly but dull, and it will have to be shown repeatedly to be grasped. And, according to our earlier analysis of the function of motion pictures, it will, as we say, "exploit the medium."

In the October number of *THE EDUCATIONAL SCREEN*, Mark A. May set forth a different analysis of the functions of motion pictures in education. His analysis dealt with the subjects that motion pictures cover, and the known psychological effects that well constructed motion pictures have on their audiences. This analysis dealt with attitudes and habits of conduct, with information about man's environment and man's efforts and success in coping with his environment, with physical and mental skills essential in modern living, and with feelings, a sense of values, and an appreciation of the good things of life. Quite obviously, motion, slow motion, fast motion, and animation may be used effectively in dealing with some or perhaps all of these subjects, but they are simply devices of the camera, not functions of the educational motion pictures, Dr. May was talking about.

Using Dr. May's analysis as a point of departure, we can easily see that motion pictures which influence the development of values, appreciations, attitudes, and habits of conduct, are motion pictures characterized by personal meaning and appeal, by wealth of detail and a breadth of context, by full and unhurried treatment, spiced with interest and tinged with feeling and emotion. These motion pictures can and should correlate with textbooks, but they do so by rounding out and filling in the kinds of experiences that make learning richer and more meaningful, deeper, and of greater breadth.

Following our counterpoint with textbooks, motion pictures should, wherever possible, be made personal, whereas textbooks cannot be or are not. The use of characters and of dialogue add a personal element to educational motion pictures. Investigations of children's responses to educational motion pictures indicate that the responses are warm and favorable and vibrant when there are characters in the film close to their own age, close to their own economic and cultural status, and of their own sex. Boys attend best to motion pictures in which boys of their own age have a part; and girls respond as characteristically to girls. For another thing, children expect the characters in the film to talk in the film. They crave live dialogue, only too frequently to be fed on commentation of a male adult. Even when dialogue cannot be used for various reasons, and there are such reasons, the commentation can and should be made more informal—more personal—more in the language of the audience instead of the language of the adult speaking through the textbook.

Second, films should reflect the details and context of the subject, not merely set forth the end-result

generalization. It is the business of the film to show, not to conclude, to summarize, or to interpret. Nothing is less satisfying psychologically or educationally in films intended for or used in schools than the camera approach to the subject, only to have the picture whisked off the screen while the commentator disposes of the scene with the deadly finality of a one-sentence generalization. The audience never gets to see the sights and only hears the hurried reading of the guidebook. Educational motion pictures fail in their function if "they sum up too soon." The summing up is the function of the audience, under teacher direction. The textbook is a medium helpful in this summing up. The pictures can be verified against the textbook, or, more appropriately, the generalizations and interpretations of the textbook can be verified against the film.

Third, educational films should scrupulously avoid condensation—packing more material into a film than can be absorbed by the audience in the running time of the film. Educational films, unlike textbooks, should be leisurely. To most children, an educational motion picture is more of an emotional than an intellectual experience. To try to make it a purely intellectual experience by making the film less emotionally satisfying, is to try to change human nature. Psychologically, intellectual activity comes after the film experience—in the discussion and analysis of the material presented in the film and from the study of the textbook in the light of the experiences supplied through the film. Over and over again it is found that when two educational films are available on the same subject, the one a highly condensed ten-minute version, and the other a more leisurely longer version, the longer, more leisurely version is more widely used than the shorter, condensed version. Textbook condensation in a motion picture simply is not wanted by teachers or by students. Furthermore, while it is often desirable and enjoyable to show an educational film twice or more to the same audience within a few hours, days, or months, it is a mistake to produce educational motion pictures that *must be shown twice or more* to compensate for overcondensation of subjectmatter in the film, and the extreme brevity with which the scenes remain on the screen for audience observation and reaction. The principle of repeated showing is a textbook principle inapplicable in the main to educational motion pictures if motion pictures are to be made really educational.

As the fourth counterpoint of the textbook and the film, it is almost axiomatic that educational motion pictures should be produced by professional film producers, not by subject matter specialists or specialists in teaching the subjectmatter. Both these educational specialists are indispensable to educational motion pictures—but their service is in the beginning planning, the technical supervision, and the final approval for accuracy and teachability, not in the professional end of motion picture making. Good educational motion pictures require professional motion picture writers, directors, cameramen, and editors and commentators. The translation of subjectmatter and teaching method into an educational motion picture is the job of the professional motion picture producer, rarely of the professional scholar or professional teacher. Professional

# Teacher Training in the Use of Instructional Materials

AMO DE BERNARDIS  
Supervisor of  
Audio-Visual Aids\*  
Portland, Oregon

PHIL C. LANGE  
Professor of Education\*  
State Teachers College  
Fredonia, New York

*A detailed presentation of the need and requirements for adequate teacher-training programs.*

**T**eacher training institutions and in-service training programs cannot afford to ignore the current emphasis and heightened interest in audio-visual and other new instructional aids. Nor can they afford to leap rashly upon just any bandwagon and affect a leadership for which they are not prepared. By recognizing the new developments without losing sight of underlying educational psychology, teacher trainers can avoid both extremes.

If teachers are to use the newer materials effectively, they must have (1) the necessary knowledge and operational skill, (2) a basic understanding of the educational principles involved, and (3) an overall appreciation of the learning and teaching situation. To develop this skill and knowledge, teacher training programs should have a setting that encourages and demonstrates the proper use of these materials, and a program of training that provides ample practice situations. Although this article is indirectly applicable to in-service teacher training programs, it is primarily an outline of conditions and principles for a practical approach to the use of instructional materials by new or inexperienced teachers in the pre-service teacher training institution.

An adequate setting for the development of teacher skill and knowledge should provide:

- (a) A collection of new materials and equipment available for teacher examination and use,
- (b) Laboratory facilities and work-shop situations,
- (c) Real learning and teaching situations where the teacher can put the materials to actual use,
- (d) Qualified personnel throughout the training program including experienced specialists to supervise the use of instructional materials.

In this setting, there should be a sound training program that: (a) provides for wide practice in the selection, development, and effective utilization of these materials, and (b) is a part of an educational program that is consistently a model in practicing its own theory in the use of appropriate instructional materials.

## Some Implications of the Current Interest in Teaching Aids

The favorable publicity given to the use of training aids by the armed forces has focused the attention of educators on the implications these tools might have

for general education. The varied needs and the large purchases by the government have resulted in an amazing variety and enormous quantities of instructional equipment and materials. Public reaction to the favorable publicity seems to indicate there will be public support for school purchases of such types of teaching aids; and there may even be public agitation for the extensive use of these materials in all classroom situations. Therefore, whatever one's personal feelings may be regarding the relative merits of the motion picture, slide, radio, or any other type of instructional aid, the fact remains that following the war, the average school will be in a better position to buy all kinds of new materials and equipment, and the teachers will already have been stimulated to use the materials.

But even if the problem of procuring materials has diminished, there are still the problems of selecting the best aid for a particular situation, making the best use of the aid, avoiding over-use and mis-use, etc. Teachers—especially those who are new and inexperienced—may need considerable help in evaluating new aids in the broad perspective of the total educational picture. Inexperience and publicity for new aids may combine to increase for new teachers their natural preference for "things" over "ideas". Thus it becomes the responsibility of both pre-service and in-service teacher trainers to give these persons a working understanding of the inter-relations of the devices for teaching and the basic generalizations about human behavior, learning, and teaching.

*Materials and equipment in themselves will not do the teaching.* The armed forces realized early that training instructors to use the aids effectively was as important as providing the tools. All branches of the service brought in specialists in audio-visual aids with the sole duty of helping the instructors to make better use of the teaching materials available. This emphasis on the training of the instructor to use instructional materials may explain in a large measure why the armed forces have achieved such good results with training aids.

It is equally important that the teachers who are being trained to teach in the public schools have incorporated into their training the techniques, practices and experiences in effective use of instructional materials.

\*Now on leave with the U. S. Navy.

## Suggestions for the Organization of an Instructional Materials Program for Teacher Training Institutions

Actually the problem for teacher training institutions is largely one of keeping abreast of the tremendous increase in variety and amounts of instructional materials. This means there must be provision for collecting, evaluating, storing, demonstrating and incorporating the newer developments in their instructional program. Some institutions, as part of their natural growth, will already have developed well organized audio-visual aids programs. Although there may be no need for radical upheaval in these pre-service training programs, yet the following points should be considered in organizing this phase of college instruction.

### The Setting

1. *An Instructional Materials Center* should provide all kinds of instructional materials for the faculty and the student teachers. Both instructor and the student teacher should have the use of preview, audition, recording, and development facilities. Films, models, filmstrips, transcriptions, charts, photographs, etc.—all should be available from this Center.

2. *An Instructional Materials Laboratory* in the Center should provide production facilities so that aids that are not available from commercial sources can be produced at the Center to fit the needs of instruction. The Center itself may function as a workshop and laboratory, where the teachers in training can carry on work relative to teaching materials.

3. *Practice Teaching Situations* should be an important part of the program, enabling teachers to experience putting the materials to good use with a real class. Teaching experiences at different grade levels, in different subject areas, and employing the different teaching methods—lecture, conference, demonstration, student performance, or study—will help to place the emphasis on the general principles of use rather than on a special device or technique peculiar to one grade or subject.

4. *Faculty Personnel* should include specialists in the development, operation, and use of instructional materials. At least one member of the education faculty should be a specialist in the field of instructional materials. The responsibility, however, for the success of the program belongs to the entire college staff and every faculty member instructing prospective teachers should be selected on the basis of his successful teaching procedure and should be constantly encouraged to be a practical model in sound teaching methods. The teacher training institutions should make every effort to see that the college instruction is the best possible. The instructors' use of materials should be in accordance with the best teaching principles. Colleges should disprove the saying, much too prevalent, that the poorest example of teaching methods is to be found at the college level. Supervision and improvement of instruction is as important on the college level as it is in the secondary and elementary school.

## The Training Program

Though there may be special units of courses given over largely to the development or use of instructional materials, the over-all program for training the prospective teacher in the use of these tools is not separate from the other school activities, and it involves the entire school—wherever instructional materials are used. The program, however, may be discussed in terms of the several phases.

1. *Faculty utilization of materials.* It has been said that "teachers teach as they are taught, not as they are taught to teach." There is reason to believe that student teachers learn some of their teaching techniques from observing the methods used by their professors; therefore, the faculty must play the model role in "practicing what it preaches." This means the staff must be aware of the instructional material developments in their respective fields (in addition to the subject matter developments,) and it may also necessitate a definition of faculty philosophy and policy relative to instructional aids.

2. *A sound Philosophy and Psychology.* Prospective teachers should be encouraged to develop sound standards and principles for evaluating new materials and techniques, and this philosophy should be consistent with psychological and teaching principles. A direct approach may be made in courses in psychology and in teaching methods, in conferences by faculty members, especially the materials specialist, and in the workshop laboratory.

3. *Training in the operation of equipment.* With all the mechanical devices that the teacher is being asked to use, it is necessary that he or she be given some experience in the use and operation of this equipment. Motion picture projectors, slide projectors, sound recorders, radios, transcription players, mimeograph machines, gelatin and direct-copy duplicators, wire recorders, and similar equipment—all are tools of the teaching profession and should be available at the Center for this training.

Lack of confidence in the use of mechanical gadgets often makes the teacher reluctant to use aids. The teacher can and must know how to use this equipment. The college can help her in learning how. Adequate training in the use of all these various types of equipment should be part of every teacher's education.

4. *Instruction in the Selection and Procurement of Materials: Planning for instruction.* Teachers should be given practical help in knowing the sources of aids, the means for procuring them. The Instructional Materials Center may display the materials, but it is especially necessary that a positive program of instruction define the respective advantages and limitations of each of the materials available and thereby develop sound attitudes and standards for the selection of these materials.

5. *Workshop experiences in the Production of Instructional Materials: Planning for Instruction.* Even with the wide variety of commercially-made materials, the teacher has need on many occasions to make her own teaching aids. There are a number of experiences which the teacher might receive that will make her better fitted to prepare aids for her own use.

A short general course in photography would give the teacher some understanding of the process of making slides and photographs for classroom use. Courses in radio production can open up new horizons on ways of getting student participation. Graphic arts courses will help give the teacher a better understanding of effective methods of display. Making direct copies, blue prints, photo-stencils, cutting mimeograph stencils, chart and photo mountings—all these and other experiences might very well be a part of every teacher's training. These experiences could be provided in a laboratory which has all the necessary equipment. If the Instructional Materials Center is well planned, these facilities might be an integral part of the Center. It should not be the purpose of these courses to make the teacher highly skilled in these techniques, but rather to give her the basic skills and understandings that can be put to practical use in the classroom. Education, after all, is the business of putting across ideas and the teacher should know how to do this in the most efficient manner possible.

#### 6. *Practice in Classroom Utilization of Materials.*

At no time during the period of the teacher's training is there a better place to help her with the use of teaching aids than in her practice teaching. The use of a variety of aids should be encouraged so that the teacher can have the experience of fitting a variety of materials into the curriculum. Careful check must be kept by the teacher on the use of aids so that she will know what aids are best suited to the various types of instruction. Constant evaluation of the aids must be carried on by the student teacher so that she will consistently select aids in terms of their contribution to the learning process. There is no substitute for actual experience, and the teacher will best learn how to use materials through actual practice in selecting, utilization and evaluation.

7. *Special Consultation Service and Continuous Research into the Effectiveness of Aids.* As mentioned above, instructional materials specialists should be available to students, faculty, and in-service teachers and administrators for consultation on problems dealing with the use of materials. The specialists should carry on research in the production, utilization, and evaluation of aids. It is important that the materials in the program and the program itself be continuously evaluated.

The suggestions offered in this article are but a few of the major points that must be considered in the training of teachers to make the most effective use of the newer instructional materials. Motion pictures, radio, television recording and other aids are taking their place with the textbook as instructional tools; and teacher training institutions must provide their graduates with the basic skills and understandings for their effective use. It is a responsibility of the teacher training institution to prepare the teacher to use effectively the tools of her profession—all of them.

(The opinions or assertions contained in the above article are the private ones of the writers and are not to be considered as official or reflecting the views of the Navy Department or the naval service at large.)

## Films and Textbooks

(Concluded from page 446)

motion picture talent adds to the subjectmatter and to the technique of its presentation a quality—a craftsmanship—which captures and holds the undivided interest of the audience, gives life to the subject, and increases the motivation, the impact on attitudes and habits, and the enduring nature of the learning for which motion pictures are famous as a medium of both entertainment and education.

Considered in the light of these criteria, motion pictures become basic educational materials, not merely supplementary aids which illustrate the textbook. They supply a basic stuff of experience and learning. The textbook, on the other hand, supplies the material by which this experience and learning are intellectualized, integrated, and extended.

Most of what has been said here has been said before in other ways and in other places. More important, it has been put to the test on a broad scale in the training programs of the armed forces. In the early days of the war training program, both the Army and the Navy made films which were little more than motion picture versions of their textbooks, with a paragraph by paragraph correlation. As the training program progressed there was a marked change in the nature of both the films and the books. While they correlated one with the other, each assumed its own character and was written and produced to do what each did best. The paragraph by paragraph correlation of the textbook and the film gave way to correlation of subjectmatter only. While both the film and the text covered the same subjectmatter, they took entirely different approaches and used entirely different treatments. The textbook became the pocket reference book, supplying the essential data. The film became the human document which gave life, and meaning, and application to these essential data. Training films were made as motion pictures on the subject, and textbooks were made as textbooks on the subject. Neither tried to duplicate the other. They were made and used as a team working together toward the same goal, but each doing something different.

It will be a mistake if we don't learn what kind of a team can be made out of textbooks and films, put each to the job it does best, and let them work together in their different ways to a better education in post-war days.

## More About Surplus Projectors

Reports as to the disposal of the surplus Government-owned 16 mm projectors continue to be varied. The latest word from Washington is that there will be no such equipment available to schools as the Army and Navy will keep whatever number of machines are still operable out of the 40,000-odd purchased. They will be used in the demobilization program, for the occupation forces, and for the military training program, if Congress approves.

According to another report, the projectors will be distributed to the state departments of public instruction by the Office of Education. Each state department will have the responsibility of disposing of their quota to school districts which will be qualified.

# "Global Music" -- An Audio-Visual Tour

*A Music Department's noteworthy program for stimulating world interest and understanding among High School students.*

PAUL E. DUFFIELD

Department of Music Education  
Northeast High School, Philadelphia

IN an effort to meet the challenge to education accorded by the recent world conflict and the post-war situation, the music department of Northeast High School in Philadelphia has developed a one year course entitled "Global Music". The course is particularly planned for students at the tenth grade level, and is required of the majority of academic and commercial course students. Three forty-five minute periods weekly in the 10A term are devoted to an illustrated musical tour of the United Nations; two periods weekly in the 10B term to a similar tour of the Axis, several Axis-dominated nations, and to the European neutrals.

This musical tour utilizes both 16mm. sound and silent films, stillfilms, glass slides, recordings, maps and posters. The work of the first term is divided into nine units; each unit considers the

folk and art music of the nation, the work of a group of representative composers being presented through talks and recordings. The cultures, customs and industries of each nation are illustrated by means of films. For this purpose, silent films have been found especially valuable since the teacher may make his own commentary on the subject matter, frequently linking it with the musical background of the course.

Following are the outlines used for the first and second units of the first term, under the general course title, "The United Nations":

## UNIT ONE. THE UNITED STATES AND LATIN AMERICA

Composer	16mm films (silent except as specified)	Stillfilm	Slides	Required Memory Records
Stephen Foster (1826-1864)	The Old South. Songs of Stephen Foster (sound)		Scenes from his life	Gems from his works
John Philip Sousa (1858-1932)	Washington, the Capitol, Song of a Nation (sound)			"Stars and Stripes Forever"
Victor Herbert (1859-1924)	Chesapeake Bay	Philadelphia		"Badinage", Gems from "Sweethearts"
Edward MacDowell (1861-1908)	Yellowstone National Park	Boston	Scenes from his life	"Woodland Sketches"
Ethelbert Nevin (1862-1901)	The Golden Gate		Song Slides from Foster and Nevin	"A Day in Venice" Suite
Walter Damrosch (1862- )	The Rio Grande			"Danny Deever"
Deems Taylor (1875- )	The Real New York			"Through the Looking Glass"
Oley Speaks (1876- )	Alaska			"On the Road to Mandalay"
Charles W. Cadman (1881- )	Hawaiian Islands	Los Angeles		"At Dawning"
Hector-Villa-Lohos (1884- )	Brazil (2 r.), Argentina		Bolivia and Ecuador	"Bachianas Brasileras"
Carlos Chavez (1899- )	Mexico			"Sinfonia de Antigua"

## UNIT TWO. RUSSIA BEFORE THE REVOLUTION, AND SOVIET RUSSIA

Composer	16mm films (silent except as specified)	Stillfilm	Slides	Required Memory Records
Michael Glinka (1804-1857)	Gypsy Revels (sound)		Russian Life	Ruslan and Ludmilla Overture
Alexander Borodin (1834-1887)		Russia, People and Occupations		Polovetzian Dances
Peter Tchaikowsky (1840-1893)	Vronsky and Bahin (Pianists) (sound)	Moscow	Life of Tchaikowsky	"March Slav", "Nutcracker Suite"
Rimsky-Korsakoff (1844-1908)	Siberia (2 r.)		Russian Folk Songs	"Festival at Bagdad" from "Scheherazade"
Sergei Rachmaninoff (1873-1943)				"Prelude in C-sharp Minor"
Igor Stravinsky (1882- )		Russia since the Revolution		"Fire Bird Suite"
Serge Prokofieff (1891- )	Soviet Russia			"Peter and the Wolf"
Dimitri Shostakovitch (1906- )	(3 reels)		Song of the United Nations	"Symphony No. Five"

Area, population, geographical characteristics, native customs and the contributions to world culture of the nations in each unit, are among topics discussed during the projection of silent

films. The remaining units for the first term of the "United Nations" include:

Unit Three—British Commonwealth (Britain, Canada, Australia)

From the Eastman silent teaching film on "Mexico."  
(Encyclopaedia Britannica Films Inc.)

- Unit Four—France and Belgium
- Unit Five—Norway and Denmark
- Unit Six—Poland
- Unit Seven—Czechoslovakia
- Unit Eight—Italy
- Unit Nine—China (Films only; no recordings or discussion of native music)

The work of the second term consists of a series of similarly constructed units presented as follows:

- Unit One—Germany (18th century composers)
- Unit Two—Germany (19th century composers)
- Unit Three—Austria
- Unit Four—Hungary
- Unit Five—Finland
- Unit Six—Sweden
- Unit Seven—Spain and Portugal
- Unit Eight—Switzerland
- Unit Nine—Japan (Films only; no recordings or discussion of native music)

At intervals, representative folk songs of the nations under discussion are sung by the class from song slides and from community song books. An excellent introduction to the field of grand opera is afforded through such sound films as "The Idol of Seville" (based on Bizet's "Carmen") and "Vendetta" (based on Mascagni's "Cavalleria Rusticana"). Likewise pupils may be given the experience of such standard forms of concert attendance as:

- (a) A Piano Recital (Jose Iturbi playing compositions by Albeniz and Chopin)
- (b) A Ballet Performance (Humphrey Dancers interpreting Bach's "Air for G String")
- (c) A Symphony Concert (Five parts: String Choir, Woodwind Choir, Brass Choir, Percussion Choir, The Entire Orchestra)

All visual material used in this course is obtained from the library of the Division of Visual Education of the Philadelphia Board of Public Education; a summary of material included in the first term comprises:

- Films—16mm silent—25 subjects—37 reels
- Films—16mm sound—10 subjects—10 reels

Stillfilms—20 subjects—40 reels

Glass slides—75 slides

The course is given in the school's Music classroom which seats one hundred and fifty students. Projection equipment owned by the Philadelphia school system, and assigned to the school consists of:

- (a) 16mm. silent projector, (b) 16mm sound projector, (c) Slide projector with stillfilm attachment, (d) Record player

Students are required to keep illustrated notebooks, and monthly tests are given on recognition of the "memory records" which total about fifty compositions per term, drawn from the school's record library of over four hundred records. Brief objective tests are also given on the factual knowledge presented in the lecture notes. Pupil interest and response to "Global Music" during the three years since its introduction has been notably good; many students bring clippings, pictures and programs to class, and frequent reference is made to radio broadcasts on which a "memory record" has been heard.

(Courtesy Bell & Howell)  
From the sound film, "Vronsky and Babin"  
(International Theatrical & Television Corp.)

For the adolescent, music becomes more significant and interesting when its relationship to human experience is coordinated with a comprehensive and carefully-selected visual background.

### Second Annual Audio-Visual Aids Institute at The American Museum of Natural History

On January 11 and 12, the Department of Education of the American Museum of Natural History, New York City, will hold an Audio-Visual Aids Institute for New York teachers. So enthusiastically attended last year was the first of these Institutes, that it was decided to conduct another conference this year along similar lines. An Audio-Visual Aids Center, displaying samples of equipment and pictorial materials, has been recently established at the Museum.

# The Film and International Understanding

## "Now the Peace" and "U.S.S.R.—The Land and the People"

### Two Films to Stimulate Discussion

DR. JOHN E. DUGAN, Editor  
Hadden Heights, New Jersey

WHAT about the peace, and what about Russia? How can we understand them? What shall we do about them? These are twin problems currently puzzling the minds of many Americans. They are problems in international understanding, and they are problems in which films can help. The power of films to help in current problems of international understanding can be concretely illustrated by these two films whose names make up the title of this article. It is a coincidence that Brandon is offering both of these extremely timely films at this particular moment. *Now The Peace* is a motion picture, and *U.S.S.R.* is a strip film.

These films are timely because they bear so acutely upon problems of burning current interest to Americans. They also are timely because they are being distributed and shown in the United States while the General Assembly and Security Council of the United Nations Organization is meeting in London.

The purposes and functions of the General Assembly and Security Council of the United Nations Organization will be made more understandable to thousands who see *Now The Peace*. For this film uses animated figures to make those purposes and functions clearer in an unprecedented way. It combines effective animated figures with live action scenes to create a powerful statement of the great challenge of our times: the building of a peace that will be real and lasting. The picture contrasts the powers and plans of U.N.O. with the failure of the League of Nations and shows how by joint action to solve problems of food, relief, money, etc., we can help to rid the world of conditions that breed war.

(Courtesy National Film Board)

A Russian woman working on the rebuilding of one of the factories in Stalingrad (from "Now—the Peace")

*Now The Peace* vividly shows that peace and progress depend upon the continued cooperation of the peoples and nations that cooperated to win the war, and the understanding that deeds, not words alone, are needed to meet the great challenge.

Because it clarifies basic aspects of the organization and program of the United Nations Organization and because it serves to stimulate discussion and understanding of the evolving patterns for building the peace, the film is receiving promotional cooperation from the U.S. Office of Education, the U.S. Department of Agriculture, the National Education Association, General Federation of Women's Clubs, and other groups.

Many groups will make the showing of the film the basis of a group discussion of the problems and principles which it treats. A discussion guide for the film has been prepared for such groups. Copies of this discussion guide may be secured in time for use with the showing of the film by interested groups.

*U.S.S.R.—The Land and the People* is a film strip, of 85 frames. But it is not just a film strip alone. It is a film strip which is distributed in conjunction with a 24-page printed booklet of speech notes and other helpful material. The booklet is as worthy of attention as the film strip itself. At the very outset the booklet lists the four main objectives of the film. They are.

1. To present facts objectively about the Soviet Union.
2. To stimulate alert observation and analytical thinking as prerequisite to sound judgment.
3. To show how a formerly backward nation, with people of widely different cultural backgrounds, has developed into a modern industrial nation.
4. To show that the United States and the Soviet Union can and should work together in peace as well as in war.

This outline of objectives should help the teacher to use the film more effectively. The booklet briefly explains three basic steps (Prepare, Present, Follow-Up) for getting best results with the film. There are tips on presentation and a suggested "pre-test." This "pre-test" is based on material in the filmstrip. It is intended to be given to a group shortly before the filmstrip is shown to them. Its purpose is not primarily to test the group at all, but to stimulate their interest and alertness. It consists of multiple choice questions and is set up so that copies may be mimeographed for the use of the group.

## Upper row:

Irrigation Transforms Deserts

Electric power multiplied eight-fold in Russia from 1923 to 1940

A Kazakhstan school teaches children first their own language, second Russian

## Lower row:

The old Kremlin, palace of the Tsars

The new Subways under Moscow

Each picture in the film has a sub-title. The speech notes in the booklet are numbered to match the frames of the film, and the first part of each speech note is the sub-title itself. Sub-titles are followed by elaborative special notes for the teacher who wishes to go into some particular phase a bit more. For example, the following is the speech note for frame 13, which happens to be a map of Russia:

13. *And here is their country—one sixth of the world. From the Baltic Sea to Alaska and from India to the North Pole.*

The sun takes 11 hours to pass over the Union of Soviet Socialist Republics. In spite of its huge size, the U.S.S.R. is so placed geographically that it is almost completely landlocked on the south and west, while on the north and east nearly all its extensive seacoast is icebound most of the year. But today airplanes, ice-breakers, and better understanding among nations are breaking down these barriers.

Intelligently used, these speech notes can add much to the effectiveness of presentation and can help the teacher to adapt the material to the needs of her particular group. The booklet also contains a bibliography of twenty items about Russia.

*U.S.S.R.—The Land and the People* lives up to its title. Its message is presented in a very logical fashion. The film is divided into five main divisions. These are:

1. Russia is a country of 193 million varied people.
2. The extent and nature of the land.
3. Developing natural resources.
4. Developing human resources.
5. The U.S.S.R. and the U.S.S.—allies in war and in peace.

Each of these divisions is first presented as generalizations, and then is developed through the presentation of specific examples.

*U.S.S.R.—The Land and the People* presents its message clearly and well. But that does not mean that any teacher should limit the use of the film to mere presentation. It should be a stimulus for discussion and activity. No film can present the complete and final word on Russia or any other country. But it can present a well organized body of facts regarding that country clearly and well. This film does that job to an outstanding fashion. It is a job of the teacher to use an intelligent presentation of the film as a springboard for worthwhile class discussion and activity.

This film was launched under impressive auspices. It was produced by Public Affairs Films Company with the cooperation of the National Council for the Social Studies. The script is by William and Dorothea Cary. **The film is the first in a projected new series entitled "The United Nations Film Strip Series."**

**T**HE article entitled "Global Music—An Audio-Visual Tour", on pages 450-451, immediately precedes this Department. The juxtaposition is quite intentional. Dr. Duffield's article bears so directly upon the main theme of Dr. Dugan's department that it may well be read as an integral part of "The Film and International Understanding".

Dr. Duffield has given our readers a concrete example of how a highly specialized department in a high school system—Music—can make its own definite contribution toward building a world of united nations. Many another school department, by judicious use of audio-visual materials, can do the same.

# The Curriculum Clinic

## Selecting and Coordinating Materials for Instruction

PAUL C. REED, Editor

Director, Visual and Radio Education  
Rochester Public Schools, New York

**A**PPPOINTING committees for the selection of textbooks to be used by a school or school system is not a new administrative procedure in education. In fact it is quite an established practice. Once the content and subject matter for a particular grade level have been determined it seems to follow naturally that textbooks must be selected and approved. It may happen sometimes that this order gets a little mixed up and the books are selected first; but in any event there is universal acceptance of a close relationship between curriculum and books. There is never any question about that; and I am not raising it. There are other points to consider.

Having committees to select motion pictures for classroom use is also becoming an accepted practice. There have also been at various times in various school systems, committees for the selection of maps and globes, committees for the selection of still pictures, and probably committees for the selection of practically everything used in a school. And I am not questioning the committee procedure. Group judgment based upon a variety of experiences is always likely to yield more dependable results than the opinion of one individual. But the tendency toward further specialization and pigeon-hole thinking, which leads to having so many uncoordinated committees, is detrimental to the most effective use of audio-visual materials and to most effective instruction.

Just the other day I heard of a certain school system where a large study committee of elementary school teachers concentrated their attentions for a year on the subject of reading and reading readiness. They sought to improve the instructional methods and results. A subcommittee examined all of the available books; and of course the theories of professors and publishers were carefully analyzed. But visual materials as such were not even thought about. Of course textbook illustrations were not ignored, but the possibilities for using all kinds of audio-visual materials for enriching and widening experience were not considered. Maybe later, there will be a visual aids committee to find the visual aids that can supplement reading intuition. But maybe "later" is too late. If most effective use of visual materials and best teacher attitudes toward the use of these materials is expected. The use of visual materials as an integral part of instruction and their values in providing basic learning experience were not comprehended by this group of teachers.

Here's another instance that is altogether too typical. Most of you have seen curriculum and curriculum revision committees at work, and no doubt you have noted the concentration of attention upon content and subject matter with comparatively much less attention upon methods and means. Too frequently there is tacit assumption that the only materials of instruction are the spoken and written word.

If visual materials are considered, they come as a last thought; as an added decoration or embellishment.

It seems to me that all of these things happen as the result of a misunderstanding or lack of understanding of the place and function of audio-visual materials in instruction. They result from the fallacy that is inherent in the terminology "visual aids", with its implication that these materials are not basic and fundamental for instruction, that they are something to be added if it suits the fancy or the budget.

When it is more generally realized that the planned and intelligent use of audio-visual materials can bring realistic meaningful experiences to learners in a way that is more efficient and lasting, in a way that can lead more surely to the development of meaningful generalizations rather than to mere verbalized generalities, then the kind of problem mentioned here just wouldn't exist. Then audio-visual thinking would be a basic and integral part of curriculum committee thinking. The materials to be used in the achievement of objectives of instruction would be regarded as equally or more important than the subject matter content of the teaching unit.

When problems of teaching skills are studied—such skills as those of reading, writing, drawing, home-making, woodworking, typing, and all the vocational manual skills—the teaching materials the teacher uses are of extreme importance. All available materials should be given consideration and equal consideration by the same group. Having separate committees for each different kind of material does not provide for the integrated kind of thinking that must be expected of the teacher in using the materials. One of the most difficult tasks for a teacher is the coordination of the various materials he uses and the various learning activities of his classroom so that there is a unified and integrated whole.

Why shouldn't the coordination of teaching materials take place at the production level? The words of the textbooks and other printed materials for classroom use could best be coordinated with filmstrips, motion pictures, and other audio-visual materials at the time they are being produced. However, that ideal situation has not yet been achieved generally and school people must therefore go through a process of selecting and coordinating the materials available. This coordination is likely to be done most effectively if a single committee considers all materials of instruction. If, however, the magnitude of the task, or even if the dictates of tradition are such that textbook committees persist in the school organization, there should be provision for joint thinking and coordinated planning with the audio-visual and other committees concerned with the selection and use of materials of instruction.

# The Literature in Visual Instruction

## A Monthly Digest

ETTA SCHNEIDER RESS, Editor

### ● Providing Facilities for Use of Audio-Visual Materials

—Francis W. Noel, Chief of State Division of Audio-Visual Education—*California Schools* 16: no. 10 October, 1945. Our experiences from the war have strengthened the argument that audio-visual aids are part of classroom instruction. For this reason classroom facilities for the use of them must be provided in old and in new construction.

Some educators would recommend a special audio-visual room. This recommendation should be carefully considered. In the first place, such a room (or a few rooms) would cost more than to equip each classroom with darkening and ventilating facilities. According to recent figures, construction costs of such rooms will be at least \$8 to \$10 per sq. ft. For a special visual room 24 ft. by 40 ft. the cost would be approximately \$9,600. Compare this figure with the cost of darkening facilities for each classroom. Moreover, the use of audio-visual materials in the individual classroom is educationally more desirable.

Readers are recommended to "Projecting Motion Pictures in the Classroom" by Francis W. Noel and "A Measure for Audio-Visual Programs" by Helen H. Scaton, both published by the American Council on Education.

### ADMINISTRATION

#### ● A Technical Service Squad—Robert R. Robinson, Midwood High School, Brooklyn, N. Y.—*High Points* 27: 61 September, 1945.

The student squad was organized to reduce to a minimum the effort a teacher would expend in the use of audio-visual aids. This involved the organization of a trained staff along the following lines. The original squad members were trained by the teacher-in-charge. Henceforth, at the beginning of each term at least one old member, together with a new applicant, are assigned to each period. This provides a period of apprenticeship. A long waiting list attests to the popularity of the squad, which, incidentally, includes girls as well as boys.

A set of rules and regulations has had to be formulated to curb the over-enthusiastic service member (see article for a copy of this excellent device).

### MUSEUM MATERIALS

#### ● Borrowed for Handling—Mildred Holzhauser, Newark Museum—*Nation's Schools*, 36:52 October, 1945.

This lending collection of exhibits has been bought or especially prepared to assist teachers. They deal with life in and customs of the ancient and modern world, industrial products, and the natural sciences. Loans are available to all those who can come for them. The Newark Board of Education has a delivery service by truck once a week to each school.

The circulating exhibits are designed for handling. The museum itself has permanent, glass-enclosed dioramas and a docent service helps toward making them meaningful to school children.

### RESEARCH

#### ● Relationship of Pictorial Material and Written History—..... Williams—Ph.D. 1943 New York University. 121p. ms.

In this study, the illustrations in 23 senior high school American history textbooks published in 1930-40 were evaluated by stated criteria. The author found, in general, that the illustrations did not adequately relate to the material in the text, and that teachers do not make the best use of the visual materials provided. He suggests closer cooperation among author, illustrator and publisher.

### UTILIZATION

#### ● Abundant Visual Materials in U. S. History—Frances Norene Ahl, Glendale (Calif.) High School—*Clearing House*, 20:103 October, 1945.

There are still ways in which U. S. History teaching may be enriched: first there should be more emphasis on geography; maps of all types should be used and map-reading skills taught. Charts, graphs and diagrams are important, as are bulletin board displays, museum materials, pictures and projected stills. The author lists some motion pictures which have by experience, proved useful in American History teaching.

### PRODUCTION and DISTRIBUTION

#### ● Hollywood's Interest in Classroom Films—Gardner L. Hart, director, Committee on Motion Pictures, American Council on Education—*Film and Radio Guide*, 12:16 October, 1945.

Early in 1944, the Committee on Motion Pictures was established thru a grant by the eight major Hollywood producers. One of the areas found greatly in need of films was 'democracy'. A group of leading educators formulated plans and treatments for such films, and scenarios were written. A series of geography, mathematics, art, teacher training and health films have similarly been planned. The results of this study are to be made available to anyone interested in the production of instructional films.

#### ● Film News vol. 7, no. 2 November, 1945. American Film Center, 45 Rockefeller Plaza, New York 20.

A few articles indicate the problems ahead in 16mm film distribution. There is an editorial advising on three possible methods of distribution for the organization or individual planning production: (1) direct nationwide exchanges, prints, personnel, promotion; (2) allocating distribution rights to commercial distributors; (3) selling all distribution rights to those especially engaged in this work, a method which completely divorces producer from audience. The best solution is to have all 16mm distributors ally themselves as closely for peacetime as they did for wartime films.

The article by E. M. Benson of the Philadelphia Museum of Art, "Blasphemy in Brief," is an appeal for a national non-profit agency generously subsidized and staffed with the best-trained personnel available to guide in programming of films for special audiences.

In "Is There a Film on . . .?" Aubrey Lee Graham makes the analogy between cumulative printed materials and 16mm motion pictures. There are excellent reference guides to government publications, and to non-government materials.

### FILM FORUMS

#### ● Film Forums: an Experiment in Community Discussion—Harold B. Allen, University of Minnesota—*Quarterly Journal of Speech*, 31:330 October, 1945.

A unique experiment in the use of films for adult education was conducted in San Diego, California, under the sponsorship of a USO-YMCA Industrial Club. The pattern was similar to that of other film forums elsewhere—a discussion provoked by and centering on a documentary film on a social or economic controversial subject. Unique in the planning of the San Diego forums was the coordination of many neighborhood forums into an integrated series.

A leadership training course was given; then local forum committees in 14 different neighborhoods were set up, in-

(Concluded on page 468)

# The ABC's of Visual Equipment

## Preparing the Classroom for Sound Motion Picture Exhibition

Edited by

ROBERT E. SCHREIBER

and PHILIP MANNINO

**C**ONCOMITANT with the increased use of motion pictures in education is the desirable tendency for the classroom to assume the role formerly enacted by the school auditorium in the exhibition of sound films. But, as this trend becomes steadily more pronounced, administrators and supervisors are finding in many instances that—in terms of structural conditions—use of motion pictures in ill-equipped classrooms is like putting new wine in old bottles. It is therefore necessary to consider what steps can be taken to improve existing classrooms together with the concept of the ideal visual education classroom in proposed structures still in the blue-print stage.

The major problems encountered in fitting the classroom for sound motion pictures may be designated as: darkening and ventilation, acoustics and speaker placement, seating and screen position, electrical connections and projector placement.

Since the impact of the motion picture is primarily visual, it is of the utmost importance that the classroom be adequately darkened. However, the problem is not as simple as that: ventilation—except in air-conditioned buildings—must be provided for at the same time, since a dark stuffy room is a major deterrent to learning. The most common solution to the darkening problem is the installation of opaque shades held in place by hinged or rigid, wooden or metal guides. Ventilation in such cases may be afforded through the use of a board eight to twelve inches wide slanted upward and inward from the base of the window frame, although some light leakage—through reflection—is bound to obtain under such an arrangement. The installation of opaque drapes—made of denim or other material—hung on traverse rods has been found an effective means of meeting the dual problems of darkening and ventilation. The use of such drapes has the added value of introducing sound absorbing material into the classroom acoustical situation.

The acoustics of many existent classrooms are far from perfect in most instances, since the presence of numerous square feet of blackboard and a hard plaster surface on wall and ceilings provides practically no sound absorption, and the pupils themselves must absorb most of the sound—as well as the learning. The addition of window drapes—as indicated above—introduces some acoustical assistance. Especially in long narrow classrooms, reverberation of sound may be so extensive that ceiling or wall treatment is imperative. Installation of a surfacing board or tile—such as acousti-celotex cane or mineral tile—is effective. In selecting acoustical treatment, it must be kept in mind that painting over some acoustical products decreases their sound absorbing effectiveness. Perforated panel board or tile—such as above—is not so affected. Placement of the projector speaker at or above the ear level of the audience and adjacent to the screen provides the best sound coverage.

The size of the screen to be used, its reflection

characteristics, its placement, and the audience seating are associated problems. Generally speaking, the screen width should be one-sixth of the length of the room and mounted so that its base is at or above the audience eye level. The problem of screen height is enhanced if it is necessary for the pupils to be seated close to the screen. Ideally, those seated in the front row should not be closer than twice the screen width. In addition to decreasing eye strain by moving the audience further back is the increased latitude of effective screen illumination. Beaded screens provide satisfactory illumination in a quadrant twenty-six degrees on either side of the projection axis. Beyond these limits, light drop-off is considerable. Hence, in short wide rooms, a matte surface provides considerably more adequate illumination through a wide angle.

Ideally, the projector should be concealed in a booth external to the major contours of the classroom, although—from the standpoint of structural efficiency—such provision is not practical. In any event, the projector should be placed in the center rear of the room at a height where the projection beam may pass over the heads of the audience. An effective measure in reducing classroom clutter through the stringing of speaker and power cords is the installation of permanent outlets for both near the intended projector location with another speaker cord outlet near the screen. Provision for a six wire cable running through a conduit between speaker cord outlets allows flexibility in the use of a variety of projectors—those utilizing both permanent magnet and dynamic speakers. To insure against overloading circuits, the power outlet for the projector should be Number 12 wire or larger. Additional niceties in effecting smooth operation are provisions for a separate room light switch near the projector, plus a dimmer in the circuit.

The foregoing suggestions for improving the classroom for motion pictures are aimed primarily at the goal of effective classroom presentation. They will contribute to easing the task of the operator and the instructor in the process, but these concomitants are only the means to the end of introducing the motion picture into the instructional situation in as natural, efficient a manner as possible.

# The New Director of NEA Audio-Visual Service

Vernon G. Dameron, Director of the recently-established NEA Division of Audio-Visual Instructional Service, majored in physical sciences and social studies at Marshall College, in education at West Virginia University, and in audio-visual instruction for

Vernon Dameron

his doctorate at Harvard University. He has had five years of experience in public school work, including a directorship in audio-visual instruction. He has also had extensive experience in still and motion picture photography, recording, radio communication (W8HGA), and instrumental music. For the past three years, he served as Director of the Planning Department and Coordinator of the Army Air Forces Training Film Preparation Unit, located at Chanute Field, Illinois. The work of the Unit consisted of producing, processing, and printing sound motion pictures, sound filmstrips, and silent filmstrips, and distributing them to the Allied nations throughout the world.

The Executive Committee of the NEA Department of Visual Instruction recently appointed him Executive Secretary of that Department.

In the November issue of the *NEA Journal*, Mr. Dameron describes the program of the new NEA Division of Audio-Visual Instructional Service. It will deal with all of the many types of audio-visual aids, including radio and television, on all levels of education. Details of the program will be based upon a survey of the present status of audio-visual instruction. The general aspects of the field to be considered are:

1. Means by which audio-visual instruction can be made less expensive. Intensive efforts are now being exerted to effect the release of surplus audio-visual equipment from the armed forces for distribution to schools on the basis of need and financial inability to purchase such equipment.
2. Criteria for more effective selection and evaluation of audio-visual aids.
3. Methods and techniques for more effective integration in the curriculum and utilization of audio-visual aids.
4. Provision for closer collaboration between educators and producers
5. Methods for more coordinated and expedient distribution of audio-visual materials.
6. Encouragement of widespread adoption of audio-visual instruction.

7. Promotion of audio-visual instruction for instilling desirable attitudes and appreciations.
8. The Division will encourage and cooperate with research projects.

## NEA Motion Picture

The National Education Association is now distributing to the state education associations a new documentary film on the place and importance of the teacher in American life, entitled *Assignment; Tomorrow*. Authorized by the NEA Executive Committee, it has been prepared as one of the tools to help leaders of the profession in carrying forward the five-year program of Unification, Expansion and Development and tells the story of what our united professional organizations are doing for youth, teachers, and for education in the United States. It runs 26 minutes and is followed by a trailer film of 7 minutes which presents the program of the NEA.

## Progress of Education Reviewed in Display

During National Education Week, November 10-17, Mr. Austin Durham, Director of Audio-Visual Instruction for the Ft. Thomas, Kentucky, City Schools, ingeniously aroused the interest of the community in education by contrasting old and new methods of teaching, in a display of classroom materials in a local drug store window. Contents of the window included: the entire series of McGuffey Readers 50-75 years old and a series of modern readers; old speller and new; series of Ray's Arithmetics 50-75 years old and set of modern Arithmetics; Harvey's Grammar and new English text; pictures of first school in Ft. Thomas (75 years ago) and picture of Highlands High School First Graduating class 53 years ago; First Highlands School Annual and last year's (All American rating); Highlands first school paper and the Nov. 1, 1945, issue; student papers from various classes (1945).

The outstanding feature of the exhibit was the continuous showing of Kodachrome slides depicting all levels of visual material used in the Fort Thomas schools.

Exhibit material for Education Week.

# School Made Motion Pictures

**QUESTION:** Our school is contemplating a course in the fundamentals of motion picture photography and projection. We intend to give this course to our younger students from whom we expect to build a large audio-visual aids squad to take care of our increased demands for visual material. In view of the fact that our materials of instruction are limited to one motion picture camera, three or four still cameras, two silent projectors, one sound machine and one standard slide projector, would you be good enough to anticipate some of the problems which are bound to arise during the course? Would you also, please, indicate possible ways and means of solving these difficulties. A rough outline of course of study commensurate with the abilities and needs of high school students would be of great help. We shall be very much obliged to you for your kind assistance.

DAVID SCHNEIDER, Editor  
Evander Childs High School  
New York City

**ANSWER:** There will be at least five major problems that will keep on haunting you. (Perhaps plaguing, might be the better term.) You may be able to reduce or eliminate them, depending upon the co-operation you can get from your local school board or the administration.

First of all there is the problem of personnel. You must limit your course to a maximum figure of no more than thirty students. These students should be chosen for their enthusiasm, interest and some ability in connection with motion picture work. Among them you need students of firm physique, who can handle heavy equipment; students who can be entrusted with the maintenance and care of expensive machinery. You need students with mechanical aptitudes, who know enough not to take machines apart unless directed and supervised by some one in authority. You should count on including students who have some creative abilities in art and in writing. Their services will be an asset in a course such as you are planning. Pupils who are good at improvising home-made devices where more expensive materials are indicated, should not be overlooked. Above all you need an instructor who can infect the class with his enthusiasm for this kind of work.

The problem of time cannot often be solved in most high schools because of program difficulties. It's a poor policy to limit this course to one period per day. It often takes just that length of time to get materials ready, leaving no time to put them away. If you can get the co-operation of the administration, you will find the course running more smoothly if programmed for the last two periods of the school. This will prove to be more effective, even if the class cannot meet more than two or three times a week.

Unless a school building has included in its blue prints a room for such course, you may run into some difficulties. A studio, soundproofed, light proofed, with movable furniture, storage space for

all equipment, plenty of outlets carrying high amperage for powerful photoflood lighting, and a large photographic darkroom in the back, is in itself an invitation for the better students to sign up for your course. The administration that is going to find a room for this course, after all other courses have been taken care of, has no right even to offer this subject.

The problem of equipment, no matter how large it looms, is not entirely insurmountable. In a professional school it's the ideal thing to equip each student with his own complete set of cameras, projectors, lights, etc. The alert high school instructor, who knows something about "activity" or group teaching, can get excellent results with a minimum of materials. By using part of each period for demonstrations, the teacher can have one group work in the dark room, another group print or draw titles, a third group use the motion picture camera, other groups at work on still cameras, lights, properties, projection apparatus, research reading and gathering information from the reference shelf, etc. After each student has mastered the fundamentals in both knowledge and technical skills of one activity, he may be assigned either to assist newcomers to that activity, or to go on to the next.

Finally, there is the perennial problem of finance. To keep such course going, the school board must appropriate a certain amount of money to provide negative materials, papers, chemicals, lamps and other perishables. In addition to those supplies, the school may wish to add additional equipment each term, so that future classes may have more capital goods with which to turn out better products. Contributions by Parents Associations and revenues collected as admissions to school-sponsored shows and movies can be used to augment meagerly appropriations of school boards that still look upon visual instruction as the step-child of the curriculum.

I shall outline a course of study in the next issue.

## Amateur Motion Picture Contest

The American Humane Association, 135 Washington Avenue, Albany, 6, New York has announced its second motion picture contest exclusively for amateurs. All films submitted should have a unified theme dealing with any type or types of animal life. It should be the aim and purpose of all films to inspire, teach or motivate acts of kindness, devotion or protection in behalf of domestic animals, birds, marine or wild-life.

All films submitted must be on original 16mm stock and not less than 200 feet nor more than 800 feet in length. They may be in black and white or koda-chrome.

**22 FULL-COLOR  
 PORTRAITS of FAMOUS  
 RCA VICTOR  
 RECORDING ARTISTS**

FULL SET, ONLY

**50¢**

THESE magnificent color portraits are reproductions of fine paintings by leading American artists. The pictures are printed on durable, coated paper, which is highly varnished to protect the surface and to bring out the brilliance of the coloring. The over-all size of each sheet is 10 x 12 3/8 inches, and the picture area of each portrait measures 9 x 11 inches. Pin them up as they are—the finish is dust-resistant—or frame them for lasting beauty.

**SINGERS, CONDUCTORS, INSTRUMENTALISTS.** Each set contains portraits of the following world-famous RCA Victor Artists: Marian Anderson, Sir Thomas Beecham, Richard Crooks, Arthur Fiedler, Eugene Goossens, Vladimir Horowitz, José Iturbi, Allan Jones, Alexander Kipnis, Serge Koussevitzky, Jeanette MacDonald, Dorothy Maynor, Lauritz Melchior, James Melton, Yehudi Menuhin, Pierre Monteux, Jan Peerce, Artur Schnabel, Leopold Stokowski, Gladys Swarthout, John Charles Thomas, Arturo Toscanini.

**GET YOUR SET TODAY.** This beautiful set of color portraits is brought to you by RCA Victor for only fifty cents. Available now, for a limited time only, at your RCA Victor Record Dealer's—or send fifty cents per set and your order to Dept. 38F, The Education Division, RCA Victor Division, Radio Corporation of America, Camden, N. J.

## The Public Life of Abraham Lincoln

(Nu-Art Films, Inc., 145 West 45th Street, New York City)  
30 minutes, 16mm sound. Sale price \$150. Original produced by United Artists. Apply to distributor for rental sources.

Compiled from D. W. Griffith's *Abraham Lincoln*, produced by United Artists in 1931 and starring Walter Huston, the film opens with a number of silent titles on pictorial backgrounds referring to Lincoln's youth and early political experience. The first real action, however, is in scenes from the Lincoln-Douglas debates in 1854 which are followed by a sequence in which Lincoln, having been defeated by Douglas in the senatorial campaign, is urged by an important political figure to consider the Republican nomination for the Presidency.

Passing over the election of 1860, the picture next shows Lincoln's cabinet presenting to the President a memorandum advising him against the attempted relief of Fort Sumter, advice which he did not take. Silent titles on pictorial backgrounds report the firing on the Fort and the opening of the Civil War, and Lincoln is next seen signing a call for 75,000 volunteers. Street scenes in both North and South show troupes marching off to war amid cheers of the people.

A rapid shift to a Union campground shows Lincoln's intervention in the case of a deserter, whom he pardons from the death sentence after hearing the young soldier's story. Back in Washington there is a scene in which leading senators of the country openly blame the President for the war's bloodshed. Again the scene becomes a military one, this time to show General Sheridan, temporarily away from his army, hearing the sound of cannon in the distance, discovering his army in retreat before the enemy, and after a hard ride rallying his men to victory.

In this same section of the film, General Lee, astride his white horse, returns to his Field Headquarters tent where at the insistence of his aide he tries to rest. But Lee, who has heard in part a conversation between his aide and a courier who had been sent for a signature on the execution order of a spy, comes from the tent and requests that the order be countermanded since by this time it would be impossible for any spy to do harm to an army which was so close to defeat anyway as were the Southern forces.

Bringing the days of the war swiftly to a close, the film shows Lincoln conferring with his Generals on the disposition to be made of horses belonging to the defeated Confederate Army and on the fate of General Lee and President Davis. Lincoln makes clear to the generals his desire to let these men go, and the scene concludes with Lincoln's expressing his anticipation in bringing back to the Union the Southern states "as if they had never been away."

The fatal night at Ford's Theater is next introduced. As the entire audience becomes engrossed in the play of the evening,

Booth slowly progresses unnoticed behind the balcony seats to the President's box; but not until he had uttered "Sic semper tyrannus" and deserted the stage did the leading lady discover the effects of the shot which apparently so many had assumed to be part of the evening's performance.

Leaving the theater audience in almost helpless confusion, the film closes with dramatic music and with symbolic scenes of a dead and deserted forest, of Lincoln's log cabin birthplace and finally of the monument at Washington.

### Committee Appraisal:

The film gives proper and much needed emphasis to a basic element of Lincoln's public policy, the preservation of the Union. Generally its spirit is in keeping with its subject. Without dominating the picture, Walter Huston portrays the Lincoln of story telling fame, the Lincoln of family life, and the Lincoln of sorrow. A few historical inaccuracies were noted in the film especially in the arrangement of and statement of passages selected from Lincoln's addresses. Perhaps dramatic demands explain the inclusion of scenes in which senators from New York and other leading states demand the cessation of the war lest the already large number of casualties on the Union side bring about public distrust. But the film does contribute materially to the development not only of concepts about Lincoln, but also of such significant historical understandings as the first flush of enthusiasm for the war among the southern people and their slaves. At one or two spots, the dramatic quality of the film leaves some things to be desired, and in a few cases, it was difficult to follow the sound. All in all, however, the film should be very useful for intermediate, junior and senior high school history and English classes, and for convocation use particularly in the intermediate and junior high school grades.

## Just Weeds

(National Film Board of Canada, 84 East Randolph Street, Chicago, Illinois) 20 minutes, 16mm sound-color. Sale price \$100. Produced by National Film Board of Canada, Ottawa, Canada. Apply to distributor for list of rental sources.

This film presents a survey of the damage caused by weeds, their spread, identification, and control.

The first sequence emphasizes the damage and loss to Canadian farmers caused by weeds. It indicates that weeds are more costly than the combined ravages of animal and plant diseases and insect pests—the annual loss being more than a hundred million dollars. It shows farms having been deserted because weeds had gained possession.

Weed seeds are shown being disseminated by birds, animals, wind and man himself. Man has scattered weed seeds by selling and buying impure seeds, by not cleaning his implements when moving from one field to another, and by failing to exert care when shipping seeds.

The next sequence points up the fact that the first step in weed-control is weed-identification. Close-up photographs show seventeen of the weeds most commonly found in Canada. Yellow mustard, cow cuckle, thistle, cress, field bind weed, and wild carrot are among those shown. The commentator calls attention to the distinguishing features of each.

The concluding sequence treats the importance of checking the spread of weeds. Proper cultivation is shown as the main method of control. The use of various plowing implements as well as crop-plowing, after-harvest cultivation, and summer fallowing is shown. Other methods of control include planting of special crops such as alfalfa or crested wheat grass to choke out weeds, sheep grazing, and eliminating roadside weed-beds by cutting or spraying the weeds.

### Committee Appraisal:

Even though the film is a Canadian production and treats the weeds most commonly found in Canada, nevertheless the

This monthly page of reviews is conducted for the benefit of educational film producers and users alike. The comments and criticisms of both are cordially invited.

Producers wishing to have new films reviewed on this page should write L. C. Larson, Indiana University, Bloomington, Indiana, giving details as to length, content, date on which the film was issued, basis of availability, prices, producer and distributor. They will be informed of the first open date when the Teacher Committee will review the films. The only cost to producers for the service is the cost of transporting the prints to and from Bloomington. *This Cost Must Be Borne By The Producers.*

## AUDIO-VISUAL-EDUCATION ENGINEERS

Suite 316, 9538 Brighton Way Beverly Hills, California

Foreign Distributors: Animex, Export Division—Haarlem, Holland

film should be useful in the United States because over one-half of the weeds discussed in the film are common to the United States and the methods of weed control recommended are efficient in this country. The close-up color photographs make weed identification possible. Biology and nature study classes, 4-H Clubs, gardeners, and adult rural groups interested in weed-control and conservation should find this film effective.

### Realm of the Wild

(United States Department of Agriculture, Motion Picture Service, Washington, D. C.) 27 minutes, 16mm sound-color. Sale price \$110. Apply to producer for rental sources and authorization to purchase.

The title of this film describes our national parks which contain in addition to myriads of small animals one third of all our big game. No longer are state laws considered the only requirement for protecting these valuable animals. In addition, their number must be carefully regulated in relation to the amount of food available. To show the great variety of plant foods required by different birds and animals the film pictures several species of each feeding on forest cover which most people regard either as beautiful flowers or weeds. Illustrating the fact that harmful animals such as porcupines and prairie dogs are prevented from becoming too numerous by Nature herself, these are seen as victims of such predators as the golden eagle, coyote, snakes, bobcat, and mountain lion. Turning to protective devices against these predators, the film features the ptarmigan with his fall and winter changes of color and his feeding and nesting habits. The sage grouse and other members of the grouse family are shown in this same connection, and there is a sequence on the male sage grouse as they strut about their grounds all night long during the mating season attempting to impress favorably their favorite hen.

Leaving the birds and emphasizing in its commentary that the feeding problem for the big game animals is a much more serious one, the film pictures the bison as one species of big game whose number has been limited by good management in accordance with the food available. In contrast, however, is shown the antler elk pushing through fields of deep snow, an unnatural habitat into which he has been forced by the enclosure of former feeding grounds by ranchers. Large herds of other elk illustrate the need for hunting to keep the number down. In this same sequence there are incidental shots of antlers being shed in winter and of their re-appearance and development during summer and fall, preparatory to the coming contests of the mating season.

The deer is next presented and is characterized as the most popular and important of the big game animals. An animated spot map shows the distribution of the numbers which feed in the various national forests, and the fawn is pictured as illustrative of protective coloring among animals. Winter scenes show fawns dropping exhausted from lack of food, thereby becoming prey to predators. The commentator explains the bad effects of artificial feeding and the impossibility of driving the animals to better feeding grounds. To show how completely deer strip the areas in which they feed, there are pictured two contiguous areas from one of which these animals had been excluded by fencing.

The moose, frightening in his size of body and antlers, is suggested as another big game animal whose numbers have increased to the danger point. The antelope, fleet of foot and easily distinguished by his markings, is shown as an example of big game which is native to the plains but because of food shortages is often forced to the forests. In contrast, Big Horn Sheep, now staging a comeback after almost total extinction by hunters, move about in healthy herds illustrative of the effects of good feeding. Shots of the lambs and ewes in this family precede a major sequence of the film in which the mountain goat rams engage in their annual jousts to determine leadership of the herd.

The closing portions of the film suggest the great value of food and fur products obtained annually from our big game animals and warn that these products will be available only

so long as we remember that "the protection of the plant cover and the soil from which it grows is the first law of the land."

### Committee Appraisal:

This film is recommended for use in connection with conservation topics from the intermediate through the college levels, also for convocation and adult groups. High School biology teachers and college professors of geography on the committee characterized the film as a major contribution in developing the newer concept of harvesting wild game in contrast to the older idea that it should be preserved so posterity could see how it looked. They recognized the film as the product of long and cooperative effort by men steeped in the knowledge of wild life and skilled with the camera. Considering its length the contents of the film are surprisingly complete with only the heaver, bear, and fox failing to receive the attention their problems merit. Some specific concepts developed by the film are those on protective coloration, the balance of nature, and the relations of animals to their food supply.

### Something You Didn't Eat

(United States Department of Agriculture, Washington, D. C.) 9 minutes, 16mm sound-color. Produced by Walt Disney Productions. Apply to distributor for rental sources and terms governing purchase.

By means of cartoon and actual photography this film stresses the importance of a well-rounded diet to maintain health and efficiency by comparing each of the seven basic groups of food to a link in a chain and showing that, because they are interlocked, the chain is no stronger than its weakest link.

The film begins with the story of a boy who ate too many green apples and suffered the painful consequences. It points out that most of us are aware of the results of something we ate, but that it will concern the other side of the question—something we didn't eat.

The following episode takes place in 1747 aboard an English freighter where many of the crew, victims of scurvy, have been buried at sea. Dr. James Lind, convinced that there is a connection between the men's diet and the disease, adds two oranges and a lemon to the daily diet of two sailors. Before six days had passed, he noticed increased vitality and a complete disappearance of symptoms of the disease.

Next Dr. Eijkman, a physician in Java in 1890, is shown discovering that beri-beri, a disease causing many deaths, can be avoided and cured by eating whole-grain rice. Only those who had eaten polished rice were the victims.

Twentieth century scientific research on foods and nutrition as shown in the next sequence indicates that the basic foods necessary to physical health are divided into seven groups. A chain of seven links symbolizes the interdependence of the seven groups and the ineffectiveness of any single group or combination of groups without all the rest.

The Jones family is pictured as an example of the fact that seven out of every ten people in the United States are inadequately fed. Mr. Jones is analyzed as to his component chemical properties. It is then indicated that at least one daily serving of some food in each of the seven basic groups is essential for the proper nourishment of these chemical substances. Mrs. Jones' selections for three meals are shown.

The film ends by advising Mrs. Jones that when selecting, preparing, and serving food to her family, she is not merely a housewife, but also an architect building the bodies of her family.

### Committee Appraisal:

This film should prove valuable in effecting desirable attitudes toward the necessity of well-balanced diets. It is especially suitable for use by schools, colleges, and groups whose particular interests are the spreading of general nutritional information and the creating of a desire to serve and eat well-balanced meals.

The Committee feels, that in spite of its short length, the film accomplishes much in developing the historical background of scientific research along the line of diet and providing information on the importance of the basic groups of foods in daily diet.

The method of exposing targets with the  
**KEYSTONE** *Overhead Tachistoscope*  
 has *Several Distinct Advantages*  
 over the method used with other projectors

1. As many as *twelve* exposures may be made from a single slide—as against one.
2. The twelve successive exposures are projected at the same spot on the screen.
3. The cost of each exposure is reduced to the minimum.
4. The projection is greatly facilitated because of the number of exposures available on a single slide

and by the way in which the slide is manipulated. YES, in Economy, in Ease of Operation, in Flexibility to Classroom Requirements, in Adaptability to Present-Day Demands and to Coming Developments in Projection Material—the Keystone Overhead Tachistoscope *stands first.*

Just try a Keystone Overhead Tachistoscope—*its superiority will be evident.*

### New Educational Production Firm

The formation of National Educational Films, Inc., to produce films to "fulfill the curriculum needs of public education," has been announced by Lt. Com. W. French Githens, president of the new corporation, and of Newsreel Theaters, Inc. He has returned to the motion picture field after three years' active service in the U. S. Navy.

General manager of the company will be Lt. Com. Grant Leenhouts, formerly in charge of planning and production for the Training Film and Motion Picture Branch of the Navy. Other associates who will join the organization upon their release from active duty in the Navy, where they have been key officers in the training film branch, are Lt. Com. Harold B. Roberts, Lt. Com. Herbert R. Jensen, Dorothy Dingley, Lt. Com. Don G. Williams, Lt. Jack W. Evans, and Lt. Gustav Revel.

### Chicago Meetings of Associations

The Coordinating Committee of the Photographic Industry, comprising the presidents and secretaries of **PICC** nine trade associations of the photographic industry, met at the Edgewater Beach Hotel on October 25, under the chairmanship of Joseph G. Dombroff, President of the Photographic Manufacturers and Distributors Association and head of Wiloughby's, New York City.

Action taken at this meeting included the establishment of a **PICC** Committee on Public Relations with William F. Kruse to serve as Chairman; the drafting of a telegram to be sent to the members of the Congressional and Senate Committees in charge of the pending tax reduction legislation, urging the inclusion of photography on an equal basis with other industries subject to Excise Taxes; and the drafting of a report urging the lifting of O.P.A. price controls.

The merits of the plan to hold an international photographic exposition during the Fall of 1946 were discussed at length.

**ANFA** Plans for increased activity in the Chicago area by the Allied NonTheatrical Film Association, which convened on the same day, were discussed between Wilfred L. Knighton, Executive Secretary, and a group of Chicago **ANFA** members. Periodical open meetings are being planned that will be of interest to the various phases of the non-theatrical film industry and to the public it serves. For information concerning membership in the midwest area inquiries should be directed to Wm. F. Kruse at Bell & Howell, **ANFA** Secretary and Regional Chairman.

**NAVED** The new officers and directors got off to a good start in the new fiscal year beginning October 1, with thirteen attending the Board meeting called by President D. T. Davis, at the Continental Hotel in Chicago on October 23-24.

After a brief review of the activities for the past year, including the treasurer's report, a budget of

# Notes

\$12,000 for the fiscal year October 1, 1945 through September 30, 1945 was presented and unanimously accepted by the Board.

Favorable reports were received from six working committees, including a final proof on the Ted Foss reference manual which has been in preparation for some time, and the adoption of an office certificate for NAVED members.

The Board approved a formal recommendation to the manufacturers council for the printing of a blue-book of the standardized and published trade-in prices for used equipment of all makes.

Highlighting the meeting on Wednesday morning was a preliminary report from Tom Brandon and C. R. Reagan, just returning from the Food & Agricultural Organization meeting in Quebec.

## Audio-Visual Conferences

• Visual education was the theme of several regional meetings of the Indiana State Teachers Association, October 25-26. At a conference of directors of audio-visual education convening in Indianapolis, conducted by L. C. Larson of Indiana University, the need for a State Supervisor of Audio-Visual Materials in the State Department of Education was discussed. Dr. Edgar Dale was a guest speaker at the Indianapolis session. At Gary the Visual Education Section heard Joseph E. Dickman of the Chicago Schools. In South Bend the Audio-Visual Aids Section and the Social Studies combined their programs

• A Symposium on "The Place of Television in Education", led by Dr. James Rowland Angell, was the feature of the New Jersey Visual Education Association program at Atlantic City December 1, planned with the cooperation of the Television Broadcasters Association. Television technique was demonstrated by high school students and motion pictures depicting television's possibilities in education were shown.

• Audio-visual aid clinics were held during October at York, Pa., by the Elementary Principals Professional Club and the York Film Library; and in six Oklahoma cities under the auspices of the Extension Division of the University of Oklahoma. Assisting at these meetings were Charles R. Crakes and Miss Norma Barts of DeVry Corporation.

• A Visual Education Conference in Oak Ridge, Tennessee, November 19, attracted an 80% attendance from the forty-four counties in East Tennessee, according to Bertis E. Capehart, Director of Visual Education, Oak Ridge Schools. The major address was delivered by Major Dennis Williams. The University of Tennessee Extension Division sponsored the meeting.

• Topics on the program of the two-day Eastern Washington Conference on Audio-Visual Education, November 30-December 1, included: "National Trends in Audio-Visual Education," "Free and Inexpensive Instructional Materials," "The Museum as a Teaching Resource," "The 2x2 Colored Slide Tells a

**Yale Chronicles to be Televised**

The fifteen silent *Chronicles of America* films, which were produced in the early 1920's by the Yale University Press and have been in continuous use by schools, will be presented over NBC's television Station WNBT, starting this month. These motion pictures, which portray important episodes and outstanding personalities in American history from Columbus to Appomattox, have been adapted for tele presentation with special scoring and narration developed.

**Herman Stern Retires**

On October 27th, Herman Stern, veteran Universal Pictures Company distribution executive, retired from active participation in the motion picture field. He has been with Universal for thirty-one years, the past eighteen years as head of its Non-Theatrical Department, a department which this Major producer-distributor organization has maintained for nearly a quarter of a century. Under Mr. Stern's leadership it has flourished, and enormously expanded its services to educational, religious, civic and other organized group users of non-theatrical films. Although retired from active connection with the field, Mr. Stern states he will continue to be interested in future advancements in the use of motion pictures non-theatrically.

Mr. E. L. McEvoy has taken over Mr. Stern's work with Universal.

**Early Films Salvaged**

A new optical printing process perfected by Dr. Carl Louis Gregory of the motion picture division of the National Archives, after three years of research, will restore such early historical film footage as newsreels of President McKinley's funeral, the re-burial at Annapolis of John Paul Jones, and the embarkation of the 72nd Regiment in the Spanish-American War. Paper copies of films produced between 1894 and 1912 were found in the storage vaults of the Library of Congress by Howard Walls, film curator. The films had been printed on paper for copyright purposes since at that time the copyright laws did not cover films as such. Dr. Gregory's process of re-photographing these paper "films" on motion picture raw stock will insure their usability. Besides pictures of historical value, the collection includes entertainment films featuring the early stars.

**Orton Hicks to Head Loew's 16mm Overseas Division**

Loew's International Corporation has appointed Lt. Colonel Orton H. Hicks to direct its special division recently organized for the foreign distribution of its features and shorts on 16mm. Colonel Hicks entered the Army as a major in December 1942 and was director of the distribution of the Signal Corps Photographic Section.

### THE DA-LITE CHALLENGER

locks automatically at correct picture proportions. Many other advanced features.

#### Write for **FREE Data Book!**

This 40-page book gives helpful information on screen surfaces—white, silver and glass-beaded—selection of the right size of screen for each projection need, and full details on Da-Lite screens, the line that has been famous for fine quality for 36 years.

He is credited with having done much to streamline Army Distribution procedures and with having established a distribution plan that is so sound that it is being carried over into the peace-time Army.

Colonel Hicks has been for nearly twenty years an outstanding figure in the 16mm film world. As president of Films, Incorporated, which he organized in 1927, he arranged for the release of the first major feature in 16mm. In 1938 he quit Films, Incorporated and joined Walter O. Gutlohn, Inc. as chairman of the board. In that same year he also organized Seven Seas Film Corporation, the first organization to supply steamship companies with shipboard 16mm entertainment facilities.

As chief of M-G-M's 16mm operations, Colonel Hicks heads an organization that will criss-cross the globe, in countries outside the United States and Canada, with "Metromobile" roadshow circuits and stationary 16mm installations in theatreless towns. In addition to M-G-M's regular productions, non-Hollywood-made educational, cultural and documentary films will be distributed for use in schools and colleges and by civic organizations and adult education groups.

Loew's International has already brought 11 men from as many countries to the United States for an intensive two-months' course of training under Colonel Hicks.

### Audio-Visual Discussion Kits on Economic Topics

Pioneering in a new field of popular economic education, New Tools for Learning, 280 Madison Ave.,

New York 16, has announced a series of easy-to-use audio-visual discussion kits for community groups. These kits, which feature a choice of film strips, lantern slides, pamphlets and recordings adaptable to any group, equipment or budget, deal with major economic questions in graphic presentations and everyday language.

The initial series includes five timely subjects: Foreign Trade, Full Employment, Inflation, Technological Unemployment, and Sound Investment versus Idle Savings. Available on a purchase or rental basis at minimum cost, the kits are planned to enable community groups of all sizes to arrange provocative and informative programs with no expert present in person.

Each kit contains visual material—graphs, charts, pictures—to clarify the subject. Identical visual materials are available in four styles—film strip, 2x2 or 3¼x4 lantern slides, or individual pictorial pamphlets. Choice of visual material is according to the equipment, budget or preference of the group. Professionally produced commentary on a phonograph record explains the visual material, poses questions for discussion, presents answers for evaluation. Each style of kit includes a discussion guide which repeats the commentary of the record, plus easy-to-follow directions on use of the audio-visual materials. If the leader prefers, he can present the commentary orally.

New Tools for Learning is also producer of the recently-launched transcribed radio series "Keeping Up With the Wigglesworths", a dramatic show interspersed with music, presenting economic information for the average listener.

## The Literature in Visual Instruction

(Concluded from page 455)

cluding a chairman, program chairman, secretary, entertainment chairman, publicity chairman and projectionist. The general chairmen of these committees elected one of their number to serve on the Informal Adult Education Council. The planned forum series began February 6, 1944 and consisted of nine 2-week rounds, until June 11th. A preview for forum leaders and "resource" speakers was provided before each forum. From the leaders' discussion, evolved leading critical questions which were mimeographed for audience use.

During the 18 weeks of the series, 97 forums were held. This is believed to be the largest coordinated community film forum program yet undertaken. Some 3,066 war workers and their family members attended; 455 Public Affairs Pamphlets were sold. Yet the values of the forums go beyond statistical measurement. Two forum groups were so enthusiastic they held regular sessions, without films, during the summer and fall before the next series was to begin.

The author gives good reasons why coordinated forum series are good—not the least of which is the cumulative values derived from consultation among forum leaders and local chairmen. The films used are listed in the article.

### SOURCES OF INFORMATION

- Motion Pictures and Recordings—Maurice P. Hunt—*The Social Studies*, 36:268 October, 1945. A review of sources for social studies classes.
- List of Junior High School Films—*School Review*, 53:253 May, 1945.

Catalog published for the junior high schools in New York City. This is a new service in New York, permitting junior high school teachers to select and circulate films of special value to them.

The teaching techniques recommended in the introduction to the catalog include: 1) Preview the film; read the guide and plan the lesson. 2) Prepare the questions to introduce the film; 3) Reshow, if necessary; 4) Use films for motivation, enrichment, intensive teaching or review. The technique will vary according to the purpose; 5) Use films wisely and only if they apply to the educational program under way; and 6) Don't show the same film term after term.

- Films, Filmstrips and Slides as Visual Teaching Aids in Schools of Nursing—National League of Nursing Education, 1790 Broadway, N. Y. 19. 35c.

### PERIDOCALS

- Building America.—vol.10, no. 7, 8.—"Our Water Resources"; "Family Life." 2 West 45th St., New York. 30c each.

"Our Water Resources" treats of the uses of water in modern living: in the home, industry, farming, recreation, fire fighting and the like. There is a clear-cut explanation with diagrams of the scientific principles relating to water and its origins. The bulletin then attacks the problem of uncontrolled exploitation and waste of water, indicating ways of control. The TVA is one of the outstanding examples of man's control over water, and the proposed Missouri Valley Authority will bring like benefits to that region.

The "Family Life" issue would be of value to classes from intermediate grade through college, as it treats of a universal problem. There is an interesting comparison of family life customs among various culture groups, leading into a history of the American family. The critical situation in family life today has been brought about by such factors as poor housing, mothers that must go out to work, smaller family groups, and the war.

Both issues are, as usual, excellently illustrated.

## Current Film News

■ **INTERNATIONAL THEATRICAL AND TELEVISION CORP.**, 25 West 45th Street, New York 19, has obtained world distribution rights on three new Kodachrome shorts on swimming, produced by Norman Sper. Commentary is by radio announcer, Ken Carpenter, and production was supervised by Fred Cady, coach for the U. S. Olympic team and swimming and diving instructor at the University of Southern California. Subjects are:

**Swimming for Beginners**—showing Fred Cady instructing youngsters in fundamentals, from floating and kicking to proper breathing and the finished arm stroke of the American Crawl.

**Advanced Swimming**—pictures accomplished swimmers perfecting their stroke and gaining speed through correct knee kicking and swift down pulls with the arm.

**Swimming and Diving**—deals with the fundamentals of diving and how to become proficient in this sport; also illustrates how difficult trick dives are performed and perfected.

■ **BRITISH INFORMATION SERVICES**, 30 Rockefeller Plaza, New York 20, report that with the coming of peace the Division's 16mm films will be reclassified into historical and current pictures. Those historical

films which are in constant demand—such as "Desert Victory", "V-1", "Operation Pluto" and "Operation Fido"—will be continued in general circulation, but for many of the war subjects an archive will be set up in New York where they may be obtained for reference purposes.

Current films from Britain now fall into three categories: rehabilitation, reconstruction, and projects for the peace. Among recent releases are:

**Your Children's Eyes**—2 reels—covering the physiology of the eye; how the eye works and the causes of long and short sight; diseases of the eye and their cure.

**Three Cadets**—10 min.—how Britain's youth, growing up in a world at war, answered the call to serve by volunteering in one of three Cadet Services—the Sea Cadets, the Army Cadet Force and the Air Training Corps, and the education given them, which prepared them not only for combat, but provided technical and manual training for use in civil life.

**Rhine Line**—10 min.—No. 6 in the "Act and Fact" films. The beginning of the Northern Rhine crossings on March 20th. All down the Rhine the opposing lines swayed and the thrust eastward continued until nine Allied armies had knifed into Germany.

■ **BELL & HOWELL COMPANY**, 1801 Larchmont Ave., Chicago 13, in line with its policy of bringing educational films made in other countries into use in the United States, has obtained the first four of a series of 16mm color productions by Ambalal J. Patel, head of "Educational Films of India." The first of these has been sounded here, with original native music by R. Bhatodekar and with editing and narration held to a minimum, by William F. Kruse. Its title is:

**Dance Revival**—a colorful story telling how a high-caste schoolgirl is moved to become a professional dancing teacher who travels from village to village to guide the revival of mass interest in folk dancing, a phase of the noteworthy national cultural resurgence. The film is 10 minutes long, and will be released both in color and monochrome. The other three are color-silent only, also single reels:

**Mysore**—the city, public buildings, palaces; military and religious procession, with masses of elephants in gorgeous trappings of solid gold. Ancient temple architecture contrasts strangely with modern zoo.

**Baroda**—a mixture of Indian and European architecture. Birthday ceremonies for youthful regent. State farming with modern machinery.

**Eclipse Stakes at Bombay**—the equivalent of our "Kentucky Derby;" notables, crowds, fine horses.

**THE  
NEW**

**MAURER**

**16-MM EQUIPMENT**

*Simple • Inexpensive • Complete*  
**FOR VISUAL EDUCATION**

Remarkably simple in design and operation, yet producing results not surpassed by complicated and more expensive equipment, the new Maurer 16-mm Professional Motion Picture Camera and new Maurer 16-mm Sound Recording System are attracting widespread interest.

These improved Maurer products are especially well adapted to the service of education. They comprise the major units of a studio as part of a visual education film production program. Everything required for recording is contained in four easily portable units and the complete camera equipment is contained in two more cases. With their many automatic features and controls and all mating connections so designed that an incorrect hook-up is impossible, no particular skill or experience is necessary to obtain results comparable to the finest professional production.

In view of the growing demand for the new Maurer 16-mm equipment, an immediate investigation would be advisable. For complete information address Dept. E-12.

**J. A. MAURER, Inc.**  
37-01 31st STREET, LONG ISLAND CITY 1, N. Y.

■ **FILMEDIA CORPORATION**, 12 E. 44th St., New York 17, announces the national non-theatrical release of a 22-minute motion picture on inter-religious good will, entitled:

**Greater Victory**—a dramatic story of two escaped Nazi war prisoners after V-E day showing why we must conquer Nazi ideas as well as ours. A booklet called a "Filmtext" has been prepared to use with the film to stimulate and guide audience participation in follow-up discussions. One of these booklets is released with each major film distributed through Filmedia. The Filmtext for "Greater Victory" opens with statements about America's problems of inter-group unity by prominent figures, and leaders of the three major American faiths. The National Conference of Christians and Jews cooperated in the production of the film.

■ **OFFICIAL FILMS**, 625 Madison Ave., New York 22, has just released:

**News Review of 1945**—1 reel—visualizing the year's most important headlines. Among events pictured are the victory in Europe and Pacific, New York's welcoming of war heroes, secret war weapons, atomic bombing of Nagasaki.

**Touchdown Thrills of 1945**—1 reel—movie record of the 1945 Football season. Among the games pictured are Army-Navy, Navy-Penn, Purdue-Ohio, Penn-Columbia, Notre-Dame-Illinois.

Both subjects available in 8mm, and 16mm silent and sound.

■ **SUN DIAL FILMS, INC.**, 625 Madison Ave., New York 22, has just released three short films on the New China, produced by the Chinese Ministry of Information:

**China's Pattern for Peace**—dealing with the Chinese Industrial Cooperatives which have emerged from the years of war, and bring nearer to fulfillment Dr. Sun Yat-Sen's principle of economic security for the people. Examples of various cooperatives are shown.

**The Road to Victory**—9 minutes—a tribute to General Stilwell and his fighting men, both Chinese and American, who reconquered and built the Ledo-Burma Road.

**The Voice of China**—reflecting the lives, thoughts and struggles of 450 million Chinese to bring their country out of chaos into a new world of hope.

■ **NATIONAL TUBERCULOSIS ASSOCIATION**, 1790 Broadway, New York 19, has prepared a Visual Aids Unit on health which includes the sound motion picture:

**Lease on Life**—2 reels—starring Gene Lockhart as the jovial doctor of the 1890's who comes out of the past for a visit to the home of the Joneses. The film portrays the events of a typical day in their lives and what the family does to stay well and avoid

unnecessary sickness. The conflict between superstition and fact is seen.

**Design for Health**—a filmstrip of 50 frames—complements the motion picture although it tells so complete a story that it can be used by itself. As in the motion picture, tuberculosis is only one of the health hazards dealt with, but a relatively greater share of footage is devoted to this disease in the filmstrip.

A reference guide for audience use, entitled "Prevention Pays," completes this unit.

■ **COMMONWEALTH PICTURES CORP.**, 729 Seventh Ave., New York 19, reports its exclusive release in 16mm of:

**Miracle on Main Street**—9 reels—a Columbia feature production starring Margo, and Walter Abel in an appealing story about a dancer—a childless and disillusioned wife—whose life is transformed as the result of a love

awakened by an abandoned baby which she finds in a church on Christmas Eve.

Also currently being released by this firm is a series of eight 1-reel shorts featuring Louis Jordan and his band of colored entertainers in swing music.

■ **UNITED CHINA RELIEF**, 1790 Broadway, New York 19, is offering a new film for a small service charge to recognized groups. This fourth motion picture in the United China Relief series is called:

**Report on China**—34 minutes—narrated by the well-known actor Raymond Massey. Captured Japanese film exposes the plot against China's freedom and the course of Japanese aggression from the first assault in Manchuria in 1931. The U. S. Army Signal Corps furnished considerable of its footage from "Battle of China" and supplied the major part of the musical score. Shots covering the completion and operation of the Stilwell Road and the fight for air bases in China, were obtained from our Army Air Forces. Although the emphasis of the picture is mainly historical, it constitutes also a report to the American people on what our soldiers and our dollars, have accomplished.

■ **YOUNG AMERICA FILMS, INC.** has issued a "Preliminary Announcement" giving information on the organization of its editorial, production, distribution and service phases. Included is a list of tentative film titles planned for production within a year. Accompanying this booklet is a statement of the company's editorial policy with respect to its curriculum-film production which expresses these fundamental convictions: 1) that educational motion pictures and slidefilms are an integral part of the school's curriculum and that they must be based on fundamental curriculum requirements, 2) that such films should be graded to the interest level, learning rates and comprehension level of a specific school-age group, 3) that they make their greatest educational contribution when used by the teacher as a basic learning experience and not as a supplementary aid, 4) that subject matter should not be presented in motion pictures, in areas which can be better treated in slidefilms or other visual forms, 5) that they must be produced to meet the expressed needs of schools and not represent merely the producers' ideas as to what schools should have, 6) that they should be made in short units that fit conveniently into class schedules—preferably 10 minutes in length, and in no case longer than 20 minutes, 7) that they are at their educational best when they stimulate participation, discussion and activity among the students, 8) that teachers welcome the help of Teachers' Guides in using films as effective classroom teaching tools.

■ **BETHLEHEM STEEL COMPANY**, Bethlehem, Pa., has produced a motion picture on shipbuilding which bears the official approval of the U. S. Navy and the U. S. Maritime Commission. It is available now without charge for showing in educational institutions, under the title:

art of shipbuilding from the days of the Clipper ships to the present time, the film traces the building of a "Victory" ship through all important steps.

### Planet 16mm Color Feature Productions

A significant new trend in the fast-expanding 16mm film field has been indicated by the recent formation of Planet Pictures, Inc., 5746 Sunset Boulevard, Hollywood 28, California, for the production of 16mm feature entertainment films in color. According to Jack Seeman, President of the new studios, the decision to establish such a production company was reached after a great deal of research and after an extensive survey conducted among Parent Teachers organizations, religious groups, educators, and motion picture chairmen of clubs and civic groups in various states. Results from the survey indicated there was a very definite market for original 16mm productions, provided that in content and treatment they were made acceptable to schools and churches. All of Planet's releases, therefore, will comply with wholesome standards of entertainment, avoiding social problems and sophisticated drama.

A series of twelve feature-length full-color films have been scheduled for production within a year. These will consist of two westerns, two mysteries, two musicals and six comedies, the first two of which have already been released. All stories are written by professional writers, and produced by experienced directors, actors and technicians. Richard Talmadge, star of the silent screen, and Harvey Parry, a team that has directed action sequences in many Hollywood action dramas, are the Producer-Directors, and wrote the story for Planet's first picture, *Jeep-Herders*, a fast-paced western about GI cowboys, released several weeks ago. The second, and current, release is titled *Detour to Danger* which combines thrills with comedy in a story of the capture of a gang of payroll robbers in their Sierra hide-away. Now in the shooting stage is the third feature, another fast-paced comedy entitled *The People's Choice*, a hilarious satire on the behind-the-scenes machinations involved in building radio programs and radio personalities.

The pictures are booked to non-theatrical users through a nation-wide distributor set-up, each handling distribution for a given territory.

Also produced and available for immediate showings are two short subjects—*Primitive Patzcuaro*, a Mexican travelogue, and *Fortunio Bonova*, featuring this Spanish operatic baritone in some of his favorite concert numbers.

### Burton Holmes Travel Films Acquired by Simmel-Meservey

The name of Burton Holmes is synonymous with world-wide travel, and with motion picture lectures which have long been an important annual event to the countless eager thousands who flock to hear him. Mr. Holmes is now in his 53rd season on the American platform, and at its close in the spring he plans to fly to South America and to Europe to obtain new pictures. The vast library of films resulting from his repeated circling of the globe has recently been acquired by Simmel-Meservey of Beverly Hills, California, producers and distributors of educational motion pictures and recordings. This film-footage, comprising several hundred thousand feet, is now being edited into 16mm short subjects for educational use. Narration will be added.

### Catalogs

#### ITTC

The new 168-page 1945-46 catalog of 16mm Motion Pictures now being distributed by International Theatrical and Television Corporation, 25 West 45th Street, New York 19, is the most complete and comprehensive one this company has ever presented to the 16mm field. It includes entertainment, educational, religious, vocational, documentary, incentive, and industrial films. Over half of the catalog's pages list entertainment subjects—Universal, RKO and other theatrical feature productions, Serials, Westerns, Foreign features, Cartoons, Comedies, Musical Varieties, Soundies, and Universal short subjects. Other group-headings, given in the General Index, indicate the wide variety of educational material offered—films on Travel and Customs, Art and Architecture, Physical Science, Popular Science, Social Science, Biology, Sports, Music Appreciation, Vocations, etc.

An Alphabetical Index, listing the three thousand-odd films described in this attractive catalog, adds to its usability.

#### Westinghouse

A new index to motion pictures and slide films loaned free to schools except for transportation costs is announced by the School Service department of the Westinghouse Electric Corporation. Covering a wide range of subjects, from science to economics, the films described in the booklet may be used in grades 7 through 12. The booklet contains two innovations useful to teachers: an index with recommendations as to the type of class for which each film is best suited and suggestions for related supplementary materials to enhance each film's usefulness in the classroom.

Teachers may secure a copy of the new index, "Motion Pictures and Slide Films for School Use" through the School Service Department, Westinghouse Electric Corporation, 306 Fourth Avenue, Box 1017, Pittsburgh 30, Pennsylvania.

## NEW 16MM FEATURES

# 8 HAL ROACH PRODUCTIONS

Starring Laurel & Hardy

#### 8. BLOCKHEADS

Starring Laurel & Hardy

## ASTOR PICTURES CORPORATION

130 W. 46th St. New York 19, N. Y.

# AMONG THE PRODUCERS

## Radex Stereo Products

The first in a new line of third dimensional products designed around the 35mm camera and the 2" x 2" slide, are announced by the Radex Stereo Company, 1328 West Sixth Street, Los Angeles.

The Radex Stereo Parallel, when mounted between the camera and tripod, permits taking two double-frame 35mm shots at the proper stereo interocular. This parallel shifts the camera 2½ inches between the shooting of the two individual pictures comprising a stereo pair. Made of heavy gauge steel in crackle finish, and with chrome plated screw heads, it is said to hold any camera weighing up to 100 pounds, with precision construction assuring accurate parallel in both positions. Its operation is extremely simple. While the present model of the Stereo Parallel accommodates the camera in horizontal position only, the company reports that an accessory permitting use of the camera in vertical position will soon be available.

When mounted in two standard 2" x 2" slide binders, the transparencies form a stereo pair, which may be inserted in a Radex Stereo Slide Holder, made of aluminum, for third-dimension viewing. The slides may also be used singly for flat viewing or projection in standard 2" x 2" viewers or projectors.

The Radex Binocular Scope third dimension viewer is made of die cast aluminum, in gloss black and crackle finish, with chrome trim. Precision ground lenses are 1¼" in diameter, with adjustable focus. Slides are inserted in slot at top which has thumb recess to permit of easy removal.

Radex Stereo Company is building

The Radex Binocular Scope, Stereo Parallel and Slide Holders.

up a large library of Stereo color slides on a wide variety of subject matter. An educational series is being compiled which will be accompanied by text cards describing each slide.

## Atomic Energy Explained in New Slidefilm

The Official Smyth Report on atomic energy for military purposes states: "The average citizen can not be expected to understand clearly how an atomic bomb is constructed or how it works, but there is in this country a substantial group of engineers and scientific men who can understand such things and who can explain the potentialities of atomic bombs to their fellow citizens."

It is to meet this need that Visual Sciences, Suffern, New York, has produced a 35mm slidefilm on *The Atomic Bomb*. It consists of 60 fully labeled, hand-drawn pictures with information included on each frame, and may be projected without comments from the teacher; or, as each picture is flashed upon the screen, supplementary information may be added by the instructor. This presentation is for the most part non-technical in scope, but several frames from the Smyth Report have been included to stimulate advanced students.

## RCA Spanish Language Records

RCA Victor has released a new Spanish language record set titled "New World Spanish," to consist of two albums of ten 10-inch records, together with a 337-page textbook. It is designed to give a practical and authentic approach to the learning of the language by students in classrooms and individuals in homes or clubs, according to the RCA Victor Record Division.

The new Spanish language set was prepared jointly by Henry Grattan Doyle and Francisco Aguilera. Mr. Doyle is Dean of Columbian College of George Washington University and was Director of the Inter-American Training Center in Washington, D. C. For a number of years he has served as editor of the national magazine, "Hispania".

Francisco Aguilera, co-author of the new RCA Victor set, is Assistant Director of the Hispanic foundation of the Library of Congress. He formerly served as instructor in Spanish at Yale University and at one time was assistant chief of the Division of Intellectual Cooperation of the Pan-American Union.

The entire instruction course has been recorded for RCA Victor by native Spanish-American speakers from Peru, Colombia, and Chile.

## DeVry 16mm Sound Projector

Devry Corporation, 1111 Armitage Ave., Chicago 14, announces its 16mm. sound-on-film equipment is again being built for civilian uses. Projector and separate sound system are housed in two streamlined, balanced carrying cases. This makes it possible to use the 25-watt amplifier and 12-inch electro-dynamic speaker separately with turntable, or with microphone as a public address system.

## Government Surplus of Aerial Cameras

Fairchild Camera & Instrument Corp., Jamaica, N. Y., has been appointed agent for the Reconstruction Finance Corp., in the sale of government surplus aerial cameras and some other photographic equipment. The contract includes not only Fairchild-manufactured instruments, but products of Fairchild design which were manufactured by other companies during the war.

There are several categories of equipment involved. Some of the instruments are new, have never been out of their shipping cases; others will show only minor wear. These will be inspected, repaired and sold. Another group includes equipment which will require a factory rebuilding job before sale. A fourth category consists of instruments which because of wear, damage or obsolescence have no value except for sale of some components and scrapping.

Instruments involved include all Army and Navy standard type reconnaissance, mapping and charting aerial cameras, machine gun cameras, automatic operating control units for cameras, view finders and miscellaneous items. In addition, Fairchild will handle sales for the RFC of some aerial camera mountings and film magazines not of its design.

Fairchild engineers are working on adaptations of the various instruments to new uses. For example, a project is under way to redesign machine gun cameras for automatic recording work in industry and for use in police investigations. And the famed K-20, 4" x 5",

manually-operated roll film aircraft camera is getting a focusing attachment making it usable for advanced amateur and professional ground photography.

### Victor Acquires Additional Office

Victor Animatograph Corporation of Davenport, Iowa, has moved the general offices from its manufacturing plant into the Kahl Building in the heart of the city's business district, it is announced by S. G. Rose, executive vice-president of the company.

The move enables the company to expand production space, install more machinery and increase its personnel. Production is now at the highest peak in the company's history and steadily increasing. Tremendous growth in the audio-visual field, both domestic and foreign, made the move imperative.

### Voice Recording Equipment

The termination of war contracts calling for steel tape voice recording units has made a limited quantity of such units available for purchase by schools and colleges for Speech, Dramatic, Vocal and Language training,

H. M. Turney, drama coach at Los Angeles City College, Utilizes Tape Recorder.

from Magnetic Recorders, 7120 Melrose Ave., Los Angeles 36, who announce that they are offered at below ceiling prices. The unit is fully complete within itself, comprising microphone, recording equipment and loud speaker and plays back immediately.

### ITTCO Establishes Canadian Branches

The opening of a branch office of International Theatrical and Television Corp. in Canada, has just been announced. It will be located at 21 Dundas Square, Toronto, and will be headed by Harry Allen, formerly director of PRC of Canada. George A. Hirliman, President of ITTCO, states this will be the first of several offices to be opened under the name of ITTCO of Canada, to facilitate 16mm film service to that country.

### New Sales Head for Princeton Film Center

Harry T. Floyd has been appointed Director of Sales for The Princeton Film Center, Princeton, New Jersey. Until recently Floyd was Eastern Manager of the Educational and Industrial Film Division of Walt Disney Productions, Burbank, California. The Commercial Department of Disney was discontinued this past month.

Prior to joining Disney, Floyd was in charge of the Promotion Department of Johnson and Johnson, New Brunswick, New Jersey, and also

headed up the Motion Picture activities for that company.

The Princeton Film Center also announced the opening of a New York office at 625 Madison Avenue to serve its Metropolitan clients. Floyd will be in charge of that operation.

### Shorthand Sound Slidefilm

A 10-minute sound slidefilm on taking dictation and transcribing has been produced by The Gregg Publishing Company, 270 Madison Avenue, New York. Complete instructions are given in the teacher's guide which accompanies the slidefilm.

## THE LITERATURE IN VISUAL INSTRUCTION

(ETTA SCHNEIDER RESS, Editor)

### Theory and Trends

Tools for Learning: Images (*Ward C. Bowen*, N. Y. State Ed.)—Feb. 72 . . . An Educator's Overview of the Audio-Visual Programs of the Armed Forces (*Paul Wendt*, Vis. Rev.); Disney Techniques in Educational Films (*Francis Ahl*, Soc. Studies)—Mar. 114 . . . Eyes for War (U. S. Camera)—May 204 . . . P.E.P. Broadsheet on British Documentary Films (Film News) June 244 . . . Films at San Francisco (*Mary Losey*, New Movies)—Nov. 414.

### Administration

A Measure for Audio-Visual Programs in Schools (*Helen Haradt Seaton*, Am. Council on Ed.)—Jan. 25 . . . Post-war Plans: San Diego County (*J. D. Knight*, Film News)—Feb. 72 . . . Organization of a Visual Aid and Dept. for Schoolwide Use (*Saul J. Siegal*, High Points); Sylvania's Self-Supporting Visual Education Department (*Lynne Metcalfe*, Sch. Mgmt.)—Sept. 294 . . . 16mm Exchange Practices (*B. A. Aughinbaugh*, Film & Radio Guide); Movies in the Classroom (*Sabra Harris*, Film & Radio Guide); Audio-Visual Aids in the Montgomery Public Schools (*W. T. McKee*, Film & Radio Guide)—Nov. 414 . . . A Technical Service Squad (*Robert Robinson*, High Points); Providing Facilities for Use of Audio-Visual Materials (*Francis Noel*, Cal. Sch.)—Dec. 455.

### Research, Evaluation and Teacher Training

Teacher Evaluation of Classroom Motion Pictures (*Stephen Corey*, El. Sch. J.); Teacher Training in Visual Education in Virginia (*Marlin L. Hogan*, Va. J. of Ed.)—Apr. 152 . . . Projected Pictures for Instructional Purposes (*Gilbert Weaver*, Guid., Prac. Arts & Voc. Ed.); Looking Backward in Visual Education A. D. 2000-1945 (*Clifford Ellinger*, J. of Bus. Ed.)—Sept. 294 . . . Tailor-Made Scripts (*Bruce A. Findlay*, Nat'l Bd. of Rev.); What Are Classroom Pictures! (*Stephen M. Corey*, Lib'y J.); Can Our Schools Teach the G. I. Way? (*Olson Anderson*, NAVED News)—Oct. 356 . . . Use of Training Aids in the Armed Services (U.S. Office of Ed. Bul.); Fallacious Arguments from Experiments on Methods of Teaching (*S. J. Philpott*, Brit. J. of Ed. Psych.); Teaching Microphotography to Librarians (*D. H. Litchfield-M. A. Bennett*, Lib'y J.)—Nov. 414-6.

### Utilization

Developing Social Concepts through Instructional Films (*V. C. Arnsperger-Mary Windle*, Sch. Mgmt.)—Jan. 26 . . . Films Valuable in Training Program (*Lynne Metcalfe*, Modern Machine Shop)—Feb. 72 . . . Community Utilization of the School's Audio-Visual Materials (*Carolyn Guss*, Lib'y Occurrent)—Mar. 115 . . . Are Science Films Used Scientifically? (*David Schneider*, High Points); The Motion Picture as an Aid in Geographical Instruction (*W. M. Gregory*, Sch. Sci. & Math.)—Apr. 152 . . . The Science Teaching Film Comes to the Elementary Grades (*W. A. Wittich*, Sch. Sci. & Math.); Visual Tools in Learning (*Paul T. Williams*, N. Y. State Ed.)—May 204 . . . Demonstration Lessons Using the Film "The Corn Farmer" (*Luella Kenny*, Sch. Sci. & Math.); Visual Aids in Technical Writing at the University of Texas (*Joseph Jones*, J. of Eng. Ed.); The AAF Convalescent Training Program as Social Education (*Lt. E. J. Taylor*, Soc. Ed.); What the Schools Can Learn from the Army's Films (*C. F. Hoban, Jr.*, Ed. Outlook); Use and Distribution of Audio-Visual Materials (*Morley Tomboes-K. L. Gauthier*, The School); Films for Nursing Education (*M. R. Brunsstetter*, Amer. J. of Nursing)—June 242 . . . How to Get the Most from Motion Pictures in the Classroom (*Thos. A. Chad*, Guid., Prac. Arts & Voc. Ed.); The Educational Uses of Films (Nat'l Jewish Welfare Bd)—Sept. 294 . . . A Method for Using Educational Films (*Louise Clark*, Amer. J. of Nursing); Methods and Materials for the Teaching of U. S. History: A Symposium (Cal. J. of Soc. Ed.); The Use of Commercial Films in Schools of Nursing (*Ruth McGeary*, Amer. J. of Nursing)—Oct. 358 . . . Abundant Visual Materials in U. S. History (*Frances Ahl*, Cl. House)—Dec. 455.

### Libraries, Forums and Understanding

Library Film Forums (*Alice I. Bryson*)—Jan. 25 . . . Newark Experiments with Films (*Bernard Schein*, Wilson Lib'y Bul.)—Feb. 72 . . . A Story of the Good Neighbor Policy in Action (Vis. Rev.); We Learn about South America (*Oscar Sama*, Nation's Sch.); A Seed Takes Root (*David Schneider*, Nation's Sch.)—Mar. 114 . . . Possible Development of Film Service through Collaboration of Schools and Libraries (*W. P. Kollam*, West Va. Sch. J.)—Apr. 152 . . . Motion Pictures in Libraries (*Etta Schneider Ress*, Wilson Lib'y Bul.)—May 204 . . . Taking Films to the People (*Morton Parker*, Adult Ed. J.); Films for Forums (*Evelyn Olsen*, Adult Ed. J.)—June 244 . . . Films to Better Human Relations (*Esther Berg*, High Points); The Price of Prejudice (*Edgar Dale*, News Letter)—Sept. 294 . . . Film Forums: an Experiment in Community Discussion (*H. B. Allen*, Qu. J. Speech)—Dec. 455.

### Radio, Recordings and Television

The Radio University in Peace and War (*Eric Underwood*, Amer. Scholar)—Feb. 72 . . . Television as an Educational Force (*Washington Miner*, Ind. Tchr.); Television in Education (*Rohana Lee*, Film News); Tools for Learning: Audio Education (*Max Bildersee*, N. Y. State Ed.); FM for Education (*William Dave Bowdler*, U.S. Office of Ed.)—Apr. 154 . . . Skill in Listening (*Alice Sterner-Kohlman Saunders-M. A. Kollam*); Radio in Postwar Education (*Nathan A. Veal*, Sch. Sci. & Math.)—May 206 . . . The Story of the All-City High School Radio Workshop (*Van Rensselaer Brookhahn*, High Points)—Sept. 294 . . . Serving Education on a Platter (*W. G. Hart*, Mich. Ed. J.); Radio's Challenge to Education (*John Studebaker*, Ed. for Victory)—Oct. 356 . . . Script-of-the-Month (*Greeta Baker*, The Amer. Mercury); Teacher Education by Radio (Sch. & Society)—Nov. 416.

### Still Pictures, Filmstrips, Museum Materials

Better Captions for Picture Study (*M. Melina Sree*, J. of Geog.)—Jan. 26 . . . The Mountain Goes to Mahomet (*Bernice Elliott*, Nation's Sch.)—Feb. 72 . . . Still Pictures Tell a Story (*Chet Ulin*, Nation's Sch.); Filmstrips in the Middle East (*David Wood*, Sight & Sound)—Apr. 152-4 . . . Picture Books (U. S. Camera)—May 206 . . . Clio and the Camera (*C. S. Ellsworth*, Miss. Valley Hist. Rev.); The Use of Textbook Pictures (*Paul T. Williams*, Neb. Ed. J.)—June 242-4 . . . The High School-Museum Program (*Charles E. Stahkin*, High Points)—Sept. 294 . . . Borrowed for Handling (*Mildred Holzauer*, Nat. Sch.)—Dec. 455.

Production

Motion Pictures for Postwar Education (Commission on Mot. Piet. in Ed.); The Factor of Motivation in Learning as Applied to the Making of a Teaching Film (John L. Hamilton, Jr. of Ed. Psych.)—Jan. 26 . . . Critical Report on Inter-American Films (Film News); Health Film Production (Adolph Nichtenhauser, Film News)—May 204 . . . Standards for Training Films (William Ecton, Jr., Film News)—June 244 . . . Hollywood's Interest in Classroom Films (Gardner Hart, Film & Radio Guide)—Dec. 455.

Sources of Information

Recreation (Lili Heimers-Margaret Cook); Teaching Materials for Industrial Education (Chris H. Groveman, Ind. Arts & Voc. Ed.)—Jan. 33 . . . Educational Film Catalog; Business Education—Apr. 154 . . . Consumer Education for All Ages (Lili Heimers-Margaret Cook); The People of America (Lili Heimers-Margaret Cook); Teaching Materials for Industrial Education (Ind. Arts & Voc. Ed.); French Language Films (Mod. Lang. J.); Educational Film Guide—June 244 . . . A Bibliography on Motion Pictures in Education (Univ. of Chicago); Films Interpreting Children and Youth (Hampel-Dale-Robinson); Audio-Visual Business Education (Bus. Ed.); Consumer Chemistry (Sarah Ransom)—Sept. 296 . . . Educators Guide to Free Films; Bibliography of Economic and Social Study Material—Oct. 358.

Books, Periodicals and Guides

Sight and Sound—Jan. 26 . . . Building America: Lend Lease, Congress; Audio-Visual Aids to Learning (Educ'l Leadership); Sight and Sound—Feb. 74 . . . White Flood: Film Guide; Film World; Building America: Russia—Apr. 154 . . . Victory-to-Peace Series—May 206 . . . Building America: Veterans, Light Metals—June 244 . . . Connecticut Audio-Visual Education Association Annual Bulletin; Sight and Sound; U.S.S.R.—The Land and the People; Three to Be Served—Sept. 296 . . . Multi-Sensory Aids in the Teaching of Mathematics; Teaching through Radio (William B. Levenson)—Oct. 358 . . . Film News; See and Hear; Sight and Sound—Nov. 416.

Miscellaneous

Armed Forces' Training Aids (Vis. Rev.)—Mar 114 . . . Basic Problems in Visual Instruction (Paul G. Kiehl, Amer. Luterban)—May 204 . . . Choosing Movies Intelligently (Edgar Date, N. Y. State Ed.)—June 244 . . . Projection Room Planning (Architects' Visual Equipment Handbook)—Sept. 296 . . . How It's Done at Oakland (Bernice Baxter, Nation's Sch.)—Oct. 356 . . . Movies Missionary (Fortune); Movies as an Influence in the Life of the Modern Adolescent (Bro. Urban Fleege, Cath. Ed. Rev.)—Nov. 414-6.
